At daybreak, Wednesday, Oct. 29, our camp was all astir. Having finished breakfast and taking a lunch along, we soon started out in pairs. Friend Bill and Frank went ahead toward the gulch, Charles and Tom cut across the timbered mountains, after deer or elk, while Billy H. and myself went along the valley leaving the river on our left and the sloping hills on the right, toward a mountain range, the principal home of the mountain goat. Having not gone more than twenty minutes from camp, my companion, who was inspecting the rising foothills, dotted here and there with buckbrush, a species of laurel, suddenly exclaimed, "There is a deer running," in the same time opening fire on it. Sure enough, about 150 yards up the sidehill, a lordly buck was running with a low rolling lope. I wheeled around and in my excitement made a beautiful miss. Friend H. blazed away and overshot again, and my second shot went also above, but seeing where my ball struck, and getting a little calmer, succeeded in putting my third bullet in the deer's head, a little below the ear, the buck making one tremendous bound and falling in a little ravine. Exhilarated by my success, I gave vent to a yell which would have put a Comanche to shame, and set out, as fast as my legs and wind would permit, up the hill to my treasured prize. Being cautioned by H. to be careful and not too impatient, I stopped a few feet from the noble buck. There he lay in all his beauty, and never will I forget the reproachful looks of the mortally-wounded animal. Resolved to shorten his miseries by cutting his throat, and, bending over him, he made a terrible effort to escape; I trying in vain to keep him to the ground, and afraid of being butted or trampled on, both of us went down the hill topsy-turvy until H. came to my assistance and ending the noble animal's struggles by cutting his throat. We dressed and cleaned him and left him near the river. Having been detained a good while by the unexpected encounter, we now hurried to the not distant range, the home of the mountain goat.

We had some terrible climbing over slopes and precipices, covered with masses of *débris*, loose slabs and boulders, with the sharpest corners and edges imaginable, using knees, toes and fingers to gain the cliffs. H. kept his course parallel, but lower than mine, instructing me to advance slowly and carefully, as in case he should start some of these wary animals they would run to the ridge, giving me a good opportunity. I soon heard the crack of his rifle and soon saw a small band of goats running with most remarkable rapidity, crossing crevices and ascending impossible steeps with the greatest ease. Gaining the ridge they disappeared in the crags like apparitions. Crawling as cautiously as possible, I neared the spot where they disappeared, and lifting my head inch by inch over a projecting ledge I saw one of the goats, a good-sized ram, sitting upon his haunches, looking and watching H., who had succeeded in killing two out of the band. As I was considerably out of breath, and nervous with excitement, I waited two or three minutes until sufficiently recovered. Steadying my nerves and sighting a little behind the shoulder, the rifle cracked and the ram was my meat. He toppled over and over, looking like a miniature snow avalanche tumbling down the ridge, not stopping until he got to the foot and near the creek. I felt as proud of my success as an Indian over his first scalp, and ran along as fast as I could to meet H., whom I saw coming up toward me. After hunting a while around the top of the ridge, and seeing only two goats through my field glass, at least a mile off, we concluded to go down to the gulch, as his goats also had rolled near down to the bottom. He had killed a female and her kid, which we soon had skinned, also taking a hindquarter of the kid along. A half a mile further down we came to my ram; it was of a very formidable size. After skinning this but leaving the head on, we were both well loaded down, but managed to get to camp proud of our load, and going back with some of the boys for the buck I had killed in the morning. All the boys had returned to camp by this time, and admiring our trophies of the day. We counted seven goats and two deer. Charles H. killed a fawn and three goats, Frank had succeeded in killing the largest ram of the lot. Roasting the kid's hindquarter, and broiling some nice steaks from my buck, we enjoyed a most pleasant meal, and a happy lot of mortals were soon rolled up in their respective blankets.

Next morning, Oct. 30, we rose bright and early, once more to try the goats; but they must have been thoroughly alarmed or thinned out by our previous day's hunt. Bill was the only one so fortunate as to run across a goat and kill it. We all returned to camp by noon, as two of our party had to leave that afternoon.

After dinner, Frank, who had his photographic outfit along, took a view of the beautiful and picturesquely situated camp, after which Bill and Mr. G. drove off, leaving Frank, Charles, Tom and myself in camp.

Friday, Nov. 31, Charles, Tom and I went off after breakfast, to see if we could find any goats further back of the mountain and on the other side of the cañon, but not seeing any tracks nor sign, we left the rocky cliffs for the lower foothills in search of deer. It had snowed the night before, and we soon saw the tracks of a large buck. We had to make considerable noise getting through the dense brush and shrub, and he escaped, frightened by a few bullets, which were sent after him at long range. I killed a fat fawn in the afternoon, and badly wounded another big buck. Following his bloody track several miles, we ran across a wolverine (or "nondescript" as it is called by Western hunters), which we succeeded in killing. It must have been also pursuing the wounded buck.

Natural History.

IMPORTED PHEASANTS.

Editor Forest and Stream:

In your last issue "Barron" relates the unfortunate experience the association of which he is a member has had with the Oregon Legislature, relative to some pheasants, presented by our Consul at Tientsin, China.

While all lovers of noble game will sympathize with him in what he says and regret that their application to the ruling powers failed, yet none need be surprised, for the average legislature of our country pass more stupid and uncalled for acts, and create fewer meritorious ones than any other bodies of lawmakers having equal power in the world. It could hardly be expected the Legislature of "Barron's" State would appreciate the value of any of the birds mentioned by him as additions to the avifauna of our land. But it is not with the law-makers I have to do at present, but with the pheasants themselves. I do not call them "Mongolian," for there is not a Mongolian pheasant (*Phasianus mongolicus*) in the lot, that is if the English terms applied to them are characteristic, but they come from quite different countries, two of them, the copper (*P. sæmmeringi*) and the green (*P. versicolor*) being from Japan while the rest are purely Chinese species.

The thought that occurred to me on reading the article, and which has influenced me in writing to you, is what a curious menagerie there will be on Protection Island in a few years, if the birds remain there! I do not know the distance this island is separated from the mainland, but if it is not considerable, the birds will be dwellers of wood and mountains of the interior before long, as they are capable of quite extended flights, and they will naturally seek the districts most suitable to their mode of life. But perhaps Protection Island is large enough to afford all the variety of hills and plains necessary. There are four genera in this little company of birds, viz.: *Phasianus, Euplocamus, Ceriornis* and *Thaumalea*. The first includes the species mentioned above, the second the silver, the third the Tragopan cocks and the last the golden pheasants.

No species of birds are probably more addicted to hybridism than pheasants, and although to a certain extent the difference of genera will present a obstacle to the crossing of some of the birds turned loose, yet undoubtedly there will be in a few years—perhaps this year—some very curious and interesting specimens existing on this island, regarding which I can safely assert no one but a trained ornithologist will be able to decide to what parents they owe their existence. As a rule, hybridism in game birds should not be encouraged, although it is claimed that the offspring of distinct species in England is a finer bird than either of his parents. But in the preserves of that country the pheasants are semi-domesticated, and often brought up by hand. It is to be hoped that "Barron," or some other member of his association, will publish the result of this introduction of pheasants of various forms on Protection Island.

I was sorry to see that the silver pheasant was a member of the little community, for although they are large, handsome birds, yet the cocks are very pugnacious and fierce, and the powerful spurs with which their legs are armed enable them to commit great injury to any fowl that dare stand against them. They are an overmatch for any other pheasant on the island.

To those who contemplate introducing members of the

pheasant family into this country, I would advise the importation only of species of the genus *Phasianus* or true pheasant. There are quite a large number of these; all birds of beautiful plumage, some of exceptional splendor. They are game in the full sense of the term, and most excellent as an article of food. Other genera, such as *Crossoptilon*, eared pheasants, *Lophophorus*, monals, *Ceriornis*, horn pheasants, and *Pucrasia*, Koklas pheasants, would also be desirable acquisitions to our list of game birds, but they are difficult to obtain, and their importation would demand a considerable outlay of money. They are mountain-loving birds, and would doubtless do well among the high ranges of our country. Before they are introduced, however, our legislators will have to be converted to the necessity of providing means for their protection, for the poacher and the pot-hunter, the game exterminators of civilized lands, would soon bring to nought all efforts for the successful acclimatization and increase of these beautiful birds, unless effective laws and also means for their stringent enforcement were provided for the pheasant's safety, as well as for the lawbreakers punishment.

SAGAMORE.

WHY DOES THE PRAIRIE DOG BURROW?

THE prairie-dog question is liable to become very profound if followed to its depths. A writer in FOREST AND STREAM of March 19, from the classic grounds of Cambridge, Mass., questions the proposition that prairie dogs burrow for water. If they do not burrow for water what do they burrow for? They do not burrow for fun nor food nor for warmth, for these exist in great sufficiency on top of the ground.

The inhospitality of a prairie dog town is not inviting for extended observations, and it must be admitted that no man, animal, bird, insect or reptile can live without water; so the question remains, where do the prairie dogs get their fluid? Their towns are generally remote from open water—so much so that no other animal lives in the vicinity; not even the prairie wolf, whose powers of locomotion are far superior to the prairie dog. The owls can fly to water, and the rattlesnakes can exist upon the juice of the prairie dog.

The moisture in the grass on the prairie dog plateaus is meager and insufficient. I did not positively assert that there were wells at the bottom of prairie towns, but believe it entirely probable. The only way to find out is to bore and see. Man, even the most scientific, has never been misled by following nature, and whenever railroad engineers have followed the buffalo they have found the best trail; the unerring sight of the bee hunter follows the sweet-laden messenger to honey, and the best watermill sites are at beaver dams. The true mission of science is to unravel the wonderful arcana of nature and make it plain to the common understanding. It will not do to stop and say that what we do not know does not exist. I have not had the advantage of reading Dr. White's article on "Artesian Wells on the Great Plains," published in the *North American Review* for August, 1882, but have suffered the misery of visiting the abortive attempt of Captain (now Major-General) Pope to bore for water under Government instructions on the Llano Estacado near the Pecos River in Texas, but found no prairie dog towns in that vicinity—and no water.

When old Senator Benton was advocating the Pacific Railroad many years ago, he said, "Follow the buffalo," and now for those seeking water on the arid table lands of the West, it may as well be said "follow the prairie dog."

The question of artesian wells in the far West is of great consequence to the Government, and if the little prairie dog has opened the way he should have credit for it. "Geological conditions" are all very fine in a scientific point of view, but it is a well known fact that our most scientific army officers explored California and found no gold, and that the scientific geologists adjusted their instruments on Mt. Davidson twenty years before the practical miners discovered the Comstock lode; and did not like the "geological formations."

In prospecting nature I "go more" on the bee, the bison, the beaver and the prairie dog than the opinion of all the scientifics in the United States; with great respect to them.

You may safely dig for water where the cottonwood grows, and are sure to find it in five miles of where the dove coos; but whether it can be found at the bottom of a prairie dog town, or not, cannot be solved by science, but by practical experience.

If the hardy pioneers who have made Western America what it is had waited for geological conditions, geometrical computations, and astronomical calculations, they would have been still hugging the Atlantic seaboard.

When science takes the common people by the hand and leads them in the ways of prosperity and power, it will be worshipped as the mariner worships the North star.

NOGALES, Arizona. C. D. P.

Editor Forest and Stream:

Seeing in your paper several articles on "Prairie Dog Wells," I thought I would write to you about a prairie dog which was kept for a number of years in the museum of this city. I saw it frequently and the curator told me that he never could get it to touch water, though he frequently offered it. This case, and the position of prairie dog towns, lead me to think the dogs do not drink water. H. J. R.

SALT LAKE CITY, Utah, March 25.

WHITE EGRETS IN ORLEANS COUNTY, N. Y.—About a year ago a party residing in Orleans county informed my son that on Thanksgiving Day, 1883, two white cranes (egrets) were killed near East Carlton, in the Tonawanda Swamp. I wrote to the party asking the particulars of the capture, but never received an answer. I also wrote to Mr. G. H. Headley, taxidermist, of Medina, but he had never seen nor heard anything of them. I questioned a number of parties residing in the county, but received no additional information, and began to think that there was nothing in the report. About two weeks ago I wrote to Mr. Frank H. Lattin, of Gaines, publisher of the *Young Oologist*. He knew nothing about them but would make inquiries. Under date of March 25, he writes: "I am pleased to inform you that it is a fact in regard to the two white egrets being killed in Carlton—not only two but three. Two were killed one day and the third a few days afterward. One was knocked over with a club or stick. They were killed by a Mr. Ford; he had them mounted and now has them in his possession. You will probably hear more about the egrets soon. I am going to see them." Mr. J. H. Langille, in his "Our Birds in their Haunts," makes no mention of ever seeing this species in Orleans county, although he resided for a number of years in the vicinity of Tonawanda Swamp, and as I thought it an unusual occurrence for these birds to be found so far north and so late in the season (December), I have taken the trouble to get at the particulars.—J. L. DAVISON (Lockport, N. Y.).

A FEMALE MOUNTAIN SHEEP.—*Editor Forest and Stream:* Having lived long in the West, taken many of its haphazard chances and mixed in and with all classes and conditions of life, I seldom read the FOREST AND STREAM, but some event of the past is recalled. I think then that I will jot it down for the benefit of fellow craftsmen, but I seldom or never do. The intention is good, but the convenient season seems never to arrive. To-night, however, I go to you for an opinion, and am consequently compelled to bestir myself a little. A few days since a Mexican brought in a couple of mountain sheep (at least they were what I always regarded as such); the buck was a fine hefty fellow, and would weigh with entrails out probably 200 pounds, of which 50 pounds could safely be taken up in head and horns. The female, whose head gear I send you, was smaller. The horns, instead of being massive and curling, are light and point backward, which led to the statement that the animal was an ibex and not a sheep. To settle the dispute I send the horns to you to pass judgment upon the character of their former wearer. I have seen goats killed in the mountains above Tubac, but they were goats in the full sense of the word, offshoots, I presume, of some Sonora stock. They are not to my knowledge found in either the Tucson or Santa Catalina ranges where the mountain sheep abound, or at least may be said to be pretty plentiful. These were killed in the Catalinas.—ADIOS (Tucson, Arizona, March 18, 1885). [The horns are those of a mountain sheep without doubt, but they are the largest pair of female sheep horns that we have ever seen. But from our correspondent's statement that the animal was a female, we should have been inclined to regard the horns as those of a young buck, perhaps a yearling. Probably the animal which bore them was quite an old one.]

WHERE DID IT COME FROM?—*Editor Forest and Stream:* On March 17 a male prairie chicken (*Cupidonia cupido*) was shot on the Virginia side of the Potomac, near Washington, by Mr. Alex. Skinner, a watchman of the National Museum. The specimen was brought to the Smithsonian immediately after it was killed, and has been mounted for the exhibition collection. It was in perfect feather, and showed no positive indication of having recently been in captivity, although on the inner edge of each wing, near the bend, was a tumid, somewhat inflamed callosity, and the tail feathers appeared somewhat worn and soiled at the ends. Since it is desirable to know whether the specimen in question was one that had recently been introduced from the West and turned out, or whether it is one of a lot, or their descendants, brought some years ago to some part of Maryland or Virginia, I send you this note in the hope that possibly some reader of FOREST AND STREAM may be able to throw light on the question.—R. RIDGWAY (U. S. National Museum, Washington, D. C., April 6).

SPRING NOTES.—Saturday spring, Sunday winter, with snow drifting deep and a gale from the northeast. We have, indeed, an uncertain climate. There were bluebirds, red-winged blackbirds, purple finches, song sparrows and the little gray *Junco hyemalis* here Saturday; and "Homo's" notes of snipe made us think that if the weather held we possibly might see one by Fast Day, which comes this week. We cannot sing with the poet of the "beautiful snow." No, not now, for our thoughts are of other things; toward coming visitors from warmer climes. One Richardson's and one hawk owl were recently taken near here, but the big white ones are very scarce. The creeks are clearing of ice and the ducks will get in and put some meat on their bones.—X. Y. Z. (Salem, Mass., March 30).

Game Bag and Gun.

BATTERY-SHOOTING.

Editor Forest and Stream:

For twenty years or more I shot ducks on Sandusky Bay, and am therefore qualified to speak of what the shooting used to be as compared with the shooting of the present day. In those days, before the advent of batteries or even of decoys, there was no better place out of doors for ducks than that bay, with its bordering marshes and tributary streams. The upper marsh was almost too far away for most of us to go to, and consequently the lower marsh was our hunting ground. When we went below Pipe Creek, and when we went for open-water ducks we struck for Fisher's Cove, Old Ned's Cove, and so on, up to the Four Big Trees on Cedar Point. Our boat houses were situated on the banks of Pipe Creek, about half a mile from its mouth where it opened out into the Cove in the neighborhood of Big Island Point. From thence we could get down to the marsh in any weather, a thing greatly to be desired, for, as a general thing, the stormier the day the better for ducks. Starting early in the morning, we almost invariably got shooting all the way down the creek. The water was always perfectly black with mud hens, with a goodly sprinkling of ducks, and the great flock would open out on either side for us to pass through and close in behind us at a few rods' distance, the ducks, of course, taking flight before their less cautious companions, the mud hens. If the wind was too strong from the eastward, and the sea too heavy in the open cove after passing Big Island, we struck across the sniping ground and so into Pond Lily Channel, down Black Channel, through Plum Brook, into the Graham Pond Holes.

This chain of ponds in the midst of the great marsh was the favorite feeding place of ducks, and countless thousands were constantly flying from one pond to the other, affording the best possible shooting to any one who had shoved his hunting skiff into the narrow strip of cane grass or flags which separated the ponds one from the other. It awakens the old thrill now when I think back to the hundreds of times I have been thus hidden, and I can almost see in imagination the long lines of bluebills with their black necks and white breasts, skimming along about three feet above the water, until, with sudden rush, they rise over the bunch of cane grass and again resume the level of their way on the other side. In those days I used to see them in my dreams at night after banging away at the reality all day. To those who did not care to go so far down, the points and channels up along the creek afforded good shooting, and the constant fusilade sounded almost like the Fourth of July at times. In good stormy weather there was good shooting for everybody and plenty of it, and if a duck hunter got no ducks it was his fault, for you could certainly find that his powder flask was empty.

I well recollect the first decoys I ever saw used. Old Uncle Jim Paul, with McKinster and J. D. Bourne (the three of them in a rowboat) had shoved into the cane grass off Ned's Point and set their decoys out in the open water, so that the countless flocks of ducks coming down the bay could see them. Those decoys were primitive enough, I assure you; mere chunks of white cedar, sharp at one end, with a chuckle head stuck on to the blunt end, painted with lead color and black, with a dab of white paint on each side for the wing coverts, but the way the ducks came down to them was a caution, and it is needless to add that with those three men shooting, the number of dead ducks in the water was wonderful to see. They soon had imitators, and in a year or two, every man who owned a boat and gun had also his flock of decoys, and no one would think of going down for ducks without at least a few decoys to throw out in front of his hiding place or blind. In those days the whole lower cove was set full of ducks.

From Sunken Island and Ned's Point down to Black Channel and over to Big Island Point and up Pike Creek the great flock rode night and day. Disturbed by the sand scows after the night had set in, the distant roar of this flock, as they took flight or fluttered along the water, could be heard from the lower part of the city, miles away. They could not be driven away by any number of hunters, boats, guns, or other appliances then in use, and year after year saw no diminution in their seemingly inexhaustible numbers.

Finally, in an evil hour, came the batteries, and from that hour the preëminence of Sandusky Bay as a shooting ground was gone. Year by year the numbers of batteries increased, and in less than five years there was no shooting for any one outside of a sinkbox. What twenty-five years of shooting, by men and boys, from points and boats, had failed to do, these batteries did in less than five years. The feed is just the same to-day as it was then, but the great flock is a thing of the past. You may paddle from the Draw Bridge down to Black Channel and not see a duck, where, in those days, were millions of them. There is no open water shooting around the creek, except, as I said before, from batteries, and there is no use going down the channel to the Pond Holes, for there are no ducks there. One would naturally suppose that being so disturbed in the open water the ducks would go down there, where the batteries never come, but this not the case as we shall see further on. Now to see how this battery business does actually work, let us take our position on Sunken Island, from whence we can see both up the bay and down toward the mouth of Black Channel. Out about a quarter of a mile is a flock of perhaps a hundred ducks, which, to a practiced eye, reveal themselves to be decoys. Apparently among them, but in reality a little to one side, is something which looks as much like a piece of board or a rail in the water as anything. That is a battery and you can just see a portion of the man's hat near one end of the innocent-looking rail. Away off beyond is the tender whose sharp "m-a-a-r-k" we hear coming across the intervening space. Down goes the head and the flock of decoys are alone upon the water. Coming down the bay is a great flock of redheads. They catch sight of the flock on the open feeding grounds, set their wings, and with whistling rush swoop down among them. Scarcely does the *h-wish* of the advance guard, as they slide into the water, reach our ears, when up rises a man in their very midst. Bang! bang! bang! bang! and all is tumult and confusion. The terrified flock goes up, up, up out of rifle shot, and bewildered by this onslaught, which they cannot account for or understand, their only thought is to get away from there entirely, and get away they do. Crossing over Cedar Point at a safe altitude, they fly for hours without again attempting to alight.

This accounts for there being no ducks in the marsh or down in the pond holes. A duck's common sense tells him to give a point or bunch of grass a wide berth, and even if shot at from one of these points he will go down in open water to the first flock he sees feeding. But when, in fancied security, he goes down to a flock of hundreds of his kind, out in open water, with no cane grass or other cover within half a mile, and is shot at by a man getting up out of the water within ten feet of him, he is a scared duck if not a dead one; and if he has a little time to spare, if he doesn't get entirely out of the country before he stops it is not his fault. The great feeding flock no longer exists in the open water, because there is no chance for the nucleus of such a flock to form. Each flock is terrified in turn as it arrives, and the ducks are prevented from becoming wonted to the feeding ground, although the feed is the same as of old, when miles of water were covered with ducks with more coming all the time. As I said before, there is no shooting for any one outside of a battery. My friend and old hunting chum, Hauser, went down three days last fall and each time brought home and took out at night the same two shells he put into his gun in the morning when he started before daylight. When he can't get ducks, there's no use for any one else to try, for a better shot never sat in a boat.

In the upper bay, where the Winons' club house is, the club have enforced the law against battery-shooting with a result as stated by "Sagamore;" but in the lower bay or cove, the law is not enforced, with results as hereinbefore stated. Some of the battery men say: "Oh, well, there are so many shooters and so many cussed boys pounding away at the ducks all the time, that's what's the matter." Yes, but for twenty years there have been just as many shooters, and the "cussed boys" with their three-dollar singlebarreled shotguns or old muskets, have been just as thick and just as omnipresent as now. Indeed, I think there was more shooting then than now, for then there used to be the unfailing evening flight, and one could hear a perfect cannonading down there from sundown to dark and after dark. Now you can't hear a gun, for there is no evening flight; that, too, is a thing of the past. With all that shooting, year after year, the ducks continued to come in undiminished numbers until the advent of the batteries, since which evil day the shooting has been ruined.

Pardon me for this rather extended statement of facts, but I think that it proves beyond all doubt the statement made by your correspondent "Sagamore," to wit, "That wherever batteries are systematically used, a diminution, if not the entire disappearance of wildfowl is sure to take place."

J. J. B.

Editor Forest and Stream:

I have read with much interest the articles on battery-shooting in your valued paper, and although living right where they are used, and have been for a long time, I did not intend to have anything to say on the subject, but since "X." has taken a hand, and "two against one is not fair," I must say that I think "Sinkboat" is on the right side. My experience, like that of "Sinkboat," is only confined to one place or locality, viz., the headwaters of the Chesapeake Bay, or more properly speaking, Susquehanna Flats.

In your issue of March 12, "Sagamore" says, "batteries, if persisted in, are certain to drive the fowl away from their

haunts." Batteries have been in use here since 1843, nearly fifty years, and still we have countless thousands of the birds with us each year. I heard more than one old gunner remark that last season we had more ducks with us than they ever remember seeing. Does this prove that they will leave their haunts?

As to the using of sailboats to gather up the dead ducks and to keeping others on the wing, this—I speak of the flats—is positively not done. Days when the ducks will not fly are invariably calm ones, and a sailboat would be of no possible use, and when there is a good breeze they are on the wing continually, although they do not always draw to the batteries. "Sinkboat" admits that "occasionally the yacht is sailed around." I go so far as to deny this also. Rarely, or ever, do you see a yacht or scow under sail, excepting when there is a change of wind, and they wish to go to windward. I might say more on this subject, but will leave it for "Sinkboat," as he is better able to handle it.

CHARLESTOWN, Md. PROFESSIONAL.

HOW THE GAME GOES.

Editor Forest and Stream:

I walked around this evening taking a view of the mercantile houses in Wichita Falls which make a business of buying and selling skins. At one place they were baling the skins for shipment, and I was told that their destination was New York.

The stomach of your great city must be quite a devil of a thing, since it seems eager to devour anything that may be pitched into it, without regard as to whether it stinks or smells sweetly. There were hundreds of skunk-skins baled for shipment to that place, and these stank so badly that the air for several squares around was laden with the smell. My clothes became infected with the smell, so that while I write this in my room in a hotel I am almost overcome with it. You see, one cannot go near a rose like that without being penetrated by its fragrance. I suppose the paper on which I write you this will bear the strange odor to you, and that it may even be conveyed into the pages of FOREST AND STREAM. Can you tell us, Mr. Editor, what economy the polecat subserves by smelling so badly? It has always seemed to me a mystery—one of the most recondite things in all nature. I asked if the smell of these skins would not hurt the price in New York, but they said that the louder the smell the greater would be their value there.

I saw also shipped from the same house 10,000 pounds of antelope and deer skins, and this made me feel really sad. They tell me that the average weight of these skins is two and a half pounds each, so that they represent 4,000 slain antelopes and deer. How many more have been shipped from this place the past fall and winter I could not learn, but was told that this one house had shipped not less than 100,000 pounds, and expected to ship a good many thousand more from last season's shooting. Here then we have at least 25,000 of these beautiful animals slain in one season in the country which trades at Wichita Falls, leaving out other houses here engaged in the same business. The shipments from Colorado City, Big Springs, Marienfeld, Midland, El Paso, and other Texas points, must be in the aggregate very much larger. It is certainly within the bounds to say that 100,000 of these animals have been slain in Texas the past shooting season.

In 1877 I wrote you from Denison, Texas, about the enormous slaughter of the buffaloes, predicting the early and total extinction of that race of animals. Since then the buffalo has appeared in Texas only twice in very feeble numbers. The past winter a herd of about eighty appeared on the Staked Plain, and I am told that all of these were killed. It is safe to say that he will never be seen in his wild state on Texas soil again. The volume of his history is about closed, and he has gone glimmering into the past.

At the rate of destruction now going on in Texas, how long will it be before the beautiful antelope has also taken his departure? In less than ten years their race will be extinct. He, like the buffalo, seeks no hiding places. He lives on the wide, open prairies, and hates mountains and forests. Therefore he is always exposed to the deadly long-range rifles of the cowboy and professional hunter. They go in bands, always sticking together, and may be shot down by these merciless destroyers as long as they like. As for the deer, he will probably be with us forever, but in extremely small numbers, because he has no special partiality for the prairies, and flies for protection to the deep forests and gorges and crags of the mountains. He is already almost entirely driven from the Texas prairies, where I used to see him in swarms of hundreds and thousands. Some years ago he was rarely seen in the woods of Eastern Texas. He is now more numerous there than in any other portion of the State, except probably the wild mountain district west of the Pecos. He has gone to the forests and farmers of Eastern Texas to get away from the terrible cowboy and pot-hunter.

And the wild mustang, which I used to see in herds of hundreds, and which I thought the most beautiful of all animals, with their glittering skins and long black manes and tails, has gone too, almost entirely. By Jove, what times I have seen in racing with this wild, beautiful son of the prairie on his native heath.

But we can't help these things. Such is the devouring white man, and such is devouring civilization. The buffalo had to give place to the domestic cow, the mustang to the domestic horse, the antelope to the domestic sheep and goat; just as the wild Indian had to give place to the domestic man. It is home and home things that are conquering the world. Also I see from these hide houses here that the wolf is giving way to the domestic dog. But pray, Mr. Editor, what particular thing is it that the polecat is giving place to? At this point I am lost in wonder. Will it be to something that can shoot out a stronger smell? How can it be possible?

I met here to-day two noted Comanche chiefs, whose names only a few years ago were a terror far down in Texas. One was Wild Horse and the other White Eagle. I had quite a long conversation with them through an interpreter. Wild Horse is quite a fine-looking old man, with a really intellectual countenance and the appearance of a born leader. He is said to be a great orator. I spoke to them about the disappearance of the buffalo and other game. "Yes," said Wild Horse, "the buffalo is gone and all the others are going. The Indian will soon be gone, too. My tribe in my day covered all this country from the big mountains to the sea. Now you can cover us all with a blanket. A few years more and we Indians are all gone." White Eagle's wife was standing by listening to this conversation. As the old chief spoke these words, she turned to her prattling pappoose on her shoulder and loved him in a sad, but sweet and motherly way.

And see how civilization advances, sweeping all things before it. When the Fort Worth and Denver Railroad reached this place twenty-six months ago, there was nothing here but a few hastily-erected tents and shanties, and there was nothing in the country save a few adventurous cowmen, with their ranches scattered very widely apart. Now here is a bright city of 3,000 people, long rows of stately stone and brick houses, and over $1,500,000 of taxable real estate. The granger, with his plows and hoes, and reapers, is settling over the country in heavy force, and the cowman and cowboy are going further west, in a few years to be driven still further on by the inevitable granger. Like the buffalo, the antelope and Indian, the inclusive cowman must go. There is some cheer at least in the fact that the destructive cowboy must go. In a few more years he will be a monster entirely of the past.

To-morrow I start alone on a buggy trip far up the Texas Panhandle, where I may not see a human residence in a day's travel. Yet I shall take no shooting irons with me, not even a pocket pistol. Thinly as that region is peopled, the Fort Worth & Denver Railroad is now building into it from this place, and in a year or two it will swarm with bustling folks. Among some other duties I go to christen a new city and to secure some choice town lots. There is now not a house, save a stage stand, in ten miles of the place, but in a few months it will be quite a city. Such is life in the West. N. A. T.

WICHITA FALLS, Texas, March 20, 1885.

MASSACHUSETTS GAME PROTECTION.

TWO or three reports by the Committee on Agriculture in the Massachusetts Legislature are encouraging as looking toward better protection. An order was introduced in the House in January last and referred to the Committee on Agriculture touching the expediency of so amending Chapter 169 of the Acts of the year 1883 as to allow the hunting, chasing or killing deer within the counties of Plymouth or Barnstable during the month of November in each year.

Chapter 169, Acts of 1883, gives a close season all the year round to deer, and continues in force. Below is the report of the Committee. It has been accepted by the House and goes to the Senate next week for concurrence if they so vote:

"The Committee on Agriculture report that it is inexpedient to legislate, on an order relative to so amending Chapter 169 of the Acts of the year 1883 as to allow the hunting, chasing or killing deer within the counties of Plymouth or Barnstable during the month of November in each year." The Senate can refuse to concur or can recommit the order.

The following order was sent to the Legislature early in February, and referred to the same committee:

As to the expediency of amending Chapter 282 of the Acts of the year 1884, entitled "An Act for the protection of game in the ponds known as Cockeast or Davol's Pond and Richmond's Pond, situated between the Westport River and the Rhode Island boundary line," so as to allow the shooting of wild duck or fowl of every description, from a boat, raft or float on the ponds named in said act at any time between the first day of November in any year and the first day of April following.

This act was only passed last year, and now certain parties want it amended so that for a portion of the year shooting in the manner named may be allowed. It would certainly be a great mistake to repeal this act, and fortunately the committee thinks so. Here is their report: "It is inexpedient to legislate, on an order relative to allowing the shooting of wild duck or fowl of every description from a boat, raft or float, between the first day of November and the first day of April, on the ponds named in Chapter 282 of the Acts of the year 1884, entitled an act for the protection of game in the ponds known as Cockeast or Davol's Pond, and Richmond's Pond."

The result of the prohibition of shooting afloat on Cockeast and Richmonds Ponds has been to make the bodies of water places where the ducks feel that they are safe. The consequence is that they gather here in great numbers, and in their flight to and from the ponds make good shooting, where a year or two ago there was little or none. The report above referred to was made in the Senate, and upon motion of Senator Job M. Leonard, of Somerset, Bristol county, it was recommitted and the House has concurred. It is hoped that no steps will be taken toward repealing the present law, which is most beneficial in its influence.

SOME REMARKABLE SHOTS.

Editor Forest and Stream:

In May, 1883, I was out near an ice pond, when my Irish setter flushed a killdeer plover which flew to my left as I fired at it, a cowbird flying in the opposite direction came in line and received a part of charge. But instead of dropping, as did the killdeer, the cowbird flew directly into the mouth of my dog, who brought and dropped it at my feet. It then immediately arose and commenced circling around in a spiral motion until it disappeared from my sight. My dog seemed as much astonished as myself. As it arose he made a motion to catch it, but missed it, and then watched it for some time in its spiral motion, until reminded that there was other and better game than vagabond cowbirds to look for, and he soon retrieved the killdeer. J. L. D.

LOCKPORT, March 28.

Editor Forest and Stream:

In 1875, while shooting for a company medal, with Enfield rifles, we used two targets, about twelve feet apart, six-inch bullseye. My rifle being too heavily charged, I determined to shoot it from a rest, before the actual contest began. Resting it in the crotch of a small tree, I aimed at the right hand target and pulled trigger. The gun went one way, I another, and while the target I shot at was intact, the one on the left showed a center shot. Have never been able to account for it, or to repeat the shot. RIFLE.

SAVANNAH, Georgia.

Editor Forest and Stream:

Seated at the desk to-day—the equinoctial, which Wiggins has appropriated to himself, having piled the snow around to such a degree as to render travel impossible—I read over some of the remarkable shots in the back numbers of your paper, and concluded to contribute my mite to the general fund. Though I have killed game at something beyond the usual range, and made many accountable and unaccountable misses, I would not call any of my shots remarkable. However, I saw one made that, for the variety of objects hit, almost equals the recently published exploit of "Col. Mendacity." One morning in September, 1870, Hiram Humphries, the present postmaster at McDonald's Corner, in this county, sallied forth to shoot a sheep. He was armed with a brass-banded musket, with "Dantzic" on the lock-plate, a regular old "dunder and blitzen," and it was loaded with a round ball the circumference of which was equal to that of the base of my thumb. When he got within forty yards of his intended victim he was standing in a little hollow. Forty feet beyond the sheep was a small knoll on which was a flock of chickens. The village smithy stood directly in line, about 160 yards from the shooter, and in the door stood Odber Secord and Isaac Humphries, the latter having his hand pushed in behind the breast of his leather apron. Had the boy taken an off-hand shot the bullet would probably have buried itself in the knoll, but before any one of the half dozen who were watching him realized what he was doing, he dropped on one knee and fired. The ball inflicted a flesh wound in the neck of the sheep, and passing on killed two of the chickens on the knoll. It then grazed the top rail of a cedar fence four rods from the shop and struck Isaac on the arm four inches below the elbow, splintering the bone on the upper side; then passing through the muscle of the arm about two inches from the head of the elbow, it lodged between the double boarding of a horse stall at the back of the shop. It thus passed through the double of his arm and left four open wounds. The wounded man was then about twenty-three years of age, and had previously lost an eye and had both legs broken. This accident unfitted him for his business, and he is now an operator in the employ of the W. U. Tel. Co. This is not a fable; but you will not have to dig deep for a moral: "Be careful in what direction you point a gun." L. I. FLOWER.

QUEENS Co., N. B., March 18.

A DEER HOUNDING INCIDENT.

Editor Forest and Stream:

In connection with the recent discussion in your columns regarding deer hounding, and to show the abject terror of the pursued deer, the following incident may be interesting. Last week E., a young farmer, living about three miles east of this place, while putting his team in the barn, about 3 o'clock A. M., after returning home with his wife from a dance, was startled by his wife's screams at the house, where he had left her but a moment before. Running to the house, his surprise can be imagined at seeing, standing in the middle of the room, a two-year old buck, panting and trembling in every limb, the heaving sides and protruding tongue plainly showing that a long chase through the deep snow had completely exhausted him. Quickly taking in the situation, E. closed the door, and springing upon the frightened animal, after a severe tussle overcame it, and with the aid of his wife securely tied it.

It seems his wife after entering the house did not close the door, but struck a light, upon which the deer came bounding into the room. The house is but a few rods from the woods, and the deer probably coming to the edge of the clearing at the moment the light appeared through the open door, ran directly toward it, in the frantic effort to escape the dreaded pursuer.

In the morning E. brought the deer to town, and wanted to sell it to me, but not caring to buy, I allowed him to put it in the inclosure with my own deer, who at first resented the intrusion, but are now on the best of terms with the stranger.

E. said the deer was followed by a lynx, which was probable, as one or more of these animals are known to frequent a large swamp near his place. This was too good a chance for a chase to lose, so taking my two trusty fox-hounds Range and Sport, and the heavy gun, a ten and a half pound Parker, 10-gange, a half dozen three-inch metal shells, loaded with 5 drams Hazard ducking powder No. 4, and 1 ounce No. 1 chilled shot, two No. 8 pink-edge wads on powder and one cardboard wad on shot (by the way the correct load for a fox at fifteen rods), and last but not least a pair of snow shoes, which the twenty inches of snow on the ground made a necessity, I was soon with a friend as anxious as myself, driving rapidly toward E.'s place.

Arrived there, after putting guns together, adjusting snow shoes, etc., we proceeded to the place where the lynx left the track and turned back into the woods. Our disgust can be better imagined than described when we discovered that the much wished for lynx tracks were made by a hound who, running still—that is, not giving tongue—had seen the light and hearing the noise at the house, and E.'s watch dog barking, had discreetly turned about and taken his back track, without feasting on venison, as he surely would have done, had not E. happened to return home at the time he did. P. M. R.

WHITE CLOUD, Mich., March 31, 1885.

A LONG SHOT AT A SWAN.—March has been a terror here abouts, but the reign of the tyrant is nearly ended. Wild geese are flying, and I hope for some ducks ere long. Swans are flying too. Let me tell you of what I call a remarkable shot: The other morning, March 16, to be exact, a boy came to my door and told me, "Swans are flying; do you feel well enough to go down and try for them?" Of course I did; I got my gun, stuck in my pocket half a dozen shells, some of them loaded with 12 buckshot, three chambers, settled with No. 12 chilled shot, the others were charged with BBs, one ounce. All had 3½ drams Orange ducking behind the shot, three Eley wads over powder, one over shot. My gun weighs only six pounds, so you can see I am not much afraid of recoil. I reached the dam, took position and waited. The air was very cold, and I regretted having come out. Presently a flock hove in sight; I slipped a "buck shell" into my right and a BB into my left barrel. The swans passed over, but so high that I thought it useless to fire. My friend, the boy, said: "Try 'em, won't you? Don't let 'em go without one shot." "Nonsense," said I, "they're too high." However, my gun came to my shoulder, I drew the trigger of the right hand lock, and to my surprise one of the flock turned tail skyward and fell. He had not come down more than two-thirds the distance to the water, when he seemed to recover and started off again. I sent the BBs after him and he came down. The boy went and brought him to me, and I found that the buckshot had cut off his bill entire close to the head, while my BBs had killed him. I can tell you nothing of the distance of the first shot. I thought, however, that the bird was out of range. I am satisfied the second shot exceeded 100 yards. The remarkable thing to me about the first shot is that buckshot would go as a ball the distance I have mentioned. One shot could not have carried away a swan's bill so clean as this was carried away—AMATEUR (Somerset, Pa., March 23).

MOOR SHOOTING IN FEBRUARY.

We have very nearly reached the limit of our tether over here as far as the shooting season of 1884–85 is concerned. Taken altogether, it has been a decided success; game has been plentiful, the weather has on the whole been what it ought to be, and those of us who have had the time and the opportunity are doubtless ready to usher in February month with a feeling of satisfaction. Some of us, however, do not have the opportunity of sharing in the general campaign, and perforce find ourselves on the lookout for such bits and scraps as fall from the rich man's table, and it is frequently during the month of February that we are best able to replenish their larders. Sportsmen who pride themselves upon the orthodoxy of their sportive character generally clean, oil and put by their shooting impedimenta after Jan. 31; but between that date and March 1, the last limit of our close season, there are some who still, gun in hand, may be seen ardently taking their pleasure in some one or other of the few, very few, out-of-the-way corners we have left in Britain where a little sport can be had. The sport is usually small, but it is essentially true. There is no ceremony about it, no humbug, and it is, therefore, doubtless thoroughly distasteful to many of our "swell" sportsmen. It nevertheless makes up in quality for any lack in quantity, and some of the prettiest of this no-season shooting is to be had upon the single real moor in our southern counties.

Devonshire is usually regarded as the garden of England. Superficially that is doubtless the case; but anyhow the garden has as its central feature a considerable and decided howling wilderness—from the horticulturist's point of view. The wilderness is a moor, Dartmoor by name. It occupies nearly the heart of the county and extends about twenty miles from north to south, by about twelve miles in width. The greatest elevation reached is about 2,000 feet, and the average height of the plateau must be about 1,000 feet above sea level. It is a huge upheaval of granite rock, and consists of a series of rugged hills interscected by countless watercourses of more er less volume. This moor is called the forest of Dartmoor, and the name of "forest" is doubtless given it because there is probably without exception a less number of trees than upon any similar part of England.

Upon Dartmoor I have found three sorts of snipe out of the four we include among our British game birds. The first kind and the rarest is *Scolopax major*, the solitary or great snipe, as we term him in the vernacular. He is a big gentleman, weighing about eight ounces, and easy enough to kill when you find him. We get very few of these snipe in the British Isles; not more than a dozen being recorded as killed every year. The solitary snipe is rarely found in the near neighborhood of the smaller kinds, and as far as my experience goes—it only extends to two—*Scolopax major* is usually out on the open moorland pursuing a really solitary course of life, choosing for his diurnal haunt a broken dip in the ground, where it is fairly dry and thoroughly exposed to every inclemency of weather. That he is not a thoroughgoing Britisher is certain; the east wind seems to be particularly to his liking.

The little jacksnipe (*S. gallinula*) ranges about one-third the size and weight of the foregoing. He is a mere atom of a bird, yet possessed of an independent character of his own, and nearly as idiosyncratic as others of his kind. I have found the common snipe upon almost every sort of ground on Dartmoor, but these little jacks seem to adhere to that which we consider typical snipe ground: Wet, sodden mires, high-lying and well out on the moor, as far from the haunts of man as possible, seem to provide these feeble wildfowl with a congenial haunt. Sometimes one finds them as thick as bees, while at others their absence is their typical point. But for their smallness they would provide but poor sport, but in February, when one goes tramping through the wet, uncertain bogland, they get up so quietly and so unexpectedly, that for the moment you seem to forget that they are what you have been seeking, and in that moment's hesitation the best chance is lost, for as he gathers speed, so he gathers waywardness in flight, and although less headlong in his rate of departure, still the true snipe zigzag is there, and unless you take him at one of the moments when he seems to steady his flight a bit, the chances are that you will miss the little fellow—for the time being. After a short journey of 100 or 200 yards he will be down again, and very often a bad or unhandy shot will go through the same performance two or three times before the snipe is brought to bag, or gets tired of the business and clears off altogether. Sometimes, in February, one gets a lot of these little beggars, far more, as a rule, than of the common variety (*S. gallinago* or *Gallinago media*), although earlier in the season the last named are the most plentiful. We call this bird the moor snipe, and also the heather bleaker, and some of us call him other names too, but we don't write them down often. In February he has become a wary and very wild gentleman indeed. Successive flushings, and perhaps shots at him deprive this eccentric feathered personage of any sedateness of manner which he may have formerly possessed, and you want to be very careful and plan your mode of attack upon lines of the most advanced strategy in order to cope successfully with this moorfowl in February month. At this season there is no knowing where to find them in numbers. No rules can be laid down, and even the most experienced moor sportsman will often and often find himself egregiously wrong in his speculations as to where the snipe will be. I have gone out upon this south-country moor one day when things look roseate for the sportsman and bad for the snipe, and things have turned out as expected. Next day the same general aspect of affairs, tried similar ground and came home nearly snipeless, finding a mere apology for a sprinkling of birds, and every "likely place" a scene of disappointment. Sometimes the birds are all in the soft low ground; another day, under precisely similar circumstances apparently, they are on the high, dry parts. When you have studied their varying habits for a week, you come to the conclusion that under such and such conditions of wind, temperature and weather, the snipe should be in certain places, and yet when you come to prove the correctness of the theory, lo! it is completely and irretrievably upset. This is the rule with snipe all the season, more or less, but when the close time approaches, the birds seem to desire to anticipate it, and simply flabbergast one with the eccentricities of their habits; at least, so it is upon this old-world corner, and I suppose so it is all through this mundane sphere.

Closely allied to the snipe is the woodcock, and when the time comes round for shooting snipe, so shortly after does the other long-billed gentry put in their appearance. Upon Dartmoor itself, upon the real actual moorland but few woodcock can be got, but upon its outskirts, where the inhospitable granite and heather and mire gives place to the cultivated fields, the rough, broken brake and the many-colored fir plantations, there I have killed many a woodcock, and even in February one occasionally comes across them by accident, and can find a good few by trying for them. To me there is something very delightful about woodcock—or as we prefer to style it, 'cock—shooting under such circumstances. The clear frosty air, the crackle of the rime upon the long tussocky grass beneath the firs, the scent of the trees, and the general feeling of exhilaration produced by a fine winter morning all combine to set one thoroughly in accord with one's self, and the peculiar difficulty of finding your bird and moreover of killing him when found, lend a zest to this moorland sport which the more conventional cock shooting afforded by well-preserved, less easy-going districts wholly lack. Folks over here pride themselves more over a woodcock well killed than half a dozen pheasants; and when in February, when others have put away their guns, you take out a steady hustling old spaniel and along with the keeper and a friend manage to secure a brace or two of cock, why then you are envied of the countryside, and feel that you ought to be.

Sometimes when we are trying for woodcock in the outlying plantations we flush a gray hen, sometimes even an old black cock, and it reminds one of the earlier part of the season, back in November, when coming home that long four-mile tramp from the big mire, the setter made point after point, and we just managed to get hold of a brace and a half out of the covey in the dusk of the autumn evening, and wondered how on earth it managed to remain untouched so long. Ah, they are "brave old birds" those heath-poults, and send the blood tearing through your veins when they dash up through the closely set boughs of the spruce saplings, and make you wish the 10th of December were not gone by, tempting you sorely to break the close time.

The uncertainties usually attaching to the ways of the woodcock are less conspicuous in February than are they at other periods of the season. Probably those we find so late are the ones bent on meeting with us—they are very few—and so in order to accommodate themselves to the change from a life of wandering nature to one of more settled description, they become less restive and changeable as regards their haunts. Anyhow it is only at such times as we write of that you can with any hope of success forecast the whereabouts of the few woodcock remaining. Where you find them one day you may with a reasonable amount of certainty expect to brush them up on the next; which of the woodcock is saying a great deal.

If the winter has been a hard one, there will, in February, be some fun, to be had at the expense of the moorfowl proper; to wit, curlew, plover, and perhaps a few duck. The first-named fall to the gun by chance. One never tries for them. They are few and far between, and to get them you must trust to luck. At least, I do so, and I get very few of them, although often seeing numbers; they are too wary and too difficult to get at to waste time over, and are often a precious nuisance into the bargain. Many a morning, when I have successfully maneuvered up to nearly within range of a flock of golden plover, has one or two of these wary gentry gotten up, and with their "curlewing" and circling put up the plover, too, and earned for themselves curses loud and deep. The plover, on the other hand, are more easily got at, and afford better sport. They come in large and plentiful flocks, usually passing from the higher to the lower lands and *vice versa*, once during the day. I have rather a weakness for the golden plover, and my favorite way of trying for them is to be out on the moor by daylight. This plover is an early riser and also an early breakfaster, and it is necessary to arrange to interview him before the matutinal meal. He will probably have occupied a strategic position at the head of some mire, being for the nonce upon the dry ground at the leeward side. The course of proceeding, then, is to walk up to him and his many companions against wind, adopting as deliberate and regular a mode of progression as the inequalities of the ground will permit. If you have any luck, you continue to approach until within gunshot, and directly the flock rises, when about two feet from the ground, have at them! Fire into the brown this time and next time, while they are circling round pick out your bird—it will probably be more than one—and if you think it worth while, reload quickly, and there may be a third shot to be obtained before the birds crowd off to a mire on the other side of the hill. The spoil is collected, and the birds must be followed along the line of flight to the other bog. If you have a dog with you, he may find one or two stray ones, slightly hit, which can be picked up on the way across, only one must not fire so as to set the flock moving again. I usually trust to sighting plover myself, it leads to more successful results on this southern moorland than does working a dog to them; but it requires some knowledge of the ground and some experience of the work to do this. A novice at it may almost walk through a flock of golden plover and never see one. I know that I have in my earlier days on the moor, and the first time "I ever heern or see" golden plover on Dartmoor was one Sunday evening when strolling along, I happened to glance toward the ground, and certainly not ten yards from me the ground was black with them. Before twelve hours were gone by I was among them again, only the aim in view was of a week day character.

Sometimes several wild duck, sometimes a little teal may be picked up in the pools of the streams during hard weather; but they come more by chance than because the ground suits them and rarely stay long. They want a deal of stalking when you do sight one upon the stream, in an open, level part of the moor, and many a beastly cold crawl have I had after them, success rarely attending the undignified operation. In February, though, they are few and far between, and no one would set out to get duck down in this part.

Feather, it will be seen, is of varied character upon the moor I write of, and sometimes it is plentiful; but fur is scarce. An occasional hare and a few rabbits may be brought to bag, but the former are all too scarce, and provide sport almost exclusively for the harriers which hunt various parts of the moor. It's rough work for certain, hare hunting; but it's grand fun if you get a good Dartmoor hare going well, and I suppose there is no more pleasanter way of breaking one's neck than is offered by many of the rough bits crossed in a day with the Dartvale and other harriers. And yet you always come well out of it, that is, if you have a horse of the country, and not the least exhilarating is this one of the several sports which February offers to sojourners in this south country moor during the twilight of the shooting season.

MOORMAN.

England, Feb. 14, 1884.

Mucilaged Wads.—*Editor Forest and Stream:* F. H. Hack's reply of the 19th inst. to my communication of the 5th inst., in which I described my method of "securing wads in place without crimping," may, in the wad he advocates, suggest the same idea more perfectly and fully. But I have serious objection to any wad fixed in place by adhesive substances, mucilaginous or gummy. In my experience the gum will form a chemical combination with the burnt powder, and in many instances firmly adheres to the inside of the barrel, thus contributing to the rapid fouling of the gun; depositing itself in streaks and patches, and, like a bad lubricant used on machinery, wear and tear would take place at some points of the bearings while other parts would be protected. Of course in a shotgun this would be a mere bagatelle; but the difficulty does not stop here. This deposit is hard to remove; water and the ordinary cleaning processes will not do it. I have frequently had to use strong turpentine, refined petroleum or something of the sort in order to cut it out. As most sportsmen love to keep their guns perfectly clean, it behooves them to be a little wary as to what they admit on the inside. If lubricants, as applied to wads, are desirable, tallow, pure and simple, is far ahead of the waxy and gummy substances too frequently used.—Backwoods (Beverly, Randolph county, W. Va., March 27).

Washington Territory.—Tacoma, March 15.—*Editor Forest and Stream:* West of the Rocky Mountains and north of Oregon I have not met with any well-bred dogs. Those few now located in this region, which are designated as good dogs are very indifferent workers, and as far as breeding is concerned, are *nil*. I regret this, because I consider myself safe in predicting that this yet unopen country will, at no distant day, rank high in the estimation of the sportsman. Our snipe season is an unusually long one, embracing almost the entire winter; as is also the case regarding duck. California trout, transplanted here from their native State a few years ago, are most fortunately multiplying. Pheasant and grouse abound, while this is a kingdom of joy for those fond of the trout rod; all our fresh waters abound in trout, ranging from eight ounces up as high as four pounds, and averaging, say, about one. I have swung a fly now for two years, and cannot complain of ever having returned home in a disappointed frame of mind. Elk can be found in our vicinity; deer, bear and cougar within a day's tramp.—W.

An Incident.—Duck shooting on Hay Bay with a friend, I once winged a duck which fell on the bog. Our punt was lying alongside. My dog retrieved the bird, and as he brought it up my friend said, "Look out, or you'll lose it." I jerked off its head, and the body disappeared in the water. "There," said he, "I told you he'd get away." I answered, "If he does, here is his head." We pushed off the punt, and paddled about, but could not see the duck. We went back to the spot and after great difficulty I scooped out from under the bog the dead body. A French physician once said that after decapitation the senses were not immediately destroyed, and to test this it was arranged with the doctor and the criminal that if this were true he would, on his head being cut off, wink his right eye, which occurred. In the present case the question arises, did the duck take in the situation and die accordingly?—R. P. J. (Picton, Ontario).

Fowl Shooting.—There have been but few ducks killed here this spring, owing to there being so much ice, and even at this late day it is dangerous to put out your decoys, for there is always a floe around ready to sweep everything away. To-morrow, Monday, is the last day of the season and great preparation is being made to give the ducks a parting salute. Ham Disston's steam yacht Manatee is here, having on board a lot of Philadelphia sportsmen, who in their minds are slaughtering the poor ducks. John B. Graham has sold his yacht Graham, but this summer will rebuild one specially fitted for the convenience and comfort of sportsmen who may desire a day of genuine sport among the ducks. Snipe have not made their appearance here yet, we have had our guns in readiness for some time.—Professional (Charlestown, Md., March 29).

Currituck Matters.—The annual meeting and election of the Palmer Island Club, whose grounds are on the outer beach of Currituck Sound, was held April 1. The following gentlemen were elected: President and Treasurer, Mr. William F. Bridge; Secretary, Mr. John G. Heckscher; Governors—Messrs. Henry Steers, Howland Robbins and Isaac Townsend. The annual meeting of the Narrows Island Club is called for April 13. The season for fowl shooting at Currituck usually closes Feb. 1, but this year, owing to the cold weather of February and March, it lasted much later, and those club members who stayed into the month of March had some very good shooting, mostly, however, at common ducks.

Philadelphia Notes.—Snipe are being killed all around Philadelphia within a radius of fifty miles. The flight does not seem to be a large one, and the birds are dropping into favored places in bunches of twos and threes. The frost is fast disappearing in the fields, and in New Jersey, within twelve miles of this city, plowing of the light soil has begun. Returning from Haddonfield, N. J., this A. M., your correspondent noticed all the migratory birds about due at this season, and listened to their love songs which filled the air. —Homo.

Winter in Tennessee.—Although our winter has been exceptionally severe, the snowfall has been less than an average, and this county and Middle Tennessee generally, is well stocked with quail. There are fewer bird dogs here than formerly, and many coveys have lost none, save from predacious birds and animals. Formerly cotton and tobacco were extensively cultivated here, but now the grasses and cereals have supplanted them, leaving excellent cover and abundant feed.—C. (Franklin, Tenn., March 23).

Robins Island Club Election.—At a meeting recently held in Brooklyn, by the Robins Island Club, officers for the year 1885 were elected, as follows: President, S. Fleet Speir, M. D.; Vice-President, H. D. Polhemus; Secretary and Treasurer, W. H. Force. Board of Directors: Alden S. Swan, W. B. Kendall, W. B. Dickerman, Henry I. Cullen, Jr., and the officers above mentioned. We have in type a description of the island as it is to-day, which we hope to publish in our next issue.

Albino Fox.—A pure white fox was shot near here a few days ago. Have asked fox hunters about finding them asleep. Mr. Amidon shot two the past winter while asleep. My brother shot one while asleep the winter of 1883.—J. Otis Fellows (Hornellsville, N. Y., April 1).

Sea and River Fishing.

SECOND DAY OF THE TROUT SHOW.

OWING to the crowd around Mr. Blackford's stands on the first day and the late arrivals of some specimens it was not possible to give a complete list of the exhibition on the day of our going to press. On visiting the market next day we were attracted by some handsome specimens of Scotch trout from the Tweed and the Forth, sixteen in all, sent by Prof. J. Cossar Ewart, of the Scotch Fisheries Board. Mr. J. C. Meuhall, of Portland, Oregon, forwarded finely preserved trout from Idaho, *Salmo purpuratus*, variously called, according to Jordan, "salmon trout of the Columbia," "Yellowstone trout," "lake trout," and "Rocky Mountain brook trout." Fifteen most elegant trout from the celebrated Castalia springs, near Cleveland, Ohio, were sent by Mr. J. L. Yale and attracted much attention.

The exhibition as a whole was up to the average and as usual attracted anglers, naturalists, sight-seers and many ladies. It requires some knowledge of fishes to fully appreciate how instructive these displays are, and to recognize the differences between the species. It is seldom that we find a collection of fresh specimens of *Salvelinus fontinalis*, *Salvelinus namaycush*, *Salmo iris*, *Salmo iridea*, and *Salmo purpuratus*, in fact we may say such an opportunity only occurs at Mr. Blackford's annual trout openings, when he spares no pains nor expense to provide this ichthyological treat.

The live carp shown were sent by Maj. Culyer from Prospect Park, Brooklyn, and were the progeny of fish placed there four years ago. The parent fish now weigh about fifteen pounds and the young shown were from two to three pounds weight.

OPENING THE TROUT SEASON.

IN NEW YORK.

THE opening day was a pleasant one in the vicinity of New York; the sky was bright and the air was mild and spring-like. In the early morning it was feared that there would be a lack of breeze, especially on the north shore of Long Island, but before 7 A. M. a light ripple broke the glassy stillness of the ponds and gladdened the hearts of the anglers. On the south side quite a strong breeze from the south made the day as nearly perfect as one so bright can be. At the South Side Club over one thousand fish were taken, and as the members do not kill fingerlings, this number represents a goodly weight. At other places on the Island the catch was fair.

It was expected that ex-President Arthur and Mr. Francis Endicott would, by invitation of Mr. William Floyd-Jones, fish at Massapequa, but the ill health of both prevented their acceptance. Mr. Austin Corbin and friends had fair success at Robinson's Pond; Mr. August Belmont gave some friends fine sport in his preserves near Babylon; Mr. W. H. Vanderbilt's ponds yielded some good fish to a few guests; Mr. Bayard Cutting, who recently purchased the pond of Mr. George Lorillard at Oakdale, invited a few friends to wet their lines in it, but the catch was small. At Sayville the Hon. R. B. Roosevelt and party fished his preserves and found them well stocked and the fish rising freely. Messrs. De Forest and Weeks met with a fair reward at Amityville, while the Suffolk Club members met with more or less success.

On the north shore Rev. Dr. H. J. Vandyke took a few good sized fish at Smithtown. Master Wallace Blackford wet his lines in the ponds of Messrs. Jones and Hewlett, at Cold Spring Harbor, with small success as to the number but took some fair sized fish. Harry Miner entertained friends at Locust Valley, but the fishing was poor, the stream at that place having been greatly damaged by the February freshet which filled all the pools with sand. Mr. E. Weeks of that place took a few fish on the meadow below. The best fishing is still on the south side of the Island. There are few public waters where fishing is free and these are naturally over-fished. The Smithtown River is one of these, and it still yields some sport, and although the catch is likely to be of large fish there are not many of them.

In former years there has been some fair fishing to be had at Mount Kisco, and at White Plains, on the upper portion of the Bronx River, but we have not heard from that region so far. There seems to be reason to believe that the trout fishing this season will be fully equal to that of several previous years, and the fish are in much better condition than was expected from the lateness with which the waters were covered with ice.

IN MASSACHUSETTS.

The opening of the trout season in Massachusetts has been a failure thus far. Ponds and streams are yet full of ice, and the ground covered with snow in the western part of the State. The open season lawfully begins April 1, but this year nature has refused to comply with the law and open the ice-locked waters. So much the better for the trout, all too scarce as they are. They thus gain a few days more of life. Not the usual display of trout has been made in the markets, for the trout are hard to obtain. Not one against ten last year has yet appeared.

In Maine and New Hampshire the thickest ice of the season was made after the middle of March, and it is now fast above the trout waters. The prospects are poor for an early opening. But many of the parties are already planned.

A company of Boston sportsmen have a steamer already engaged to take them from the foot to the head of Moosehead Lake the day the ice goes out. The telegraph will inform them when it is likely to move, and they will hie to the rendezvous with hooks baited with a worm. They will be first on the ground and catch bushels of trout, probably; but, alas, for the cold, bitter winds and colder waters! Give us a little sunshine and green leaves, even with fewer trout—if they will rise to the fly—in preference to cold winds and woods full of slowly departing snow.

But it is singular how some trout do get into market. The law forbids possession previous to April 1 in this State, and yet the few that were shown in the markets were on the platters at the opening of the stalls All Fools' Day in the morning. One chap in white frock carelessly answered, "We have had them three or four days, but didn't dare to show them till the law was off." How hard those marketmen try to evade wholesome laws for fish and game protection.

By far the finest thing in the trout line seen this season is in the window of Appleton & Litchfield, fishing tackle dealers, in Washington street. It is a painting of an Androscoggin *Salmo fontinalis*, a noble specimen, weighing eight pounds. The painting is about 2x3 feet, showing only the trout, the leader, the water and a bit of shore. The hook is in his jaw. He is plunging head downward against the strained leader. The broad tail appears above the foam of the plunge, and the true angler can see the split bamboo buckle, hears the reel hum—how his nerves thrill—if that gut should break! In position the picture is full of life, new to artists, but old to the anglers, like the smell of powder to the old soldier. But alas! honestly the writer would suggest that the water is just a little too green, like the ocean, and that the bluish-gray, sparkling foam of the fresh-water lake is lost—so hard to paint but so easy to see. The picture is by Walter M. Bracket, the well-known fish artist, and an earnest worker for fish and game protection in the Massachusetts Association. SPECIAL.

BOSTON, April 5.

LEASING TROUT STREAMS.

A QUESTION which now threatens to be brought into New York courts is the right of an owner to lease trout streams to individuals or clubs. A correspondent of the New York *Times*, writing from Middletown, N. Y., says:

"Some of the principal summer hotel and boarding house keepers in the Sullivan and Ulster county trout regions, are endeavoring to have an organized effort made by all people interested in the same business to test the question as to whether the members of private sportsmen's clubs acquire the exclusive right to fish in streams by the fact that they have leased the waters of parties through whose lands they flow. The importance of this matter is vital to those whose livelihood depends in a great measure on the attractions which trout fishing affords to their localities, as during the past few years the best portions of the trout streams in not only the above counties but in Delaware county have passed under the control of private clubs, and some of the most famous streams have been leased from mouth to source. No person not a member of the clubs so leasing, or bearing a permit from them, can cast a line in their water without making themselves liable to arrest and punishment. The Willowemoc, the Beaverkill, the Neversink, and all their numerous branches, streams that made the region celebrated among anglers years ago, are no longer common property, and the native who has lived within sound of their waters and fished them at will all his life, as well as the city angler who has been in the habit of spending his vacations along their banks, can now only steal to their pools and cast their lines as poaching outlaws. As it is now, a few men control the great trout region and alone enjoy it to its best advantage. The opponents of this class ownership of fishing rights hold that these streams, having been restocked during the past few years and brought back to their original value as trout waters by the work of the State Fish Commission, the cost of which work has been paid from the public funds, a few persons cannot enjoy the advantages of such public work and expenditure to the exclusion of all others by the mere formation of clubs and leasing the privileges of the streams. They hold that the fish in the creeks are now public property, and the courts will be asked to decide upon the correctness of the ground taken. If the anti-club people do not succeed in curtailing the privileges of the clubs, many of the sportsmen's resorts will necessarily be closed, and thousands of dollars that have been left in that section annually by city people will be diverted elsewhere. This is a matter in which the railroads as well as the boarding house keepers are interested, over 15,000 persons having paid them for transportation to different trout regions last season, and their co-operation in testing it will be expected."

It will be seen that the main point of objection lies in the fact that some, or all, of the streams have been stocked at the expense of the State. No doubt this will be a very knotty question for the lawyers, and we shall watch the case with great interest. So much will depend on the ownership of the land and the legal rights of owners on streams which are navigable wholly or in part, and the many conditions of ownership which will be found in the different brooks, that it is impossible to give an opinion upon the merits of the case in the light of our present knowledge. It is for the courts to decide whether riparian property holders may dispose of their fishing rights to others or not. The Fish Commission has given fish to stock private waters in several cases, and whether such action would necessarily throw those waters open to the public or not is one of the points at issue. It is well known that well-stocked waters within easy reach of a great city soon become fished out and worthless for angling when thrown open to the public, so that within a few years afterward there is no fishing worth going after there.

A correspondent comments on the *Times* article as follows: "Permit me as a member of one of the clubs alluded to, to give in as few words as possible the condition of affairs from our standpoint. If the fishing in these streams would always remain as good as it was when the hotels were built and railways introduced into this section, their argument would be better, but unfortunately the reverse is the case. Four years ago I ceased fishing the Beaver Kill because it was utterly fished out, and for the first time fished in the Neversink River. I found there, as had been the case with the Beaver Kill and adjacent waters, the river almost devoid of fish; that parties from a distance were in the habit of visiting the streams with the apparent view of carrying away as many fish as possible, regardless of size, hiring small boys to increase the catch, and making use of other unsportsmanlike ways of depleting the streams. I have heard parties boast that they had carried away 1,100 fish (some of which were scarcely two inches long), the result of three days' fishing, besides all they ate. In contradistinction to this the Neversink Club limits the catch to twenty-five per day to each member. The fish must exceed eight inches in length and be taken with the fly. One aim of the club is to preserve the fishing generally by preventing the excesses alluded to, the result of which will be a real benefit to the whole of this section. It is a mistake to suppose all the streams are leased. The above facts show that it is not the fault of the clubs that the streams are depleted of fish, but it is owing to the thoughtless and indiscriminate slaughter by persons whose only object is their own pleasure for the time being. The real facts are the fishing has been destroyed by this class of persons, permitted by the hotel keepers and owners of the streams to fish them. Sportsmen will not patronize hotels or travel over railways for the purpose of whipping streams that contain no fish. As to the legality of the clubs to lease the streams, I beg to say that should the clubs waive the ownership of the fish in their wild state they certainly have the right of property, and can exclude any person from trespassing upon their grounds for the purpose of fishing. The clubs not only lease the water, but the land through which it flows. Granting that citizens have a right to catch State trout, I fail to find the authority that permits them to trespass upon private grounds. The statement that 15,000 persons who visited this region last year will be diverted elsewhere unless the clubs are broken up seems not to be borne out by the facts. The clubs have been in existence some years, and the fishing outside of the club grounds is worthless. When the Neversink Club leased a portion of the Neversink River, the scarcity of fish was so great that it had to stock the stream. Some thousands of yearling trout were bought and put in the river at the expense of the club. It is the pure air, the charming scenery, the low price of living, and the accesibility from New York city that induced these 15,000 people to visit this section. Trout fishing is only one of its charms, and this will be entirely ruined in a few years unless the streams are properly protected."

A writer in the *Commercial Advertiser* says: "In Europe streams are considered the property of the owners of the land on the banks, or else they are under the control of the municipalities. The right to fish, subject to all the provisions of the law which regulate close and open seasons, is invested in these property owners or municipalities. The plan works excellently there, even in the vicinity of large cities. While living at Coburg, Germany, I could, by a walk of twenty minutes, reach a stream where, under ordinary circumstances, I could land a dozen trout or grayling, weighing from one-half to a pound each, in an hour. For this privilege I paid $8 a year. Here all the streams have been fished out. The game laws have done something, but not enough. It will be an undoubted hardship if all the streams are rented here."

CASTING FOR TROUT.

IN the volume entitled "Fly-Rods and Fly-Tackle," by Mr. H. P. Wells, which we noticed last week, we find much on a closer perusal which is more instructive than the ordinary run of angling books, partly because it is new, and partly because Mr. Wells has the faculty of saying things so concisely that his meaning is perfectly clear. His chapter on casting the fly and that on flies and fly-fishing, contain about all the instruction which can be obtained from a book. With these, combined with practice, the novice may become an expert.

Of the most killing flies he says: "It may well be conceived that he whose angling has been confined to much-fished waters, and he who habitually fishes far from the haunts of men, where trout are both numerous and uneducated, would differ in experience, and consequently in opinion.

"We must remember that our horizon does not include the whole habitable globe. It may rain in the State of New York, while the sun is shining in full splendor elsewhere. The truth is, there are few points in regard to fly-fishing of which it may justly be said this is right and that is wrong, irrespective of attendant circumstances. As the inhabitants of the Eastern States differ from those of the West or South, so the fish of different localities differ in habit and inclination. The most killing flies on the Maine waters would scare the trout of a Pennsylvania brook into fits. We know next to nothing of the causes which influence the conduct of fish. To-day they will take any kind of humbug greedily—to-morrow, without apparent change of conditions, they act as though it were a solemn fast, and ignore every form of temptation."

Mr. Wells cautions beginners not to strive after a long cast, but to let that take care of itself, and that thirty-five feet should not be attempted until thirty can be cast without effort; and advices that the wrist and not the elbow should be trained to do the work. Directions for casting when wading, casting from a boat and from a bank, are given. When casting, he says: "Locate your boat first, if you fish from a boat; or, if you cast from the shore, take your stand deliberately and noiselessly. Then allow some minutes to elapse, that any alarm occasioned by your approach may subside. When you begin, start at about thirty or thirty-five feet, and cast around your position, directing the fly at each throw about six feet to one side of where it last fell, and so cover the water like the rays of a fan. When one circuit has been completed without a rise, lengthen out about six feet, and, beginning at the same starting point, repeat. Continue this until you have all the line out you can cast perfectly straight every time, and do not go a single foot beyond. Nor should discouragement follow because success is deferred. It behooves him who would boast of the capture of a large trout (and it is a thing to boast of) to remember that if he wants to catch any fish he must keep his line wet; or, in other words, be patient and persevering. His vigilance must never flag, ever expecting the very next cast to draw the wished-for prize."

The beginner is told that success in fly-fishing in waters where the trout are familiar with the wiles of the angler depends much on concealing the connection between the line and the fly.

"We have all cast," he says, "time and time again without a rise where we knew the fly was seen by trout every time it touched the water. We have then changed and changed our cast, yet all in vain. We have distinctly seen a trout rise to the fly, approach it closely, and then, turning from it warily, revert whence he came. Under these trying circumstances permit me to advise that after the cast has been varied a reasonable number of times without success the leader be changed to one of a different color. I feel confident that in many cases this will solve the difficulty." For instance, if we are to fish a meadow stream or water in which an appreciable quantity of green floating matter is present, we should provide ourselves with green leaders. If, on the other hand, the water appears brown colored, we should use our darkest tinted leader at all hours. Under ordinary conditions of clear water we should begin with a lighter ink-dyed leader, varying to the uncolored sort about half past 10 in the forenoon, and returning to the first from 3 to 4 o'clock. Finally we are cautioned "not to be deceived by the appearance of the leader as we look down upon it, for this gives little or no indication of its visibility when viewed from underneath." He gives the result of his experiments with a tank with a glass bottom through which he looked upward to discover how the leader appeared from the point of view of the fish, part of which he detailed for FOREST AND STREAM some time ago.

In concluding, the author regrets that fly-fishing is not more in favor with ladies, and thinks that "where the use of a boat is practicable, there is no earthly reason why they should not derive the same mental, moral, and physical benefit from it as do men. It is a general pursuit, and a cleanly, and affords an ample field for the exercise of that manual delicacy and skill for which women are pre-eminent, while at the same time, unlike every other out-of-door sport, no great muscular exertion is required, nor is excessive fatigue incurred."

TROUT FISHING IN ALASKA.

Editor Forest and Stream:

In the summer of 1882 I had the good fortune to be located at Fort Wrangel, Alaska, and being a lover of the sport in all its phases, I availed myself of every opportunity to attempt the capture of the different varieties of fish to be found in that locality.

The trout season I found to be at its height in the month of September. Being only an amateur, I must refer you for a description of the different species and their habits to the article written by that veteran contributor "Piseco" in "Fishing with the Fly."

The stream we found to be most prolific was about four miles from Wrangel, the source of which was presumably a lake in the mountains, although we never had the hardihood to explore it so far as that, being content with the success we had about a mile from the outlet. The Alaska trout I found to be entirely uneducated, and nothing would induce them to take a fly. I struggled in vain to provoke a "rise," and gave them the choice of all the different varieties in my fly-book, but had finally to content myself with taking them as every one else does in that section, with salmon roe; a most disagreeable bait to use, but still the only thing that possesses any charm for the Alaska trout. Our mode of obtaining the salmon was either by shooting or by pulling them out of the shallow parts of the stream, using a large hook attached to the end of a short pole. There never was any difficulty in securing bait, as the lower part of the stream was usually swarming with salmon struggling toward the source.

It was such a lovely morning with the sun shining brightly—a rare treat for Alaska—that after breakfast three of us decided we would take advantage of it, and pay our finny friends a visit. Hastily putting up a lunch and collecting our guns, rods and tackle, we started with our "Siwash" (Chinook for "Indian") crew. After a pleasant pull of about an hour we reached the mouth of the stream. Pulling up a short distance, we left the boat in charge of one of the Indians, and with the other two started on our way up to the rapids. We caught several salmon on the way up, and secured a good quantity of bait which we rolled up in some green leaves to keep moist. In the course of an hour we had arrived at our destination, the home of our victims.

After resting a short time, and taking lunch, we lighted our cigars, jointed our rods, and prepared for the sport which commenced at once and was lively beyond description. The strikes were not as spiteful as those of our Eastern trout, but what they lacked in quality was compensated for by their frequency. The task of keeping our hooks supplied with the soft gelatinous bait occupied a good deal of time, for it had to be renewed at about every cast, this causing many inward imprecations.

After casting in the rapids for an hour with decided success, I concluded I would work the stream higher up, and as the banks were very nearly perpendicular, I was obliged to make a detour, but managed, by dint of perseverance and some hard climbing, to come to a pool about thirty yards in diameter, and at the foot of a fall of about fifteen feet. I could see the determined efforts of the salmon in their attempts to scale the fall, a feat not easily accomplished, for if they got too near the rapid current they would be dashed back end over end into the pool below, and then would renew the attempt. Jointing my rod I made a cast into the pool, and was immediately rewarded by a vigorous strike, and landed a trout weighing two pounds. After securing several more, I had the extreme pleasure of establishing a telephonic connection with a member of the salmon family, and the tenor of his conversation was decidely of an aggressive nature, although he evidently objected to a "short circuit."

After a hard struggle, in which I was obliged to humor his manifest liking for the other side of the pool, I succeeded in persuading him to form my acquaintance on *terra firma*. Putting him on the scale I found that he brought the pointer down to six and a half pounds, which caused me to regard my eight-ounce lancewood fly-rod with a good deal of satisfaction. I secured three more salmon, varying from three to five pounds in weight, but no more trout.

By that time I concluded I had enough sport for one day, and made my way with my spoils down to the others, whom I found had also had excellent sport. What to do with our fish seemed a difficult question, but the two Indians soon decided that. Cutting a young sapling and stripping the limbs from it, they took it at either end on their shoulders and we hung the greater part of the fish across it. Taking the remainder ourselves, our little procession started down the bank of the stream, reached the boat and pulled home, arriving about dusk, pretty well tired out, and with a ravenous propensity for dinner. After discussing a good meal we examined our catch, and found we had 250 trout, weighing 450 pounds, and four salmon weighing about fifteen pounds. All of our friends had an abundance of trout the next day.

REEL-PLATE.

WASHINGTON, D. C., March 27, 1885.

LOOPED LEADERS.

Editor Forest and Stream:

Your correspondent "M." makes inquiry how to tie leaders with loops for flies. The great superiority of looped leaders over those without loops, in convenience of changing flies, in strength and durability, is at once apparent to all who have ever used them. Every fly-caster ought to be able to tie his own leaders so as to be ready for any emergency.

I will attempt to describe the method I have used for several years with entire satisfaction. After soaking the gut lengths in tepid water until they become pliable, I select a heavy length for hooking to line and tie the simple old slipping noose, and loop the end once around leader and draw tight to prevent the knot from untying. In tying the strands together I use the double water knot, which is very strong and permits close trimming of the ends. This knot is tied by laying the ends to be tied parallel, between the thumb and fingers of the left hand; then with the right hand take the short end and coil around the other strand twice, the second coil being in front of the first and between it and the left hand. Then slip the end through the coils back parallel with the other strand and draw tight. Now reverse and fasten the other end with the same knot, and draw the knots together, after which the ends can be clipped close.

At the joints where loops for flies are to be made, draw through the knot in the upper strand enough gut, say three inches or so, to tie the knot and have enough to spare for the loop. Draw the knots together, then an inch, or inch and a half above the knots, form another double water knot, draw tight, and slip down on the shoulder of the knots. This forms a loop of the gut which cannot loosen, and which stands out at right angles to the leader, so that neither the loop itself nor the flies can fray or weaken the leader by friction.

The loops should be placed from two feet six inches to three feet apart, so that the flies will drop separately. If the amateur will tie a few leaders by above method he will be delighted with their strength, security, convenience and economy.

ROB ROY.

SYRACUSE, N. Y.

Editor Forest and Stream:

Relative to the query of "M" in your issue of March 26, "How to fasten flies," permit me to say that after trying many plans I have adopted a method which I find entirely satisfactory. It is simply to use leaders with loops at one or more of the knots. Then fasten drop fly in the same manner as end fly. The advantages of this idea seem so obvious as to need no explanation. Observe one thing. When tying the leader to the line have the loop for the drop fly point away from the end or stretcher fly. This seems contrary to common sense, and did not occur to me until late last season. However, upon trial it will be found to obviate the tangling of drop fly with leader when casting, and to give the same fly a surprisingly lifelike struggle and skip on the water.

E. L. R.

BLOSSBURG, Pa.

DOES THE BLACK BASS LEAP?

Editor Forest and Stream:

I notice that "Nessmuk" in "Woodcraft" states that the large-mouthed black bass does not leap out of the water when hooked. I do not know where he obtained his information, but my experience has taught me differently. I left Connecticut last November for a pleasure trip through Florida, and after some traveling about, found myself here in the best place for bass fishing I ever saw. I lost no time in unpacking my rod and getting started. As this is comparatively a new country there were no guides to show me the best fishing grounds, so I started out alone in my canoe. I had a score of lakes to choose from, and selected one (Lake Saunders) which looked as if it must be full of fish, and of which marvellous stories are told by the settlers here. Bass weighing thirty and forty pounds, they claim, have been taken from this lake. I camped on the shore and spent one afternoon trying different flies with poor success, and getting a little discouraged, I shot a wood duck and made a fly from the mottled gray feathers, and prepared for another trial. The second cast was rewarded by a strike, and I hooked what I was sure was a large fish. He made my reel sing for a moment, and my rod (which was made by Wm. Mitchell, N. Y., and weighs eight ounces) was bent nearly double in my attempt to keep him from the grass on the edge of the lake. I turned him and soon had the pleasure of seeing him leap at least twelve inches clear from the water, and before I landed him he had jumped three times completely out of the water. He turned the scales at 7 pounds 2 ounces. I caught four more before dark and they weighed respectively 2½, 3, 3¾ and 5 pounds. I went to my camp with my nerves tingling with excitement and in love with my rod, which had worked beautifully. I will admit that a two-pound small-mouth bass at the North would have given me more work than any of the five, but the pleasure in landing such large fish more than recompensed me for what the fish lacked in fighting qualities. Each of the five leaped clear from the water at least once, and at least nine out of ten of the fish I have caught since have done the same. I have caught as many as 25 in one afternoon, ranging from 1 to 8 pounds, and on one occasion caught two that weighed 9½ and 10 pounds respectively, but have never been successful enough to catch any larger ones, although one of my lady friends caught one on a spoon hook that weighed seventeen pounds. Perhaps "Nessmuk" on reading the above may feel inclined to call me a "trout hog," but I can assure him that I never catch more than I need, and on the above occasion when I caught twenty-five, I wanted them for a picnic. I have never been out without some success and almost always catch a good string, and have found invariably that my "wood duck" fly is the killing bait. I never did and never shall concede that there is any fishing equal to the trout and salmon fishing of Maine, but when the waters of that State are frozen solid and there is very little fishing to be had there, the warm, pleasant days and fine bass fishing of Orange county, Fla., make a very good substitute.

F. P. S.

EUSTIC, Fla., March 20.

THE SUFFOLK CLUB.—The gentlemen of South Haven, L. I., had magnificent sport with the wild trout in their preserve on the opening day, when the weather was all that could be desired. On April 2 and 3, however, the weather changed, and the fish would not rise. The take on the first day was 114 fish, which averaged about three-quarters of a pound. No one enjoyed the sport better than Mr. Grafton, the president of the club, who is a rare old sportsman, both genial and courteous, and one who greatly delights to make every one happy. The Suffolk Club was organized in 1866, and is situated on the Connecticut or Carmen's River, which empties into the Great South Bay. The club owns in fee about 600 acres of land, and there are two ponds on the property, one of about thirty-five acres and one for preserving small trout, of about five acres. The stream or brook extends about about two miles north of the large pond toward Yaphank. There are fifteen shares and at present fourteen members; these are: Messrs. J. Grafton, President; Mr. F. W. Meyer, Treasurer; Mr. J. N. Platt, Secretary; P. Townsend, Peleg Hall, J. W. Gerard, T. C. Meyer, O. H. Shepard, F. Schuchardt, Charles H. Strong, J. L. Cadwalader, Philip Schuyler, Henry W. Fearing and J. H. Campbell. As there was a large run of fish on the spawning grounds and an unusual supply from the bay by the fish ladder at the dam, the club have magnificent fishing this season. The trout average about three-quarters of a pound. The club depends entirely upon the natural resources of the stream and pond for the propagation of and food for the trout, which are of a rich salmon color. Bait-fishing is prohibited, and fish under half a pound are thrown back. The club members are well-known gentlemen in social circles, and have no desire to have their organization become in any way notorious.

SEALS AND FISH.—Stephen Ellis, who made the first fly that caught a salmon in California, and who has probably as much experience in salmon fishing as any other man on the coast, is able to give some facts with relation to the destruction of fish which confirm opinions that have for a long time been held by the Fish Commissioners. The source of greatest destruction is, in his opinion, the seals. In the Columbia River, where he has fished for many years, he has often had the entire catch of a net destroyed. He has seen seals pursuing fish, driving them from one end of the net to the other, and biting pieces from their bodies. It is seldom that they take more than one bite, and that is usually from the neck, and the wound is of so severe a character that death usually ensues. As a seal will eat at least thirty pounds of fish a day, the number of fish destroyed to procure this amount will be very large. But even when a seal has appeased his hunger, he still continues to inflict fatal wounds on the salmon in simple sport. Mr. Ellis has seen seals bite pieces from salmon and then throw them from their mouths, having already eaten enough. In his opinion seals destroy at least one-third of the salmon that seek entrance to the river through the Golden Gate. Another source of destruction exists in the fine nets set along the banks of the river, in which the salmon fry, from four to six inches long, are caught as they come down from the spawning grounds. Millions are yearly caught by Chinamen and Portuguese and dried for export. They never come to this market, and are not only virtually lost, but their destruction constantly diminishes the number of fish by which our waters must be stocked. These two causes alone are sufficient to account for the constantly diminishing number of salmon in the Sacramento and Columbia rivers.—*San Francisco Bulletin.*

TROUT IN NORTH CAROLINA.—*Editor Forest and Stream:* Vigorous spring, even at this altitude, has at last reduced tenacious winter to everlasting somnolency, wrapped him in his eternal winding sheet and pleasantly consigned him to the category of the past; and while nature is preparing to don her vernal robes and rehabilitate herself in gorgeous beauty, and while the gentle zephyrs are again gently fanning the mountain maiden's cheek, the small boy as well as bipeds of a larger size are disporting themselves with the speckled brook trout. They seem quite plentiful, and baskets of from forty to fifty are easily taken, ranging in weight from an ounce to a pound and a half, which is the largest caught here. From here we have easy access to the following good streams: Cullasaja, Nantohala, Little Tennessee and Chattooga rivers, besides a great number of creeks and brooks.—J. W. W. (Highlands, N. C., April 2).

TARPON CAUGHT WITH ROD AND REEL.—Jacksonville, Fla., April 2.—I met your correspondent, "Al Fresco" (Dr. C. J. Kenworthy), this morning. He was in a dejected frame of mind because that tarpon has been taken with rod and reel before he had a chance to test his elaborate devices. A Mr. Wood, of New York, took at Punta Rassa last week a tarpon measuring five feet eight inches and weighing sixty-eight pounds; tackle, rod and reel. "Al Fresco" says the Florida tarpon is bound to beat the Canada salmon. I saw a letter from "Nessmuk" asking "Al Fresco" to come over and share his camp-fire log.—WING.

Fishculture.

THE MENHADEN QUESTION.

Editor Forest and Stream:

While spending the last summer at Westport Harbor my attention was called to a letter in one of your back numbers, written by Mr. Daniel H. Church, in which he attempts to show that all kinds of fish are now as plentiful as before trap and purse seining was known. This statement is so directly opposed to the facts that there appears but one way to account for it, that it was not written for fishermen to read.

I have been requested by the fishermen to give my observations of the last fifty years. It will require so large a space for the consideration of the whole question that I will leave the food fish for some future ocasion, and tell what I know about menhaden. I will confine myself principally to that part of the coast lying between Seaconet Point and Gooseberry Neck, and across Buzzard's Bay to Cuttyhunk, a distance of about twenty miles, it being a section second to none for all kinds of fish common to our coast, and with which I have been familiar all my life, and I am more than sixty years of age.

Mr. Church tells of the quantities captured every year as proof of his statement, and of the immense schools seen at certain periods as being larger than ever before known. I do not think that Mr. Church or any other person, has any statistics by which they can compare the present with fifty years ago, for then menhaden were quite too common to excite even a passing notice. It is reasonable to suppose if any one had been interested in the subject, when the whole coast was alive with fish all the season, that in the fall when they were leaving, they could be seen in larger quantities than Mr. Church ever dreamed of.

Where are all the menhaden that filled Long Island Sound, and all its bays, and New York Bay to Sandy Hook, then east all along the coast to Montauk Point? Of all the men that in former years caught fish by hauling their seines to the shore not one is now seen on Long Island beach. They have long since ceased to exist. How many fish are now taken in Gardiner's Bay as compared with the past? Fifteen years ago I saw as many as seventy-five different companies all busy taking fish. Now, how many can be seen?

Why do the menhaden fishermen cruise from Maine to the Chesapeake Bay, if fish can be found as plentiful as ever? There is no man that knows better than Mr. Church that it is as useless to cruise over this old ground where fish were once so plenty as it would be for him to take his horse and wagon, and hunt for them in the backwoods. Many is the time when a boy I have stood on the rocks at Westport Harbor and have seen the whole surface of the water, from the shore far out at sea, in all directions as far as the eye could reach, covered with menhaden. They made their appearance early in the season and remained until cold weather, unless the first fish were constantly relieved by a new supply. At Gooseberry Neck bar, there were a number of seine companies, which depended altogether on hauling fish to the shore, and large numbers were caught every year and sold to the farmers, at twenty to twenty-five cents a barrel. I remember well the first company of purse seiners that fished along this part of the coast, also how quickly all of the shore fishermen disappeared, and have ever since been numbered with the past. I have spent the whole of the last four seasons at Westport Harbor, and every pleasant day have sailed over these waters and have not seen one school of menhaden, and, with the exception of two days last fall, have not seen the steamers when they appeared to be catching fish. And then they were several miles out at sea.

It is also claimed that menhaden do not come on the coast to spawn, as other fish do, but spawn out at sea, in the fall. That I do not deny, for the reason that I know but little about it and I think that is as much as any one knows. This I do know, that in the spring more or less menhaden make their appearance at the head of Westport River, and also a few herrings, where they remain until late in the fall. In the month of July I have repeatedly caught in the same net full-grown fish, and young ones three inches long. Later in August the young ones are from four to six inches in length. The young herrings are about as large as the young menhaden, and as one grows as fast as the other, they must begin at the

same time. When there are no large fish, there are no young ones to be seen, the quantity of small fish is always in proportion to the large ones. If the spawn is not deposited there, where do the young come from, at this unseasonable time of the year?

I simply state the facts as I know them to be, and leave the answer to those who claim that menhaden spawn only in the fall, out at sea. A. S.

Brooklyn, N. Y.

THE FIRST SHAD.—The first Hudson River shad of the season was caught on April 4 by William Wandell, Stapleton, Staten Island, and sent to Mr. E. G. Blackford, Fulton Market. The fish was some twenty days late, although earlier than the first shad of last year. The cold water has kept them back, and when the temperature rises there will be a rush and a short season. Our correspondent "Homo," writing from Philadelphia, says the first Delaware River shad was taken on the 3d in Alloway's Creek, and weighed five pounds.

The Kennel.

FIXTURES.

BENCH SHOWS.

April 7 to 10, 1885.—First Annual Dog Show N. E. Kennel Club, Music Hall, Boston. J. A. Nickerson, Secretary. 159A Tremont street.

April 21, 22 and 23.—Annual Dog Show of the St. Louis Gun Club. W. A. Albright, Secretary, St. Louis, Mo.

April 28, 29, 30 and May 1.—Ninth Annual Dog Show of the Westminster Kennel Club at Madison Square Garden. Entries close April 14. James Mortimer, Superintendent, 48 Broad street, New York.

May 5, 6, 7 and 8, 1885.—Second Annual Dog Show of the Cincinnati Sportsman's Club, Cincinnati, O. W. A. Coster, Superintendent.

May 13, 14 and 15.—Third Annual Dog Show of the Toronto Dog Show Association. W. S. Jackson, Secretary, Toronto, Ont.

May 19, 20, 21 and 22.—Show of the Philadelphia Kennel Club. F. A. Diffenderfer, Superintendent, Philadelphia, Pa.

June 2, 3, 4 and 5.—First Annual Dog Show of the Illinois Kennel Club. John H. Naylor, Secretary, 3,182 Archer avenue, Chicago, Ill.

FIELD TRIALS.

November.—Seventh Annual Field Trials of the Eastern Field Trials Club, High Point, N. C. Entries for Derby close May 1. W. A. Coster, Secretary, Flatbush, L. I.

Dec. 7.—Seventh Annual Field Trials of the National Field Trials Club, Grand Junction, Tenn. Entries for Derby close April 1. B. M. Stephenson, La Grange, Tenn., Secretary.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription $1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed **2200.**

SPANIELS AT NEW HAVEN.

Editor Forest and Stream:

It is refreshing to notice the steady progress made by spaniel breeders during the last two or three years. It would not have been an easy matter two or three years ago to have named a brace of good looking cockers in this country. That state of affairs no longer exists, and at the present time there are not only many good looking specimens, but there are two or three that could hold their own in any company. In your report of the Louisville show you said that Bonanza (one of the prize winners) was not a good specimen. Mr. Fellows, who owned the dog, objected to your critique, which was a just one, and now the dog takes the hc. card, there being six specimens ahead of him. May the pointers be improved to the same extent. To Mr. Willey, of Salmon Falls, is due a large share of credit for the marked improvement that has taken place, and it is evident that unless something should lead him from the track he is on, the black cocker of this country will not only equal the best specimens that old England can produce, but beat them. When I first met Mr. Willey I told him that the most difficult defect to breed out is in the muzzle. It is here that many otherwise almost perfect specimens are deficient, and Mr. Willey now says that he can breed them right everywhere else but not yet to his liking in muzzle. To become a successful breeder of dogs in this country a man must strike out on an independent course of his own; this is just what Mr. Willey has done. He ignored the ignorance and prejudice with which the columns of a Western paper are pregnant, and bred to his own ideas. The result of this we saw at New Haven, where the cockers made the best collection ever seen in America.

One of our dog papers abounds in ignorance to such an extent, and has so many little axes to grind, that nothing in its columns can be said to be reliable unless it is the rehash from foreign papers. The result is that the beginner who is foolish enough to read it gets his head filled with a lot of flimsy ideas, which he proceeds to cultivate, not entirely at his own expense, but at the cost of others interested in the breed of dog he strives to improve, but which in reality he slaughters. Let me digress a moment to better illustrate my meaning. Mr. Frank F. Dole entered a bull-terrier at the New Haven show. The gentleman has not had a very large experience either as an exhibitor or breeder, but he is anxious to learn the points which go to make up a first-class dog, with a view to improving bull-terriers in this country. His dog took premier honors, and no doubt he looked into his FOREST AND STREAM and other papers to see what those who should know more about dogs than himself had to say about his exhibit. A Western paper, which never gives either a truthful description of a show or a reliable report on the dogs, in commenting on Mr. Dole's dog, said: "A remarkably handsome puppy, The Earl, was shown and won in his class. He has a perfect head and eye, is a little light in body, but otherwise good." Now, sir, fancy any person (out of his swaddling clothes) penning such a critique. The dog's faults are in head and tail, and his body, legs and feet are as good as they make them. His nose is not yet quite black, he is not filled up sufficiently below the eyes, and he carries his tail away up. These are his faults, and Mr. Dole knows it. It is not probable, therefore, that he will go to work to replace what is good by something faulty, or that he will endeavor to perpetuate the dog's faults. Mr. Dole no doubt arrived at the conclusion that he had forgotten more than the paper which assumed to teach him ever knew, and accordingly transferred the independent (?) journal to the w. p. basket.

In the same report you will find "Roy and Pete, two very nice little dogs, were given respectively first and second in the class for Blenheim spaniels." Roy and Pete may be "two very nice little dogs," but the man who says they are good Blenheim spaniels knows less of the breed than the breed knows of him. The world's canine renovator also said "two nice little King Charles spaniels were shown of about equal merit. First was given to Topsy and second to Pitou." It happened that these two "nice little King Charles spaniels" were very inferior specimens, one of them being small in eye, wanting in color and weak behind; the other small in eye, short of ear, snipy, leggy and tucked up. The Chicago reporter should clip this critique out of FOREST AND STREAM, and apply it to the first King Charles spaniel he has to report on; only let him be careful he does not get it down for an Italian greyhound. If the Chicago paper cannot print a decent report either by copying FOREST AND STREAM or the English papers, why don't it give up fairly and squarely and confine the report to the prize list? The FOREST AND STREAM and the English papers give very reliable reports. The blunder is not made in copying from them, but in applying a description of a pug, for instance, or a mastiff, to a toy spaniel or an Italian greyhound.

Back to the spaniels. Only two Irishmen were shown. The Chicago wiseacre said the first prize was withheld, and that the specimens were "very ordinary." That is an easy way of getting rid of waste paper. The owners of the dogs knew by the judge withholding the first prize that their dogs were "ordinary," and so did the public. In order that the Western reporter may be able to criticise these dogs the next time they are shown, I will tell him why they are "ordinary." John has a poor head, is too long in coat and not close enough in curl. That is the reason why he is "ordinary." Rocket has a hopeless head, short, badly placed ears, white feet and lacks Irish water spaniel character; hence is he "ordinary."

In the class for Clumber spaniel dogs, John Halifax, placed at the head of affairs, deserved the blue ribbon. The Chicago paper thought he had the best head in the class. If the reporter should ever see a good Clumber he would perhaps change his opinion. John is snipy, and his ears are set on too high; he is also light of bone, leggy and short of coat and feather. Although John is not a good Clumber spaniel, he is a nice dog, and was very well shown. Bateman came next. He is too leggy, and short between the couplings. His color is too dark, and his coat was not looking so well as I have seen it. Jockey, commended, has a sour face, ears placed too high, and is leggy and too wavy in coat. The class was properly judged. Among the ladies Romp had an easy win. The Chicago "barnacle" said she was a good fair bitch. Clumbers ought to be fair; very dark lemon or orange color is objectionable. No, sir, Romp is not a good specimen, so why mislead her owner or tell him what he knows to be untrue. The bitch is leggy, light of bone (very serious defects in a Clumber) carries her ears badly, and lacks character. Ursula, placed second, is what an old fox-terrier friend would call "monkey-faced;" she is light of bone, and although she has a straight coat, there is not enough of it.

In the champion class for field spaniels, over twenty-eight pounds weight, the undefeated Benedict was alone in his glory. He was in splendid condition. His fault is in the muzzle, which is too fine. Newton Abbot Lady had a narrow squeak in the open class for dogs and bitches. Your Chicago contemporary said "First went to a good all-round liver and tan dog." I should like to see a few good all-round dogs; such specimens I have found to be exceedingly rare. To begin with, it is not quite clear how Newton Abbot Lady can be a dog. In the second place I don't quite understand how a bitch can be good all-round that is faulty in eye, muzzle, neck, feet, mouth and length of barrel. The bitch has a Roman nose, her eyes are not the proper color, her mouth is not level, she is throaty, her feet are not thick enough through the pads, and her body is a bit short. She is a broody looking bitch, with a nice straight coat, good legs and bone, and shows her good breeding. The Chicago description of Newton Abbot Lady is about on par with that of the mastiff Hero II. He was once described as having a rather long fine tail. The only inference to be drawn from this is that from a Chicago point of view the mastiff should have a short tail. Black Prince made a good fight for premier honors. He is described in the Chicago parody as "another good one." Good what? Good coat—that's it. Prince has a beautiful dense black and glossy coat. He was a picture of health, but should be shown with more flesh on his bones. He is at all times a trifle long on the legs, and this would not be so apparent if he were shown heavier. His eyes are light and he is weak in muzzle. With these faults he could not truthfully be called "another good one." Just a fair specimen would be nearer the mark. Young Bob, Kaffir, Zulu and Squaw are what I call "good ones," and even they are not like Newton Abbot Lady, *i. e.*, "good all round," Mr. Jacobs refused £100 for Kaffir at the Birmingham show of 1880, but never claimed that he was perfect, grand dog that he was. Bob, Jr., vhc., is in my opinion an overrated dog, being much too short in the back, cheeky, underhung, and showing too much daylight under him. Gloss, vhc., was not well shown. I don't like either his head or tail. I want a strong tail, carried low. He is light of bone and stands too high; ears good. Critic, vhc., is short in head and light in eye. His ears are rather short and are not properly carried. His feet might be better and his coat requires attention; in other respects he will do. Beppo, vhc., was not in good condition. He is faulty in skull, weak in muzzle and light of bone. Had he been a few pounds heavier he would not have appeared so leggy. Bonanza, hc., is curly and short, has light eyes, and does not carry his ears *comme il faut*. The class was well judged.

A splendid class was the next one for cockers, dogs, liver or black under 28 pounds weight. Obo II. was properly placed at the head of the class. He is a handsome little dog and has demonstrated his ability to beget stock as good and even better looking than himself. He stands on the best of feet, has good legs, plenty of bone, and a lot of substance (indispensable requisites in a stud dog). His coat and the top part of his head are good, and he is every inch a cocker. Like every other dog, he has his faults, but none are very pronounced. His eyes are a little light, and he might be improved from them to the end of nose. His ears might hang better, he has a spot of white on the chest, his tail is too thin, and his back would be better an inch or so longer. I failed to find anything else wrong with him. He is a good dog and the proper stamp to breed to. Young Obo made a good second, and is a nice little dog. Your Chicago contemporary does not think him "quite as good in the front legs as Obo II.," but fails to find him faulty at any other point. Wrong again. Young Obo has capital front legs, lots of bone, and good feet. He is faulty between the ears and below the eyes, has a thin tail, and is a trifle underhung. Obo, Jr., vhc., another nice specimen, is faulty in muzzle, and his coat requires care. Dandy Zulu, hc., has a fairly good head, but his ears are short and badly placed. He carries his tail too gaily and is not of good color. The class was well handled.

The ladies made the best class that has ever been seen in this country. Mr. Willey was again to the front with Shina, a charming little daughter of Obo II. She is but 11 months old. I should have given her the special for the best cocker of all classes. She was shown in the best of condition, and with the exception of being a little defective in muzzle, it is not easy to find fault with her. Miss Obo II. was not exhibited for competition. To me she appeared to be over the stipulated weight. She is a nice bitch, a trifle leggy, and light of bone. Mere coat and feather would improve her. In head she is good, and being a rare bred one (Farrow's Obo—Farrow's Nellie). She should throw something good-looking to Obo II. Dinah W., vhc. and reserve, is a niceish bitch. Three years, or even two years ago, she could have won the highest honors in this country. She is faulty in eyes, carriage of ears, length of ears, and in stifles. Juno W., vhc., can be improved. She is a bit snipy, leggy and light. Miss Nance, vhc., stands a trifle high, is heavy in head and faulty in muzzle; body and coat very good. Rose Obo, hc., is monkey-faced. Helen, winner of second prize, though a nice bitch, does not improve. She is growing all wrong behind, is not strong enough in the arms, does not carry her ears very well, and is a bit snipy. Black Meg, vhc., has a nice coat, plenty of bone and excellent feet, but her head is hopeless and she is out at the elbows. Darling, vhc., is not to my liking, being of poor color, plain in head, light in eyes, out at the elbows, and was not well shown.

In the class for cockers of any other color, Sport, who took first, must on all occasions make room for a good one. The Chicago would-be dictator says: "Sport, a little high on the legs, but otherwise good, won." The owner must have gone off in hysterics when he read that report. A dog that is "good all over" with the exception of being a "little" high on the legs, would be an acquisition to this or any other country. They make dogs like that sometimes. Come Chicago, throw up the sponge and furnish your readers with a prize list only. People really cannot afford to pay even ten cents a week for such clap-trap. The dog is faulty at the elbows, his ears are not well placed, and he is snipy and leggy. Marion, placed second, is weak in muzzle, light of bone and out at the elbows. I failed to find a good looking puppy, but I am mindful of the fact that the judge extinguisher said one of them was "very pretty" and another "splendid all-round." With so many "splendid all-round" specimens on view, no wonder New Haven was a great show. Chas. H. Mason.

New York, April 6, 1885.

NEW HAVEN NOTES.

Editor Forest and Stream:

The dog show is over and the boys are glad, that is to say, are glad that the worry is over; but we still retain the pleasure of having to put our hands quite deep into our pockets in order to make up what was not put into our treasury by the citizens of the City of Elms, in order to make us square with the world. We live in a queer community. It takes a perfect day, a complimentary ticket and a free coach to induce our people to leave their firesides and patronize a home enterprise; but nevertheless, we will give them another chance next year, and will try and have nature with us, as she gave us weather that would make a Greenlander shiver this time. But we must not "kick," as the dog men from all over the country supported us in grand shape.

Reports from the surrounding country indicate that we shall have plenty of quail this year as well as partridge, but no matter how many we breed there will be a hunter (not shooter) to each bird. Our Legislature is made up of countrymen who will neither protect the birds nor have any mercy on a man owning a dog. Our club have talked with many of them, with a view of trying to either reduce the dog tax or to protect those who do pay the now heavy tax, viz., $1.15 for a dog and $6.15 for a bitch. In the way in which it now stands, about one in a hundred, more or less, pay their dog tax. Last year there were about 700 dogs registered in the town of New Haven, of which one in sixteen was a bitch. At a small calculation there are not less than 3,000 dogs here, so you see how the law is enforced. It may seem funny on the face of it that while we object to the price we still want to have the law enforced to the letter; but if the law were rigidly carried out and all persons owning or harboring an unregistered dog were fined the full penalty, $7 and costs, there would not be so many mongrels running loose on our streets, and the standard would be raised in proportion.

If you do not register your dog, any one can take him from his kennel in broad daylight, and in full sight of your family or yourself, and you can do nothing unless you are big enough to take the law into your own hands and run the risk of paying a fine for assault and battery. Some time ago I had a bitch stolen, but caught the thief. I had witnesses who saw him take the dog—in fact, had a complete case; but the judge discharged the thief on the ground that the dog was not property on account of her not being registered. I could not sue the man for trespass as he did not take her from my premises, but from where I was keeping her for a time.

As to just how anything not property can be taxed goes far beyond my limited knowledge of law. The revenue from the dog tax is supposed to be used exclusively to pay damages to the farmers having sheep killed by dogs owned in the town; but as a fine-tooth comb carefully used could not bring to light more than a baker's dozen of sheep in this whole town, it seems hardly just to make the tax so heavy.

As to the snaring of birds; there is a law against that, but nine farmers out of ten keep a partridge fence the whole fall, and if you destroy them you are prohibited from shooting on their land. Nevertheless, the sportsmen kick over a great many fences and snares each year. I know of several of our lawmakers who snare birds and don't pay a dog tax; and are not prosecuted, for the reason that one against the many would have his trouble for his pains. I live in hope of seeing the time when all of the Connecticut sportsmen will join hands and "go for 'em," and then, with the aid of FOREST AND STREAM, I think we can do a great deal toward stopping the wholesale "hanging" of birds and also straighten out the dog laws. Rosecroft.

New Haven, Conn., March 27.

DISQUALIFICATION.

Editor Forest and Stream:

For the first time I am compelled to find fault with Mr. E. S. Porter's course in dog show matters. Perhaps I had better say with his explanation of his course in the matter of the Pierce disqualification, etc.

When I saw the entry of Mr. Pierce in the New Haven catalogue, I said, "There, those New Haven fellows have outdone even themselves," and I am sorry to learn that the admission of the entry was more of an oversight than a deliberate defiance of the most outrageous of all the abortions, dignified as the A. K. C. rules. However, we all know that Mr. Porter and the N. H. K. C. have been actuated by good motives, and falling short of perfection is not a very grievous sin.

I am delighted that FOREST AND STREAM has taken the position that I have ding-donged at, from the first appearance of the Association rules, that it should not be possible for any one club to disqualify an exhibitor. But why not go further, and maintain that any club, even after having adopted the 17th iniquity, is justified in refusing to exclude an exhibitor, merely on the dictum of another club, when that dictum is pronounced in a very suspicious way? It is surely a warrantable inference that the disqualification shall be for cause, and substantiated to a reasonable degree. I maintain that the N. H. K. C. had a right to receive Mr. Pierce's entry, if the Philadelphia K. C. did not satisfactorily support their action. Do you mean to say that a member of the A. K. C. loses all right to private judgment, and must surrender to any performance in the disqualification line that another member may choose to perpetrate? As to violating the A. K. C. rules, New Haven had done that by omitting the "extra" silliness, why not reject another of them as well?

I ought to say that I have never seen or had anything to do with Mr. Pierce, unless he was the gentleman who kindly informed me that Glencho was an Irish setter at the State Fair show last fall, wherat I hadn't courage left to repeat my question as to what the name was; so don't suppose I am championing anybody when I attack a piece of iniquitous tyranny.

The fact is, the idea of the A. K. C. is all wrong; it is too hide-bound, too narrow, too leveling. Its minute directory rules as to private details of show management indicate its petty lack of comprehension. I think the most elegantly silly piece of rot I have seen on this matter was in the *Mirror*, where a correspondent gravely said, anent the Boston show, that it was a member of the A. K. C., which was a congress of clubs, which provided that no winnings should be recognized except at shows of members, and therefore all the best dogs of the country would be at Boston. Great snakes! Who ever before even smelt such flapdoodle, let alone eating it?

Just in this point let me say that the secretary of our Pittsburgh club has been so overwhelmed with inquiries as to whether we were to have a show, that as a measure of economy of postal cards, the board of managers directed him to send notices to the kennel papers that as we could not get a hall we would not have a show. He was getting worn out receiving and answering such inquiries. As Pittsburgh is not an associated club (the Cincinnati meeting was too busy with "proper construction" to act on its application), this pressure of inquiries indicates to me that exhibitors want to stretch their lungs in breathing a little fresh air in an independent

show. They are tired of the rings, and the first club that tries the experiment of boldly throwing off the shackles and going it on their own hook will reap such an appreciative reward from exhibitors as will make the hair stand on end on the heads of those who think they can run the dog world of America.

Look how flunkeyism has been rampant since the initiation of the A. K. C. Fault is found with club action—we are immediately told how wealthy, honorable and high-toned the managers are. A judge is said to have shown himself incompetent (as the *Stock-Keeper* says, "his honesty is only equaled by his incapacity")—forsooth, there is a howl about abusing respectable judges and honorable men.

A dog dealer is over a year in filling an order for a dog that can be picked up in packs, and we are told that he has the entire confidence of Tom Collins, Snooks and Peter Funk.

Now, would it not be more to the purpose to show that the "high-toned managers" were right in their course, that the "respectable judge" was correct in his awards, and that the dog dealer enjoying such "confidence" had good reasons for keeping his customer's money over a year without sending the dog, than to dose us with such silly stuff as this?

I am glad to note that you, at least by implication, recognize the usefulness of agitation; call it "kicking" if you will, but we were sinking into a slough of imbecility that promised to make dog shows ridiculous. The vigorous prosecution of the "Pointer Protest" war stirred up the waters, and note how, since then, the fresh blood in kennel matters has forced itself forward. Such managers as the New Haven Club, and such a "knight of the quill" as Mr. Gregg, are distinct and hopeful gains to dog-show interests. W. WADE.

HULTON, Pa., March 28, 1885.

ENGLISH KENNEL NOTES.

XXVII.

AN event long foreseen by those who move among the "inner circle" of doggy life has at last come to pass with dramatic suddenness. By next Friday when the papers appear the whole kennel world will be discussing the resignation of Mr. H. St. James Stephen, the secretary of the Kennel Club. It is easy to fix the date when this step was taken. On Friday, the 27th of February, a committee meeting was held in Cleveland Row to consider matters in connection with the club's secretary. This week the papers publish a letter dated 27th of February, about the new champion rule, from Mr. W. J. Mellor, who signs himself "Chairman of the Committee Meeting." The result of that committee meeting is plain enough, as in the ordinary course of affairs that letter would have been written by the secretary. At this hour it is unnecessary, and it would be ungenerous to drag out the many little misfortunes and shortcomings, private and public, that have contributed to Mr. Stephen's downfall. This much I may repeat, from one who knew him well, that he owes the loss of his post to his unmeasured and unreasonable liberality, and to the occult workings of men whose feelings he had slighted, and of others in whose way he stood. Now that he has succumbed, I am certain he will receive the "forgiving and forgotten" sympathy of the first, and I hope he may enjoy the disappointment of the second class.

Mr. Stephen's connection with dogs dates only some four or five years back. At that time he was a "sucking barrister," and in the public service as one of Her Majesty's *custodes rotulorum*. He has not attained eminence at the bar, his name having been only once before the public, when he last summer conducted Miss Violet Cameron's case for damages against a butcher whose ferocious mastiff had eaten the lady's lap dog. There are, however, lucrative plums in the Civil Service, and the course of promotion in the Record Office should incline favorably toward the cousin of a judge. As Mr. Stephen remains a member of the Kennel Club, I should be surprised if he were to entirely sever his doggy relations.

I think that is highly unlikely. He made his first appearance on the show bench with a magnificent deerhound, now champion Bevis, and from the last Ostend show brought back with him a Great Dane bitch; this latter breed will probably be his "fancy." He has an engagement to judge at the approaching Warwick show, where I hope he will receive a frank and hearty welcome to the exhibiting ranks by those fanciers who liked him not in his official clothing.

"Whom will the Kennel Club get now?" is the next question. Will it be the old secretary, Mr. George Lowe, their present editor of the *Kennel Gazette?* More unlikely men than he will try for it. Will it be the head clerk, Mr. Boardman, who, from the long time he has been in the office, has acquired a thorough knowledge of the technique of the business? The position is said to be his ambition, but I am afraid that his irritable nature would make it a burden to him. Will it be a member of the Club? I think not, as he is certain to be impatient of control and reproof. It comes too late for Mr. Taunton, and there is no ditch deep enough to bury Mr. Hugh Dalziel's hatchet. I prophesy much bickering and bitterness before it is decided, as the appointment lies with the committee, and each one has "a friend round the corner who'd be very glad to have the job." If the Kennel Club expect their new official to devote the whole of his time to the duties they must make a considerable addition to the present salary, which is something under £200—not enough for "cigars and cabs," as Mr. Stephen could probably tell them.

What a pity it is that the club cannot induce some of their present committee to resign also. Between the wooden-headed stupidity of some, and the supercilious, arrogant ignorance of others, the unofficial members of the club are gradually losing patience. They make a great show of working for the improvement of dogs, of course, without heed of themselves, and are forever startling us with some fresh proof of their incapacity, such as the new champion rule.

I will forthwith relate their latest *faux pas*, which is an indulgent description of the act. A visitor to their last show in the Crystal Palace claimed a Dandie Dinmont terrier at the catalogue price. He paid the full amount in the office, received his receipt, and the agent of the club, whoever may have been in the office at the time, undertook to forward the dog to the purchaser on the evening the show closed. They neglected to fulfil this promise, and in answer to a letter from the purchaser asking for an explanation, replied that the dog had been found dead on his bench the morning after the show. Therefore the club broke their contract in not sending the dog while he was still alive the last day of the show, and then on the purchaser naturally asking for his money back—now mark their sense of honor and duty—refuse to refund, actually decline to disgorge, the price they had received for an animal they had contracted to deliver, and which through their own culpable carelessness they had been unable to send. I am sure I don't know what steps he will take, but if I were the pillaged person I should unhesitatingly invite the committee's explanations before a magistrate for retaining money under false pretenses.

At the late Hanley show an objection was laid by a popular and esteemed member of the Kennel Club, Mr. W. Arkwright, against a well-known exhibitor, Mr. Geo. Raper, for having trimmed his collie, Rutland Hero. The dog's head presented an extraordinary appearance; somebody seems to have taken a pair of scissors and clipped all his forehead. A collie judge who was examining it said it was a clumsy dodge to give length to the skull. I don't know what the club can do in the matter; they have no rules on the point; trimming more or less is an every show matter.

Mr. Dalziel has ferociously jumped upon Mr. Ashwin for his unworkmanlike proposal to divide collies into classes by color. I am not surprised at that raising the ire of the practical and matter-of-fact "Corsincon."

I have no doubt the Collie Club at their London show will adopt the age division. I understand that three gentlemen are to be elected to judge, and the election of the trio will be in the hands of the members. The three names that I expect to see at the head of the poll are Thomson, Shirley and Radcliffe. The last named is honorary secretary to the club, and I guess the stairs at 20 Craven street, London, will be well worn before the show is over.

In the paper just to hand I see Mr. C. Greville Harston replies to my remarks on his collie information, and as he good-naturedly welcomes me to rattle away at him if it amuses me, and I give him my honor it does, why bring me the gloves and I'll have another "go" at him just to show there is no ill-feeling. From my letters Mr. Harston has noticed that I can fight without the gloves, that is when I am dealing with rogues; but Mr. Harston I believe to be an honest meaning gentleman, laboring under the delusion that he is the prophet of colliedom. I call this a friendly spar, so shake hands, sir, and keep smiling.

When I pointed out to you the absence of the second great strain (Welsh) of collies in your long string of local breeds, it was a fair "counter." You compiled the list for effect, and the omission just spoiled it. Mr. Harston thinks that the owners of the bitches would be "fools"—"Lillibulero" bows, he is one of them—who bred from Carlyle without inquiring if he came "from the Highlands, the Lowlands, or the Cheviot Hills." I can assure Mr. Harston that he is mistaken; nobody cares about that, breeders send bitches to him that are wide and short in skull and scanty in coat. Carlyle is so long in the face that he is actually pig-jawed, and he carries an enormous coat. Mr. Harston's query, "You would not put a Suffolk Punch to a Clydesdale horse" exhibits a curious confusion of ideas. He has confounded strains with breeds. He asks if I want to abuse him why I don't do it under my own name, and later on refers to "anonymous correspondents." In the first place, I don't want to abuse him. My primary object was to show that when Mr. Harston assumed the *rôle* of critic he proved that he knew less of the subject than the gentleman he criticised, and I am sure that Mr. Watson did not enjoy his animadversions any the more for their being signed. If Mr. Harston considers my notes in the light of anonymous correspondence, he displays want of perception. My *nom de plume* is adopted in the character of a public writer. If *de quibus ignoras tace* be a maxim that Mr. Harston should bear in mind, he might also admit *de quibus certus es, loquere opportune* to be an injunction that it is my duty to observe in favor of my readers. I am surprised that he should not recognize the "Roving Highlander," everybody here knows who it is. Again, Mr. Harston "enlightens" you upon the "right spelling" of *collie*, which he says should be "colley," thus setting himself up against his own authorities—Shirley, Thomson and Vero Shaw, not to mention the Collie Club, which ought to know something about it and on all occasions spells it *collie*. He calls the English bobtail sheepdog a "colley," and has also mentioned a *German* "colley," thus proving that he is unaware of the fact that collie is a Scotch word, and can only be applied to the Scotch sheepdog; so kindly reinstruct your printers to set it up as "collie" altogether. I have been very much diverted by this little controversy, and so, I daresay, have your readers. Not the least funny part about it has been the humorous support accorded to Mr. Harston by the "Roving Highlander," with whom Mr. Harston was at first as anxious to agree as Polonius was ready to admit that Hamlet's cloud was "in shape of a camel, a weasel, or a whale." But in the end the friends fall out, and Mr. Harston proceeds to administer "snuff" to the Highlander, surely a superfluous action, after the nature of carrying coals to Newcastle. However, Mr. Harston must not so easily get his back up. I write as much for his edification as for the rest of my constituents. I am incapable of bearing ill will against a gentleman I don't know, and it is not the part I have to play. I am "your only jig-maker—what should a man do but be merry?"

For the rest, I will refer my collie friends to my notes on their breed in my letters, Nos. XV. and XXII. They can take my word for it that the information therein is well grounded, accurate and expressive of the best opinions in this country.

The question of undershot terriers is now engrossing our attention. The Rev. Mellor set the ball rolling at the late Crystal Palace show when he turned a crack Dandie Dinmont out of the ring for this defect. The *Field* has given us a leader on the subject and with the majority advocates level mouths. Lord Antrim, in the next number, as president of the Dandie Dinmont Club, indorsed this opinion. The Dandie judge, the Rev. E. Spenser Tiddeman, condemns undershot mouths, but is inclined to be lenient to pig-jaws, herein he only follows the club code of points. The *Scottish Fancier*, which surely has some claim to lay down the law on one of the national breeds, contends itself with advising breeders to "seriously consider the matter." Mr. F. Gresham has rushed in to expose himself and wants a hard and fast line laid down to "prevent terriers being allowed to take prizes which have not level mouths." Corsincon replies, "Hear, hear, by all means let us prevent our terriers taking anything so certain to disagree with them as prizes which have not level mouths." From which you will gather that ignorance of the Queen's English is no impediment to a man's assuming to write for public information. Corsincon says it is "painful to see him spinning out the twaddling insipidities only worthy of a man milliner." A "demnition" unkind remark, as Mr. Mantalini would have observed. My own opinion of the question is that for show terriers I prefer a level mouth, but for working purposes, where a fast hold is necessary, I should choose a terrier whose teeth did not meet. Try it yourself, put your stick in the mouth of a terrier with the correct jaw formation and then see how easy you can draw it away, but the undershot dog gets a grip that will not give an inch.

We are in a glorious muddle over Mr. Percy Reid's new champion rules. Neither show secretaries nor exhibitors understand them. Two members of the committee, Messrs. Mellor and Wootten, have written to the papers with a view of elucidating their meaning.

I regret to record the death of the lovely young St. Bernard bitch Thisbe, with all her pups. This is a lamentable loss to her reverend owner. Beyond the purchase and sale of Plinlimmon Mr. Arthur Carter has not had his share of the loaves and fishes in this breed. No man has worked harder and his unflagging energy has achieved much for the fancy and guided many shekels into the pockets of its followers.

LILLIBULERO.

MARCH 9, 1885.

THE PIERCE DISQUALIFICATION.—Peekskill, N. Y., April 4.—*Editor Forest and Stream:* In your issue of this week I see Mr. W. H. Child, acting secretary of the Philadelphia Kennel Club, does not agree with your interpretation of the power of Superintendent Lincoln as regards my disqualification, and still claims that I won the kennel prize through misrepresentation. That is false. I would not knowingly or wilfully misrepresent a dog's entry under any circumstances. I applied to Superintendent Lincoln in good faith, and it must be admitted that he was the person to whom inquirers had to apply for information on all matters connected with the show. Mr. Lincoln as I have proven by Mr. Walker, knew Reeta's connection with the Glencho Kennels, and after obtaining his assurance that the entry was legitimate and proper, how can Mr. Child still claim that the prize was won through my misrepresentation. The Boston Kennel Club have resolved to accept my entries, and claim that the American Kennel Club have no right to sustain the action of the Philadelphia Kennel Club, on the grounds that the American Kennel Club was not in existence at the time of the Philadelphia Kennel Club show, and cannot go back of their organization. —W. H. PIERCE.

THE HANLEY DOG SHOW.

[From our regular correspondent.]

THE North Staffordshire Kennel Club's second exhibition of sporting and other dogs was held in the Covered Market Hall, Hanley, Eng., on February 24 and 25. The show proved in every way a success, and the entries amounted to 774, and contained most of the best dogs in England. There were, however, few classes that contained a good collection of new faces, so that in the majority of the classes all the winners are well known.

In champion mastiffs we find no less than Maximilian, Pontiff, Cardinal and Crown Princess, with Orlando entered but absent. Crown Princess was placed first, which was a surprise to many of the mastiff men; yet we were pleased to see her at the top, being an old favorite, and when taken all round and judged from nose to tail as a modern mastiff, we think she stood in her correct position. In open dogs the small but typical John Bull won first, Spartacus second, Goth coming third. The Lady Clare won in bitches, with the winner at Liverpool second; a sister to Goth getting vhc. reserve.

St. Bernards were a strong collection, Save winning first in champion and beating Bayard, we think correctly. Plinlimmon won in open dogs, also special. We certainly consider him a grand dog, and since we first saw him at Warwick last year until the present occasion he has continued to improve and develop. At Warwick we considered him large, yet held an unfavorable opinion of his general qualities. However, we admit he has not turned out the coarse dog we expected him to become. The rest of the class was really good, the Liverpool winner and half brother to Plinlimmon came a good second, and the well-known Storm King and Pilgrim, sire of Plinlimmon, equal third. The whole class was one of extra merit. The bitch class was also good. The first is well-known, she was looking well. Bernardine, second, was also in good bloom. She is a good showy bitch, good on feet and legs and a good mover, while her color and coat are also good. There were two good classes of puppies, the winner being good and promising.

The winners in Newfoundlands are well-known. Lord Nelson, the winner at the Palace, won again here, and also took the special prize, a beautiful set of china.

Great Danes were moderate, and greyhounds a small class, first going to the white bitch Hair Spring that we have not seen now for about three years. She was looking well.

Luck of Hessen won well in pointer dogs. Second went to a lemon and white, in very bad form; in fact we preferred Perdix, vhc., for second place. Mr. Beck won well in the bitch class with Nan, second going to a heavy marked liver and white, heavy of shoulder.

In setter dogs first went to Glencairn, who was looking well. Count Howard, second, is young and small, but full of quality. Royal Engineer, third, is plain-headed. The winning bitch was fairly up to the average, the second prize going to a nice sort, rather fine and out of coat.

In the spaniel classes all the winners have often been reported.

We find Charlemagne in champion collies with no opponent. He also wins the special for best in the show. In open dogs, we thought the winner lucky, as we fancied several in the class equally as much as him. The second is full of collie character of a blue and white color and tanned cheek, also a wall eye. Rutland Hero, the Palace winner, seemed to have had his coat tampered with. Not that his appearance was improved, because it took away from his chance. He certainly should not have been shown in the condition he was in. The bitches were a good lot. The second, which we fancied so much at Birmingham, is not in the best of form, but she will be often heard of. Matchless was entered, but did not turn up. The quality throughout the collie classes was good, as has been usual lately at the best shows.

Mr. Shirley won well in champion bulldogs, and Rustic King won in the large sized open class. He was looking well.

Cairo had a walk over in champion bull-terriers. In the open class the first and second were placed the same as at the Palace, but we prefer the second prize winner Chancellor, and fancied Kettering Maggie for third place.

In champion fox-terriers Cavendish just managed to come in ahead of Pulborough Jumbo. In the open class first went to a good sort of young dog, whose ears are occasionally wrong, yet in the ring he showed to good advantage, and we consider won well. We liked the second prize in bitches equally as well as anything in the class.

In wire-haired first went to a very nice young bitch, good all through. She is rather short of face, yet of good terrier character. She was claimed at £20, and we know her owner would have given the purchaser a little profit on her to have got her back.

Burke was once more first in black and tans, with the small-sized Witch second.

The three winning Skyes were all good ones, the second possessing good coat. Capt. Mackie was well ahead in Scotch terriers. We understand this gentleman is thinking of sending to the forthcoming show at Madison Square Garden.

In the any-variety terrier class no less than six good specimens of the white English terrier turned up. We expected to see a special class for this variety. In Staffordshires first went to the well-known white English terrier dog Leading Star; second went to the well-known Airedale, Venus III. She was looking remarkably well. Third fell to the Bedlington, Domino. Bourbon won easily in the champion Bassets, and we considered it close running between the first and second in open dogs. The bitch class for Bassets was cancelled. Pugs were well represented. The winners are well known.

There was a good entry of foreign dogs from Mr. Taunton's kennels, and Miss Bodley managed to get equal first with a Pyrenean wolf hound, and Mr. Taunton's Sir John Franklin. The majority of the sporting and non-sporting puppies were shown in the open classes. In litter of puppies first went to wire-haired fox-terriers in the sporting division, while a good litter of bull puppies, by Bend Or, won in the non-sporting collection.

The benching was by Mr. Yates, of Stockport, and was very well arranged considering that he had considerable difficulty, owing to the smallness of the hall and the large number of entries. The dogs were confined in very small pens and the walks between the benches were too narrow, in fact at times it was with extreme difficulty one could push his way through the crowd of visitors.

Following is a list of the principal

AWARDS.

BLOODHOUNDS.—1st and extra, E. Nichols (Phyrne); 2d, J. C. Tinker (champion Dido).

MASTIFFS.—CHAMPION—1st, J. Royle (Crown Princess).—OPEN—*Dogs:* 1st and extra, G. Holmes (John Bull); 2d, D. L. Buchanan (Spartacus); 3d, E. Nichols (Goth). *Bitches:* 1st, J. S. Turner (The Lady Clare); 2d, C. R. Leach (Lady Blanche); 3d, M. Beaufoy (Princess Rita).

ST. BERNARDS.—CHAMPION—1st, J. F. Smith (champion Save).—OPEN—*Dogs:* 1st, cup and extra, J. F. Smith (Plinlimmon); 2d, H. B. Wood (Nero III.); equal 3d, W. J. Orwin (Storm King), W. G. Marshall (Pilgrim). *Bitches:* 1st, L. C. R. Norris-Elye (Crevasse II.); 2d, W. Jones (Bernardine); 3d, S. W Smith (Duchess of Leeds). PUPPIES—*Dogs:* 1st, R. S. Williamson (Sea King); 2d, S. W. Smith (Colonel Gordon); 3d, F. A. Kelley (The Earl). *Bitches:* 1st and extra, A. P. Evans (Duchess IV.); 2d, G. Nixon (Lady Pauline).

NEWFOUNDLANDS.—CHAMPION—1st, E. Nichols (Nelson L.).—OPEN—1st and extra, E. Nichols (Lord Nelson); 2d, R. W. Moll (King Bruce); 3d E. J. Bird (Isla).

GREAT DANES OR BOARHOUNDS.—1st and extra, R. Herbert (Leal); 2d, Lieut. R. L. Smart, R.N. (Joubert II.); 3d, R. L. Collings (Stella).

GREYHOUNDS.—1st, T. Sharples (Hairspring); 2d, T. B. Swinburne (champion Rose Marie).

POINTERS.—*Dogs:* 1st, Prince A. Solms (Luck of Hessen); 2d, W. Arkwright (Eldon Don). *Bitches:* 1st and cup, C. H. Beck (Nan); 2d, F. Warde (Kent Baby).

SETTERS.—*Dogs:* 1st, J. Royle (Glengairn); 2d, G. Potter (Count Howard); 3d, G. H. Gadd (Royal Engineer). *Bitches:* 1st, W. P. Cosier (Rhona II.); 2d, J. Bishop (Bonny Bevis).

RETRIEVERS.—CHAMPION—S. E. Shirley (Moonstone).—OPEN—1st, extra and 2d, S. E. Shirley (Think and Tractor); 3d, Rev. W. Serjeantson (Chelmer).

SPANIELS.—CHAMPION—J. Royle (Solus).—OPEN—CLUMBERS—1st, J. W. Carr (Lightfoot Ruby); 2d, E. Walling (Toots). BLACK—*Dogs:* 1st, W. R. Bryden (Beverley); 2d, Holley Bros. (Don Carlos); 3d, W. A. W. Lawson (Duke V.). *Bitches:* 1st, J. Royle (Carrol); 2d, Holley Bros. (Althea); 3d, W. R. Bryden (Belle of Buxton). ANY OTHER VARIETY—1st, G. T. Miller (Lord Randolph); equal 2d, Holley Bros. (Castle Tan) and E. Walling (Rover IV.).

BEAGLES.—1st and 2d, C. H. Beck (Abigail and Careless).

COLLIES.—CHAMPION—1st and special, J. Bissell (Charlemagne). —OPEN—*Dogs:* 1st and extra, J. F. Godfree (Major Trefoil); 2d, W. Arkwright (Blue Sky); equal 3d, G. Raper (Rutland Hero), S. Boddington (Scotch Laddie). *Bitches:* 1st, H. C. White (Wild Daisy); 2d, J. & W. H. Charles (Bertha); equal 3d, J. Pirie (Peerless), J. F. Godfree (Trefoil Lady). *Puppies:* Equal 1st, H. C. White (Wild Daisy), and J. F. Godfree (Major Trefoil); equal 2d, J. & W. H. Charles (Bertha) and G. Rapier (Rutland Hero); equal 3d, T. H. Stretch (Northampton) and J. Pirie (Peerless).

BULLDOGS.—CHAMPION—S. E. Shirley (Cervantes).—OPEN—OVER 45LBS.—*Dogs:* 1st and extra, G. Raper (Rustic King); 2d, J. S. Pybus-Sellon (Royal George); 3d, W. Paddock (Fizz). UNDER 45LBS.—1st, J. S. Pybus-Sellon (King Cole, Jr.); 2d, W. Woodgates (Lion) 3d, J. Morris (Sir John). OVER 35LBS.—*Bitches:* 1st, J. S. Pybus-Sellon (Dona Sol); 2d, A. Pemberton (Scissors); 3d, Mrs. J. R. Pratt (Saucy Girl). UNDER 35LBS.—1st, G. Raper (Ridotto); 2d, A. H. Greatbach (May); 3d, C. H. Brown (Zenobia).

BULL-TERRIERS.—CHAMPION—A. George (champion Cairo).—OPEN—OVER 25LBS.—1st and cup, T. Keene (Silver King); 2d, F. Hinks (Chancellor); 3d, J. Harrison (Gladstone). UNDER 25LBS.—1st, F. Hinks (Little Victor); 2d, A. George (Geroua).

FOX-TERRIERS.—SMOOTH OR WIRE-HAIRED—CHAMPION—1st, P. C. Reid (Cavendish).—OPEN—SMOOTH—*Dogs:* 1st and cup, J. G. Hikeley (Belgrave Spark); 2d, F. Baguley (Daylesford Billy); 3d, J. Foreman (Belgrave Rasper); 4th, A. Hargreaves (Dane Topper late Favorite). *Bitches:* 1st, G. M. Southwell (Society); 2d, A. Jordan (Winsome Nell); 3d, J. H. Seldon (Rochdale Pansy); 4th, W. R. Hues (Brokenhurst Tiny).—WIRE HAIRED—1st and extra, Maxwell & Cassell (Tees Pearl); 2d, F. W. Fellowes (Burton Sweet Briar); 3d, M. P. Lucas (Warwickshire Gipsy).—NEVER HAVING WON A PRIZE.—SMOOTH AND WIRE-HAIRED—1st, J. Hikeley (Belgrave Masher); equal 2d, Maxwell & Cassel (Tees Pearl) and D. Bourne (Pitcher); equal 3d, A. Hargreaves (Dane Topper) and J. Parkin (Marsden Premier); 4th, R. H. Cartwright (Called Back).—SMOOTH AND WIRE-HAIRED—*Puppies:* 1st and extra 3, J. G. Hikeley (Belgrave Soark); equal 1st, Maxwell & Cassell (Tees Pearl); equal 2d, F. W. Fellows (Burton Sweet Briar) and J. J. Stott (Fulwood Spark); equal 3d, P. Hikeley (Belgrave Masher) and H. J. Price (Cotswold Thistle); 4th, D. Bourne (Pitcher).

TERRIERS.—BLACK AND TAN—1st and extra, J. Royle (Burke); 2d, C. Whitehouse (Witch); 3d, T. B. Swinburne (Skittles).—SKYE—1st, T. B. Swinburne (Sherry); 2d, J. King (Prince Charlie); 3d, W. M. Easten (Warlock II.).—DANDIE DINMONTS—1st, W. E. Easten (champion Border Queen); 2d, J. Sherwood, Jr. (Babbie Ker); 3d, H. F. de Trafford (Jennie Deans).—SCOTCH—1st and extra and 2d, Capt. W. W. Mackie (Dundee and Glengogo); 3d, H. J. Ludlow (Worry).—IRISH—1st, W. Graham (Garryford); 2d, L. P. Bevan (The Boy); 3d, J. D. Lamsden (Garryroan).—ANY OTHER VARIETY—1st, C. F. Copeman (Leading Star); 2d, A. Walker (Venus III.); 3d, A. Holdcroft (Domino).

BASSET HOUNDS.—CHAMPION—1st, F. W. Blain (Bourbon).—OPEN—*Dogs:* Cup and 1st, F. W. Blain (Bertrand); 2d, H. Jones (Judge); 3d, F. D. Bland (Chorister).

DACHSHUNDE.—CHAMPION—1st and medal, H. A. Walker (champion Maximus and champion Ozone).—OPEN—*Dogs:* 1st and extra, E. L. Puxley (Subaltern); 2d, Mrs. P. M. Hoare (Graf III.); 2d, H. Jones (Joubert). *Bitches:* 1st, E. W. Haslewood (Swipes); 2d, W. Arkwright (Winks); 3d, Mrs. P. M. Hoare (Edelweiss). *Puppies:* 1st, E. L. Puxley (Subaltern); 2d and 3d, Mrs. P. M. Hoare (Graf III. and Edelweiss).

PUGS.—CHAMPION—1st, W. L. Sheffield (Set Set).—OPEN—*Dogs:* 1st and extra, J. H. Lock (Second Challenger); 2d, W. L. Sheffield (Sovereign); 3d, C. Houlker (Loris). *Bitches:* 1st, J. H. Howe (Wild Mint); 2d, J. H. Lock (Mignonette); 3d, J. W. Wood (Toinette).

FOREIGN.—Equal 1st, Miss A. Bodley (Congleton Bruno), W. K. Taunton (champion Sir John Franklin), and C. Macdona (Moscow II.); 3d, F. Adcock (Piston).

THE BOSTON DOG SHOW.

BOSTON, April 8.—The show opened on Tuesday with very successful prospects. The weather was pleasant, though to-day it rains, and the attendance during the first day was very good indeed. Mr. Watson was unfortunately absent on account of sickness.

The show is extremely crowded, there being a dog in every available corner of the hall. Thus the animals are not seen to the best advantage. The arrangements at first were not good, but the officers are working hard and things are going better. The English setters, mastiffs and collies are very good, and the Irish setters are a grand lot. The bulldogs and bull-terriers are also good, and the quality of the classes throughout is above the average at our shows. On the other hand spaniels and greyhounds are much below the exhibits at New Haven.

Most of the special prizes were awarded, as will be seen below, but the prize for the best team of dogs used in field sports, to consist of three, has not been judged, as the exhibitors have not been able to decide upon a judge.

The judging was done in a room in the basement by electric light, a very bad arrangement, for the dogs did not show to advantage under the circumstances, and it is impossible to judge of the color of Irish setters, Gordon setters, etc., under such conditions. Marked catalogues will be out to-day. The judging was completed the first day and we are therfore able to give a full list of the

AWARDS.

Scholes's Toronto Princie (Young Jumbo—Princie). High com., F. B. Fay's Minnie (Alexander the Great—Lil); Mrs. Percie A. Pond's Esmeralda (Prince Charlie—imported Bertie); R. T. Ross's Blanche (Prince Charlie—Bertie). Com.,

hounds, Memnon and Mother Demdike. Best deerhound, Mac. Best deerhound bitch in open class, Perth. Best couple of foxhounds, Dashwood and Stainless. Best kennel of five beagles, Wakefield & Co. Best couple of beagles, Rattler and Music. Best collie, Ben Nevis. Best collection of collies, Kilmarnock Collie Kennel. Best brace of collies, Kilmarnock Collie Kennel. Best fox-terrier, Richmond Olive. Best bull terrier (two), Grand Duke. Best bull-terrier puppy, The Earl. Best bull, Belissima. Best pair of bulls, Tipper and Belissima. Best pug, Dolores. Best pug owned by a lady, Lady Pilkington. Best pug the get of Young Toby, Queen. Best brace of pugs, Forest City Kennel. Best Scotch terrier, Vic. Best King Charles spaniel, Young Prince Arthur. Best Italian greyhound, Fanny. Best poodle, Cairo.

THE CINCINNATI DOG SHOW.

THE list of judges for the Cincinnati Dog Show, to be held at Cincinnati, O., May 5 to 8, so far as they have been appointed, is as follows: Mr. Hugh Dalziel, all the non-sporting classes; Major J. M. Taylor, English setters; Mr. B. F. Seitner, Dayton, O., pointers. Among the valuable special prizes offered is one of an oil painting, value $200, for the best kennel of six mastiffs owned or bred by the exhibitor, and one of $50 cash for the best kennel of St. Bernards, rough or smooth, or either; also a prize valued at $50, for the person exhibiting the largest number of dogs. Nearly all breeds will receive one or more.

At a meeting of the Cincinnati Railroad Association, passenger department, held in Cincinnati March 28, the following was adopted, viz.: "*Resolved*, That no reduction will be made to the public on account of the bench show to be held in Cincinnati May 5, 6, 7 and 8, but to sell exhibitors and their assistants on presentation of entrance receipt, special tickets from St. Louis, Chicago, Toledo, Indianapolis, Cleveland, Salamanca, Pittsburgh, Louisville, Richmond, Parkersburg and intermediate stations, also from points on the Cincinnati, New Orleans & Texas Pacific and Louisville & Nashville Railroad, and the Illinois Central Railroad south of Odin to Cincinnati and return, at rate of one limited fare for the round trip. Tickets are to be sold thus on presentation of entrance receipt April 28 to May 4, inclusive, and made good for return until May 11, 1885, inclusive. Dogs in crates are to be passed free in both directions at owner's risk." In order that exhibitors may get the full benefit of the action of the representatives of Cincinnati lines, I would suggest that entries be made as soon as possible, and that exhibitors write me fully stating by which route they wish to come to Cincinnati, and the station from which they will start. I will at once send them all necessary instructions, giving name of railroad official to whom to apply for reduced ticket and manner of securing instructions to baggage masters to pass dogs free. Parties living off the line of the roads covered by the territory mentioned would do well to write me, as full and explicit instructions cannot be given through the press. WASHINGTON A. COSTER, Sup't.

THE AMERICAN FOX-TERRIER CLUB.

AT a meeting held last evening at Delmonico's, in this city, for the purpose of forming an American Fox-Terrier Club, an organization was effected and the following officers elected: President, Mr. L. M. Rutherfurd, Jr.; Vice-President, Mr. F. R. Hitchcock; Secretary-Treasurer, Mr. Edward Kelly. The standard of the English Fox-Terrier Club was adopted. The initiation fee was fixed at $5, and the annual dues at $5, payable on election; the fiscal year beginning Jan. 1. The first annual meeting will be held at the coming Westminster Kennel Club's show, on a day to be fixed. At the coming Westminster Kennel Club's show the following cups, value $25 each, are to be offered for competition, open to members of the American Fox-Terrier Club only: For best fox-terrier dog, best bitch, best wire-haired dog or bitch, best fox-terrier bred in America, best dog puppy and best bitch puppy.

All communications to be made to Mr. Edward Kelly, Secretary-Treasurer, 185 Fifth avenue, New York.

POINTS OF THE FOX-TERRIER.

Following is the standard recommended by the Fox-Terrier Club:

1. *Head.*—The *Skull* should be flat and moderately narrow, and gradually decreasing in width to the eyes. Not much "stop" should be apparent, but there should be more dip in the profile between the forehead and top jaw than is seen in the case of a greyhound.

The *Cheeks* must not be full.

The *Ears* should be V-shaped and small, of moderate thickness, and drooping forward close to the cheek, not hanging by the side of the head like a foxhound's.

The *Jaw*, upper and under, should be strong and muscular. Should be of fair punishing strength, but not so in any way to resemble the greyhound or modern English terrier. There should not be much falling away below the eyes. This part of the head should, however, be moderately chiselled out, so as not to go down in a straight slope like a wedge.

The *Nose*, toward which the muzzle must gradually taper, should be black.

The *Eyes* and the rims should be dark in color, small and rather deep set, full of fire, life and intelligence; as nearly as possible circular in shape.

The *Teeth* should be as nearly as possible level, *i. e.*, the upper teeth on the outside of the lower teeth.

2. *Neck.*—Should be clean and muscular, without throatiness, of fair length, and gradually widening to the shoulders.

3. *Shoulders.*—Should be long and sloping, well laid back, fine at the points, and clearly cut at the withers.

Chest.—Deep and not broad.

4. *Back.*—Should be short, straight and strong, with no appearance of slackness.

Loin.—Should be powerful and very slightly arched. The fore-ribs should be moderately arched, the back ribs deep; and the dog should be well ribbed up.

5. *Hind Quarters.*—Should be strong and muscular, quite free from droop or crouch; the thighs long and powerful; hocks near the ground, the dog standing well up on them like a foxhound, and not straight in the stifle.

6. *Stern.*—Should be set on high, and carried gaily, but not over the back or curled. It should be of good strength, anything approaching a "pipe-stopper" tail being especially objectionable.

7. *Legs.*—Viewed in any direction must be straight, showing little or no appearance of ankle in front. They should be strong in bone throughout, short and straight in pastern. Both fore and hindlegs should be carried straight forward in traveling, the stifles not turning outward. The elbows should hang perpendicularly to the body, working free of the sides.

Feet.—Should be round, compact and not large. The soles hard and tough. The toes moderately arched, and turned neither in nor out.

8. *Coat.*—Should be smooth, flat, but hard, dense and abundant. The belly and under side of the thighs should not be bare.

9. *Color.*—White should predominate; brindle, red, or liver markings are objectionable. Otherwise this point is of little or no importance.

10. *Symmetry, size and character.*—The dog must present a generally gay, lively and active appearance; bone and strength in a small compass are essentials; but this must not be taken to mean that a fox-terrier should be cloggy, or in any way coarse—speed and endurance must be looked to as well as power, and the symmetry of the foxhound taken as a model. The terrier, like the hound, must on no account be leggy, nor must he be too short in the leg. He should stand like a cleverly made hunter, covering a lot of ground, yet with a short back, as before stated. He will then attain the highest degree of propelling power together with the greatest length of stride that is compatible with the length of his body. Weight is not a certain criterion of a terrier's fitness for his work—general shape, size and contour are the main points; and if a dog can gallop and stay, and follow his fox up a drain, it matters little what his weight is to a pound or so. Though, roughly speaking, it may be said that he should not scale over 20lbs. in show condition.

WIRE-HAIRED FOX-TERRIER.

This variety of the breed should resemble the smooth sort in every respect except the coat, which should be broken. The harder and more wiry the texture of the coat is, the better. On no account should the dog look or feel woolly; and there should be no silky hair about the poll or elsewhere. The coat should not be too long, so as to give the dog a shaggy appearance; but at the same it should show a marked and distinct difference all over from the smooth species.

	Points.
1. Head and Ears	15
2. Neck	5
3. Shoulders and Chest	15
4. Back and Loin	10
5. Hind Quarters	5
6. Stern	5
7. Legs and Feet	20
8. Coat	10
9. Symmetry and Character	15
	100

DISQUALIFYING POINTS.

1. Nose, white, cherry, or spotted to a considerable extent with either of these colors.
2. Ears, prick, tulip, or rose.
3. Mouth, much undershot or overshot.

A CRITIC CRITICISED.—New York City, April 2, 1885.—*Editor Forest and Stream:* I would beg to take exception to a line or two in Mr. Mason's letter in your issue of to-day. While "killing the Western paper" and fending off approaching dissolution held over his own devoted head by that sheet, he hesitates not in bringing to public notice the defects (?), or *vice versa*, of any dog that may serve his purpose for a clinching (?) argument. For instance, in speaking of the chestnut and tan field spaniel bitch, Newton Abbot Lady—a new addition to my kennel—he quotes the Western paper, which speaks well of her, and then to off-set their favorable comment, mentions three or four physical defects, which exist only in his own eye. To quote him: "First * * * went to a bitch that has a Roman nose, is throaty, and too short in the back," and forgets to add, "but is one of the shortest-legged, and best-coated spaniels this country has ever seen, and withal is full of true spaniel quality," which he might readily have done. I grant that she is a trifle throaty, but do not acknowledge the other defects. To mention two or three bad points in a dog, in the manner that Mr. Mason has done (omitting all good ones), leaves your readers with an impression anything but favorable to it. To the bitch's credit let me say, that she beat Black Prince (twelve prizes) under so good a judge as Mr. Watson; and Black Prince in turn beat champion Bob, Jr., champion Bonanza, Critic (first, New York), Beppo, and others at New Haven; and at previous shows champion Beau (twenty-two prizes), Toronto Jet, Success, Growler (first, Chicago, first, Philadelphia), Bob III., etc., etc., all of which, to my mind, goes to prove that the bitch is anything but the horrible piece of canine flesh that he pictures her. While disclaiming any desire for controversy with so redoutable an adversary as Mr. Mason, I think that justice to Newton Abbot Lady demands the foregoing explanation.—A. C. WILMERDING.

PHILADELPHIA SHOW PROSPECTS.—There are many finely-bred imported dogs of both the non-sporting and sporting classes in Philadelphia that have never been exhibited at any show. This has been especially noticed by members of the Philadelphia Kennel Club, and commented upon at meetings of the society. While the majority of these owners are adverse to gaining notoriety, and have entirely ignored canine exhibitions heretofore, a strong effort will be made to have these animals placed upon the bench at Industrial Art Hall in May. It has often been remarked by good judges that there are dogs among those mentioned that would be winners in the best company, more especially in the non-sporting classes. No effort will be spared to interest the owners of these valuable dogs and bring out the best specimens. We are glad to see already not a few are making inqury as to our rules and regulations.—HOMO.

A MINNESOTA LAW.—Dog owners everywhere will feel satisfaction at a law passed at the last session of the Minnesota Legislature and approved March 2, making dogs personal property. The law is a wise one, and will be of benefit to all classes of citizens. The act is as follows: "An act declaring dogs to be personal property. Be it enacted by the Legislature of the State of Minnesota: Section 1. All dogs owned or kept by any person for domestic or personal use, or for pleasure, are hereby declared to be personal property within the purview and meaning of the criminal laws of this State, and the laws of this State relating to larceny and malicious mischief or injury, shall be construed to embrace and apply to said animals. Sec. 2. This act shall take effect and be in force from and after its passage. Approved March 2, 1885."

THE AMERICAN COCKER SPANIEL CLUB.—The Produce Stakes for 1885 of the A. C. S. Club will be decided at Toronto during the show to be held there May 13, 14 and 15 next. Eleven entries have already been received. The club gave a special prize of $10 at New Haven, and have offered two of the same amount—one for the best dog and one for the best bitch—at Boston, New York and Toronto. The fourth annual general meeting will be held at the Horticultural Gardens, Toronto, on Thursday, May 14, at 8 P. M. Those members who may be unable to attend are specially requested to be represented by proxy. Besides the usual business on that occasion, the members will be asked to vote on the following point: As to whether the time has not now arrived to extend the sphere of the club, so as to take cognizance of all distinct breeds of sporting spaniels.

PACIFIC COAST FIELD TRIALS CLUB.—*Editor Forest and Stream:* Mr. N. E. White having found it impossible, on account of press of private business, to longer act as secretary of the Pacific Coast Field Trials Club, has resigned. I have appointed Mr. H. C. Bronn, of Sacramento, Cal., to fill the unexpired term of Mr. White. All communications to the club should be addressed to him. Entries for our Derby of 1885 close 1st of May next.—C. N. POST, President P. C. F. T. Club.

THE ST. LOUIS DOG SHOW.—*Editor Forest and Stream:* The club has decided to substitute $5 cash prizes for ribbons in the pointer and setter puppy classes. Valuable specials will be offered for nearly all the classes. Among them is one of $50 cash for the best kennel of mastiffs. Mr. H. W. Lucy, of Demarest, N. J., will take charge of dogs from his vicinity if owners wish. Entries close April 11.—G. W. MUNSON, Manager (St. Louis, Mo., April 4).

A STRAY COCKER SPANIEL.—A correspondent in Brooklyn, N. Y., writes that there is a stray liver and white cocker spaniel bitch in his vicinity that has recently had a litter of puppies. She has been at her present place about five weeks. If her owner will write to this office we will inform him of her whereabouts.

EASTERN FIELD TRIALS CLUB MEETING.—There will be a meeting of the Board of Governors of the Eastern Field Trials Club at the St. James Hotel, New York, on Tuesday evening, April 14, at 8:30.

DESICCATED MEAT, a new food article for dogs and puppies, is advertised in this issue. Dog owners should give it a trial.—*Adv.*

Rifle and Trap Shooting.

RANGE AND GALLERY.

SPRINGFIELD, Mass.—The Rod and Gun Rifle Club shot the telegraph match with the Pittsburgh Rifle Club Fast Day, April 3, which ended in favor of the Rod and Gun Club by three points, Rod and Gun Club 800, Pittsburgh 797. The day was a splendid one for rifle shooting; there was a great deal of interest manifested in the match in the city. There was also a large attendance of spectators out at the club's range, Lake Lookout. The conditions of the match were three sighting shots, 200yds. off-hand, Massachusetts decimal target, this being the first time the target has been used on this range. After the defeat which the Rod and Gun Rifle Club received at the hands of the Minneapolis, Minn., team, they are taking more interest in rifle shooting, and the older members are showing up at practice, we think we have a strong team when our club is in full practice. The scores were:

Marks	7	8	4	8	5	8	8	9	5	9	7	4	7	9	9	10	8	10	9	10—154
Farrow	5	9	7	5	8	10	9	7	7	6	10	8	9	5	5	8	9	7	8	4—146
Bumstead	5	9	8	10	3	7	2	3	10	7	8	5	5	8	4	9	6	10	9	7—133
Wilson	7	9	10	7	9	2	7	5	9	7	2	6	9	7	8	7	6	4	4	4—128
Talbot	7	5	7	6	0	9	5	9	7	7	5	3	9	6	6	4	10	5	8	7—125
Allen	4	5	5	9	7	7	4	2	2	7	7	7	5	5	6	5	6	7	6	8—114
																				800

Before the match started, a record match was shot by members present who were not on the team. The highest score was made by T. T. Cartwright, a second class marksman, who has never made one hundred points in ten consecutive shots. The scores were:

T T Cartwright	10	8	11	12	10	11	11	9	9	8—99
C J Gassn r	12	8	7	12	9	10	10	10	11	9—98
J H Bullard	10	8	3	11	7	8	10	7	4	5—69

After the telegraphic match was finished, two re-entry sweepstakes were started, one on the Massachusetts decimal and the other on the regular Massachusetts target. The first was won by T. T. Cartwright, his allowance of one point a shot for second class marksmen being just a little too much for the first class marksmen. There were over twenty entries, and some of the best scores were:

Cartwright	6	10	8	5	9+5=43	Allen	7	9	3	7	9—35
Farrow	10	9	7	10	6 —42	Field	5	7	4	6	9—32
Wilson	9	7	10	8	6 —40						

The sweepstakes on the regular Massachusetts target was won by Capt. W. Milton Farrow, who shot the new Farrow rifle, 32-cal., using 45 grains powder and 125 grains lead; but for the Captain's good work, Cartwright would also have run away with this sweep:

Capt Farrow	12	11	10	12	10	—55				
T T Cartwright	11	9	6	12	9+5—55					
T B Wilson	10	12	9	10	11	—52				
E T Stephens	10	12	10	11	8	—51				
Z C Talbot	11	8	12	9	10	—50				
M Bull	10	7	11	10	10	—48				

A splendid day's sport was had. We shoot a match April 11, with the Massachusetts Association of Boston. The officers of the club for the year are: J. H. Bullard, President; L. H. Mayott, Vice-President; S. K. Hindly, Treasurer; T. B. Wilson, Captain; Executive Committee, W. M. Farrow, L. H. Mayott, T. B. Wilson, S. K. Hindley, J. H. Bullard.

WORCESTER, Mass., April 2.—Members of the Worcester Rifle Association have had a field day at their Pine Grove Range. The results were as follows:

Massachusetts Target.

S Clark	75 73 72—220+ 7—227	A Williams	72 63 62—197+21—218
A C Brown	76 75 75—226+ 0—226	J Fay	73 72 71—216+ 0—216
T Leighton	73 71 71—215+ 9—224		

Creedmoor Target.

A C Brown	33 33 32—98+0—98	A L Rice	30 30 31—91+ 4—95
T Leighton	32 31 31—94+4—98	A Mills	26 25 26—99+11—88
B Smith	33 31 31—95+8—98	T Roberts	25 25 24—74+ 0—74

GARDNER, Mass., April 2.—The Gardner Rifle Club went out to Hackmatack range to-day, for their first spring shoot. The American decimal target was used. Out of a possible 100 the totals were as follows:

G C Goodale	87	88	C Shumway	79	80
A Mathews	86	85	C O Bent	69	81
I N Dodge	80	87	Geo Warfield	63	74
W C Loveland	79	81	H C Knowlton	60	72
F E Nichols	78	82			

BOSTON, April 2.—Marksmen of the Massachusetts Rifle Association visited the range at Walnut Hill to-day in large numbers. All were pleased with the conditions—a good gray light and soft wind, causing little trouble and enabling them to roll up good scores:

Military Match.

F W Perkins	23	23	23	22
E C B Erickson	22	18	21	19
F E Benjamin	18	18	17	21

Rest Match.

E B Souther	5	9	6	7	5	8	8	8	8	8—72

Practice Match.—A. Miller 44, A. B. Archer 44, W. L. Coon 42, F. W. Welles 42, H. Davidson 42, T. H. Buffum 41, C. W. Hodgden 41.

Creedmoor Match.—E. F. Richardson 47, O. M. Jewel 47, A. Law 46, B. G. Warren 46, W Howland 46, W. Fisher 45, N. F. Tufts 44.

THOMASTON, Conn., April 3.—The Empire Gun Club held the opening shoot of the season to-day. The weather conditions were: A bright light, with a stong, gusty wind blowing from the 9 to 12 o'clock quarters. The conditions of the shoot were: 200yds., off-hand, four strings of 5 shots each, two best strings to count as one continuous score:

W H Dunbar	10	10	11	10	12	8	9	10	9	11—100
G A Lemmon	11	12	7	11	10	9	9	8	11	11— 99
G C Canfield	10	8	7	12	10	11	9	10	10	10— 97
F Carr	10	9	10	11	9	7	9	7	12	9— 93
C L Alling	10	7	10	6	11	8	8	8	9	9— 86
G P North	5	8	10	12	8	5	10	12	6	6— 86
E Thomas	7	11	12	6	6	9	8	8	8	9— 88
Fred A Perkins	7	10	10	4	9	9	9	5	10	8— 81

SPRINGFIELD, Mass., April 2.—The Armory Rifle Team, of this city, shot a telegraph match with the Massachusetts Association of Boston, at their water shops range, Fast Day. The match was the third in a series of three and ended in favor of the home club by 13 points, Armory team 327, Massachusetts Association 314, they also win the rubber, having won two out of the three. The military rifle was allowed one point. The scores were:

F R Bull	5555455554+1—49	M W Bull	4555454555 —47
F B Wilson	4555555454+1—48	Z C Talbot	5455544444 —44
J D Marks	5545554554 —47	Jas Kimball	4455544545+1—44
S Bumstead	4455455454+1—47		—327

PITTSBURGH, Pa.—The Pittsburgh Rifle Club had a shoot at High Bridge Range on April 2, and a team of our six best men fired two scores against the Minneapolis, Min., and Springfield, Mass., Rifle Clubs. Regulation rifles, over three pounds trigger pull, Massachusetts decimal target, 200yds. off-hand, were the points of agreement. The day here was warm and pleasant, quite hazy (smoky) and sunny at first, then cloudy and with more smoke. There was a moderate 9 o'clock wind blowing, which required a few turns on the wind gauges. The day was as good a one as we ever get here for shooting, and the team took position at 1 P. M., and finished about 2:30. Four men shot with the steadiness of veterans; two were decidedly rattled by their anxiety to do well. The scores stood:

Hodgdon	4	4	4	5	5	8	8	10	6	4—97
Dutch	5	8	7	7	9	4	10	8	8	9—96
Brehm	7	9	4	8	5	4	6	9	3	9—92
Stolte	6	4	4	8	9	9	10	10	5	5—86
George	7	5	4	4	4	8	8	5	5	9—79
Huggins	8	5	6	7	8	8	10	7	6	10—85

4	4	7	5	4	7	3	4	3	9—107	
8	6	7	8	6	9	6	7	7	7—146	
6	5	8	6	2	6	7	7	7	9—122	
6	7	4	9	7	8	9	4	6	3—136	
8	5	7	7	8	7	5	8	8	6—128	
8	5	8	9	9	10	9	7	8	9—158	
									797	

We received by telegrams the reports of shoots held by the competing clubs. The Minneapolis Club scored 774, the Springfield Club scored 800. Our club is therefore second best. Its shoot shows a good average, but it is not as good as the same men make on regular shooting days. The decimal target is a difficult and exacting one, but it defines the exact powers of the marksman, develops his skill, and

never flatters. We hope it will soon be used by all the clubs.—W. H. W.

SAN FRANCISCO, April 3.—Miss Lillian Smith, a California girl, 14 years old, last night broke 100 glass balls with a Winchester rifle in two minutes and thirty-five seconds. This beats Dr. Carver's previous record of two minutes and thirty-six seconds.

OTTAWA, April 3.—The Government has ordered 10,000 Martini-Henry rifles and 3,000,000 rounds of cartridges for the troops.

BULLS HEAD RIFLE CLUB, 322 Third avenue, New York city. Regular shoot, April 3, 12-ring target, possible 120, scores: G. Zimmerman 118, M. Dorrier 118, C. Rein 117, A. Stolzenberger 114, J. Schutz 114, H. Miller 112, J. Schneider 110, B. Walter 107, J. Jordon 116, H. Gunther 105, D. Holland 104, H. Sindlinger 101, H. Wasmuth 101, J. Shaw 100, J. Wettje 99.

THE TRAP.

WORCESTER, Mass.—One of the most successful tournaments ever held in New England occurred in this city April 2 and 3, on the grounds of the Worcester Sportsmen's Club. The programme was very attractive and brought together a large number of the very best shots in this section, large delegations coming from Boston, Providence, Brockton, Exeter, N. H., and Lowell. Among the most interesting events was the match for the New England clay-pigeon championship badge, for 5-men teams, which occurred on the first day, and on the second day the match for the valuable New England individual clay-pigeon championship badge. Both badges were held by the local club and both were retained. In the team race the home club were easy winners, but in the individual it was a sharp fight throughout, Mr. H. W. Eager finally winning by one bird after putting in his last nineteen straight. Mr. Eager and C. M. Stark also shot off a private match in this race for $25 a side.

The first day of the tournament being Fast Day, and therefore a legal holiday, brought out a large number of spectators. 'Busses made frequent trips to and from the grounds. Putnam & Thurston, the popular caterers, served an excellent dinner in the dining hall at the club house both days, and all the details of the tournament moved along smoothly from the beginning to the end. The members of the executive committee, especially our new secretary, Mr. W. L. Davis, are entitled to much credit for their efforts in making the affair a complete success.

FIRST DAY.

The principal interest was in the New England team badge match. There were two teams from this city, the Boston and the Narragansetts of Providence. There were five men to a team, each with a possible 100. The detail of their work was as follows:

Worcester No. 1		Boston.	
H W Eager	11101111111111111111—19	W Allen	11110101101111111010—15
W L Davis	11011101111010011100—13	W Baker	11011010101010011100—12
M Gilman	11111111111011110110—17	C Wilbur	11111111111010111111—18
C Holden	11111101111111110110—17	W Howard	11011011010000111—12
W Perry	10111111110111111101—17	J Bartlett	00111011111110111011—15
	83		72
Worcester No. 2		Providence.	
G J Rugg	11111111111101111110—18	E Tinker	10000111111001011010—11
H Webber	11101111111101110.0—16	Crandall	01111110111001110110—14
M Whittier	11111101111101110111—17	W Sheldon	11111101111111101011—17
Sampson	00110011011000110111—12	G Corey	11111000101111111000—14
E Smith	11011011111100111111—16	C Sheldon	01000011101111000000— 8
	79		64

The shooting in sweepstakes was generally participated in the several events, number of entries and results were as follows, the full name of each occurs below only once:

Five clay-pigeons, 18 entries: O. R. Dickey first, A. L. Gilman and C. B. Holden second, M. D. Gilman, E. T. Smith and Alba Houghton third.

Seven clay-pigeons, 27 entries: G. J. Rugg first, E. W. Tinker, M. D. Gilman and W. S. Perry second, M. O. Whittier and W. H. Allen third, A. L. Gilman and W. F. Howard fourth.

Three pair clay pigeons, 27 entries: O. J. Jenkins, C. F. Harris and Geo. J. Crandall first, J. Faulkner and Smith second, Houghton and E. S. Luther third.

Team shoot.

Seven clay-pigeous, 30 entries: J. Bartlett and Dickey first, Whittier, A. F. Coulter, Rugg and Luther second, Gilman third, Gerrish and Tinker fourth.

Five singles and 3 pair clay-pigeons, 18 entries: H. W. Eager first, Gilman and Smith second, Luther third, Tinker fourth.

Seven clay-pigeons, 37 entries: Luther, Faulkner and Eager first, Smith second, A. F. Cooper and D. Kirkwood third, Whittier fourth.

Ten singles and 5 pair clay-pigeons, 15 entries: Gilman first, Dickey second, Luther third.

Seven clay-pigeons, 32 entries: Holden, W. L. Davis, Jenkins and Faulkner first, Rugg and W. Sheldon second, Gerrish, George Corey and G. A. Spring third, Whittier and F. J. Francis fourth.

Five clay-pigeons, 21 entries: Francis first, Spring second, H. W. Webber and Gerrish third.

Six singles and 2 pair clay-pigeons, 12 entries: Cooper first, Gerrish and Perry second, Eager third.

SECOND DAY.

The principal event the second day was the contest for the individual badge held by W. S. Perry, of Worcester, who won it at the Walnut Hill range. The contestants shot in the following order: C. H. Gerrish, of Exeter, N. H.; W. M. Sheldon, of Providence, R. I.; W. S. Perry, of Worcester and H. W. Eager of Marlborough, of the Worcester Club; C. M. Stark, of Boston; O. R. Dickey, of Walnut Hill; W. H. Allen, of Brockton. The detail of the work of each contestant was as follows:

H W Eager.....1111001111001111101111111101101111111111111111—43
W S Perry.....1111111011111100011101111111111011101111010111111—42
W H Allen.....1111011111111001011011111100111111111111010111—40
C F Stark.....1111111011111100110110111111111111010101000111—39
W M Sheldon.....0111010110110111111111011111111111010001110111—37
O R Dickey.....1110101011111010110110111111111010100110001101—35
C H Gerrish.....1011010100110101111111111010111111111111010010001—35

The other events were as follows:

Five clay-pigeons, 23 entries—1st, Cooper, Dickey, Luther; 2d, Rugg; 3d, Faulkner.

Seven clay-pigeons, 19 entries—1st, Gerrish; 2d, Houghton, Cooper; 3d, Dickey; 4th, Faulkner, Allen.

Five pair clay-pigeons—1st, Perry; 2d, Smith, Faulkner; 3d, Eager; 4th, Dickey, Webber.

Two men teams—1st, Cooper and Gerrish; 2d, Stark and Wilbur; 3d, Dickey and Webber; 4th, Holden and Gilman.

Ten singles and five pairs, ten entries—1st, Stark, Cooper; 2d, Eager; 3d, Holded; 4th, Gilman.

Seven clay-pigeons, 18 entries—1st, Holden, Wilbur, Dickey; 2d, Faulkner; 3d, Cooper, Gerrish, Gilman; 4th, Stark.

Three pair doubles—1st, Cooper, Webber; 2d, Dickey, Webber; 3d, Luther; 4th, Davis.

Five clay-pigeons, 18 entries—1st, Gerrish; 2d, Faulker, Cooper; 3d, Rugg.

Seven clay-pigeons, 17 entries—1st, Eager, Gilman; 2d, Perry; 3d, Webber, Cooper, 4th, Stark.

Five clay-pigeons, 14 entries—1st, Eager, Cooper; 2d, Rugg; 3d, Gerrish.

Seven clay-pigeons, 14 entries—1st, Dickey; 2d, Perry; 3d, Gerrish; 4th, Webber.

Five blackbirds, 26 entries—1st, Eager; 2d, Dickey; 3d, Webber, Cooper.

Five birds, 14 entries—1st, Eager, Holden; 2d, Gilman, Perry; 3d, Cooper.

A purse of $75 was then made up, and was contested for by W. S. Perry, C. F. Stark and H. W. Eager. The prize was won by Stark, who made 26 out of a possible 30. Perry made 25, and Eager 23.

NEW BEDFORD, April 2.—The New Bedford Gun Club had an all-day meeting to-day. The following were first prize winners: Ten blackbirds, P. D. Slocum, Erskin Pierce, divided; ten redbirds, H. P. Bryant; three black and two red birds, Pierce; five pairs birds—five black and five red, Slocum; five blackbirds, Bryant; five blackbirds, F. Allen; five redbirds, Allen: three pairs redbirds, Pierce; five blackbirds, five balls, Slocum; five blackbirds, two clay-pigeons, Post; ten balls, Allen; six blackbirds, four redbirds, Allen.

TEKAMAH, Neb., March 31.—Tekamah Gun Club, Craig, Neb.

No. 1.—7 glass balls, 21yds.: C. E. Bardwell 7, A. T. White 6, W. R. Fitch 5, J. F. Beard 6, E. Gibbs 6, J. W. Lattymore 5, P. Hoffman 4.

No. 2.—4 clay-pigeons and 3 glass balls, 21yds.

	Pigeons.	Glass Balls.		Pigeons.	Glass Balls.
Fitch	1100	110—4	Beard	1111	111—7
Bardwell	1111	111—7	Hoffman	0001	011—3
White	1111	110—6	Lattymore	0111	110—5
W Eby	1110	011—5			

No. 3.—7 glass balls, 18yds., rotary trap: J. F. Beard 3, A. T. White 4, C. E. Bardwell 7, J. A. McLaughlin 6, Wm. Ely 6, Lattymore 6, W. R. Fitch 6, Paulger 5.

No. 3.—7 live pigeons, 25yds., wind blowing strong, no boundary, 3 minutes to re rieve in: Bardwell 6, Fitch 3, McLaughlin 3, White 5, Lattymore 3, Eby 2, Beard 5, A. Blackstone 3, Paulger 2.

No. 4.—5 live pigeons, 25yds., plunge traps: Bardwell 5, Beard 4, Fitch 3, Blackstone 1, Eby 3, White 2, McLaughlin 3, Dowell 3, Paulger w., Lattymore 3, Yearns 3, Hoffman w.

No. 5.—7 glass balls, 21yds., rotary trap, for a celebrated pointer dog, worth $50, large liver colored, 2-year old, named Eager. White and Bardwell did not divide first prize, but went into partnership upon him. Score: Beard 6, White 7, Bardwell 7, McLaughlin 4, Eby 5, Paulger 5.

No. 6.—7 glass balls, 18yds., for a celebrated pointer pup, valued at $25, named Tipol. Bardwell took the pup. Score: C. E. Bardwell 7, W. R. Fitch 5, A. T. White 5, Beard 5, Lattymore 4, Paulger 6.

No. 7.—10 glass balls, 18yds.: Bardwell 9, Fitch 7, White 8, Beard 10, Lattymore 9, McLaughlin w, W. A. Clark 10, Paulger w, Eby w.

NEW ORLEANS, March 23.—The match at fifty clay-pigeons for $250 a side was shot off to-day at the Oakland Park between Hon. W. F. Cody (Buffalo Bill) and Mr. Evelyn Booth, an English gentleman much given to sport. When within six birds of the finish they stood two apart, in favor of Mr. Booth, who in shooting out let three get away, which necessitated his opponent killing the remaining six. At this very point a stiff breeze joined the sport and and blew the birds wild, and left the score as follows:

Evelyn Booth....1101111111101011011011111111111111011011111110010—40
Buffalo Bill.....1111011110110010011111101011111111111111011111000101—39

Yank Adams, scorer.

March 30.—To-day the marksmen met again for a stake of $125 a side. As they say out on the frontier, Bill cut loose and killed forty-nine out of fifty, while his youthful opponent was only one behind. The excitement was intense.

Cody.....11111111101111111111111111111111111111111111111111—49
Booth.....11110111111111111111111111101111111111111111111111—48

April 1.—At Oakland Park to-day Mr. Cody and Mr. Booth shot their third match at Ligowsky clay-pigeons sprung from a trap 21yds. rise. Mr. Cody scored 47 and Mr. Booth 46. This being the tie match, and Mr. Cody winning two out of three, makes him the winner.

Cody.....11011111111111111111111111011111111111111111111111—47
Booth.....11111111111111011101111011111111111111111101111—46

NATIONAL GUN ASSOCIATION.—Cincinnati, O., April 1.—Stock certificates are now ready for delivery to those who have paid subscriptions in full, and members' certificates to those who have paid annual dues. Persons intending to visit inter-state tournament, Springfield, O., May 5 to 9, can obtain information regarding reduced rates by addressing the secretary, Box 1,292, Cincinnati, O. Efforts now being made before the Ohio Legislature to procure a modification of the restriction on shooting within city limits in that State, promise to be successful during the present session. The secretary of the association invites correspondence on the subject of the preservation of game and fish, purifying of rivers and streams, preservation of forests, securing game preserves, etc., from persons interested, with a view to making an organized effort in either one or all of these directions. Copies of the first handbook of the association issued from press on the 1st inst. Copies may be obtained of any news dealer.—F. C. BISHOP, Sec.

WELLINGTON, Mass., April 2.—To day witnessed the largest number of sportsmen ever gathered at the grounds of the Malden Gun Club with but a single exception. The trappers were kept busy at work, and as the result of their labor, some 3037 birds were sent skyward. The results: 1. Five blackbirds, 31 entries—Field, Loring and Wurms divided first. 2. Seven pigeons, 23 entries—Sanborn and Field divided first. 3. Three pair blackbirds, 26 entries—Adams and Black divided first. 4. Seven blackbirds, 31 entries—Snow and Field divided first. 5. Five pigeons, straightaway, 34 entries—Loring, Parker, Renaud and Field divided first. 6. Five blackbirds, straightaway, 29 entries—Shumway and Steele divided first. 7. Five pigeons, 29 entries, Symmes, Black and Wurms divided first. 8. Three pair pigeons, 19 entries—Black first. 9. Seven blackbirds, 32 entries—Johnson first. 10. Five blackbirds, straightaway, 30 entries—Snow, Evans, Steele and Stanton divided first. 11. Five pigeons, straightaway, 24 entries—Stanton first. 12. Three blackbirds, 14 entries—Black and Scott divided first. 13. Three pair pigeons, 20 entries—Stanton first. 14. Five blackbirds, 30 entries—Adams, Symmes and Swift divided first. 15. Five pigeons, 23 entries—Dennis, Pond, Pratt and Swift divided first. 16. Seven blackbirds, 19 entries—Symmes, Stanton and Swift divided first. 17. Five blackbirds—Field first.

SOUTH MANCHESTER, Conn.—The Mount Nebo Gun Club held their first shoot Fast Day (April 2). Every other Wednesday was the day decided upon to meet, commencing April 8. The following scores were made:

F E Watkins.....01101011011111011111—15
W C Cheney.....00101111101111011101—14

MIDDLEBORO, Mass., April 2.—The Hit or Miss Gun Club held its first clay pigeon shoot for the season of 1885 at Bull's Eye crossing to-day, and it drew together a large number of sportsmen. The matches were all at 10 birds, and the following is the result: 1. L. S. Baily and B. W. Bump divided first; 2. W. Osborne first; 3. L. J. Baily first; 4. L. S. Baily and B. W. Bump divided first; 5. L. S. Baily first; 6. L. S. Baily, B. W. Bump and I. S. Swift divided first; 7. L. S. Baily and H. Wilbur divided first; 8. L. S. Baily first; 9. L. S. Baily first.

WAKEFIELD, Mass, April 2.—The Wakefield Sportsman's Club held a largely attended clay-pigeon match to-day at the range. Below are the results: 1. E. Gardner first; 2. G. Curtis first; 3. Harry Dutton first; 4. H. Dutton first; 5. D. S. Kellam first; 6. George Lamont first; 7. D. S. Kellam first; 8. E. Frisard first. In the prize match of 20 birds, the first prize was won by D. S. Kellam, score 14; second by H. Dutton, score 11; third by E. Miensset, score 9; fourth by S. White, score 7. The gold badge was won by Harry Dutton, score 11 out of a possible 20.

SOLOMON CITY, Kansas, March 30.—The Solomon City Gun Club met and reorganized March 27, and is now in full blast, with the following officers: H. B. Aldrich, President; Thomas Robertson, Secretary and Treasurer. Appended are to-day's scores on glass balls, and hope to be able to send better scores in the future with our clay blackbirds and trap which we have just ordered. Score: T. Robertson 7, C. G. Wescott 9, J. Dorflinger 5, T. Yohy 7, E. Crooks w., A. Collins 4, G. Yohy 6, H. B. Aldrich 7, W. C. Selvey 10, T. J. Edworthy 4, M. Wall 8.

THEY HAVE COME TO NEW YORK.—The well-known Western house of A. G. Spalding & Bros. have recently established themselves in New York, on Broadway, near the corner of Park Place, and had their formal opening April 1. The location chosen for their store is a most advantageous one, and the opening was well attended. The main floor with the office in the rear is entirely devoted to their retail department, and the cherry counters, show cases and wall cases that run the entire length of the store, which is about 100 feet deep, together with the displays of fishing tackle, guns and miscellaneous sporting goods, make this department very attractive.

INTERIOR VIEW OF THE STORE.

On the right as one enters is located the fishing tackle department, and then comes the gun department, with all kinds of guns and shooting goods. On the left is a handsome display of cutlery, kennel goods, skates, base ball supplies, cricket, foot-ball, lawn tennis, gymnasium, theatrical and various kinds of miscellaneous goods. On the second floor is located the bicycle department. On this floor is also located the uniform department, where an experienced cutter will be kept busy making athletic uniforms of all kinds. The upper floors are used for storage purposes, and the shipping is done from the basement. In addition the firm have a large storehouse in Greenwich street, where they keep case goods. This firm own and control a large factory at Hastings, Mich., where they employ upward of one hundred hands, and where most of the goods bearing their trade mark are manufactured. The firm will no doubt by their energy secure their share of the New York trade in guns and fishing tackle.

Canoeing.

CANOEISTS *are invited to send us notes and full reports of cruises club meets, information about canoeable waters, and other communications of interest.*

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signals, etc., of their clubs, and also notices in advance of meetings and races, and reports of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

FIXTURES.

May 30, 31—Hudson River Meet.
May 30 to June 1—Connecticut River Meet.
July 18, 28—Western Meet, Ballast Island, Lake Erie.
July 24 to Aug. 8—A. C. A. Meet, Grindstone Island.

AMERICAN CANOE ASSOCIATION.

SECRETARY—C. A. Neidé, New Orleans, La. Candidates for membership must forward their names, with $2 for initiation fee and first year's dues, to the secretary, who will present the names to the executive committee. Money should be sent by *registered letter* or money order.

THE NEWBURGH MEET.

ON Monday afternoon and evening of this week a meeting was held at Newburgh by a number of canoeists, for the purpose of arranging for the local meet, to be held at Plum Point, in May. Among those present were Commodore Oliver and Mr. Cushman, of Albany; Mr. Grant Van Duzen, of Rondout; Mr. R. J. Wilkin, of Brooklyn, and the full local contingent. After much discussion it was decided to hold the local meet on Friday and Saturday, May 29 and 30, the camp to be ready for occupation even as early as Thursday afternoon. The programme will contain four set races, viz.: unlimited sailing for classes A and B, and paddling races. To enable the laying out of a better course for the sailing races and so that the whole race may be viewed from one point, the camp site will be removed to the north end of Plum Point, or nearer the spring, where good places will be found for those who will camp in tents as well as for those who sleep in their canoes. The suggestion was made that each club send a prize to be competed for and that the expenses of the meeting be borne pro rata by the clubs in camp, that is in proportion to the number of men each club may have. The regatta committee will consist of three members of the Newburgh C. C., and that organization has kindly consented to arrange all the necessary details, such as docks, etc., etc., for the meet.

A CRUISE ON THE WEST COAST.

I.

I KNOW of nothing that gives more satisfaction to the average canoeist than the preparations for a cruise. Stores must be selected, camp kit, clothing and blankets looked after, the canoe, sails and paddle overhauled and put in order.

Speaking of camp kit, I wonder if there are others who cherish such things as I do. My old battered camp kit, every article has its history. That little frying pan was originally purchased at a ten-cent counter and given me as a joke. It has cruised with me five years and nearly ten thousand miles.

I have drank oceans of coffee and mayhap a drop of Hennessy from that rather nasty tin cup. I baled out my canoe with it once when I was capsized on Lake Champlain. It is battered, to be sure, nearly all semblance of tin has departed; but it is an old friend, and to me is as bright as silver.

And that sheath knife and belt; they were given me by one of the finest canoeists in America. I prize them accordingly.

And my canoe; she is not handsome, has no mahogany, nor nickle plate; but I built her. I have sailed and paddled her many miles. She never ducked me yet, has never leaked a drop, and although I have sometimes found lumpy water, she has always proved herself equal to the occasion. I'll stick to the old canoe a little longer.

I had planned my cruise weeks ahead, and so, when I struck the double blade into the water on the morning of Oct. 8, I was fully prepared for a week or a month, as the case might be, of genuine solid comfort. My course lay down the river some four miles, then southward along the coast between the mainland and the outlying keys and islands, through those waters which form the finest cruising for the canoeist that I have ever seen. Reaching the mouth of the river I find a good breeze from the northward, and so, getting a good offing, I make all sail, and swinging off before the wind, dance merrily away on my holiday; the waters clear as crystal beneath me, the sky a perfect blue above.

In a short time I am in open water, the main a mile away on the port hand, while Hog Island is five miles off on the starboard bow. The breeze freshens, I soon pass Seaside, and anon Yellow Bluff looms up before me. I recall some very pleasant days I spent there one year ago, so I decide to stop for a chat. In five minutes I am at the little wharf and running under the lee of the warehouse. I catch a turn with the painter and climb up. Quite a crowd meet me, and as usual, chaff is the order. "Not drowned yet?" says one. I answer them all as best I can, and slip up the street a few steps for a hand-shake with some little pets of mine.

On returning to the wharf after making my rounds, I find there is decidedly more wind, and two skiffs just starting away have reeled down. All hands open with their chaff. "Better take in that rag, get out your pudding stick," etc. I listen to it all and decide to sail. A moment takes me out from my lee and then I get it solid, but with my hundred and sixty pounds as far to windward as I can get it, I hold her down, and how we go. On the southern end of the key, at what is called Little Pass, is a large mullet fishery, and wishing to take in everything of interest I strike across the bay, at this place about four miles wide. A good sea is on in the channel, but I am soon out of it, and as I round up alongside a schooner at the wharf, I am met by the entire force of fishermen, they have been watching my run across the bay, and are curious to see what it is that goes through the white caps, showing nothing but a sail. All eye the canoe with interest, but no one accepts my invitation to "try it." Full of banter, but kindly withal, one brings me a fat pompano, another a chunk of ice, and all give me a cheer when I start on. Eight miles south of the fishery is my old camping ground of last year, it is a good one, and I shall not pass it without calling. I reach the place at 5 P. M., land and get ready for supper. What will I have for my supper? I think my pompano would make a glorious stew, so here goes.

As I have never seen a fish stew described in the Galley Fire, I will tell briefly how I do it. Two slices of pork cut into dice, fry quite brown over quick fire. When nearly done add two medium sized onions sliced thin. When onions are done stir in one handful of flour and brown nicely, add hot water to make thin gravy, have the fish cleaned and cut in small pieces, sink in the gravy, cover, and cook slow about twenty minutes, pepper and salt to suit, and if you don't like it, don't try it again.

My camp ground is on a low shore covered with dwarf palmetto, there is a small space of clear ground and here I make my camp. Gathering plenty of dry marsh grass, I soon have a good bed with a fire in front, and with my mainsail set up for a "lean to" I shall do finely.

Supper is soon prepared, and as the day's sail has given me a good appetite, it is soon disposed of, dishes washed and put away, canoe cared for, wood gathered for the fire and I will settle down for a quiet smoke. Lying on the palmetto leaves, face to the stars, I smoke and think, think and smoke. The first camp always brings a review of former cruises. In fancy I run the Allegheny again, follow the windings of the Father of Waters, paddle through the beautiful bays and sounds of "Our Lake," and finally go back to old time cruises in bigger boats, back again to my first venture on the little mill pond in my old home. Then my thoughts wander from boats to boatmen, old friends, some are gone on the long cruise, some are running rapids, making wonderful quick time on the life cruise, barely missing some very ugly rocks in the channel, others are paddling on quiet waters, getting all the pleasure possible out of their cruise, while others still are hauled out for repairs. And so I dream away until—hello! my pipe is out, so is the fire, it is dark too, air feels decidedly chilly. I stir about, start up the fire, fill the empty pipe and try to keep awake, no use, the surf on the outer beach is singing a lullaby, the south wind whispering in the palmetto leaves suggests sleep, and pulling the blanket over my head, I am soon asleep.

I waken with the first faint show of gray in the east, rake together the remains of my fire, a few live coals are found, and with some dry chips I boil water and prepare my coffee. It is a rule with me to have my coffee in the morning early; breakfast I can do without till 7, 8 or even 9 o'clock, but I must have my coffee.

Coffee disposed of, I tuck a sweet potatoe away in the hot ashes, and shouldering the gun, start along the beach for a bird. I have not far to go, as the sun tinges the tops of the pines, a flock of willet settle on a mud bar near me. I walk toward them, and as they rise, I turn loose the left hand barrel; two drop. As two are enough, I pick them up, and chuckling over my good luck in getting a break-

fast, start for camp. Nearing camp, I hear a rattle of tinware, and peering over the tops of the low palmetto scrub I find I have callers. A large black sow and a litter of half-grown pigs have taken possession of my household, capsizing coffee pot, tin buckets, etc., and breaking up housekeeping generally. I was mad. I dislike hogs exceedingly, and a Florida razorback particularly. I suppose it was cruel, perhaps needless, but I did warm those hogs with No. 8 chilled shot, and how they did squeal. Things were soon righted, and as I carry my stores in tin cans nothing was lost. Now for a breakfast. I skin my birds, clap them in the frying pan, half fill it with water, and set on the bright coals, then heat more water for coffee. Watching my frying pan closely, I let the water all boil away, then dropping in a pat of butter, I rake out fresh coals and brown my birds nicely; a little pepper and they are done. My coffee made, I rake out the sweet potatoe; it is done to a turn, and with birds, sweet potatoe, crackers, butter and coffee, I manage to worry through.

Breakfast over and dishes washed, I stow canoe and am ready for a start. The Pass stretches away south like a river, on the left are the lowlands of the mainland, covered with scrub palmetto, in the background rise the tall pines. On the right hand a narrow sand key, covered with dense mangrove bushes, and on the beach side with a narrow fringe of tall palmettos, separate us from the Gulf. At some points the key is only a few steps in width, in others it widens to several hundred yards. At the northwest part of Rocky Pass lives Mr. Hendricks. He has only been there two years, but already the wilderness begins to blossom as the rose. Mr. H. keeps a large number of bees, and I was much interested to hear him tell his experience in bee culture in Florida.

After looking over his bee farm and his excellent garden, and tasting some of the finest honey I ever saw, I paddle away south. Toward noon I cast about for dinner. Some plover come circling up the pass. I drop a brace for a stew. Landing on a smooth sand beach, I kindle a fire, and putting my birds in a tin bucket, with about a pint or so of water, I set them over the fire to boil. Now, then, I will pare and slice thin two Irish potatoes and two onions, dredging potatoes and onions well with pepper. I set them on one side and look after my birds. They are cooking finely. I add a little more water, stir up the fire, and getting out the pork cut off a generous slice, cutting it into small dice. Now a look at the birds; they are getting tender; so I add the potatoes and onions, giving my fire a poke the while. Now the pork must go in the frying-pan and be browned nicely, stirring in a spoonful of flour when it is nearly done. A look at the kettle tells me the potatoes and onions are done. Now add the contents of the frying-pan, stirring all the while. Let it cook a minute, and setting off the fire drop in a piece of butter.

Just as I get everything ready for dinner I hear the flap of a sail. Looking up I see a skiff containing one man and trying to sail, but owing to lack of wind, doing nothing but drift. I hail the stranger and invite him to dinner. He accepts, for it is a rule in Florida never to refuse a proffered meal. Pulling his skiff ashore, he introduces himself as Mr. Charles Carter, a native of Canada, but a resident of Florida for some thirty years. Making an impromptu table of an old box found at the beach, we gather around and enjoy what we have. After fully testing my stew, with which, by the way, he expressed much satisfaction, Mr. Carter says, "Now we'll have dessert." Going to his skiff he produced a bag of oranges; they were fine, and rounded out the dinner complete.

I found Mr. Carter a pleasant, well-informed and intelligent gentleman. He related several little anecdotes which proved a thorough knowledge of the "West Coast." He had sailed it as sponger, fisherman, coaster and pilot. I, of course, did very little talking, but I listened for all I was worth, and prolonged our after-dinner chat as long as possible. Some little episodes which came on during the late unpleasantness were peculiarly interesting. I shall probably speak of them again.

About two hours are spent after dinner, and then I am swinging the double blade again, heading due south. I soon reach what is known as Indian Pass. There is no pass there now, having been closed by a furious nor'wester several years ago. Just beyond I came to a "rookery." White and blue herons, pink curlew (roseate spoonbill), egrets, Spanish curlew, etc., all find a lodging here, and make night hideous with their cries. Five miles below the rookery is John's Pass, and on the mainland opposite is a little store, a few dwelling houses, etc., that is called the village of John's Pass. I stop at the little store, and while there meet with an English gentleman. He is very much interested in canoeing, and invites me to spend the night with him and partner. We cross the little bay and soon arrive in front of a neat little cottage almost on the beach, where I meet the other member of the firm. I find them very pleasant gentlemen, enthusiastic lovers of out-door sports, and ardent admirers of canoeing as portrayed by Macgregor and Bishop. My hosts had been in their new home but a few weeks, but they had already made many improvements, and had become quite attached to their Florida home. We spend the evening in pleasant chat, review canoeing and canoeists, speak of travels by sea and land, discuss the books we have read, the sights we have seen, and finally at a late hour we smoke the final pipe. Swinging my hammock under the wide, cool veranda, I turn in for a sound sleep.

A PRACTICAL TEST.—On a Saturday afternoon lately at the club house, the captain of the Boreas gave a lecture on the strength of canoe materials in general, and spruce masts in particular. The lecture was illustrated by experiments at his own expense. The first experiment (and the last) was to put his spruce mast, 13ft. 6in. long, and a trifle less than 1¾ in diameter, on two stools 13ft. apart; then sitting on the mast in the center, he gradually put his whole weight, 125lbs., on it. The stick bent nearly to the floor but did not break. Again and again the test was made with success. But alas! that pitcher went once too often to the well. Some new arrivals in the audience induced him to show off once more, and giving an extra jump the climax was reached. Result, two dandy masts; expenses of experiments, $2.25; receipts, *nil*. Canoeists are an ungrateful lot, they didn't even make a collection. Joking aside, all the T. C. C. men are now satisfied that spruce from the Province of Quebec is hard to beat for canoe use in paddles, masts, knees, etc. The Boreas has now a new mast 14ft. long, 1⅞in. diameter, but the thickness is carried up about 8 or 9ft. This stick will stand any strain that can be put on it by her ninety feet of canvas.

MOHICAN C. C.—A meeting was held on April 1, at which Messrs. Howard Brown and Henry Dwight were elected members. A resolution to authorize the executive committee to purchase the canoe Henrietta for a club canoe, and to pass rules for its use, was passed. An invitation from the Newburgh C. C. to camp at Plum Point was accepted, the secretary being instructed to reply to it. It was also resolved that Mr. Lloyd Thomas should prepare a flag for a prize at the same camp. A communication was received from the Regatta Committee, A. C. A., asking for the nomination of a measurer, and Mr. P. M. Wackerhagen was appointed. After the meeting Com. Oliver spoke about canoe fittings, illustrating his remarks with the new Mohican No. 2, Marion B. and her remarkable outfit, all of which was on show at the club room. The new rig also excited much attention, as did that of the Snake, just completed. The evening was concluded by Mr. Gibson reading the revised rules and giving some very acceptable explanations of them, with many diagrams on the blackboard

A NEW CANOE JACKET.—The latest in the way of canoe clothing is a jacket of knit Jersey cloth, the material showing a knit surface outside and a a rough woolly one inside. It is not knit in one piece, but is cut and made up like a cloth jacket and makes a very light, warm and serviceable coat, while easier to put on and off than the knit jersey. The makers are Devlin & Co., Broadway and Warren street, New York, who also deal largely in uniforms for canoe clubs.

PHILADELPHIA C. C.—At the annual meeting of the Philadelphia C. C., held March 31 last, a new constitution was adopted. Election of officers resulted in selection of Commodore, W. H. Falkner; Vice-Commodore, Samuel J. Creswell, Jr.; purser, P. S. Westcott. A club cruise will be made on Decoration Day, down the river to Red Bank, N. J. Jas. C. Harrison was appointed official A. C. A. measurer from the club. The club now numbers thirty members.

PERSONAL.—Capt. Gibson of Albany, and Com. Jones of Hartford, were in New York last week. Mr. H. Parker Fellows of Boston, a cruiser of renown, though not a canoeist, paid us a visit on Friday. Mr. Fellows has cruised for some years past in rowboats, and has written some interesting logs of his trips.

A. C. A. BOOK.—Dr. Neidé will have the Association Book ready next month. In the meantime the sailing rules, as published in the FOREST AND STREAM of March 26, have been printed in pamphlet form and sent to canoeists in all parts of the country.

BROOKLYN C. C.—The Brooklyn Canoe and Sailing Club will meet at their rooms, 371 Fulton street, on Tuesday, April 14, at 8 P. M. Prof. Fowler, K. C. C., will read a paper on "Why we Prefer the Canoe."

MAINE RIVERS.—A good map of the Kennebec and Dead River region of Maine is published with the "Guide to Tim Pond and the Seven Ponds," published by A. W. Robinson, No. 33 Winter street, Boston, Mass.

BRASS CENTERBOARDS.—The Tramp has had an after center board of brass added this winter, and the Surge will put in one of ¼in. in place of her present iron board.

KNICKERBOCKER C. C.—A fleet of half a dozen canoes turned out on April 2 for a cruise up to Yonkers and back, the first of the season.

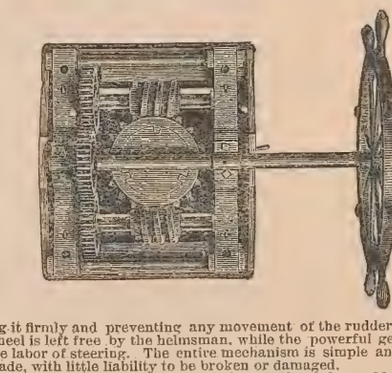
A FISH CHOWDER.—In our yachting columns "Dorsal Fin" tell. now to make a fish chowder, a valuable accomplishment to a canoeist

Yachting.

FIXTURES.

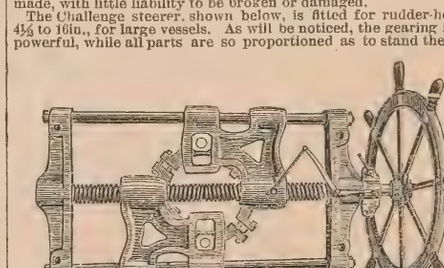
April 22—Annual Meeting N. E. Y. R. A., Parker House, Boston, 8 P. M.
April 25—Pacific Y. C., Opening Day.
May 2—San Francisco Y. C., Opening Day.
May 25—N. J. Y. C. Match—Catamarans.
May 30—New Haven Y. C., Opening Day.
May 30—South Boston Y. C. Regatta, City Point.
May 30—Knickerbocker Y. C., Regatta.
May 30—Newark Y. C., Regatta.
May 30—Dorchester Y. C., Club Race, Dorchester Bay
May 30—Fall River Y. C., Open Regatta.
June 9—N. J. Y. C., Annual Regatta.
June 11—New York Y. C., Regatta.
June 13—Boston Y. C., First Club Race.
June 13—S. C. Y. C., Annual Regatta.
June 16—Atlantic Y. C., Annual Regatta.
June 17—Harlem Y. C., Annual Regatta, Oak Point.
June 17—Peatucket Y. C.
June 17—Dorchester Y. C., Open Regatta.
June 20—Boston Y. C., Second Club Race.
June 30—Hull Y. C., Pennant Matches.
July 4-11—Pentucket Y. C., Annual Cruise.
July 8—Beverly Y. C., Nahant, First Championship Regatta.
July 11—Hull Y. C., Cruise.
July 11—Hull Y. C., First Cruise.
July 16—Boston Y. C., Third Club Race.
July 16—Cleveland Y. R. A., Annual Regatta.
July 17—Cleveland Y. R. A., Cruise to Ballast Island.

NEW CATAMARANS.



THE present season promises to be a lively one with these peculiar craft. It is extremely improbable that they will ever become generally popular or that we shall see a large fleet of them in New York waters; but for racing purposes they have some advantages, in spite of their cost, and they may find a limited use where speed is the main requisite. Two are now building at Yonkers, one for Mr. Inman with hulls 42ft. long, and one for Mr. S. D. Field 41ft. long, both of which will be fitted with the jib illustrated last week. Several matches are already arranged, one for $100 a side, between the Iris, Mr. Field's boat, and the Duplex, Messrs. Longstreet & Ogden's boat. Mr. Inman's boat has three races on hand, a series of three with the Jessie for $250 a side, one with the Duplex for $50, and one with the Hermes for $50.

Mr. Geo. P. Everson, of Jersey City, owner of the Columbia, has lately built a new keel craft of a larger size to be called the Nemesis. The hulls are each 39ft. 6in. long, 2ft. 6in. deep, and are spaced 18ft. center to center. The draft is 15in. aft and 7½in. forward; the hulls are planked with cedar on oak frames; the mast is 31ft. long, boom 30ft., gaff 14ft. 6in.; the mainsail is 24ft. on luff, 29ft. 6in. foot, 14ft. head; the jib will be 29ft. 6in. on stay, 25ft. on foot.



RICHARDSON'S STEERERS.

THE accompanying cuts show two forms of steerers for yachts and other vessels of all sizes made by Nathan Richardson, of Gloucester, Mass.

In the smaller sizes, which are fitted for rudder heads of 3½ to 10in., the wheel on rudder head is held by a worm gear on each side, locking it firmly and preventing any movement of the rudder when the wheel is left free by the helmsman, while the powerful gears lessen the labor of steering. The entire mechanism is simple and strongly made, with little liability to be broken or damaged.

The Challenge steerer, shown below, is fitted for rudder-heads of 4½ to 16in., for large vessels. As will be noticed, the gearing is very powerful, while all parts are so proportioned as to stand the heavy strain to which a steerer of large size is often subjected. A locking attachment is fitted near the wheel by which the gear may be clamped fast, preventing any possibility of movement.

CORA.

THIS steam yacht, lately launched at Poillon's yard, will go to Newark this week for her engines and boilers. As she is designed chiefly for use in a warm climate her interior has been so arranged as to secure light and fresh air in plenty. The yacht below is divided into three bulkheads. Forward of the first is a large forecastle, with good head room, and well lighted by side lights of large size. The finish is in varnished ash. In the extreme bow is a paint locker, and at the after side of the forecastle are two large closets. Between the forward and the second bulkhead, the latter being just forward of the engines and boilers, is the main saloon, bath room, galley and crew's mess room. A winding stairway from the social hall on deck leads down to a large saloon, fitted for a dining-room by day, while at night folding beds at the sides are let down, making sleeping quarters for the gentlemen. This saloon will be finished in mahogany and lincrusta. A large bath and toilet room extends across the yacht at its forward end. The saloon is lighted by large side lights in the sides of the vessel, and also from above by similar lights in the sides of the social hall, as hereafter described. Aft of the saloon on the port side is a store room and the galley, the latter extending to the second bulkhead, while on the starboard side is a companion leading to the deck, and also the crew's mess room, the latter being furnished with a large refrigerator. Under the floor of the galley is a box for 8 tons of ice. Aft of the third bulkhead is the ladies' cabin, 15ft. long, and of the full width of the ship, lighted by a large square skylight on deck, and entered by a separate companion. On the port side of the stairs is a toilet room, and on the starboard side is a room for the maids. The cabin itself is finished in mahogany and has four bedsteads, two on each side, the space between them, 3ft., being fitted with dressing cases and mirrors. The yacht is mainly intended for the use of Mr. Morris's daughter, an invalid, and her comfort has been the principal consideration in planning the accommodations. Aft of the ladies' cabin, in the run, are the quarters of the captain and engineer, entered by a square companion well aft. These are very neatly fitted up in varnished ash.

All the fittings on deck are of mahogany. Forward is a deck house, the fore end of which is divided off into a roomy pilot house. Just aft of this is a winding stairway leading below, while the entire after portion of the house is devoted to a smoking room or social hall. Three sides of this are fitted with seats, the deck under them being left open. The sides of house are pierced with side lights, giving light and air through the spaces under the seats to the dining hall below. The coamings of the boiler-room hatch are oval in shape, the longest diameter being athwartship, to admit two boilers side by side. The engine room coamings join these but are oblong. These coamings are about 3ft. high, and paneled with mahogany. Abaft them are the skylight and companion to the ladies' cabin, also of mahogany. Five tons or iron ballast, moulded to fit, are ready to go into her. She will carry a metallic lifeboat 20ft ×5ft. 3in., fitted with sails for general use, a steam launch 22ft.×5ft. 6in., built by Wright & Son, a boat on starboard quarter 16ft.×4ft. 6in., and one on port quarter 14ft.×3ft. 9in. The bunkers will carry 60 tons of coal, and the tanks 2,000 gallons of water. The cora, as before stated, was built by Poillon Bros., from designs by Mr. Philip Ellsworth. Her boilers and engines are by Wright and Son, of Newark, joiner work by Vanderveer, painting by Clark and sails by Sawyer. She will be schooner-rigged, with no bowsprit. Captain John H. Breitfield will command her, and she will carry a crew of 8, all told.

CRUISE OF THE CORA.

[Continued from page 156.]

AT 7 A. M. we were off Pilot Island and entering Les Portes des Morts. This is an exceedingly picturesque part of the shore line of Lake Michigan. The bold, rugged shore of the peninsula which separates Green Bay from Lake Michigan, is covered with tall pines and thick underbrush. The water is deep, cold, and so clear that the huge rocks and fissures on the bottom are plainly visible, though much deeper than one would suppose. We seem to be sailing on a surface of molten crystal, the wind mostly above the water, which is only slightly disturbed, and we amuse ourselves by lying flat on deck and peering down over the side at the wonders of the clear depths below, over which we were sustained by the transparent fluid that intervenes, but which obstructs the view so little that, where the rising sun's rays strike under the vessel, one could almost see to pick up a pin could one reach the bottom. The northern extremity of the Peninsula stands out like a rugged, shaggy head in the lake. About two miles across "The Door," as the entrance to the bay is called, is Pilot Island and its lighthouse. A short distance to the N. W. is Detroit Island, and still further Washington Island extends a long distance to the north and east.

At 7:30 the yachts had passed through "The Door" and were close-hauled on the bay side of the peninsula pointing for Chamber's Island, away up the bay. At Table Bluff, just inside "The Door" and at the entrance to a small bay or called Hedge Hog Bay, is a most remarkable echo The crews of both yachts amused themselves as we passed, hallooing and listening to the echoes as they came back from the shore.

The gun was fired, and the response from the rocky shore was fairly astonishing, as it crashed along down the Bay until it died away, seemingly a mile distant. Breakfast and pipes were now over, at 8:30 a fine breeze sprung up from S. E., we bore away toward Chamber's Island under full head of canvas.

Just here the Doctor poked his head up the companionway and announced that he was ready "to tackle that chowder." So the master's mate went below and began preparations, and this is how he did it: First, he selected a dozen good-sized sound potatoes and clipped a small slice off of each end, he put them in a pot of cold water, set it over the fire and sprinkled in a large tablespoonful of salt. Let me here pause long enough to remark, don't ever peel a potatoe if you wish to boil it. Always boil them with the "jackets" on, merely cutting each end, and boil them as hard and fast as you can. Unless you are fond of that miserable, soggy, vile smelling mixture of cabbage, saturated potatoes, meat, and all other odds and ends cooked up in one mess in the same pot called "a boiled dinner." If you are, go ahead, but if you get the dyspepsia you have no one to blame but yourself, as for me, if there is anything that will induce me to stay downtown and go to the lodge, it's wash day and a boiled dinner.

Well, let's belay and get back to that chowder which was barely begun. After putting a cover on the potato pot the M. M. laid out the Mackinaw trout on a table and carefully cleaned it, split it down the back, took out all the fins so as to take bones below the skin as well as the rest. Then the backbone and all other bones were cut out, leaving only the firm, clean, pink meat. This he cut in pieces about one inch by three inches, all as nearly alike as possible, and taking a tin pan laid them in it and sprinkled them with salt. Then he sliced up three good-sized Bermuda onions in a dish, and putting a large iron pot on the fire he proceeded to slice enough bacon to line the bottom of the pot nicely, and then with a fork stood by until they had browned, when he turned each piece over. When all were nice and brown he took the pot from the fire, forked out the bacon on a plate, poured away all the grease that had tried out, and set the pot back on the stove where it would keep warm. Then he chopped up the browned bacon in pieces about the size of dice and set them on the back of the stove to keep warm. By this time the potatoes were done, and pouring off carefully every drop of water he set them back on the stove, while he and the Doctor took them out one at a time to peel. I say peel, but don't mean it exactly, as the moment they were laid on a plate the skins almost fell off and left the inside as white and mealy as one could wish. They were then thoroughly mashed and seasoned with butter, pepper and salt.

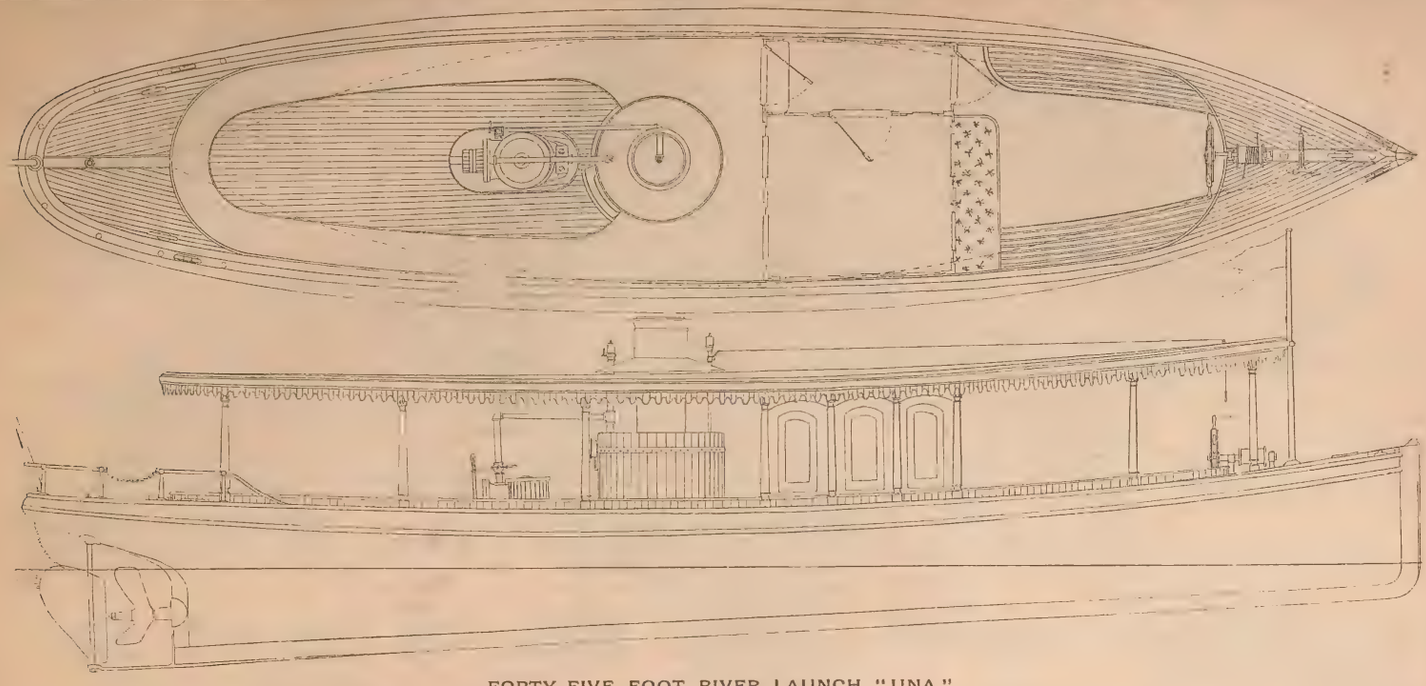
All was now ready for the final touches, upon which all (so he said) was to depend. Taking the pot that had fried out the bacon—without washing, mind—he proceeded to "erect" the chowder. Draining off the water from the fish that had been salted he laid a layer of it in the bottom, then scattered in a spoonful of the chopped brown bacon, then a few slices of the onion, and poured over it a spoonful of tomato catsup, dusted it with some pepper and salt, then a handful of broken crackers, and over this he put a layer of the mashed potatoes. Then he began another layer of fish, chopped bacon, onions, etc., the same as before, seasoning each layer the same until all the material was in the pot, after which he poured in enough warm (not hot) water to cover the contents an inch or more, and having done, set the pot on the fire where it would simmer or boil only slightly. When it had cooked long enough so the slices of fish were done—about two hours—he stirred in a cup of condensed milk and half a pint of claret, tasted it, stirred it, and added a little seasoning of salt and pepper, and it was ready to serve. When the Doctor announced "Dinner" the Mamie was hauled up—she still had our line astern—all the crew but one at the wheel came on board by way of her bowsprit, and all hands went below to eat the chowder. It was declared to be "fine," "splendid," "best I ever ate," etc., as each person expressed it in his own way. We had a royal dinner, and when it was all gone but the portion reserved for the man at the wheel and the Doctor, we lit our pipes and sang:

Oh, a little more chowder too,
A little more chowder, for Miss Dinah,
A little more chowder too.

At 11:45 P. M. the wind died out flat, and we came to an anchor three miles off Long Tail Point Light and all turned in below. At 4 A. M. next morning piped all hands to make sail, wind south, and at 9 A. M. when a few miles off Green Bay Light, the schooner Gaston, of Chicago, came along in tow of tug Peesaukee, and as the water was getting shoal and the channel narrow through the mud flats, we took a line from them and towed up into the river, where we cast anchor opposite the city. The gig was lowered and Capt. Bussey, with some of the rest, went up to the telegraph office and reported arrival to Commodore Munger, in Chicago.

Soon after Commodore Melville, of the Green Bay Y. C., came off and made us a short visit, and at 5:30 P. M., having shifted ballast so as to lighten up aft, we weighed anchor and prepared to tow up Rock River and through the big locks for Lake Winnebago, for as the muddy expressed himself when it came his trick at the wheel,

"I'm a Green Bay pilot. I am, b' Gosh.
Just look in my eye while I head for Oshkosh."



We took a line from the tug Dennison, and were soon skimming along at a fair speed up the river. At 7 P. M. we passed through the first of the large Government locks, and at 10 P. M. we laid up at Wrightstown, for we could not risk running in and out of stone-faced locks in the night. Besides we were about tired out. There are eighteen of these locks between Green Bay and Lake Winnebago, which lies nearly two hundred feet above the waters of Lake Michigan. They were constructed by the Government to allow the passage of vessels between the lakes, and aside from the labor of snubbing on lines, holding fenders and warding off to avoid scraping against the stones, it is a pleasant and interesting trip for a yacht. At a little place called Kankakee, Capt. Stevens of the Oshkosh Club met us with a tug and took us in tow. As there was no wind on reaching Lake Winnebago, we did not make sail but kept on up the Lake for Oshkosh, where we arrived at midnight, and received a most hearty welcome from Commodore Burnell and Vice-Commodore Harshaw.

Every yachtsman of Oshkosh, I will venture to assert, either owns a yacht or an interest in one, and has besides a gun and a rod and reel, and all you have to do is to make yourself known as one of the craft, and he will lock up the office, put up a sign "Out of Town" on the door, and fish, hunt or sail with you to your heart's content. We sat up and talked of our trip, the coming regatta of their club a few days hence, cracked jokes, and had a royal time till almost morning, and sang a little comic refrain of the middy's to the tune of "Villikens and his Dinah," which ran thus:

"We arrived at Oshkosh about early morn,
We blew off the gun and fired the fog horn;
Burnell bade us welcome, and Henshaw said aye,
And bade us all summer in Oshkosh to stay."

Tired and sleepy we turned in, our hearts full of the warm reception by our friends. The regatta, our pleasant stay and our trip back to the bay, and the cruise to Mackinac, I must leave to a final chapter.

DORSAL FIN

FORTY-FIVE FOOT RIVER LAUNCH "UNA."

A STEAM LAUNCH FOR RIVER USE.

EVERY year the use of steam launches is increasing, both for purposes of business and pleasure, until the little steamer has come to be as much of a necessity to waterside residences as a carriage and team is in the country, while they have also become an important auxiliary to both steam and sailing yachts of large size. The launch illustrated above, the Una, was built by E. E. Roberts, of 107 Liberty street, New York, for Mr. Henry A Laughlin, for use on the St. Lawrence, in the neighborhood of the Thousand Islands. The Una is intended for day use, carrying fishing and pleasure parties, running to the neighboring towns, and as a family "carryall." She is 45ft. over all, 9ft. beam, and draws 2ft. 8in., loaded. The hull is built of white oak, planked with cedar below the waterline, and white pine above, fastened with galvanized iron. A deck of light construction covers her fore and aft, the sides being furnished with curtains for stormy weather. Forward of the boiler is fitted a stateroom or small cabin 6x6ft., on the starboard side of which is a gangway leading aft. The engine is 7x7in., with shaft of 2¼in. steel. The boiler is a vertical tubular, with submerged head, and is 48in. diameter, and 5ft. 6in. high. It is of homogenous steel, tested to carry 140 pounds, and has 200 2in. lapwelded steel tubes. The wheel is four-bladed, 32in. diameter and 48in. pitch. The main features of the boat are shown in the drawing. This boat is not intended for speed, but, as stated, for a comfortable boat for pleasure and sport, for which purpose she is excellently adapted. The finish throughout is neat and plain, designed rather for use than for show. Mr. Roberts has lately sold another launch, 35x7½ft., to Mr. Frederic Cunningham, of Boston.

BOSTON MOSQUITO FLEET, APRIL 2.

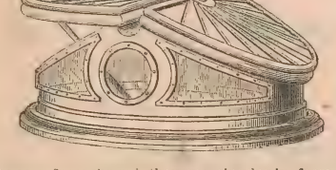
THE first yacht race of 1885 was sailed on last Thursday at South Boston. While the larger yachts are not yet in commission, the owners of the smaller craft are eager for sport in spite of the backward season, and thirteen of them turned out on Friday morning at the float of the South Boston Y. C. The course was from the float to a buoy in Dorchester Bay, then to buoy No. 6 off Fort Independence, and home, a distance of four miles. Seven boats started in the first class, 13 to 15ft., and six in the second class, under 13ft., the prizes being $10 and $5. The wind was very light at 11 A. M. when the start was made, and continued so during the race. The Dot, a new boat, signalized her first race by winning first prize, the times being as follows:

	Length.	Actual.
First Class.		
Dot, J. A. Hildreth	13.03	1 46 08
Wizard, James Bertram	13.06	1 50 11
Nan, J. P. Bullard	14.03	1 48 53
Lizzie, H. McDonough	13.03	1 54 43
Sport, O. Starkweather	13.08	1 55 26
Arctic, R. W. Bibber	15.00	1 55 42
Phantom, Bullen	13.02	withdrawn.
Second Class.		
Grace, A. Holbrook	12.02	1 53 55
Brunette, W. B. Cherrington	12.02	1 54 05
Mamie, W. H. Buckley	12.10	1 54 06
Waif, R. J. Bibber	13.00	2 00 57
Vera, F. J. Carter	11 66	2 05 42
Alert, A. P. Holt	11.05	2 05 55

The judges were Commodore Henry Hussey, Vice-Commodore W. J. Orcutt, H. Stickney and T. Condon. The Brunnette capsized, and her crew of two had a free bath.

In the afternoon an impromptu race was arranged between the Dot and the Wizard, the course being from the club house to the red buoy off the pumping station, thence to buoy off the Grant House, and home over same course, 5½ miles in all. Mr. Geo. Hutchins sailed the Dot, winning in 4h. 55m. 15s., with Wizard, sailed by Mr. Wm. Condin, 7m. 15s. astern. The prize was a purse of $15 contributed by the two boats. The judges were Messrs. R. V. King and Wm. Hathaway. Referee, H. J. McKee.

HULL Y. C. RACING REGULATIONS.



THE following rules concerning starting and other details of racing have been published by the Hull Y. C. for the guidance of its members this season. Most yacht clubs now have their fixed rules for starting, entries, etc., and those which have not, should pay attention to the matter before the season begins, so that all may be posted in due season, and no mistakes shall occur in the races.

Many clubs have rules which need a careful revision to adapt them to present wants, and the following will commend themselves, as they have worked well in a large club holding many races:

Start—Flying, across a line between judges' yacht and flagboat. Fifteen minutes before the start of the first and second classes, flags bearing the numbers of the courses will be hoisted on the judges' yacht. At 2:55 o'clock, or five minutes before the starting signal for the first and second classes, the numbered flags will be lowered, a gun fired, and a blue flag hoisted. At the expiration of five minutes exactly, a second gun and lowering of the blue flag will be the signal for first and second classes to start. Exactly five minutes later, a third gun and lowering of the blue flag will be the signal for the third class to start. Exactly five minutes later, a fourth gun and lowering of the blue flag will be the signal for fourth class to start. Exactly five minutes later a fifth gun and lowering of the blue flag will be the signal for fifth class to start. Exactly five minutes later, a sixth gun and lowering of the blue flag will be the signal for sixth class to start. Should any gun miss fire, the lowering of the blue flag will be the signal to start. The time of all the yachts shall be taken from the starting signal of that class, and no allowance shall be made for yachts starting later. If any yacht or any part of her hull or spars be on or across the line when the signal for her class to start is given, she must return and recross the line, keeping clear of all competitors. Should the first signal be delayed, the same intervals will be observed between the other signals. Entries—Any yacht enrolled in the club may enter for the club race by giving notice of such intention in writing to the chairman of the regatta committee, which notice shall be for the entire season. Numbers—Yacht owners intending to participate in racing will be supplied with official numbers by applying to the chairman of the regatta committee, which numbers must be shown prominently to the judges on crossing the line at the finish of each race. Failure to comply with this rule may result in a yacht's time not being taken. Outriggers shall not be used for the purpose of trimming the boat by means of crew or ballast. Caution—As the position of the judges' boat is liable to be changed after the start, particular care must be taken on coming in. Notice—For first and second classes, if the wind is very light and the tide strong ebb, the finish for these classes will take place outside Hull gut, and the time will be taken as yachts pass a line between the flagstaff on Hotel Pemberton and the judges' yacht flying the club flag.

A NEW YACHT SKYLIGHT.

A NUMBER of Boston yachts have been fitted for the past year with a style of skylight, the invention of Mr. Jas. McIntyre. These skylights possess several novel features, and some marked advantages over the old form.

As will be seen from the cut, they are circular in form, the frame being a brass casting with spaces in the sides glazed with plate glass. A circular bed of mahogany in the form of a moulding is laid down on deck, and on it is a brass circle. On this circle the skylight is fitted so as to revolve freely, while making a water-tight joint. The two sashes are also of brass, with heavy plate glass protected by a grating. The sashes are opened by arms sliding on a brass tube running across the skylight. When at anchor one side may be opened and turned forward, aft, or in any direction, acting as a windsail. The ridge between the two sashes is made of a half section of brass tube, preventing any leakage, while the sashes fit down on rubber packing. Besides their handsome appearance and the additional facilities for ventilation, a much greater amount of light is admitted below than in the usual style of wooden skylight with heavy wooden sashes. Huron, Thetis and Gitana have all used these skylights during the past season, and they are now being fitted to some of the new yachts.

ELECTION OF OFFICERS.

West Lynn Y. C.—The annual election was held on March 30, the following officers being elected: Commodore, B. W. Rowell; Vice-Commodore, A. R. Hall; Fleet Captain, Wm. Sprout; Treasurer, Wm. Batchelder; Secretary, F. C. Viall; Measurer, P. J. Lynch.

South Boston Y. C.—Election, April 1: Commodore, Henry Hussey; Vice-Commodore, N. J. Orcutt; Secretary, J. C. Meny; Treasurer, Theo. Christian; Measurer, John Bertram; Fleet Captain, J. W. Bligh; Trustees, C. T. Haley, C. McKenna, R. Disbrow.

Dorchester Y. C.—A meeting was held on April 3 at the club house, at which 13 new members were elected. The treasurer's report showed the club to be in a flourishing state with a balance of nearly $300 in hand. The following officers were elected for 1885: Commodore, Dr. L. D. Shepard; Vice-Commodore, Charles H. Whiting; Secretary, Henry B. Callender; Treasurer, Samuel G. King; Measurer, Hartford Davenport; Directors, W. H. L. Smith, Charles H. Nute, Coolidge Barnard and Samuel G. King; Regatta Committee, Louis M. Clark, Erastus Willard, Henry B. Callender, George S. Forbush and William P. Fowle.

American Y. C.—The annual meeting and election of officers was held on March 31 at the club house. The following officers were elected: Commodore, Alfred de Cordova, steam yacht Promise; Vice-Commodore, Joseph C. Hoagland, steam yacht Lagonda; Rear-Commodore, Washington E. Connor, steam yacht Utowana; Secretary, Henry A. Taylor; Treasurer, William B. Dowd; Fleet Surgeon, Thomas H. Bailey, M. D.; Measurer, Chas. H. Haswell; Trustees, Josiah M Fiske, steam yacht Theresa; Jabez A. Bostwick, steam yacht Orienta; Alfred D. Cordova, steam yacht Promise; Washington E. Connor, steam yacht Utowana; Henry A. Taylor, steam yacht Sphinx; Frank R. Lawrence and William B. Dowd; Regatta Committee, Chas. H. T. Collis, Geo. W. Hall, Thomas Manning, Richard G. Murphy and J. P. Lockwood; Committee on Admissions, W. E. Connor, J. M. Fiske and Wm. B. Dowd; House Committe, F. R. Lawrence, H. A. Taylor and Wm. B. Dowd. The treasurer's report showed a balance of $7,000 on hand. Capt. Lundborg's model for a sloop yacht was on exhibition at the club rooms.

ELECTRIC LAUNCHES.—The use of the electric launch as a police boat on the River Thames and elsewhere is likely to prove a success, for, compared to a steam launch, its movements are noiseless, and the same power that is employed to propel it can be utilized for supplying current to an arc lamp for "searching" purposes. The launch with which the experiments have been made is 25ft. long with a beam of 5ft. 6in. and carries 50 accumulators, each weighing 40lbs. It can maintain a speed of 8 miles an hour for four hours, but can be made to travel faster on emergency. The search lamp is of 3,000 candle power, and, as the term implies, the beam can be sent in nearly every direction.—*Exchange.*

MARINE HARDWARE.—One of the largest concerns in the East who deal in ship and boat hardware, is L. W. Ferdinand of Boston. Their large store is at 267 Federal street, and the storehouse on Essex street. Among the many standard articles kept in stock are the Waterwitch Rowlock, Chester Anchor, Meaney's Sliding Seat, Howell's Marine Paints, Tarr & Monson's, Wolsey's and Bay State Bottom Paints, Norcross Patent Blocks, and Crockett's Spar Composition. Eastern yachtsmen will find there everything they require about their boats.

SLOOP YACHT FOR SALE.—Herreshoff Bros, Bristol, R. I., have for sale a cruising sloop yacht of eastern build, 45ft. waterline, 15ft. 6in. beam, 5ft. 6in. draft. She is a keel boat, very strongly built, with oak frame. Below she has a good cabin and two staterooms. Full particulars may be obtained by addressing them as above.

YACHTING NOTES.—Electra is having a new engine with cylinders 28 and 44x26in., in place of 20 and 40in., as at present. Mr. W. L. Stanton, of Ward & Stanton, is superintending the work, which is being done in Paterson....Meta, schooner, arrived from Salem at Lawley's yard last week, where she will have new rails, foremast, bowsprit and cabin fittings....Brunhilda. It is expected that this schooner now building at Nyack for Mr. J. J. Phelps, will leave New York in June for a cruise around the world, sailing first for England ....Muriel, cutter, Mr. C. H. Robbins, will have sails by Lapthorne this season....Stranger, Mr. Warren's new 41 tonner, was given this name when she was launched two weeks since. She is 79ft. on deck, 65ft. w. l., 13ft. 6in. beam, 10ft. 6in. draft....Viola, Mr. Kennedy's steam yacht, will have new engines, 10 and 20x12in., with a larger boiler and new wheel....Yosemite has returned from her cruise, and is now at the Morgan Iron Works....Huron, Mr. Gray's yacht, will have a new boom of 60ft. and gaff of 38ft....Mr. Theodore Hall, of Newburg, is having built by Bernard a keel catboat, 27ft. over all, 23ft. w. l, 9ft. beam, and 4ft. 6in. deep....Silvie, schooner, will have new cabin fittings and deck, besides other repairs....Thelga, cutter, Mr. Thayer, is up at Smith's yard, South Boston, for 2,500lbs. of lead in place of her iron keel....Moya. The spars of Mr. Binney's new cutter will be: Mast, deck to hounds, 29ft., masthead 6ft., topmast, fid to truck, 28ft., bowsprit outboard 20ft., mainboom 34ft., gaff 24ft., topsail yard 25ft., lower sails 1,710sq. ft., total 2,836sq. ft.... McManus & Son, Boston, are making new sails for the sloop Phantom. J. O. Shaw, Jr., and schooner White Cloud. Mr. Henry Smith....Brenda, schooner, has been sold to the United States Government to be used as a survey boat in the Gulf of Mexico....Utowana, Mr. Connor's steam yacht, will be overhauled in New York this month....Madge has been purchased by a New York yachtsman, and is now being refitted and put in commission.

NEWARK Y. C.—Although at a disadvantage as to sailing waters, its growth, in the two seasons of its existence has been rapid and strong. From a small beginning with a few members and some small boats it has grown in a large and firmly established club, with a large fleet and a fine club house. The latter is a large building, on the Passaic, at Newark, fitted up with a comfortable meeting room and ample room for stowage, and is kept warmed and open all winter, making a general rendezvous for members. The club list now includes the following boats: Sea Witch, owned by Thos. W. Dawson, 65ft., schooner; Washington, Hugh Cameron, 50ft., schooner; Ella Cook, B. H. Price, 40ft., cabin sloop; Belle, John Dechert, 32ft., cabin sloop; Winnifred, Cullen Brothers, 28ft., cabin sloop; Gray Eagle, E. Hinderlang and Wm. O'Brien, 3 1ft., cabin sloop; Emmy C., C. E. and E. D. Cameron and W. Goodenough, 28ft., cabin sloop; Vixen, E M. Grover, 27ft. 1in., cabin sloop; Leo, Leo Smith, 25ft., sloop; Rambler, Albert F. Adams, 24ft. 2in., sloop; Good Fortune, John Fortune, 23ft., cabin sloop; Just Woke Up, James Phillips, 22ft. 1½in., sloop; Shadow, Hardy Bush and Alfred Frazer, 20ft., cat; Cloud, George and Louis Hartung, 22ft., sloop; Ripple, Frederick Miller, 20ft., cat; Porgie, Clark Brothers, 19ft., sloop; Triton, Edward Phillips, 18ft., cat; Mischief, Jonas D. Phillips, Staten Island, 18ft., sloop; Wisp, Edward Burfield, 18ft., cat; Onward, James Williams, 18ft., cat; Skip Jack, James Stevenson, 16ft., cat; Eddie, Richard Uldrich, Greenville, 16ft., cat; Marion, W. B. Adams, 16ft., cat; Linda, Theo. M. Hinderlang, 16ft., sloop; Duplex, steam yacht. 45ft., Lysander Wright; and another steamer, owned by Geo. Wright. This year a number of races and cruises are proposed, a series of pennant races serving to keep up a spirit of rivalry among the boats. Besides the shorter cruises the club will probably make another cruise to the eastward, as that of last year was so successful. The progress of the past two years is such as to encourage the members to new efforts, and the growth this year will probably be more rapid even than before.

A HANDY WINDLASS.—A powerful and compact windlass is a great desideratum in very small yachts, and the ordinary pattern, with two horizontal heads, is far from perfect. We noticed lately in the shops of the Herreshoff Manufacturing Company a little windlass of their make which they are fitting to most of their steam yachts, and which is well adapted to sailing yachts as well. The base is a circular plate of iron, which is bolted flat on the deck, no cutting away being needed. On this base revolves a small upright drum for rope or chain. It is operated by a movable lever, the gearing being on the base plate under the drum, while the motion is a reciprocating one, back and forth, the operator standing upright. For quick speeds and small power the two handles are shifted to sockets in the drum itself, and one or two men may turn it directly. The total weight is only about fifty-six pounds, and from its compact form and easy application, it may be set up anywhere that power is desired.

THE SCHOONER GAETINA.—The owner of the schooner Gaetina, described in our columns some time since, has changed her rig slightly, substituting a lug foresail 14ft. on foot for the boom foresail, with but 10ft., the change being an improvement. The foresail is rigged with double sheets like a jib, and also has a lift rigged from clew of foresail through block at mainmast head, down to deck, and thence aft, so that when coming to anchor, the helmsman in the cockpit can clew up the foresail so that the blocks will not strike any one on deck. The area of the new sail is larger, and it is considerably more effective. The Gaetina carries two topsails on yards, each 18ft. long and projecting 8ft. above the masthead and 2ft. below jaws of gaffs. They are set with a single halliard, tack and sheet. Gaetina has been in commission for three weeks. She will cruise north this summer in time for the Cup races.

YACHT RACING ASSOCIATION.—We have received the new sailing rules, time tables and classification of the British Yacht Racing Association, containing, besides the tonnage rule, the alternative one, waterline length multiplied by sail area, divided by 6,000. The new classification into classes A, B and C, is also given. Time scales are given both for the tonnage and length classes, with tables for the calculation of sail area for classes A, B and C.

CHESAPEAKE BAY Y. C.—The burgee of this club is a pointed hull pennant with white star in upper corner.

CRUISING.—Namouna was reported at Martinique on March 25. On March 30 she arrived at Bermuda.

OCEAN QUEEN.—The frame of this schooner is nearly all in place in Poillon's yard. It is mainly of oak and very heavy. Her keel is three feet deep outside of rabbet.

LILLIE.—This fast keel sloop, 38ft. long, prize winner in ninety per cent. of her starts, for sale. P. M. Bond, Boston.—*Adv.*

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

H. D., Baltimore, Md.—We do not know address of owner of Norwood.

TAR HEEL, Weldon, N. C.—We do not know the breeding of the dogs you mention.

TARGET, Bath, Me.—We do not know the formula for the mucilage you ask about.

H. D., Salmon Falls, N. Y.—We cannot answer your question unless you give more particulars.

J. C. Frankford, Philadelphia, Pa.—We are unable to learn anything definite about the arm you ask about or the shells.

D. T. G., Homer, N. Y.—1. We prefer the lapstreak. 2. None published separately. We can send abstract. 3. Good. 4. Yes.

C. S. D., Warren, R. I.—The "Management and Disease of the Dog" by J. Woodroffe Hill is the book you want; we can send it. price $2.

A. G. N., East Sixty-First street.—The only place that we know is along the south shore of Long Island, and there it is very uncertain.

POINTER, Charlottetown, Canada—Spaying is a cruel and unnatural operation. We have never known of an entirely successful operation.

C. G. M., Hudson.—1. No. Not if arm is properly taken care of. 2. Brass cleaning rod or string and wad. 3. There is no law on the birds. 4. No.

W. M. W., San Francisco, Cal.—We do not know the maker. A gunsmith should be able to tell you if the gun will stand the charges you mention.

BERNARDO, Jersey City, N. J.—If the bitch is well matured you can safely breed her the first season. If not well grown wait until the next time.

PICCOLO, New York.—Will you please say whether a Yorkshire terrier is a long-haired or smooth-haired dog, or may he be either? Ans. Long-haired.

H., Syracuse, N. Y.—1. Write to Wm. Mitchell, 36 Vandam street, New York. 2. The session is not yet over. A dozen bills have been introduced and some of them may pass. 3. No. 4. No. 5. About the middle of May. 6. About the last of May. 7. We do not know. That is black fly time.

R. F. B., Troy, N. Y.—Is a black roof to the mouth necessary to establish the thoroughbred character of pointers, setters and other hunting dogs? Ans. No.

GUNNER, Buffalo, N. Y.—The names you mention are those of reliable houses, but there are many imitations of their work in the market. You had better look out for the guns you mention.

S. S. W.—Can you give me directions for casehardening to get the clouded finish seen on Remington's and many other guns. I understand how to casehardem, but do not know how to get the clouded finish. Ans. This, we believe, is a trade secret, and we cannot tell you how to do the work.

PERCYVAL.—Is the trout law in Massachusetts from the first of June to September now? I heard recently it would go into effect next spring. It seems as if it would be more appropriate from the first of May to August first. Ans. The law opened the season on April 1, and we have not heard of any change.

H. N. C., Waterville, N. Y.—Has a game constable any right to go out of the town, in which he was elected, to arrest violators of the law for offenses against the game laws, committed in said town? If not, is there any way we can give him power to do so? Ans. We would advise you to consult the Revised Statutes. If the game constable has not the power mentioned you may call on the nearest State game protector, who has such power.

F., Essex Co., N. Y.—1. There are certain streams and ponds which contain brook trout. The State furnish California trout which are placed in these waters. Afterward certain parties (owners of the lands about the waters) advertise and post them as private fishing grounds. Can they legally do so? 2. Can they claim the original brook trout in these waters for that purpose? Ans. 1. It may depend on the fact of ownership of all the land bordering the waters. 2. See articles on "Leasing Trout Streams" in this issue.

PERCYVAL.—1. Do you regard a waterproofed or dressed silk line, or an undressed raw silk line best for minnow casting in the Henshall style? 2. In a late article to this paper, Mr. Wells said that a region had lately been opened to the public which had better trout fishing, larger fish and easier and cheaper access than the Rangeley region. Can you tell me to what place he referred? 3. A large number, some 40,000 land-locked salmon fry, were placed some years ago in a lake containing pickerel and bass. None have been seen or caught since. Do you think it likely any of them have escaped and grown up? Ans. 1. We prefer the raw silk line as small and as hard as possible. 2. We cannot say. 3. Without knowledge of the size, depth, and temperature of the lake, it would be impossible to give an opinion. They require deep lakes and very cold water, with plenty of room. The predatory fish may have eaten them.

MONNEY, Newark, N. J.—Would you kindly inform a new beginner the best bait to use for large-mouth bass and pickerel, as we go in camp at Greenwood Lake in July (our first attempt) we would like to know what to take with us, and will they rise to a fly, if so, what kind? Ans. The best bait for the bass is the helgramite, or dobson, for pickerel use minnows. We cannot recommend any fly above another. The fish often refuse a fly that was a favorite the day before. Use large gaudy flies with red and yellow in them.

NED NORTON, Colebrook, N. H.—The following is copied from the town clerk's report of proceedings at town meeting in Stewartstown, N. W. The famous Diamond Ponds are in said town: "Voted, to prohibit the taking of fish in the waters of the town for a term of three years." 1. Is this definite enough to be enforced according to law? 2. If malice in the projectors can be proved, and not an intent to stock the waters, would it be safe to test it? Ans. 1. If the proceedings are dated we think it sufficient. 2. Your question seems to point to some local feeling which we do not understand, and therefore cannot advise.

A. C. G., Poughkeepsie, N. Y.—1. Has a shooter a right to level or sight his gun after he is at the score? 2. Must the butt of gun be held below the elbow or below the armpit? Ligowsky say armpit, but others say that is not right. 3. Shall a contestant have another shot if the trap throws the bird broken into the air and he shoots at it and misses? 4. Are the Ligowsky rules the most perfect for clay-pigeon matches? Ans. 1. Yes; before he calls pull. 2. Below the elbow is the general rule, but the Ligowsky rule prevents the raising of the elbow above the shoulder level. 3. A miss is scored. 4. They are carefully drawn and seem to cover all cases.

E. B. G., Cloverport, Ky.—Our fishing grounds have been invaded by a stave company, they have placed a boom and obstruction across the creek, causing drift to accumulate, and green oak staves are towed in and are caught in the boom and held there during low water, and the green juice of the staves has nearly killed all of the bass and batchler. The creek has been stocked by the Government also. This creek is a chartered creek, and navigable for six miles, clear of all obstruction, and conceded to be excellent fishing grounds. Now, has this company any right to injure this fishing ground or to put a boom across public property? Ans. Consult a lawyer.

T. H. CHUBB'S

"Henshall" Split Bamboo Bass Rod.

This cut represents our "Henshall" Split Bamboo Bass Rod: length, 8 feet 6 3-10 inches; weight, 8 oz. This rod has extra tip, light wood hand-grasp whipped with cane. Metal reel seat, or reel bands, as preferred. Hexagonal cap ferrules, with welt, no dowels, anti-friction tie guides. Three-ring tops, nickel plated trimmings fastened on. These rods are all ready for use, with the exception of winding and varnishing, for $7.50. This rod is made according to the dimensions given by Dr. Henshall, and is indorsed by him as a "Standard Henshall Rod." Above rod with German silver trimmings, instead of nickel, $9.25. Send for catalogue of Trout and Bass Fly Rods, also Amateur and Rod Makers' Supplies, to

T. H. CHUBB, Post Mills, Orange Co., Vt.

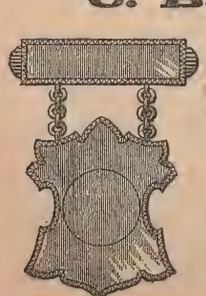
Reads like a romance from beginning to end.—SPRINGFIELD REPUBLICAN.

Old Saint Augustine.

BY CHARLES B. REYNOLDS (FOREST AND STREAM).

THE famous Florida town's three centuries have been crowded with romantic incidents; and a story of wonderful interest is this, with its Huguenots and Spaniards, Franciscan Fathers, English Sea Kings, Boucaniers, Minorcans, Liberty Boys, and Seminoles. It is told vividly, in the briefest possible compass, with strict historical accuracy, and with an enthusiasm that is manifest from the very first page to the last. Among the illustrations are copies of some of the very rare drawings by Jacques Le Moyne, the French artist, who so narrowly escaped massacre by the Spaniards in Florida, three hundred years ago. Another very rare engraving is the plan of the city in British times. The *artotypes* (or photographs in permanent ink) are among the most beautiful book illustrations of the day. They are made from negatives taken expressly for "Old St. Augustine," and are: Fort Marion (four views), the Matanzas Fort, the City Gateway, the Cathedral, the old Palm-tree, Garden Overlooking Plaza, and two very characteristic St. Augustine Houses. Cloth, pp. 144. 8vo. Price, $1.50. **Forest and Stream Publishing Co.**

FISHER'S ISLAND.



Important to Club Men and Investors!

The Eastern end of this Island, comprising about two thousand acres, is offered for sale (to close a trust). Its location is peculiarly adapted for club purposes—having good covers, fertile soil, and a chain of fresh water lakes and ponds extending through the Island, affording opportunities for stocking with Game, Fish, etc. Its situation and climate being cool in the summer months makes it very desirable as a summer resort. Being surrounded by salt water, and several miles from the main land—with the Atlantic Ocean on the South and the waters of Fisher's Island Sound on the North, with fine beaches for both surf and still water bathing, good roads, etc. A large section of the west end is surveyed and mapped for cottage purposes. A number of fine cottages have been erected. Steam communication from New London, Conn. For maps and full particulars address,

J. H. LYLES, Trustee. 104 John Street, N. Y.

Fly-Rods and Fly-Tackle.

Suggestions as to their Manufacture and Use. By HENRY P. WELLS. Illustrated. Pp. 364, Post 8vo., Illuminated Cloth, $2.50.

"An epitome of practical information for the fly-fisher. The following table of contents will give an idea of the subjects treated."

CONTENTS.—*Fish Hooks and the Principles which Govern their Efficiency.—How Fish Hooks are Made.—Lines.—Leaders.—Reels.—Rods and Rod Material.—Rod-making.—Repairs.—Casting the Fly.—Flies and Fly-fishing.—Miscellaneous Suggestions.*

Mr. Wells has devoted more time and attention to the materials used in fly-fishing than any person we know of, and his experience is well set forth in this most valuable book. . . . The author is an amateur rod maker who has experimented with every wood known to rod manufacturers, as well as with some that are not known to them, and therefore he is an undoubted authority on the subject. This chapter and the one following which gives directions in rod making forms the most perfect treatise on rods extant. . . . The book is one of great value, and will take its place as a standard authority on all points of which it treats, and we cannot commend it too highly.—FOREST AND STREAM, N. Y.

Since Izaak Walton lingered over themes piscatorial we have learned to expect, in all essays on the gentle art of angling, a certain daintiness and elegance of literary form as well as technical utility. Publisher and author have co-operated to meet these traditional requirements in "Fly-Rods and Fly-Tackle." . . . Mr. Wells's competence to expound the somewhat intricate principles and delicate processes of fly-fishing will be plain to any reader who himself has some practical acquaintance with the art discussed. The value of the author's instructions and suggestions is signally enhanced by their minuteness and lucidity.—*N. Y. Sun.*

A complete manual for the ambitious lover of fishing for trout. . . . All lovers of fly-fishing should have Mr. Wells's book in their outfit for the sport that is near at hand.—*Philadelphia Bulletin.*

An illustrated volume, elegantly presented, that will make all anglers jealous of possession until upon their shelf or center-table. It is a book of suggestion as to the manufacture and use of all kinds of fishing apparatus.—*Boston Commonwealth.*

Gordon Setter "ARGUS."

Argus is thoroughly trained for field work; has an excellent nose and great endurance. The following are his bench show winnings: 1st prize in Toronto, puppy class, 1880; 3d prize, London, 1881; 1st prize, Cleveland, also special for best Gordon setter exhibited, 1882, 1st prize, champion, Ottawa, 1883; 1st prize, champion, Chicago, 1883; 1st prize, Montreal, and special for best Gordon setter F, 1883; 1st, champion, London, also special for best Gordon setter dog in show, and special for best Gordon setter dog or bitch, 1883.

Argus has been awarded prizes under the following judges:—John Davidson, Major J. M. Taylor, Harry Malcolm, James Watson, W. J. Munson.

Stud Fee, $25.00.

STUD FOX-TERRIER

Champion Raby Tyrant,

(K.C.S.B. 11,179.)

Lupped October, 1880. Weight 16½ pounds.

Raby Tyrant is a white dog, with an even marked rich black and tan head. He is a thoroughly game and stylish terrier, possessing a beautifully shaped long punishing head, with perfect drop ears, small eye, rare neck and shoulders, deep chest, well ribbed and muscular quarters, short, straight legs, excellent feet, great bone and substance, with an exceptionally hard and dense coat.

Raby Tyrant is without doubt one of the most successful terriers of the present day. He has been exhibited 67 times, 33 different judges having adjudicated upon him, and has won 47. First 10 cups and specials; 12 second and 2 third prizes. His breeding is undeniable, combining as he does the choicest and most valuable blood that can be obtained. At the stud Raby Tyrant is proving himself eminently successful.

Fee, $15.00.

JOHN E. THAYER, Hillside Kennels, Lancaster, Mass.

Stud Dogs Proper.

ANSWERS TO CORRESPONDENTS.

THE ADIRONDACK FORESTRY BILL.

IN its slow progress through the Senate, Senator Low's Forestry Commission bill is encountering many obstacles. Some of these are based on an entire misconception of its scope and object, and of the methods of forest conservancy.

Last week, when the bill was made the special order of the day, Senator McCarthy, who is as staunch a conservator as any in the House, noted with alarm that the bill made provision for the felling and sale of timber, and in the strongest terms deprecated the vesting of any such powers in a commission, which, if appointed, should be appointed to preserve and not destroy. Senator McCarthy appears entirely to have overlooked the fact that in the forests, as among animal organisms, one generation succeeds another, and that an economic system of forest administration aims at utilizing only that timber which would otherwise pass to decay, by exploiting it by methods favorable to perfect restocking. It is no more possible to maintain permanently a forest of mature timber than permanently to maintain a State with adults only. Systematic conservancy aims at maintaining a due proportion between trees of all ages, from seedling to maturity, and the equilibrium once established can be maintained permanently, but not without systematic felling.

Senator Lansing objected to the bill because it proposed to engraft the European system of forest management on the State of New York, in which the conditions are widely different. The European system provides for the most economical administration of the forest in the present and for the permanent maintenance of their productive capacity, and what the special local conditions are which should debar the State of New York from the economic administration and permanent maintenance of its forests, Senator Lansing forebore to point out. The fact is, that in the Senate, as among the general public, there is a very wholesome sentiment in favor of maintaining the Adirondacks as a forest reserve, but there is a very wide difference of opinion as to the measures necessary or expedient for that object, and in any question of appropriation before the Legislature, there is such an utter want of faith in human nature that even Senators and Assemblymen are sometimes tempted to suspect each other's motives.

We do not think it would be expedient to commit the State to any heavy outlay at the outset, either for commissions or for executive work. Create a small working department and call upon its chief for an annual report of what is most necessary to be done, the means he proposes to adopt and his estimate of costs. Whether this report be submitted directly to the House through the Comptroller or a Board of Commissioners is of secondary importance. The forest chief, who should be an expert, must necessarily frame his plan of operations and the Legislature will ratify or respect them at discretion, with or without the intervention of an advisory commission.

If the commission, appointed last year with Professor Sargent at its head, could be induced to renew its responsibilities during the infancy of the department, it would inspire the Legislature with confidence, and render valuable support to the well considered proposals of the departmental chief; but the duties are onerous and not altogether unattended with expense.

Another and more startling objection to doing anything is the discovery or assertion that the State's ownership of its three-quarter million of acres is questionable; that the necessary provisions of law were not complied with for the acquisition of the lands, and that bought at sales for taxes the titles are unsound. This is startling but not alarming. If the State's title is not perfect no individuals have as good a title, and the State is in possession. Bad or questionable titles are characteristic of the Adirondacks. Half the land owners there have allowed their lands to be sold up for taxes and bought them in, with the simple object of perfecting a title. Apparently they have made nothing by the motion; but they are in little danger of being dispossessed, and the same conclusion holds good for the State with regard to its holdings. The objection is technical only.

The mere fact that land has no private owner vests it in the State.

In spite of all objections and obstacles there is reasonable ground to hope that the bill will pass in some shape. A preliminary bill may be in some respects faulty, and must needs be inadequate; but the important point is to gain the recognition by the State that the maintenance of its forests is a public duty. Once embarked on that duty, the executive work will naturally pass into the hands of experts, whose labors and representations will sooner or later result in placing forest management in this country on a par with forest management among the leading European nations for economy, efficiency and honesty.

LEASING TROUT STREAMS.—In our last issue we stated that an individual named R. E. Best had contributed an article to the Kingston *Freeman*, in which he called the persons who leased trout streams vile names, and that his article was the only indecent thing in this connection. These remarks appear to have offended this gentleman, to whose knightly courtesy we are indebted for another article on this subject in the same paper. We are deeply impressed with his terse way of stating his views, as well as by the kindly spirit in which he treats those who differ with him. In speaking of the gentlemen composing Neversink, Balsam Lake, and Willememoc clubs and of FOREST AND STREAM, he says: "These wretches, calling themselves 'New York Sporting Clubs,' have done more to deplete the trout streams of this country than all others combined. And the wretch who edits their organ is a convicted liar, as the columns of the *Freeman* will show." Quite so. We hope he will pardon us for making a correction in his statement that the Neversink Club has obtained trout fry from the State. They stocked their waters with larger fish purchased from Mr. James Annin, Jr., of Caledonia. Such trifling errors will creep in even with a gentleman so generally correct and truthful as Mr. Best. We congratulate the *Freeman* on having so accomplished a correspondent; one who is evidently a gentleman of the old school. He unites to a scrupulous delicacy and care for the feeling of those who may chance to differ with him a vigorous logic which is truly crushing in debate. A study of his style may be commended to those of our readers who may desire to attain the ease and grace of delivery which marks the well-bred gentleman.

NETTING DUCKS ON LONG ISLAND.

THE bill introduced at Albany by Senator Otis to prevent the netting of ducks on Long Island has been amended. The change is made in deference to the remonstrance of the Long Island fishermen, who have shown that, during the summer months, nets without floats must be used to catch the kingfish. It is also shown that during the winter no nets set on the bottom in deep water are used for any legal purpose. Their prohibition will therefore work no injury to any class except that composed of the habitual violators of the law, who fill their pockets by the sale of the strangled ducks.

This bill is one which directly interests the large and increasing class of men on Long Island who make their living in winter by gunning, or by caring for and taking out strangers who come there from abroad. If the shooting is made so poor that men cannot hope to have an occasional day's sport when they visit the shores of the Great South Bay, they will soon cease to go there, and the occupation of the men who, in winter, largely depend on this kind of work, will be gone. Only a few selfish lawbreakers, who care nothing for the general good and nothing for the welfare of their neighbors, will oppose this bill. It is supported by public sentiment everywhere, and ought to pass. There is reason to hope that it may receive prompt and favorable consideration.

A correspondent, whose letter is printed elsewhere, gives a very clear summary of what is needed in this case, and it is hoped that every influence possible will be brought to bear on the Legislature in order that a bill which promises so much may become a law.

THE FIREARMS TRADE.—The war notes from the other side have turned attention to our American armories as possible places of supply for the contending armies. The managers of these rifle works and cartridge factories have been thoroughly questioned by the reporters, but have shown themselves adepts in fencing off the inquiries thrust at them. It is pretty certain, however, that there have been a number of large contracts recently placed or received in the American armories, and that they are for a class of arms intended for bringing down human game. The factories for fixed ammunition are also putting out large quantities of their goods. The natural tendency is when articles of this sort are needed to visit the American market, and the purchaser generally gets satisfied with the offers placed before him. The private armories have been sustained in this way, and the country enjoys the feeling of security which these institutions bring, despite the fact that the Government puts its private establishment in direct rivalry.

THE DEER HOUNDING BILL.—General Curtis's bill still hangs in the Senate Game Law Committee, where its opponents hope to keep it until the end of the session. Various attempts have been and will be made to kill the bill by adding amendments to it. Some of these except particular localities, while others would permit the chasing of deer with dogs for short periods of time. All these amendments are offered with the single object of preventing the passage of the bill and leaving the law at the end of the session what it is now. The dogs must go. This session, we hope, but at all events before long. The efforts of a few hotel keepers and of pseudo-sportsmen who are unable to kill a deer except when it is held for them, cannot successfully oppose the sentiment of the best class of American sportsmen. The condemnation of deer hounding as practiced in the Adirondacks is almost universal, and comes from the east and the west, the north and the south. Unless hounding is forbidden, the deer will before long have been exterminated in New York State.

FOR ECONOMIC ORNITHOLOGY.—At its meeting, in September, 1884, the American Ornithologists' Union instructed its Council to present to Congress a memorial requesting aid in carrying out the plans of the committee on bird migration. This was done, and as a result of the appeal an appropriation of $5,000 was secured through the Department of Agriculture. This sum will, it is hoped, enable the committee to carry out the work of the present year, and may perhaps assist in getting the results of last season's work into shape for presentation to the public.

THIRTY-TWO PAGES.—The pressure upon our space of advertisements and news matter obliges us to print a thirty-two page paper.

WRITE ON ONE SIDE of the paper only. Never roll your manuscript, always fold it.

THROUGH TWO-OCEAN PASS.

XIII.—TRACKS ON THE SNOW.

THE voices of the men shouting at the stock awoke us next morning, and gave us the first intimation that the day was pleasant and we could continue our journey. Sure enough, the sky was without a cloud, and before breakfast was ready the sun had shown his face over the lofty rock wall which shut us in on the east. The air was warm and everything was as wet as could be. Before the packs could be put on the animals it was necessary that the blankets should be dried, and for a while every one was busy at this work. All the various articles of camp equipage were collected together, the snow beaten from them, and they were spread out on low trees, bushes and prostrate logs, so as to be as much as possible exposed to the sun's rays. Then a place was selected between two fallen trees bristling with branches, the snow shoveled away, and a great fire built. Lines were stretched from branch to branch, and over these, the logs, and stakes driven into the ground, were hung heavy blankets, coats, saddles, bridles and ropes—everything, in fact, which had suffered from the storms of the past few days. Great volumes of steam rising from these articles soon showed that the drying process was at work. In the meantime the packs had, so far as was possible, been made ready, and the animals caught and tied up.

The difference in apparent bulk between the camp baggage packed, and unpacked and scattered about, is very remarkable, and one who is unfamiliar with the packer's methods would scarcely believe that all the material of a camp could be brought into such compact shape as is done before it is placed on the animals.

It was nearly noon before we started. Following the valley a few hundred yards we turned off a little east of north through a low pass, and took the hillside over an open country where there was a good deal of climbing of low hills, but no very steep ascents. The sun shone brightly, and the glare on the unbroken surface of the snow was extremely painful to the eyes, and those who had colored glasses found relief by putting them on, while those who were without them tied handkerchiefs tightly about their heads just below the eyes, and pulling their hats low over their foreheads, thus limited the amount of light entering the eyes.

The scene was beautiful in its purity, and often, in crossing through the saddles between the bare hills, we could see—

> "No cloud above, no earth below,
> Only a universe of snow."

Again we would reach a point where there was an extended view, and snow-clad mountains, evergreen forests—each tree draped in white—and, not far before us, the fine high peaks of the Main Divide, with precipices of bare, black rock, combined to make up a scene of sharp contrasts and striking effects which will not soon be forgotten. Below us in the narrow valley of Pacific Creek the black course of the winding stream was sharply marked as far as the valley could be seen.

As we proceeded through this universal whiteness the history of the past twelve hours was seen plainly written on the snow before us. Here on this shining tablet were inscribed a series of characters which recorded the doings of the inhabitants of the forest; characters whose lines and letters running hither and thither over the snow told to one who had learned how to translate them a story as unmistakably certain as did ever the pages of a printed book to the reader. It was a record, though transient and subject to the elements; likely to fade slowly and, become indistinct and illegible beneath the warm rays of the sun, or to be wiped away by a blast of wind, as the schoolboy clears the figures from his slate with a sponge, or to be still more utterly blotted out by the silent fall of a few more flakes of snow, which would prepare a new surface, fair and unbroken at first, to be again marked with other stories of the deeds of the free, wild creatures who make their homes among these shining peaks. Thus this deep snow is a palimpsest, from which the writing has been many times erased, but one that can never be restored.

Down at the foot of the cañon wall in the valley were a series of tiny parallel dots in the snow which showed where a little striped squirrel had run out from the broken rock fragments where he had his home down nearly to the water's edge, and then, frightened by some sight or sound—perhaps our approach—had turned and hurried with long bounds back to his rocky fortress.

Higher on the hill, about every weed stalk that showed itself above the surface of the snow, were pairs of long parallel depressions, and scattered about them were fragments of the seed cases of the plants and strips of the bark of the stem. Here the snowbirds had been at work, and so hard pressed for food that they had visited almost every projecting plant. Similar but larger tracks accompanied by a long and wide shallow depression, occurred here and there, made by the gray jays so abundant in these forests.

The night had looked on more than one tragedy. Death had been abroad, stalking grimly over the barren hills and pushing his way among the thickly clustered pines. There had been battles, and ambuscades, and stern unrelenting pursuits, fierce struggles, resistances, feeble and unavailing, despair, and the final yielding when hope was lost. Many a life had gone out that night on the bleak hillside, many a death shriek had been smothered by the thick whirling snow drift, or drowned by the wailing of the wind which moaned through the narrow cañons or made dismal sobbing among the tossing pines. Here close to the margin of a little brook was a pile of bright azure feathers, telling its own sad story of death, and near it long light strokes on the fresh snow spoke plainly of the fierce bird that in the gray light of earliest dawn had seized in his savage crooked talons the little bluebird who was just beginning his journey toward the summer land.

Winding about upon the hillside, often quartering the ground like a well trained hunting dog, and occasionally proceeding directly to some bush or cluster of weeds, were a series of footprints larger than any we had yet seen. A fox had been hunting during the early morning and had visited each spot that might give shelter to his prey. There beneath a spreading pine he had come upon the footprints of a dusky grouse, and had followed them for a little distance, when suddenly they were no longer to be seen, the two last deeply impressed tracks showing where the bird had vigorously sprung from the ground, and on whirring wing had darted away among the snow-laden treetops. A few feet from these one could see where reynard had paused in his stealthy advance when the bird took flight, and it was easy to imagine how regretfully he had gazed after her, and to picture to oneself the look of disappointment on his cunning visage as he saw his hoped for breakfast disappear. A little further on he had been more fortunate. A hole dug in the snow, and a tuft or two of bluish fur, showed that some unlucky mouse had fallen a victim to the keen-nosed hunter.

The tracks of mice and of tiny shrews were evident about each stalk of weed or bush that showed itself above the snow, and the delicate trails ran hither and thither over its surface, all of them converging to the little hole close to the stem, up and down which the small creatures passed.

The snow here was a foot deep, and the passage of a heavy animal over it made a wide trail. Such a trail, looking somewhat as if one had dragged along a pillow, emerged from a grove of pines and zigzagged along a hillside that we crossed. At the foot of a pile of rocks which obscured the base of a little lava bluff, the beast had paused and had dug a great hole, tossing snow and pieces of rock about in a reckless fashion that indicated great strength. Then it had left this work and gone on over the hill and down into the valley of the stream. It was a wolverine that had been prowling about here, and he had been trying to dig out a woodchuck or a squirrel, but without success, for the home of the rodent was well defended by the frost-bound fragments of rock.

As we rode through the pines, we could see where the red squirrels had run over the snow from tree to tree, and in a little glade a porcupine had passed along, sweeping with his broad body and long dragging quills a wide pathway in the snow.

Often at the border of some grove of pines could be seen the impress of the great coarse pads of the snowshoe rabbit, scarcely sinking into the light snow. These, for the most part, kept close under the evergreens, where the snow was least deep; but when startled by wolf or fox, then indeed they could skurry away over the drifts, while the heavier pursuer must laboriously toil through them—far behind.

The tracks which were most noticeable were those of the elk. The heavy snowfalls, warning them of the near approach of winter, had started them down from the peaks, and everywhere were trails leading from the hillsides into the valley and going westward. As we came along, noisily announcing our approach with clang of bell, and rattling of dead branches against the packs, and cries to the mules, the animals retreated to the timber to let us pass, and so we saw none of them, but they were evidently migrating in considerable numbers, and many of the tracks were extremely recent. By hunting a little we might have secured a load or two of meat, but we did not require it.

We had not gone far from the camp when we saw, off to the northeast, a low pass in the hills, which we took to be the one we were in search of. The stream forked again here, the two branches being nearly equal in size, and thus giving us no hint as to which was the main creek. We were now able to descend into the creek bottom, which soon became wide and level, and except that it was occasionally somewhat miry made good traveling. Usually we kept close into the hills and had no trouble at all. Occasionally the hills would close together, so as almost to form a cañon, and again would widen out again into the broad level plain, crossed in all directions by elk tracks. These, at a distance, were pretty to see, looking, as they often did, like two delicate chains laid side by side and running for a long distance almost in a straight line. The elk had been hungry, and the first ones that had passed along had bitten off the heads of all the grasses and weeds that they could find above the snow. Thus the first tracks went in every direction, but always they turned finally and kept on down the valley. I remember one set of tracks where the valley was perhaps two miles wide, which we could see as they came out of the timber on the opposite side and proceeded straight across the valley. About half way across and two hundred yards to one side of these tracks was a great dead pine stub standing alone, the only tree in all the meadow. When the elk came opposite this he had turned at right angles to his course, gone to it, rubbed himself against it, and then returned to his track and kept on straight across the valley. We crossed his path as he went into the timber on our side. More than once as we reached these widenings of the valley we thought ourselves near the pass, but always it narrowed again and the water kept flowing west.

At length, late in the afternoon, we came upon a heavy and old pack trail, which was no doubt that made by Captain Jones, of the U. S. Engineers, in 1873.

All the signs showed that it was a white man's trail and made by a Government expedition. We could see the broad blazes on the trees, most of them now partialy covered by the growth of many years, and the spots on the trunks where the hard corners of the packs had knocked away the bark, and allowed the resinous sap to trickle down and harden. Following this trail for a short distance, we came to a large camp at the edge of a broad meadow, in which rose many springs, forming several large pools of quiet water. We were now, according to Jones's map, only a short distance from Two-Ocean Pass, and at every opportunity we scanned the creek carefully to see which way the water ran. For half a mile more it continued to run west, and then suddenly, after passing through a bit of timber, we came out upon an open valley from the other end of which a brawling stream hurried away to the eastward. The snow lay here a foot or eighteen inches deep, and covered the narrow streams and channels, so that it was impossible for us to determine just what course the drainage took, as might have been done had the ground been bare. It was apparent, however, that the divide which separated the waters flowing in opposite directions was very low, certainly not more than a few inches high, and that in times of high water this low barrier might be overflowed and so cease to exist.

The Sportsman Tourist.

THE FARMER'S BOY.

BLESS his dear, honest face, how can one but love that frank expression, that awkward but cordial greeting; he is glad to see us, his eyes are eloquent in saying so, if his tongue is not. I have a large number that I value as friends, and often wonder why sportsmen do not more generally cultivate their acquaintance. There has been a great deal said about the farmer and the sportsman, but give me the farmer's boy. How I enjoy a visit with him as, tramping through stubble or cover with dog and gun, I find him looking after the cows or going to some spring for a drink, or maybe chasing a squirrel or gathering nuts, we sit down, and while man and dog are resting, we enter into a conversation that generally ripens into a lasting friendship. He is shy at first, and if saluted with the question, "Bub, is there any game around here?" his answer would probably be, "I dunno," while he does know if there was a brood of grouse or quail raised anywhere about there, and where they are, and how many there are of them; he knows of every squirrel and what trees their nests are in, and of every woodchuck's hole, and he will tell you about them if you treat him like a little gentleman; and he will go a mile to show you just where the grouse are at this particular time of day, for he has watched them day after day while herding the cows or picking berries. He goes into the woods, the thickets, the gullies, and through the fields and stump lots, and he knows what is going on where the farmer himself never goes.

I was just thinking—this cold blustery day—of a little friend who has given me some very good shooting the past three years, and has also added greatly to the pleasure of it. There are a number of others who always make it a point to come and see me when in the city and tell me of any game they may have discovered, but this one is a little naturalist and is very observing, which tends to make him the more interesting. I met him on his father's farm three years ago the past fall, after taking a long and tiresome tramp without starting a feather. We sat down at the top of a gully, and while I was resting, told him how the dog loved to hunt, and how disappointed he was when we failed to find the birds. This opened the way to the little fellow's heart, for he and the dog had been exchanging caresses and were already friends, and he told me where there were two bevies of quail further up and across the gully in a small piece of standing corn; how he had watched them as they ran out to feed from the scrubs that grew along the edge ever since they were a few weeks old, and if I would go with him he would show me where to find them. I at first demurred, as I felt that they must seem like pets to him, but gave in immediately when he brought up that time-worn but clinching argument, "If you don't shoot them some one else will." He was also anxious to see the dog work. Going across the gully, we had hardly regained our breaths, when looking ahead toward the corn, there stood Pard just at the edge, pointing as rigid as a statue; going on I flushed the bevy and scored a double, much to my friend's delight. Following them up we scored two more, when, as it was growing late, we turned homeward; his house being on the way I stopped for a drink, and learning that his mother was sick, gave him the quail with instructions how to cook them for her. Ever since, when shooting in this section, he has invariably joined me, and I enjoy his company no less than the apples and pail of cider which he brings for my refreshment.

The past season he kept the usual sharp lookout for something for me to shoot. About the first of October—my two pups sadly needing instructions—I took a tramp over to see my little friend. Yes, he knew where there was a dozen or more grouse that had not been disturbed; he had been waiting for me to come out to go with me, but could not go just then; but if he could get away would come over in the woods in an hour or so. Giving me the necessary directions we parted. This was to be a red-letter day, not in the amount of game brought to bag, but in the pleasure and instruction derived. I went to the place described, the old dog ranged and quartered well, the pups worked as independently as though they were old hands at it, we covered the ground over thoroughly, but not a ruffed grouse could we find. Where could they be? There was no other place near by; where should I go? I was disappointed and did just what many another sportsman has done under like circumstances, lit my pipe and seated myself on a log to reflect on the uncertainties of finding game just where you have reasons to expect it most. I had every confidence in my informant; the birds had been there, but they were not there then. I sat

dreamily enjoying my smoke, when a shout from down the wood road roused me from my reverie. I answered back, and in a moment the boy was with me. Was he disappointed? If so his countenance did not betray it. He changed the subject by saying that he thought he knew where there were some snipe, not more than half a mile from there. I knew of no snipe ground in that vicinity, but for the sake of going somewhere, followed him. He took me to a field of winter wheat, well up, and there the old dog pointed and I killed five snipe, and the pups retrieved them; and strange to me, I had to fairly kick them out of the wheat before they would rise. Here was pleasure and instruction combined. I had shot a great many snipe before, but never looked for them in winter wheat; and seldom will they lie to a dog as they did that day.

It had been a cloudy day, but near the middle of the afternoon the clouds broke away and the sun shone out bright and warm, which was all that was needed to make it a lazy day. I had tramped enough, so we took the back track. I noticed my little friend, although very reticent in regard to the partridges, kept working over toward the opening where I had hunted in vain for them in the forenoon, although it was somewhat out of our way. While I was willing to give them another trial, I had no hopes of finding them, for with the old dog and pups they could not have escaped me in the morning. We had hardly entered the opening, however, when Pard was on a point. There, not over ten feet from the dog and about thirty feet from us, sat the bird on a little rise of ground, its neck stretched, intently watching the dog, and evidently unconscious of our presence, while we stood silently taking in the picture. The pups having passed to one side of the bird and gone on, now came racing back helter skelter, flushed the grouse, and forgetting that I had a gun, I allowed it to go without so much as a parting salute. Maybe it was better that the first bird flushed by the pups was not brought to bag; first impressions are generally lasting—it seems especially so with pups—and I believe Hammond claims that a bird flushed by a pup should not be shot at. If I was right this time it was more good luck than good conduct. Pushing on in the direction the bird had taken, we had hardly gone five rods when the lemon and white pup (my favorite, by the way) dropped to a beautiful point, except that the end of his tail was vibrating. He was not quite certain (it was his first point), but the bird was there. Going in I flushed, and gripping my gun the tighter and pulling hard as if to make a surer shot, I brought him down, a beautiful young cock grouse. How proudly the pup retrieved it. This did my heart good; it was worth a long tramp, just this one shot. It was the making of that pup. No old dog could do better from that time than he has done.

Covering the same ground over that I had worked in the morning we found seven or eight birds, bringing two more to bag, making three grouse and five snipe for the day; a goodly number of feathers, but a small item as compared to the pleasure and profit derived. As we turned toward home late that afternoon, I ventured the question, "Where could those birds have been this morning?" and was considerably surprised at the quick and, to me, satisfactory reply from my companion, "Well, you see, it looked like rain this morning, and young partridges don't like to get wet, so they fly up in the trees and sit on the big limbs when it's rainy weather. I knew we'd find 'em when the sun came out." Here was a conclusion he had formed upon actual observation of only one summer, while I had never even thought of it during several years of shooting them and of studying their habits.

This was only the beginning of the season for me. Many another pleasant day did I spend with these birds and another brood which we found not half a mile away. Who could have afforded me more pleasure, more instruction, and have been a better companion than my little friend the farmer's boy. RANCKTONE.

LANSING, Mich., Jan. 15.

ROUGHING IT IN THE NATIONAL PARK.

IV.

THE following day we concluded to move camp nearer the deer country. It was a long tramp in the morning, and after hunting all day a long return, so we packed two horses with absolute necessities and a few cooking utensils, leaving all superfluous stuff at our old cabin. It was late before we started, having to climb over high mountains, following an old Indian trail which was partly so steep that we had to tack with our horses like a sailing vessel against contrary wind before we reached the top. We stopped in a gulch near a running creek, where Charles and Frank established camp while Tom and I took a hunt to see about our wounded buck, and also to skin the wolverine, which we did, but did not succeed in finding the buck, nor did we start any game whatever. On our way home stormy clouds were gathering around us, and such a sudden darkness overtook us, that we were not able to find the place where we left our fawn. We hunted high and low; it was horrible climbing through rocks, ravine and brush, many a fall and nasty scratches, but all in vain. The darkness became so intense that we could not distinguish one place from another. We managed to gain camp in rather ill humor and an exhausted condition. Frank and Charles were waiting supper for us. They had no venison in camp, thinking we would bring in some on our return. Having canned goods, plenty of bread and fried bacon, and a strong cup of coffee, we satisfied the grumbling inner man, and soon forgot the hardships and rough time we had had in gaining camp. The next afternoon I took a hunt in the neighboring gulches and started a doe and two fawns, but got nothing. The others also had a blank that day, but they brought along the fawn which we could not find the evening before. Rising early next morning, we went far up the gulch, separating at different points. I hunted very carefully all the forenoon, but to no account. Coming to a meadow-like opening skirted by high timber, I sat on a ledge for lunch, and while eating I heard a rustling, and not fifty yards from me saw a fine buck just disappearing behind some brush.

I dropped my lunch and quickly grasped my rifle, knowing that he would appear at the next opening. The moments he kept me in suspense seemed like hours. Having my hair-trigger set, I nervously awaited his reappearance; but in my excitement, now seeing the deer emerge out of the thicket, this very hair-trigger played me again the same trick it had with the antelope. My finger must have touched the extremely light trigger and off went my rifle before I intended, frightening the buck, who disappeared in the thick timber. Only a person who has experienced the same situation can imagine my feelings; I felt like telling somebody to club me. Tom, who soon joined me, wondered why I was so blue and pensive. In the afternoon we found fresh bear tracks and followed them through a perfect wilderness, but did not succeed in getting a glimpse of Mr. Bruin. Feeling somewhat disappointed, we reached camp just as Charles was returning. He had been more successful, as he got three goats out of a band of five.

The next day we regained some of our lost spirits, as we managed to bag three deer—a buck, a doe and a fawn—also several grouse near our camp, which we reached that day quite early. Wednesday we packed the deer out of the timber to the summit near the trail, as we concluded to move back next day to our old camp. Frank killed some grouse with his shotgun, the only shooting that day. Early next morning we pulled up sticks to go back to our old camp, as we expected the return of friend Bill from the mine. Charles and Tom, with the pack animals, took the trail across the mountains, while Frank and I went around the gulch, hunting back through our goat region. We did happen to see one. I tried very hard to get within shooting distance, but without success. Not seeing any more game that day, we got to our old camp by sundown. Friday morning we forded the Boise, hunting in the mountains on the other side of the river. Frank and I carried our breechloaders in search of grouse, while Charles and Tom went in quest of larger and nobler game. We had some excellent sport with grouse, making a good bag, also a few white rabbits (moccasins).

The boys did not see any large game whatsoever, and arrived in camp rather late and tired. Having hunted steady every day in the week (which is no easy work in those mountains) we all felt tired and exhausted.

Saturday, Nov. 8, in the evening, the long expected wagon arrived from the mine and the next day we pulled up camp, loaded our deer and skins in the wagon, and set out for home. The game killed on this trip consisted of 11 goats, 6 deer, 1 wolverine, a number of rabbits, and a gunnysack full of grouse. It was with many regrets, for we were leaving our happy hunting grounds behind us. I cannot call to mind a more enjoyable and successful trip, and will never forget my first hunt for the Rocky Mountain goat. We arrived at our headquarters late, but in excellent spirits, and after partaking of a delicious meal soon retired to our cozy and comfortable quarters. The next morning I was busily engaged with my different skins for preservation. In the afternoon Charles and I rode down to Junction Bar, enjoying a refreshing bath in a comfortable bath house built over a hot sulphur spring. We remained a little while in the tavern of our old friend Billy, who had heard that deer were passing through the neighboring mountains, and as he was out of meat, we promised to come down from the mine the next day and enjoy another little hunt. Putting a few camp and cooking utensils in the wagon, we were soon on our way to Goose Creek.

Leaving our wagon in a beautiful park-like plateau, we packed the rest of the way on our ponies, following an unfrequented and overgrown trail through a thickly-timbered forest, and arrived quite late at our camping spot on a creek in a gulch near the head of the mountain. Next day we started out early. Billy was the only lucky one, killing a fat buck fawn. The deer must have left the mountains for "High Prairie" on the way to their winter range, when they return in spring as soon as the snow begins to leave the mountains. We saw plenty of fresh signs, and at some places the ground was literally torn up with their tracks. We held a council the next day, and prepared for our departure out of the mountains, as we were running the risk of a snowstorm, which is equal to imprisonment till spring in these mountains. We packed our camp truck and deer on the ponies, having another hard tussle through brush and windfalls until we gained the grove where we had left our wagon; but before unpacking and harnessing the horses, Frank took a very successful picture of our trailing outfit. Having a fair road from here we soon reached the mining camp.

Next day, Friday, Nov. 14, I improved my time mostly with the peaceful and domestic avocation of washing and mending my rather hard-telling clothes. I would have given a good deal if my wife could have seen me at the washtub, or admiring my dexterous perfection in mending, darning and sewing. I wound up my day's work with writing a few letters and reading some Eastern news which had just arrived, feeling especially interested in the presidential election.

Waking up late Sunday morning we found everything covered with snow. The exceptionally fine weather seems to be at an end, and we began to think in earnest of our home journey. We stirred early the following morning, and after breakfast were ready to depart.

Tuesday, Nov. 18, after a good night's rest, we hunted in different directions the foothills and gulches sloping toward High Prairie, and managed to secure three fine blacktails, bringing to camp only a small fawn for immediate use, leaving the other two, as we intended to move camp next day a little further into the hills, near Lime Creek, they being more accessible from that camp. Moving our camp next day we hunted only a little, and H. killed a two-year old buck.

Thursday, Nov. 20, we all started in good time, and counted eight fine deer for our day's sport. Friend Frank, who had been exceptionally unfortunate, not having had a glimpse of a deer on this hunt, succeeded in killing a large doe and a fine fawn that day. It took us all next day to pack the game to camp Having hunted the surrounding grounds pretty thoroughly, we decided for the morrow on a hunt to the yet unexplored foothills and gulches of Wood Creek.

We started in the morning before daybreak on our long tramp, but not seeing many deer, the two brothers Charles and Billy were the only successful ones, killing three deer. All hands feeling pretty well tired out, soon after supper we turned into our wigwam. Sunday, Nov. 23, Charles and Billy rode over, bringing in the last victims of our hunt, the total number of fifteen blacktails, considering it sufficient for their winter's supply, and not being game butchers, we also felt contented with the results of our few days' hunt. After the others had gone back we tinkered around camp until supper, after which we rolled up in our blankets. Several days later, while we were at breakfast, a trapper who had camped near by came over to pay us a visit and gain some information. Hearing that we wanted to dispose of our outfit, he made us an offer for our horses, which we declined, as we intended to sell horses, team, in fact the whole camping business in one bargain. He having no use for a wagon, following mostly trails passable only for horses, left us.

Arrived at Mountain Home Station, we sold our horses and wagons, and exchanged our hunting garments for those of civilization. Frank was to visit San Francisco, while I was bound direct for my Eastern home.

The next morning, Nov. 30, we had to rise very early, as the train which was to carry me east left Mountain Home at 4:30 A. M. Taking a hasty breakfast, Frank, who insisted to see me off, accompanied me to the depot, where the train had just arrived, he intending to take one in the afternoon for the West. One more handshake and a last "au revoir" and the train had left the station.

Let me whisper a word of advice to the stay-at-homes of the East, who imagine the mole hills near their doors are mountains, their little cascades great waterfalls, and the neighboring gullies and ridges, grand scenery, or if you have traveled in Europe and never seen your own country, take my word for it, the scenery in America eclipses it tenfold in grandeur and magnificence, and I will finish with Horace Greeley's advice, "Go West." F. B—T.

THE PUGET SOUND COUNTRY.

TO the lover of the rod and gun, no more inviting field can be presented than Washington Territory, and especially that portion west of the Cascade Mountains, which is known as the Puget Sound Country. I wish in this article to give to your Eastern readers, as briefly as possible, an idea of the resources in game and fish of this portion of the Territory. In order that a thorough understanding of the subject may be had, a brief description of the geographical features, climate, etc., will be proper.

The Territory is divided by the Cascade Range or mountains, which traverse the Territory from north to south, into two portions, widely dissimilar in climate and soil, and as a natural sequence, animal and vegetable productions. I shall leave the eastern portion to some future article, and speak here only of the country surrounding Puget Sound. The present winter has made itself felt in so marked a degree in the Eastern States that the first thing suggesting itself to the average person in the consideration of an unknown country, would be the climate. This with us is mild and salubrious. Extremes of heat and cold are rare. The two winters ending with the present one have been the most severe experienced here in a period of more than twenty years, and in neither winter did the mercury fall below zero. As a rule we have a week or ten days of frosty weather, during which the temperature may fall as low as twenty degrees above zero, but these "cold spells" are rare. Often during the winter we have from two to six weeks of uninterrupted sunshine, the mercury during that time never falling below the freezing point. But little snow falls, and what little we have rarely remains for more than twenty-four hours.

The rainfall averages about forty-five inches at most points on the Sound, though there are spots where it is much greater, notably at Neah Bay, near the mouth of the Straits of Juan de Fuca, where they have had as high as one hundred and thirty inches in one year. Our climate is tempered like that of England, by a warm ocean current coming from the south, ours being the Japan current. It strikes full against the shores of the Territory, and the winds which come commonly from the southwest in the winter season, come laden with warmth and moisture. Striking the colder stratum of air which hangs over the land, this moisture condenses and falls in gentle rains over the country. As I heard a gentleman remark a short time ago, this is a fine climate. There is nothing changeable about it. It rains all the time. Our climate, however, has been much slandered. The usual idea abroad is that we are perpetually water-soaked here and that the old Puget Sounder, like the old resident of Oregon, has webbed feet. The fact is, however, that we have little, if any, more rain than the average of the Eastern States. The water of the Sound is of about the same temperature all the year, about fifty-two degrees.

Our summers are equalled not even by those of California for beauty. Commencing about the first of May, they extend far into the months which are winter on the Atlantic coast. Extreme heat is as rare as extreme cold. The temperature is commonly during the day about seventy, while as soon as the sun goes down a refreshing coolness pervades the atmosphere. Sultry, oppressive nights are unknown. There are few nights during the year when one is not comfortable under a good heavy pair of blankets. Occasional showers fall in the summer months. Thunder storms in the eastern acceptance of the term are unknown, though when a shower chances to be passing over on a warm day, occasional low rumblings of thunder are sometimes heard. Under these climatic conditions it will be seen that an out-of-door life is enjoyable during most of the year.

Puget Sound, one of the great island seas of America, enters the land at about 48° 20′ north latitude, with a breadth of some twenty miles, and sweeping easterly for about seventy-five miles, expands into a body of water having a diameter of about thirty miles. It is known from its entrance to this point as the Straits of Juan de Fuca. From the Straits a passage runs northerly and expands into the Gulf of Georgia. On the south, Admiralty Inlet commences and runs south for about sixty miles, with a width of from five to fifteen miles, and then expands into Puget Sound proper, although all of the waters south of the Straights are in local parlance termed Puget Sound. Inlets and bays innumerable indent the coast line, and at short intervals beautiful clear streams flow from the mountains on either side through their rich valleys into the Sound.

Admiralty Inlet and Puget Sound taken together have a shore line of about 500 miles. The waters are deep, the shores bold. There are numerous fine harbors affording good anchorage. From the shores of the Sound the country rises gently to the foothills of the cascades on the east. From there to the summit, fifty or sixty miles from the Sound, the rise is more abrupt. On the west the Olympic range of mountains commences at the water's edge and fills the whole of the country between the Sound and the Pacific. These mountains cover a wild region which has been but little explored. The soil in all of the river bottoms is rich, and most of the valleys are well settled. On the uplands the soil is not so good and is more difficult to clear, owing to the character of the timber, which on the high lands is almost entirely fir. The entire country is covered with a thick growth of timber, with the exception of a few small prairies, which are mere dots on the vast expanse of timber. Fir is the predominating growth, and it covers the land in vast illimitable forests and grows to a great size. There is also a great deal of cedar, as well as pine, tamarack, hemlock, spruce, ash, alder and maple. The bottom lands are covered with a dense growth of ash, maple, cottonwood and alder, but the clearing of them is not difficult.

The towns of this region are not numerous. Seattle, the chief town of the Territory, has a population of twelve thousand, nine thousand of which has been added since 1878. It has many fine buildings, among them many fine

business blocks, two public school buildings costing $60,000, an opera house with a seating capacity of twelve hundred lately erected at a cost of $100,000, and many fine residences. It has gas works, a telephone exchange, a system of water works lately finished at a cost of $150,000, one and one-half miles of street railway in operation; in short is a bustling, energetic western town. Of the other towns the chief are Tacoma, with a population of seven thousand, Olympia, the capital of the Territory, population about three thousand, and Port Townsend, the port of entry of the Sound, population two thousand, and several smaller places, with populations of five hundred and downward.

From Seattle many lines of steamboats extend to all points on the Sound, and any point near the water can be easily reached by their aid. Methods of traveling back from the water are primitive, and a trip into the interior is generally accomplished by going on horseback, or where this is impracticable, on foot.

Game of many kinds is abundant throughout this region. Through the tall firs the deer and elk wander, in many places undisturbed by the hunter. On the marshes and lakes wildfowl of all kinds abound, and in the thick covers afforded by the heavy underbrush, the grouse, pheasant and rail breed undisturbed. The elk is here in great numbers, being most numerous in the wild regions of the Olympic Mountains. They are not found of late years near the settlements, as they are the first animal to take alarm at the rifle of the hunter or the axe of the woodsman. They here follow their custom elsewhere, and herd together in bands, and the hunter who is fortunate enough to find a band and kill one can, if armed with a repeating rifle, kill nearly the whole band, as they become confused in the presence of danger, and huddle together in a stupid manner, not knowing enough, seemingly, to take advantage of the great speed with which nature has endowed them. Instances are numerous of a whole band having been killed by two hunters within a day's travel of the settlements. Happily, however, such instances are more rare latterly, owing to a more sportsmanlike feeling which is taking possession of our hunters of late years. The idea is gradually dawning on our sportsmen that it is not all of hunting and fishing to kill and destroy.

Deer are far more numerous than elk, and range over the entire region west of the Cascades. They do not seem to recede before advancing civilization as do the elk, and they are often killed within the corporate limits of Seattle. The writer with a friend a few years ago was engaged in trout-fishing in a small stream about two miles from the business center of Seattle, his companion being armed with a rifle to knock over any stray grouse that might appear. Crossing over the stream on some logs, the rifleman ahead, I saw him draw his rifle suddenly to his shoulder and fire and rush forward into the bushes. Supposing he had killed a grouse I leisurely followed him, and on reaching him found him engaged in cutting the throat of a fine spike buck. We fastened his legs together in the approved style and carried him home, together with four grouse and about one hundred trout. Not a bad day's sport in the outskirts of, at that time, a city of six thousand inhabitants. The deer of the Sound country are of two species, the mule deer and the blacktail, though the mule deer is rare on the Sound. There are many localities on the Sound where, from lack of underbrush, still-hunting is good, but the more common way of hunting is by hounding. The writer with a party of three others once killed twenty-eight in four days in this manner. I relate this at the risk of being considered a "deer hog." It brings a slight blush of shame to my cheek even yet to recall it, although we made good use of them among our friends. But for that act I have the excuse of youth to offer, as it was a good many years ago. White deer are numerous in some places on the Sound. The north end of Whidby Island, one of the largest islands of the Sound, seems to be a favored spot by these objects of superstition. I have never been fortunate or unfortunate enough to kill one of them.

Of bear, we have the common black, the cinnamon, and an occasional specimen of the grizzly, and one even more dreaded than the grizzly, the "delate mesatchie" bear of the Indians. Of a dirty brown color, his muzzle presents a grizzled appearance, from being sprinkled plentifully with white hairs. He is as large as the grizzly, and his habits are much the same. He is rather rare, fortunately, for he is regarded as being even more formidable than the grizzly. I am glad to be able to add my testimony to that of "Ness-muk" concerning this bear which he described, or one very near like it, in your columns some time ago, and the existence of which was denied. Like him, what I know I know, scientists to the contrary, notwithstanding.

The common black bear is largely represented. Three were killed last summer within the limits of Seattle. Cougars are abundant and grow to a large size. The lynx or wildcat is also plentiful.

We have several species of grouse, and all abundant. This is not intended to be a scientific treatise, and I will not enlarge upon the characteristics of any of the game or fish mentioned. The males of the blue grouse before the passage of the game law, afforded fine sport during the mating and breeding season, to the expert rifleman. During this season, seated in the upper limbs of some tall fir tree the male bird gives utterance to a "booming" sound, which is difficult to describe. Close your lips and produce a grunting sound deep in your throat and you have it as near as possible to produce it, save that it has not one-tenth part of the deepness and intensity of the real call. On a still day this call can be heard for half a mile, and often a dozen of them can be heard "booting," as it is termed, at the same time. The bird is supposably actuated by the same motives that the cock-pheasant is in "drumming." Armed with a small-bore rifle, and carrying a good field glass, the hunter may enjoy a fine day's sport, or rather could, for the game law passed in 1883 protects grouse during the season referred to. Guided by their "booting" one can single out the tree in which they are sitting, and then a patient search with the glass reveals their whereabouts. Sitting close to the trunk of the tree far up, and almost the same color as the bark, they are sometimes difficult to find, even though they may be constantly "booting." When found you could take your time about shooting, as they will sit for an hour under a continual fire, if the aim of the hunter is so poor as to permit of it. The head is the only approved place of hitting them, and when a well directed shot takes the head off cleanly, and the heavy thud caused by their striking the ground is heard, the enjoyment is nearly equal to that of wing-shooting.

Pheasants or ruffed grouse are very numerous, and may be found in almost any thicket. Quail, both Bob Whites and California, were introduced into the Territory a number of years ago, and are now abundant in many localities. High up on the mountains may be found a great many ptarmigan. All manner of waterfowl are very abundant, and the flats at the mouths of the larger rivers present fine shooting grounds. Our duck hunting cannot be excelled. Wilson's jacksnipe are also plentiful, as are many other species of snipe.

I find that I have omitted from the list of animals the mountain goat, which is found on the summits of the mountains in large numbers. He is hunted by few save the prospector or miner, as his home is among the inaccessible crags of the wildest portions of the mountains.

We have but few varieties of fresh-water fish, but what we have are well represented. The trout is here in many of his species, and is found in every stream in great numbers. They have all of the characteristics of their Eastern brethren, and rise freely to the fly during all of the spring and summer months. They commonly spawn during the latter part of October, although their time for spawning varies in the different streams, being earlier in the smaller streams. The different species of trout comprise nearly the whole of our fresh-water fish. A species of chub inhabits most of the lakes, and the common sucker is found in most of the larger rivers. These, with the fresh-water sculpin or bullhead, make up the list. Our streams are all clear and rapid, and afford fine sport to the lover of the rod.

As the subject of the most killing fly has lately been under discussion in FOREST AND STREAM, I may as well give my experience in these waters. First of all I place the common coachman, and all of the varieties of the coachman are good, notably the royal coachman. The following list may all be relied on to kill at almost any season with us: Canada, Montreal, alder, brown hackles of any description, governor, Abbey and the professors. We have nearly all salt-water fish in great abundance, and a pleasant day's sport may be enjoyed in taking some of them. There are seven or eight species of salmon in our waters, and the sea trout is here in all his glory. He ascends the streams in September—later than his Eastern prototype. I gave an account of the manner of capture of our salmon in FOREST AND STREAM some time ago. They will not rise to the fly, either in fresh or salt water. At least no combination of feathers has yet been discovered that will tempt them. It may be that they will in future years become educated up to that degree. The facilities for getting about the Sound as I before said are good. The sportsman may be dropped from a steamer with his small boat at almost any point he may desire, and if he wishes to be wholly independent he may have a sloop, and with the aid of the gentle breezes of this region travel in safety to any point he may desire. The tides are not violent, and high winds are almost unknown.

As I write, I am sitting without a fire; the day is bright and warm, the leaves are bursting from the buds, and it seems as if summer is near at hand. I felt the impulses of the angler stirring within me last evening, and gave my flies and tackle an overhauling, and in the light of the discussion that has been going on on the vagaries of fly nomenclature found myself at the conclusion of my task utterly bewildered. I found in my collection some forty varieties, not more than two dozen of which, with the aid of my own knowledge and that gained by C. F. Orvis's plates, am I able to identify.

It makes no difference, of course, to the individual angler, taking him alone, whether the flies have a name at all or not, or whether they are called by one name or a dozen; but when we come to exchange thoughts upon the killing quality of the different flies, it becomes confusing. Let us have a system. If we are mad over our hobby, let there be a method in our madness.

In conclusion, let me say, that the Puget Sound region, with its wealth of timber and fine harbors, its game and fish, its grand snow-topped mountains and fine climate, its vast undeveloped fields of coal and iron, and its agricultural resources, affords a magnificent field for the sportsman, the tourist, the manufacturer, the capitalist or the farmer. For any of these, who are provided with that requisite in any country, energy and push, this country offers a rich reward.

If any of FOREST AND STREAM'S readers wish for further enlightenment I shall be happy to reply, as my time will allow, if addressed P. O. Box 520, Seattle, W. T. ALKI.

SEATTLE, W. T., March 12, 1885.

Natural History.

THE BIRDS OF MICHIGAN.

BY DR. MORRIS GIBBS.

(*Continued.*)

27. *Anorthura troglodytes hyemalis* (Vieill.) Coues—Winter wren.

A common species with us during six or eight months of the year. It is recorded from all parts of the State; from the most northern point, by Superior's chilly shores, to the southern counties, and I think it safe to say that it summers in every county in the State, but of course only rarely on our southern borders. It is abundant in summer north of 43°. I have never yet found its nest, but on one occasion observed the old bird carrying material in her beak, a delicate spray of mossy texture, with which she was hastening over logs and through the underbrush no doubt intent on the construction of a home. Covert gives the winter wren as wintering in mild seasons, but as yet, in quarters that I have visited, I have failed to find it in December or January, although it appears in February in advanced seasons. All other collectors with whom I have communicated inform me that the winter wren is most common in spring and fall, and that the great majority of the birds are transient with us.

This species delights in secluded spots in the deepest woods, and rarely if ever selects sparsely timbered tracts. That the bird in its migrations must, from necessity, pass over large tracts of cleared land is patent, but the shy midget is so cunning in its movements during migration, that it is rare indeed, that an individual is detected crossing a field. I have seen a bird of this species out of the woods but once in my experience, and the devices resorted to in order to elude my vigilance on that occasion were very amusing. The bird fluttered along the ground, dodging between the tussocks of grass, and securing temporary hiding places behind chips and small bushes. It finally reached a fence, among the rails of which it played peek a-boo in an animated manner for a few lengths when it utterly disappeared, having undoubtedly crept into a hollow rail or secreted itself beneath some one of the bottom rails next the ground. In such a situation it is impossible to dislodge it, and only by the removal of the covering can it be forced to show itself. In the woods, collectors are often bothered about securing a specimen, the active fellows keeping well out of sight, and only after the most patient waiting can a specimen be secured. Thrashing around in the brush and shooting at other birds has not the slightest effect of scaring it from its retreat. It is extremely timid and very suspicious, and is the most retired bird that I know of. A winter wren would live unknown a century so far as the observations of the average stroller are concerned, were it not for his song. But he must and does sing on all occasions, and it is as utterly impossible to quiet him as it is his more audacious cousin, the house wren. *Hyemalis* is not so obtrusive as the latter, and his style of delivery is far superior, but the same incentives seem to cause him to rattle away, and he is quite as difficult of subjugation as *ædon*.

The song is very beautiful indeed, and is as thrilling in its inspiration as that of any of our birds. In inflection and versatility it may be compared to the vivacious song of the ruby-crowned kinglet, but is not quite so softly modulated and is much longer and louder. The birds do not sing with their usual vigor when first arrived, but keep rather quiet until the warmer days have come, only uttering a few faint call chirps and guttural rattles while flitting hither and thither in the brush. As soon as the warm days of April appear, the winter wren goes into ecstacies and shows his appreciation of the pleasant weather in his most extravagant efforts at song. This species rarely consorts with other birds, and gives evidence of his independence by living by himself. It is safe to say that he would readily become a complete hermit if he had the opportunity; but the woods are so full of birds that he cannot avoid them all, and is brought into daily contact with the numerous songsters. Sometimes he may be seen quite near a pair of chickadees, but I have often wondered if it were not more the insatiable curiosity of the titmice, that caused them to thus affiliate. The next instant the wren is off, and his rattling burst of song is heard ten or fifteen rods away, utterly regardless of the civility he should extend to the inquisitiveness of his little neighbors. After July 15 but little is heard from our short-tailed friend for some time; but later in the season, sometimes in late October, the silvery jingle is heard issuing from the densest piles of brush, as musical and vivacious as ever.

28. *Telmatodytes palustris* (Wils.) Baird.—Long-billed marsh wren.

A common species, but confined, from the nature of its nesting grounds, to certain localities. In many parts of the State, the longbill, as well as the next species, is extremely rare, while in other sections one or both are abundant. This wren is strictly confined to the shores of marshy lakes and low sections partially covered with water, and is restricted in its range. I have yet to learn of the capture of a specimen in a locality where the nature of the land is high, dry and sandy, and no lakes or sluggish streams were to be found. Mr. Chapin reports this wren as abundant in the northern counties of the Lower Peninsula. We may say of this species that it is a well-distributed bird, but from the nature of its nesting habits confined to marshy tracts, and therefore not frequently met with excepting by the collector.

As I have never lived in a neighborhood where a colony of these birds nested, it is impossible for me to say at what time they make their appearance. However, they are exceedingly abundant, and lively in their summer quarters by May 15, and for the period of six weeks or more may be found nesting in abundance, sociable, noisy, and ever entertaining.

In the northeastern part of Kalamazoo county, noted for its many beautiful lakes and delightful camping grounds, lies a clear sheet of water about seven miles in length, known as Gull Lake. Its shores are wild in part, but chiefly cultivated by the farmers. This lake offers inducements to the collector superior to those found in any other one locality in the country. I have camped repeatedly there upon an island of a few acres' area, and have fished, hunted and collected on every part of its smooth, glassy surface, and explored the country around it in various directions. On the west is a large marsh, which merges into cultivated fields on the one side and into the blue waters of the lake on the other. This favored section has tempted many collectors, and from the bogs, morasses, cat-tails and rushes, many birds and eggs have been taken. At least three sets of eggs new to us adorn our collection, the result of wading in mud and water in this old marsh. Gallinules, rails of two species, bitterns and many smaller species of birds nest here, while many kinds of waders are found during the migrations.

Here are found in profusion the nests of the long-billed wren, and in this marsh the habits of the cheerful castanet-noted bird can be fully studied. In 1882 a number of sets of eggs were collected, and three of us in a half day or less counted over two hundred nests. If one thinks to secure the eggs without getting wet and muddy, he may as well stay at home and buy the eggs of some dealer, for the nests that I have met with were invariably built over water from one to four feet deep. The locations chosen by the birds are such as to prevent the employment of a boat by the collector, as the coarse marsh grass and bushes are too dense to permit of the entrance of the boat into the chosen haunts. The pleasures of collecting, in a situation of this nature, are very great, notwithstanding the apparent discomfort attendant upon encountering the water and mud, and with the constant dread of going in over one's head, an occurrence by no means rare. Each step takes us deeper into the water and tangled grass, but also adds to the agreeable feelings of anticipation, and as we hear the wrens chattering on every side, the rails and gallinules cackling among the rushes, and see a least bittern rise near us, we dash on impetuously, and either trip up or come near it in our anxiety to collect a good showing of eggs. Suddenly we spy a little green bunch of grass placed about a foot and a half from the surface of the water, and connected by interlacing grass blades with the surrounding stalks or rushes.

The first nest is completed but contains nothing; another nest within a foot or so is also empty, and looks like a last year's affair; the next one we examine contains six eggs. We hear a shout from our companions at a distance, who calls that he has found seven eggs in one nest. We are induced to renewed exertions and continue our search. We soon find another group of nests with the birds chattering about in great numbers, but although there are fifteen or twenty nests not one of them contains eggs, while in a little group of four a few rods distant three are supplied. In two or three hours of hard but exciting work we feel satisfied that the ground has been fully covered, and go on shore to blow the eggs which are then packed in the collecting can. We have also secured several sets of eggs of rails, bittern and some other common eggs. These with a number of birds to skin are packed away, and all hands start for home, twelve miles distant, fully satisfied with the day's trip. One trip among the longbills is enough for all time, so far as is needed for the collection, if the birds are nesting abundantly, for a dozen or more sets may be readily taken in a

short time if the trip be made at the proper season. The time at which the mating season is at its height is from May 28 to June 6.

The nests are loose, straggling affairs, apparently shiftless in their construction, and yet so thoroughly entwined together, that the whole is not easily torn from its fastenings, and is only pulled to pieces with great difficulty. The nests are composed wholly of grass, nearly always of the green blades of the year. Those nests that are made of dry grass are generally, if not always, of the previous year. Frequently the old battered nests of the last year are found to contain eggs, while the freshly-made ones are generally unoccupied. I think a fair estimate may place one occupied nest to every ten or twelve found, and the practice of building so many nests while so few are occupied is undoubtedly a device of the birds to deceive the despoilers. Some one has said that the extra nests are built by the males in order to give themselves employment while the female is sitting. This is not a proper explanation, for I have found the females building extra nests while the male was sitting, and further, there is always sufficient employment for the male in feeding his patient mate in her isolation, and cheering her in her task with his creaky but interesting song.

The nests are about the size of a cocoanut, and the variation in size is about equal to that found in the different sizes of cocoanuts. It is placed from one to four feet from the surface of the water, generally about eighteen inches. The nests are, without any exception in my experience, cold and wet, and differ in this respect materially from the nests of the shortbill. The eggs are laid on the bare, damp grass, and can readily be felt collected in the bottom of the little house on stilts by passing the finger into the orifice. The eggs are usually five or six in number, sometimes only four, occasionally seven and rarely eight.

The song of this sprightly species is, like the songs of all the members of the family, difficult to describe. It is of a decidedly rasping tone, and though nothing like the beautiful ditty of the winter wren, is still agreeable from its very oddity. The little fellows may be heard singing in the tall grass and chattering to one another all around, and yet not one be seen. Occasionally a fluttering bird may be seen flying from one bunch of cat-tails to the next. The flight is peculiar and different from any other of the family. The species rarely breaks into song on a cloudy day, but while the sun shines is all animation. I do not know at what time this bird departs for its southern home, but I have observed them in September.

MISPLACED CONFIDENCE.

A FEW weeks ago I received a letter from a friend in Milton stating that he had captured a fine specimen of "cat-owl" (*Scops asio*), and if I wanted it, to come out and get it. The next day I drove out and got it.

The owl was caught in the following way: Toward evening my friend noticed that his pigeons did not enter their cote as usual, but remained on the roof, also that two of them were missing. He mounted the steps leading to the cote, and looking in, perceived the owl seated on one of the pigeons gorging himself, while the other lay dead near by. Cautiously descending, he obtained a pair of thick gloves and a coal sieve, and returning captured the little robber.

I was greatly pleased to get the bird, and on returning home put it in a large hayloft, which was also occupied by a tame great-horned owl (*Bubo virginianus*), thinking that he would be delighted to have so pretty a little comrade. The big owl, which I call Scops, has his wings clipped and in consequence can fly no better than an old hen. The little owl, on the contrary, was in possession of all his faculties, and I had no suspicion that Scops would ever catch him. As soon as I let the little fellow out of the cage in which he was confined, he lit on a perch opposite to Scops. He perceived him immediately, and gazed at him as if petrified, nothing could distract his attention. Scops returned the stare with compound interest. Being curious to know how they would behave in closer proximity, I lifted the smaller owl upon a stick and moved him toward Scops. As soon as he felt himself moving nearer to his big enemy, he spread one wing (his left one) in front of his body as a shield, all the time giving vent to fierce hissings and snapping his beak in a defiant manner. When he thought he was getting too close, he uttered two soft cries, and glided back to his perch as silently as a spirit. I repeated the experiment three times, always with the same result.

I concluded from this that he could take care of himself, and gave myself no further anxiety concerning him. For a week all went well, but one morning I looked in vain for my little pet. All I could find was a few feathers corresponding to his. When Scops disgorged the pellet I dissected it and found it composed of the claws, beak, bones and feathers of my first, but I hope not my last, screech owl.

I have known of a big trout eating a little one, but never before of a large owl eating a smaller one.

F. E. PARK, JR.

SOUTH BOSTON, Mass.

SPRING NOTES.—Newport, R. I., March 29.—To-day in a walk of about two hours I saw, for a spring like this, what I consider an unusual number and variety of birds, namely: Crows, old squaws, coots, a great northern diver, gulls, meadow larks, shore larks, snow buntings, several American goldfinches, a red-winged blackbird, a large flock of purple grackles, robins, a white-throated sparrow, song sparrows, a titlark and a killdeer plover; also heard several bluebirds calling. Wild geese have been flying for two weeks.—C. H. L.

AN ALBINO ROBIN.—Mr. C. E. Osborne, of Stepney, Conn., has a pure white (albino) robin, full size, taken among a large flock of the common red robin, and stuffed by a skillful taxidermist. What reason do naturalists give for the very few kinds of pure white birds to be found? Seldom are pure white ones to be seen in the large collections, save perhaps a few sea birds. We send you a photograph of the bird.—SCOTCH COLLIE KENNEL CLUB (Stepney, April 6).

RECENT ARRIVALS AT THE PHILADELPHIA ZOOLOGICAL GARDEN.—Purchased—Two common marmosets (*Hopale jacchus*), one male ring-necked parrakeet (*Palæornis torquatus*), one male mountain tinch (*Fringilla montifringilla*), and one female chaffinch (*Fringilla coelebs*). Purchased—One male raccoon (*Procyon lotor*), one Egyptian ichneumon (*Herpestes ichneumon*), one jackass rabbit (*Lespus callotis*), two mallard ducks (*Anas boschas*), three Pekin ducks, one sickle-billed curlew (*Numenius longirostris*), two little black-headed ducks (*Fuligula affinis*), one turkey buzzard (*Cathartes aura*), one red-tailed hawk (*Buteo borealis*), two alligators (*Alligator mississippiensis*), one mountain black snake (*Coluber obsoletus*), and one copperhead (*Ancistrodon contortrix*). Born in the Garden—One bactrian camel (*Camelus bactrianus*), male; and two zebus (*Bos indicus*), male and female.

Game Bag and Gun.

THE BIG BUCK OF THE BACKWOODS.

Editor Forest and Stream:

As I am kept in-doors to-day by storms and bodily infirmities, I propose to note down from memory, in a desultory manner, the particulars and final result of a disagreeable day's hunt. There was nothing marvelous about it, nor was it very materially different from many other days' hunting, but it happens to come up first in my memory just now.

It was away back, some twenty-five years or more ago, that I had occasion to visit a friend who lived in a sparsely settled neighborhood in McKean county, Pa. Deer were always fairly plenty in that region until subsequent raids had thinned their numbers, as also through the northern counties bordering the State. It was late in November, after a hard day's tramp of twenty-five miles, that I arrived at my friend's house. I had brought my rifle, well knowing what would be expected. My friend H. was a little gray-haired, tough, wiry old man. He was no deer killer, but claimed that packing in venison and eating thereof was his best "holt." In the days of which I write every well-regulated backwoods settlement had, or believed they had, a big buck of marvelous size, whose wariness and acute sense of sight and smell had served him, while scores of small deer had fallen victims to the skill of the hunters. This back settlement was no exception to the rule. The old man was full and running over with stories which the hunters had told him about an old buck which they had repeatedly shot at, but always escaped with a whole skin. Now, I had but little faith in the buck stories. I knew that this locality bordered on a large territory of woods, and also that a large buck might pass through them occasionally. I had promised to kill a deer for the old man before I left, and could not conveniently tarry more than two or three days at most. The old man was sanguine, and rather hinted that he had done taking small deer, but that big buck would be quite satisfactory.

At early dawn, the following moning, I pulled out on a westerly course for one of the head branches of the Lewis Run. A light snow had fallen the day before, but a heavy rain fell during the night, and had cleared up freezing cold, and the whole surface of the ground was coated with a thin covering of crust and ice, which made it about the worst day for deer hunting that I had ever been out in. During the forenoon I started some four or five deer at different times, but a white flag was the only ocular demonstration.

It was horribly noisy traveling. My boots gave a clank, clank, which could be heard nearly a quarter of a mile, and I made up my mind then and there that I was the only fool that was trying to hunt deer under such unfavorable circumstances. I quit hunting on that range and took a circuitous route, crossed over the divide some four or five miles, and struck into a large basin which is drained by a branch of Tuna Creek. I reached this point about 2 o'clock P. M., which brought me some two and a half miles northwest from the place where I had started in the morning. Here I sat down, or sat up, rather, on the butt of a fallen hemlock, determined to hunt on that log the remainder of the day. There was not a vestige of snow left here, but the leaves were frozen and crumpy. The view was good for a long shot and certain signs indicated that it was a good runway. Now this hunting on a log is pleasant and easy, providing the weather is warm. But on this occasion, when the temperature was down toward zero, it got to be monotonous, later on tedious, and finally became extremely irksome.

Night was coming on and the prospect left but little doubt that the day's hunt would prove a failure. On the right was a gradual ascent up to the ridge or rim, which was thinly wooded with large hemlocks, under which grew a thicket of low laurel and underbrush, the lower edge being some twenty-five rods from my perch. I had just decided to leave my temporary roost when I discovered a commotion in the upper edge of that laurel patch, perhaps eighty rods distant. It began to be a little dusk or twilight up there under the hemlocks, but by close scrutiny I could see by the agitation of the laurel tops that some large animal was working a zig zag course down through that thicket, and nearly in a direction toward me. I knew that no doe or fawn would come through that patch making all that stir, and I concluded it must be a buck sure. All that I had to do now was to keep cool—in fact I was so cool that I had been shivering for the last hour and a half. I had but a few moments to wait when a large buck burst out of the thicket on a gait between a walk and lope, coming diagonally or quartering toward me, his nose pointing out on a straight line with the top of his neck, and his neck on a line with the top of his back. I had a bead on him in an instant and pulled for the butt of the shoulder as near as possible. At the crack of the gun he made some lofty bounds, changing his course a little more toward me, and by the time I slid from the log had stopped broadside, not more than two rods distant, where he stood a full minute perfectly still; and so did I, when he turned at a right angle, started off on a smart lope and was gone. In that minute of time I had looked him over. I saw that he was a splendid deer—a beauty. He was a fair sample of what an old hunting chum of mine used to call a "gee-whilliken big buck," and not the least prominent feature was the unusually large and handsome pair of horns.

Talk of buckshot, pshaw! That buck was riddled through two-thirds his length by a bullet from my muzzle-loading rifle, fifty round balls to the pound, and had run off apparently unhurt. The amount of vitality which an old buck has in November is simply wonderful. I once shot an elk precisely in the same manner, which did not live five minutes. After reloading I followed the slightly-blooded trail for a short distance, when night closed in and darkness prevented any further search that night. Being quite sure, however, that I could find that deer in the morning should there be no snowfall during the night, I now started on a direct course, as near as possible, for the settlement, where I arrived late in the evening after a wearisome and vexatious tramp of some three miles on a moonless night.

My old friend Uncle Dan, as he was familiarly called, was in ecstacies when I told him that that famous old buck would be ready for him in the morning. He was up before day and the good wife had breakfast as soon as light, when we started, he and the hired man with hatchet and butcher knife. An hour of smart traveling brought us to where I had left the trail at dark the night previous. We followed the trail and found that it led into the branch, thence down to its confluence with a larger branch, where after a half hour's search we found the deer lying up against a rock, limp and dead. It had apparently been dead not more than a half hour. It was a noble specimen of the deer, including also the horns. But I had spoiled his natural beauty, and I confess that I felt some slight qualms, as I have on some similar occasions. But I claim that there are some mitigating circumstances in my case, to wit, that I have never wasted even a forequarter of venison, have never hunted for the market, nor has any game dealer ever made a cent's commission on the avails of my hunting. I have been offered $100 per month to hunt deer for the market, and that, too, since I was sixty years of age. It was flattering to my skill, but offensive to my principles.

The skin of the big buck was taken off with the head and horns, the deer cut up into four quarters, two of which were hung up, and Uncle Dan and the hired man taking a quarter each we marched out of the woods, your humble servant carrying the skin, head and horns. Uncle Dan with his man returned for the two quarters left, and brought them in at night. The buck didn't weigh 300 pounds nor 250, but it did pull down 242, and was the largest deer that I ever killed, and the largest, except one, that I ever saw weighed. That night the snow fell six inches in depth, making a splendid hunting snow, and had I stayed and hunted two or three days I might perhaps have killed four or five deer. But what did I want of any more deer? Uncle Dan had meat enough for the present, so he said, and I had no need of venison nor skins just then. This skin being extra large, I carried home and dressed for home use; and the horns being extraordinarily large and uniform, I carried them home too; and afterward presented them to Col. Page, who carried them to his home in Worcester, Mass. They were fancy horns, and the last evening of the Colonel's visit I discovered that he had a strong desire to possess those horns. He knew my eccentric weakness too well to offer to buy them, but I was more than glad to present them as a free gift. But the Colonel beat me badly. The next day, after he was many miles on his way home, a five dollar bill was found in the stand drawer, evidently dropped there by the Colonel before he left.

ANTLER.

GRANDVIEW, Tenn.

PARTRIDGE SHOOTING IN VIRGINIA.

IN the month of November, 1884, I was honored with a visit from two of my friends from—well it does not matter where they came from—it is enough to say that they were both shooters from that little town known as Shootersville, which is some hundreds of miles away. And shooters they were, too. Each brought his breechloader, one of them having a splendid 10-bore, the other one a number 12 and a number 20-bore, the latter being the handsomest looking little plaything I have ever yet seen in the shape of a breechloading shotgun. Each of these friends, whom I shall call Frank and Jim, brought several hundred rounds of loaded shells, and Frank his Laverack setter, one of the most untiring dogs that I have ever shot over. Our sport consisted mainly of raids upon our Virginia partridges, for we do not say quail in Virginia, but partridges. A game little fellow he is, too, and annually affords more sport, and gives more pleasure to a greater number of sportsmen than any other species of game bird of which I have any knowledge.

On the arrival of my friends, as soon as the usual greetings and handshakings were over, their first inquiry was: "Are the birds plentiful this fall?" I assured them they were; but that many of the broods were late and not yet fully grown. That night as we sat around a blazing log fire that burned so brightly upon the hearth, we discussed in all of its details the campaign for the next day, even to the fields we would hunt and the dogs we would shoot over.

After a good night's rest we were all up in time for an early breakfast, and having partaken of that we started afield.

The dogs, Frank's Laverack, my red Irish, and a young pointer, which I was handling for the first time, were all in beautiful trim, and started across the field at a rattling pace, each seeming to try to outrun the other, just as if they had been race horses and not hunting dogs. They had not gotten more than half way across the first field, when the red Irish threw his nose slightly to the right side, and checked up and stiffened out so suddenly that he nearly stood upon his head. Frank's Laverack backed him and then the young pointer did the same, but the latter, as we came up, in trying to get too close, flushed a bird before me, which I killed, and the report of my gun caused the whole covey to rise. Frank brought down one, his other shell snapping, and Jim two, one with each barrel, as nicely as could be.

I did not fire my second barrel, but stood watching the birds, which I marked down in some pine timber, and after the dogs had retrieved the dead birds we followed into the timber, getting several more, and scoring some beautiful misses, occasionally putting a charge of shot into the body of a tree instead of in the body of a partridge.

As we were returning to the field, I remember that on the edge of the timber there was an old pen in which corn fodder had once been stacked, and as the grass, though dead, was still rank within this inclosure, I suggested that possibly some of the covey had hidden there, so waving my red Irish over into the pen, he pointed beautifully the moment he touched the ground.

Believing it would prove but a single bird, we agreed to give Jim that shot. The dog flushed at the word, and a cock bird started across the open field toward a fence, along which some briers grew, but Jim dropped him handsomely right in one corner of the fence. I walked that way to make the dog retrieve him, and as I reached out my hand to receive the bird, another rose on the other side of the fence which I killed, and the report of my gun caused the third one to rise, and I killed that also, thus getting three birds between us where I had expected to get only one.

We then moved on to a second and then to a third field, finding several large coveys in each, our success varying with the character of the cover the birds would seek. Some flocks took refuge in cover so thick it was useless to follow them, while others would alight in open ground, to be followed up and shot down almost as fast as they would rise. I know that Jim and another friend will both remember the following incident:

We flushed a bevy of partridges in a cornfield, and five of them crossed a small stream and settled in some briers. We followed and the dogs pointed. When the birds were flushed, all five of them got up and all five were instantly killed and bagged. When we reached home that night we had twenty-seven birds and five hares. In my next I shall give you an account of a shooting trip Frank and I had one rainy day, and of the two big coveys of birds we found, and of the queer-looking red partridge I shot that had black legs and feet.

T. E. EPES.

VIRGINIA, March 28, 1885.

ON DUCK NETTING.

Editor Forest and Stream:

Permit me to lay before your readers some reasons why the bill recently introduced by Senator Otis, to amend Section 5, of Chapter 534, of Laws of 1879, ought to become a law, as modified by excepting from its operation the months of May, June, July, August and September.

I am informed that serious opposition to the bill is threatened on the part of the duck netters, aided by the middlemen, who find a profit in the unlawful proceeds of the nets, and that their cry is to be "injury to the fishing interests."

I think it can be conclusively shown that legitimate fishing would not be affected at all by the proposed amendment.

The section above referred to (and which forms part of what are collectively called the game laws) was passed in 1879, and prohibits in express terms the use of any net "with intent to kill or capture" wildfowl, and the proposed amendment neither broadens, enlarges nor otherwise changes the same, nor its penalty, but merely renders the enforcement of the law practicable, by specifying what shall indicate the intent.

As the law reads at present, it is necessary for the prosecution to prove an intent on the part of the duck netter to catch ducks, which is impossible unless he admits it, which he seldom does. He claims instead that his net was set for fish and "some ducks happened to be caught," and as such setting a net for fish is a lawful act in itself, no presumption of an intended violation is raised against him, even though he catches no fish at all, but at every lifting of the net finds fifty ducks entangled therein instead. That many thousands of ducks are caught in this manner is an indisputable fact.

Such being the position, the question arose, how can the law be made effective? An investigation revealed the fact that the duck netters always, in their nefarious trade, use nets of very fine twine which they set on the bottom in deep water, on the feeding grounds of the ducks, using no floats, and although their intent might be patent to any observer, no legal proof could be in any case produced, since in law an intent (being an invisible mental process) must either be presumed, or be proven by an overt act. If a person commits a felony, the law presumes a criminal intent, and leaves the accused to show the contrary; but violations of game laws are not felonies, and therefore, in making the gravamen of the violation of a game law consist in the intent, it follows that in order to render a law in that behalf effective, it must declare what shall constitute or be deemed presumptive evidence of such intent.

And the proposed amendment, it is believed, does this by declaring that the use of nets without floats, during the months specified, shall be deemed a violation of the law *per se*.

I do not believe that the rights of any fisherman will be injuriously affected by such an amendment. A law prohibiting swinging a cat by the tail cannot injure Mr. Dick, who does not want to swing a cat, and who never does swing a cat.

It can be satisfactorily shown that from October 1 to May 1 following, nets are not set for fish on the bottom in deep water, and during the balance of the year, to wit, from May 1 to October 1, the restriction is removed.

Every one of these men who set duck nets is a violator of the law, and though by reason of the defects in the law he be able to escape the penalty of his wrong doing, opposition from him and his ilk to a measure that shall "loose the hand of Justice" upon him, although natural, is not entitled to any consideration at the hands of the Legislature in its deliberations upon the subject.

The question is, shall the people of a whole district be deprived of the legitimate enjoyment of the game within its limits in order that a few marauders may thrive, and shall a statute which was intended to prevent the unlawful acts complained of, remain any longer a nullity. A. H. A.

New York, April 14.

The following is the form of the amended bill above referred to:

Section 5. No person shall, at any time, kill any wild duck, goose or brant, with any device or instrument known as a swivel or punt-gun, or with any gun other than such guns as are habitually raised at arm's length and fired from the shoulder, nor use any net, device or instrument, or gun other than aforesaid, with intent to capture or kill any such birds. Any person or persons who shall set or cause to be set in any of the waters of the counties of Queens or Suffolk, between the first day of October and the first day of May then next ensuing, any seine or net wholly below the surface of the water without having corks or floats of at least three inches in length each, attached at intervals of not more than five feet, in such manner that such corks or floats shall float upon the surface of the water over the entire length of such net when set and not more than five feet apart, shall be deemed guilty of a violation of this section. Any person violating any of the provisions of this section shall be deemed guilty of a misdemeanor, and in addition thereto shall be liable to a penalty of fifty dollars.

COLORADO GAME LAWS.

Editor Forest and Stream:

Our Legislative Assembly that has just adjourned enacted the following amendments to the game laws of the State:

Section 1. Section 1545 of Chapter XLV., General Statutes, is hereby amended so that it shall read as follows:

No person shall kill or wound, ensnare or trap any elk, deer, buffalo or bison, fawn or antelope within this State, between the first day of January and the fifteenth day October in each and every year. No person or persons shall kill or wound, ensnare or trap, any monutain sheep for the period of ten years from and after the passage of this act. No person or persons, except butchers and dealers in meat, who have regularly established stands or places of business, shall offer to sell or expose to sale the saddle or hindquarters of any elk, deer, buffalo or bison, fawn or antelope, without offering or exposing therewith the forequarters of the same. No person or persons shall wantonly kill and destroy any of the game, birds or animals mentioned in this act, nor shall it be lawful at any time for any person to kill, ensnare or trap any elk, deer, fawn, buffalo or bison, or antelope for the sole purpose of securing the hide or skin of any such animal or animals, nor shall it be lawful for any person, persons or corporation, during the close season, to have in possession any of the game herein mentioned, for any purpose whatever, except as provided in Section 1546 of said Chapter XLV., General Statutes; and any person or persons outside of any incorporated town or village found in possession of two or more of the saddles or hindquarters of any elk, deer, buffalo or bison, fawn or antelope, without having the forequarters thereof, shall be deemed guilty of violating the provisions of this section, and such possession shall be *prima facie* evidence of his having wantonly killed and destroyed said animal. No person or persons shall purchase, deal in or have in possession any skin or skins of buffalo, elk, deer or antelope, either tanned or in their natural condition, that have been taken by Indians or other hunters, who kill such animals for the sole or chief purpose of taking their skins, nor shall any person or persons or corporation carry or transport such skins. Any person or persons offending against the provisions of this section shall be deemed guilty of a misdemeanor, and, upon conviction thereof before any justice of the peace, shall be fined in any sum not less than fifty nor more than two hundred dollars for the first offense, and for each subsequent offense shall be fined in any sum not less than fifty nor more than two hundred dollars, and be imprisoned in the county jail not less than thirty nor more than ninety days. Any person arrested and brought before any justice of the peace for any violation of the provisions of this section, shall be entitled to a trial by a jury of six, unless he shall waive the same; and if the jury find him guilty, the justice of the peace shall assess the fine and costs, and fix the term of imprisonment, as the case may be. And in case the fine and costs be not paid, the same shall be collected in the manner provided for the collection of fines in cases of assault and battery before justices of the peace. One-half of said fine shall go to the informer, and one-half to the school fund, as provided in Section 2 of this act.

Sec. 2. Section 1548 of Chapter XLV., General Statutes, is hereby amended so that it shall read as follows:

For the more certain detection and punishment of violators of this act, the county commissioners of any county shall have the power to appoint special game wardens, who shall hold their office during the pleasure of the board, and it is hereby made the duty of such game wardens, when so appointed, and of the county commissioners, sheriffs and constables, or any other person of the several counties, whenever a violation of its provisions is brought to their knowledge, to file, or cause to be filed, an affidavit before a justice of the peace, charging the person or persons with the offense committed, and thereupon a warrant shall issue for the arrest of such person or persons, and trial shall be had, as provided in section three of this act. Justices of the peace are hereby empowered to appoint special constables who, of their own knowledge, or upon the information of a reputable citizen of the county, may arrest, without warrant, any person or persons violating the provisions of this act, and take him or them before the nearest acting justice of the peace, where trial shall be had, as provided in section three of this act, after the proper affidavit shall have been filed, as though a warrant had issued in the first instance. And this section shall be a full protection to any such officer or person above mentioned, who causes the affidavit or the arrest to be made in good faith, or upon the information of a reputable citizen of the county.

Another bill that became a law provides:

Sec. 4. No person shall ensnare, net or trap, within this State, any wild duck or wild goose at any time. Any person or persons who shall violate the provisions of this section shall be deemed guilty of a misdemeanor, and upon conviction thereof shall be fined, as provided for in Section 2 of the act of which this act is amendatory.

Penalties are the same as above.

It is unlawful to kill, net, ensnare or trap any quail, wild turkey, curlew, plover, lark, whip-poor-will, finch, thrush, sparrow, wren, martin, snowbird, bobolink, red-winged blackbird, crow, raven, turkey-buzzard, robin or other insectivorous bird. There is an open season, for shooting only, in which partridge, pheasant, prairie hen, prairie chicken and grouse may be killed, from October 1 to November 15 of each year. The having in possession any of these birds at any other time shall be *prima facie* evidence of violation of law and subject the offender to punishment as above. Dealers may sell game birds imported from other States and Territories, and professional taxidermists may kill for preservation in cabinets or museums, but must present satisfactory proof that such specimens are so preserved.

Some good amendments were proposed to the fish laws, but they were slaughtered the last day of the session by the upper house in a vain effort to retain the old Fish Commissioner. Gen. John Pierce, president of the Union Bank of this city, was appointed to that office. The State Hatchery has done very little good the past year. W. N. B.

Denver, Col., April 8.

SOME REMARKABLE SHOTS.

Editor Forest and Stream:

Some sixty years ago, while my father was a youth and a student at Hamilton College, New York, on a certain occasion in returning home from one of his usual Saturday afternoon strolls in the woods thereabouts, he observed a gray or black squirrel run from the ground up the trunk of a large hemlock tree, standing a few rods from him, and quickly disappear among its branches. Wishing to discharge his gun—which was one of those long, old-fashioned flintlock rifles—before reaching home, but with not the remotest idea of hitting the animal, for he could not see a hair of it and did not know the place where it was concealed, he fired at random into the densest portion of the large top, and to his utter amazement and great delight down fell the unlucky squirrel, shot through the body.

A pure accident, of course, but he might have fired thousands of shots through the top of that tree without harming that animal.

At a subsequent time, after my father settled down in the wilderness in the interior of this State to hew out a home and at the same time indulge his fondness for wild sports, in a locality which was truly then a hunter's paradise, he was one evening in spring gathering and boiling sap for maple sugar, when his attention was suddenly attracted by the loud noise of wings. He immediately became aware that a large flock of wild turkeys had come down from the high hilly ground adjoining, and had settled to roost in the high tops of the large oaks around him. He seized his rifle which was resting against a tree, and moved cautiously about, peering up into the trees, but the day having faded into twilight, it was almost impossible to distinguish an object, and one bird after another became alarmed and took wing. He began to despair of getting a shot, when finally he succeeded in making out the faint outlines of a bird sitting on a high limb with its neck outstretched against the clear sky, as if on the point of following its companions. Hastily bringing his rifle up, he found he could see neither sights, and he was compelled to guess as near as possible to hit the body. Following the report of his gun, the turkey came struggling to the ground, and upon examining it he found that his ball had carried away the bill and part of the head, and a clean shot.

Another instance or two of rather remarkable shots which came within the writer's own experience.

One day during the early part of November, after there had been a light fall of snow, covering the ground to the depth of an inch or two, I had been out armed with this gun looking for small game. In passing through a tract of land bordering a neighbor's farm, which was in a wild state, covered with brush, bunches of tall grass and patches of rose willow here and there, interspersed with a few scattering oak, I happened to catch a glimpse of a quail which was moving in a patch of willows and grass a few rods ahead, and quickly fired at it, when there immediately arose a quail from the same place and stopped on the lower branches of a small red oak near by. With the second barrel the bird was summarily knocked off, and upon going to investigate the effects of the first shot, as the smoke from the gun prevented seeing anything, I was greatly surprised to discover among the dead grass and willows a large number of dead and wounded quail. After securing and counting these were found to number thirteen fine, fat, full-grown birds with the first shot, and one by the second. This very probably comprised the entire flock. Murder most fowl, and truly a barbarous act of destruction which the writer has often very much regretted.

A few years after the above occurrence I was out one day with the rifle in the fall of the year, prowling around a buckwheat field which lay on the edge of a tamarack swamp somewhat frequented by turkeys, when I started up some quail, which ran along a fallen tree extending into the swamp. I thought I would take the head off one, and as I pulled the trigger others got in range, and the bullet not only knocked the head off of the one aimed at, but cut the wing from a second and the back of a third, thus securing three birds at one shot with a 50-to-the-pound round bullet, which if it had hit any of the birds squarely in the body, would have left nothing remaining but the feathers. This was the last of the writer's quail shooting, although he has frequently seen small flocks when he has carried a gun since, but they looked so pretty and innocent that he hadn't the heart to kill or disturb them. Chasseur Vieux.

Detroit, Mich., March 30.

Editor Forest and Stream:

Last week a friend went hunting turkeys on Big Wichita River by moonlight. From one tree he killed two turkeys, one 'possum, one squirrel and an owl. He killed the owl and squirrel without knowing it, shooting his new Spencer repeating shotgun four times. Almo.

Henrietta, Texas, April 2, 1885.

STRAY SHOTS.

THE water of the Wallkill, in the vicinity of Deckertown, N. J., is at present very high. There are some ducks and geese on the meadows, but no snipe.

The quail on the line of the Indianapolis and Vincennes Railroad, in Indiana, have suffered greatly during the winter. In some sections they are reported entirely wiped out.

The duck shooting on the Illinois River this season is very late. Ralph Whitehead, a market gunner who lives at Liverpool, writes that the best flight will take place this week. Usually the birds appear early in March.

Bill Vallentine, a celebrated shot, formerly of Newark, N. J., but for years past of Francisville, Indiana, is dangerously ill.

The Nimrod Gun Club is one of the sporting organizations of Newark, N. J. It has just gone into permanent quarters at No. 46 Bloomfield avenue, where it has an eighty foot rifle range. The club numbers thirty-five members.

The duck shooting at Havre-de-Grace, and on the Maryland shore was quite good a week ago last Saturday. At Carrolls Island and along the Saltpeter the birds appeared in large numbers.

An attempt is to be made in England and Scotland to stock certain woodlands with the American ruffed grouse. This bird certainly should do well in the mountains of Wales.

Mr. Charles Banks, of this city, has been spending several days on his magnificent preserve at Pine Neck, on Shinnecock Bay. Mr. Banks's new shooting box is nearly completed. It is a model of comfort.

Mr. Harry B. Hollins has been spending some days recently on his new catboat on the Great South Bay, duck shooting.

The wildfowl shooting on Shinnecock Bay this spring has been very poor. The redheads put in an appearance on March 30, when Capt. Joe Penny and Lan Penny rigged out and killed nineteen redheads and one broadbill. On the day following the bay froze over and the ducks went to the Great West Bay. There were then some excellent bags made in the vicinity of Moriches. For several days each "rig" averaged about forty birds. The geese began to fly north on Thursday and Friday of week before last, and the gunners from Bill Lane's had several shots. On Friday of that week Mr. John G. Heckscher, Mr. H. H. Hollister and Mr. F. Satterthwaite spent the day at William F. Foster's, but met with no success with the ducks, which were very wild.

Several English snipe were shot on the Newark meadows last week. The birds are very late this season owing to the meadows being covered with ice. Last week the snipe made their appearance in Virginia and Maryland. Mr. Frank Dunning, of this city, killed a good bag near Washington, D. C. Small bags were also made at Old Point Comfort. Mr. Arthur Duane and Mr. John H. Abeel, Jr., spent the three last days of last week at Forked River, N. J., but had no shooting.

Three or four red foxes have been wintering on the Hackensack River meadows, north of the Belleville, N. J., turnpike. Old Abe Jerolamon and a party of old fox hunters have been running them with hounds during the past week, and having no end of fun. The death of the foxes is not contemplated.

Owing to the dryness of the meadows in this vicinity but few English snipe have been shot this season. The shooting for these stylish little migrants in Illinois this year is wonderfully good.

A bill was passed in the last New Jersey Legislature empowering the New Jersey State Fish Commissioners to control and appoint game and fish wardens. Heretofore the power was vested in the Governor.

The Nimrod Gun Club of Newark, N. J., has secured a club house, No. 46 Bloomfield avenue. A private rifle range is to be built eighty feet long. The club numbers thirty-five members.

IOWA SEASONS.

Editor Forest and Stream:

After one of the most terrible winters I have ever experienced—terrible from its intense and long-protracted cold—at last the spring has come, just now, with a balmy air, and the first real rainy day for four months. The whole dreary winter has been one long, unbroken blizzard, with no snow to speak of here, and what little there was, blown into drifts, filling up railroad cuts and banked along the hedges of the country. Whether our elevation here has had anything to do with our weather I don't know, but we are 900 feet above the Mississippi, and I leave it to you to guess.

Last fall was glorious beyond compare. For nine weeks I drove out and back, a distance of ten prairie miles, missing but three days in the whole time—nine weeks of unalloyed happiness. Every day my eyes were gladdened with the sight of bevy after bevy of beautiful quail, tame as barnyard chickens, the cute little fellows scarcely getting out of the road to let me pass; with the sight of flocks of pinnated grouse starting up on every hand, and darting away on bow-shaped wings like a shot out of a gun; with the sight of rabbits jumping out of adjacent hedges and skurrying off into groves and cornfields. Now and then a weasel would take a saucy look, and then a flash into the prairie grass. Multitudinous crows held noisy conventions, sagely cawing speeches to each other with a serio-comic gravity, highly suggestive of the average political ratification meeting. Soaring over all were numerous hawks with motionless, wide-spreading wings. Beholding all this through all those long, clear, sunny days of the autumn time, has left a memory with me not easily effaced.

This section of country was formerly the home and haunt of the deer, the elk, the buffalo, and the wolf, and that for unknown ages. The mound builders must have hunted them here in pre-historic times, for a few weeks ago Mr. Singleton Smith, in the south part of this county, in digging a well, at the depth of twenty-two feet below the surface, found the petrified skeleton of an elk, a part of the stone bones he brought to town, and another part he still has in his possession.

But there is no large game left here now; it has disappeared with the Indian. In place of the Indian and his trail we now have the pale face and his railroad. So great is the destructive power of the white man that he has been obliged —to preserve any game—to restrict himself by laws of his own make. I think the quail must have read the act in their case made and provided, otherwise how account for their utter fearlessness? But I fear that our past winter has done for them what the shotgun has not, for I have neither seen nor heard of a single one hereabouts yet, though grouse are growing plentiful.

In some other leisure hour I will endeavor to give you some account of the live sportsmen here and their doings.

COMMON SENSE.

CRESTON, Ia.

THE ROBINS ISLAND OF TO-DAY.

THE annual meeting of this club for the election of officers for the year of 1885 was recently held in the city of Brooklyn, where all of its members reside. In fact, the club is distinctly a King's county organization, and numbers on the list of its members' names, many of those best known in our sister city. The question of the sale of the club's property, Robins Island, came up at the meeting referred to, and after a long and animated discussion, it was resolved by an almost unanimous vote to retain that celebrated game preserve.

Our readers are well acquainted with the now famous island. It was first brought into notice by the Eastern Field Trials Club, which there held its first running meetings, they being the first contests of the kind held in this section of our country. All those who visited the island in the years of those contests, and the number ran well up in the thousands at the various trials, were favorably impressed with its manifold beauties. It is little wonder then, that its at that time owner, Ira Brewster Tuthill, received an offer for the property from one among those who were spectators at the trials. It was bought by Richard Ingraham of our city as agent for the present owners. The price paid was $20,000, added to which has been the cost of the various improvements made upon the island, these bringing the expenditure to a total of $25,000, a really insignificant sum considering the present and prospective values of the property.

Peconic Bay, in which the island is situated, is most singular in its conformation. Forty miles in length and half that in width at its widest point, its entrance from Long Island Sound is so narrow as to escape notice from the passing voyager. The first notice the writer can recall of the Great Peconic was in the reading of Fenimore Cooper's novel "Red Rover," where he describes the escape of the skimmer of the seas from the chasing corvette Coquette, by an entrance to the bay and a successful hiding in its land-concealed waters. Absolute security from storms, large area, a perfect anchorage, with any desired depth of water, combine to make the bay one of the largest and best harbors in the world. The commencement of the bay is at Riverhead, the county town of Suffolk county, where the Peconic River, the largest of Long Island streams, enters the bay.

The scenery is enchanting to a lover of nature. Long reaches of the most brilliant of sand beach, backed by low-lying stretches of salt meadow, alternate with bluffs of varying height the whole length of this inland, or rather, land-locked, sea. Midway in the bay's length stands Robins Island, its shores rising bold and precipitous above the pebbled beaches, in some places these sand bluffs reaching an altitude of near a hundred feet. Comprising some hundreds of acres, well watered and of rolling character, the island is already one of the most charming spots of the writer's acquaintance. The bathing is superb, while if any wind is stirring an ocean-like surf thunders in, breaking spray to the tops of the sandy cliffs. When I first knew the island difficulty of access had always made it almost uninhabitable during the winter. In summer it was and is a paradise. Surrounded by miles of water, the air is ever bracing and cool, necessitating the use of blankets at night in even the warmest of summers.

Lying at full length upon the bluffs in the dense shade of the scrub oaks, the famed bay of Naples can show no fairer or more delicious views. Water and sky rival each other in the deepness of blue color, while the surf as it combs before breaking upon the yellow sands, assumes an emerald tint unmatched outside of God's laboratory. To the south rises bold and clean of outline the Shinnecock Hills, pierced at one spot by the low-lying passage from bay to ocean yclept Canoe Place, famous in local history as the spot where the Indians dragged with toil their bark canoes from the placid water to the surf of the outer bay. This track is being used by the State as the line of the canal now being cut to connect the waters of Peconic Bay with those of the Atlantic. To the eastward the point of Hog Neck extends nearly a mile into the Bay. Then follows a deviating undulating coast line until the Peconic fairly ends at Sag Harbor on its easterly and Greenport at its westerly sides. Shelter Island fairly blocks the entrance, a mere channel running on either side. On a clear day no greater enjoyment to one fond of natural scenery can be found than a siesta under the shadows of the trees upon the bluffs. The narcotic sound of the surf upon the sand, the drowsy hum of the bee amid the wild grasses, the warning cry of the loon over the water, the scream of the gull all combine as an inducement to nap, which is seldom resisted. Fortunately the soil is of sand, where no ague-breeding dampness exists.

The improvements the club have already made upon Robins Island are but an earnest of what is to follow. Purchased for the purpose of a game preserve, that idea has been conscientiously followed from the inception of the club until the present time, now some four years. The dense patches of scrub oak woods have been intersected with wide paths in all directions. The brier thickets which so marred the working of the dogs at the first trials have been cut out, so that now a dog can be seen at any point and a fair judgment rendered as to his merit. Acres of soil have been turned up, and the ground seeded to oats, rye and wheat, while patches of Indian corn and buckwheat have been planted and sown with a liberal hand. As a consequence the quail have multiplied in a marvellous fashion and it is a matter of no dispute that there are more birds to the square acre than on any other spot in the United States. While abundance of food has been provided as above mentioned, the superintendent resident on the grounds has waged constant warfare upon the hawks, crows and snakes, so that the danger from those formidable sources has been pretty thoroughly eliminated.

The shooting pleasures of those of the members who are fond of dog and gun was last fall something to be envied. Each member was allowed twenty dead birds a day, so that if a good shot, his bag at the end of a week was more than a good one. Nearly a thousand birds were thus disposed of. The preparations for the coming season have been begun on a still larger scale. Five hundred birds have been turned loose already, and have, according to the reports of the present superintendent, Mr. E. D. Lecompte, recovered from the effects of netting and transportation with the smallest percentage of loss. It was the pleasure to be derived in this manner, as well as the comfort of owning virtually your own watering place, that induced the refusal by the club of the $100,000 recently offered by a syndicate, who proposed the purchase of the island for the erection of a mammoth hotel, its many advantages in this direction having led to the offer alluded to. The members, who are largely men of fortune, cared not to look upon the island as a business venture, but simply as a means of comfort, health and recreation.

The officers elected for the present year are as follows:

President, S. Fleet Speir, M.D.
Vice-President, H. D. Polhemus.
Secretary and Treasurer, W. H. Force.
Board of Directors, Alden S. Swan, W. B. Kendall, W. B. Dickerman, Henry I. Cullen Jr., and the officers above mentioned.

Under the government of such officers, seconded by the board of governors, the original ideas of the club cannot fail of being carried on with more energy than ever before, for all of those named are thorough sportsmen, ardently devoted to rod and reel or to dog and gun. The club has already made a grand success in two directions, first in creating one of the best, if not the foremost, game preserve of the country, and secondly as a magnificent business speculation pecuniarily. May it long continue in its career of prosperity. *

FIRE-HUNTING DEER.

BY many people it is considered unsportsmanlike for a man to slip up on a deer behind a light and shoot him down, and so it is if one does it for pleasure or sport, but when a man wishes venison for self or family, the surest way to get it here is with a frying-pan and light wood chips or knots. Nine out of ten deer shot at while fire-hunting are killed, and when, after perhaps hours of tramping, the hunter gets a deer to "stand" while he slips up near enough to shoot, and finally kills it, I think he has earned his venison. He is apt to think so too, especially after "packing" it from one to four miles or more back to camp. No one ever fire-hunts in this country unless in need of the meat, as it is the hardest kind of work, and requires endurance as well as patience.

While I am on the subject I will tell the readers of FOREST AND STREAM about a fire-hunt I recently went on with my friend, Abner C. Spencer. Mr. Spencer is a tall, well formed man, of about 50 years of age, an ardent lover of shotgun and rifle, and a "crack" shot with the latter. Mr. S. built the Waterbury Clock Company's factory, etc., and for several years was superintendent of the Wheeler & Wilson Sewing Machine Company. He moved here several years ago, and now the country cannot get along without him. If your gun gets out of order your first thought is, "Well, Spencer can fix it." No matter what one wishes repaired or made, "Spencer can do it."

On the appointed day I saddled Black Prince, got my camping kit out, provisions, grain, etc., fastened them to the saddle and went over to Spencer's, about one and a half miles east. He soon had Major ready and everything fastened behind the saddle, and we started south for Cow Creek Hummock, six miles away. We took the road past Mathew's old sugar house and Dan French's fine orange grove, and entered Turnbull Hummock on one of the old turnpike roads built over a hundred years ago. Arriving at Chilton's, in the hummock, we filled our pockets with juicy oranges and continued north, arriving at the creek about 3:30. We at once dismounted, moved our "plunder," and made a shelter—to protect us from the dews and a possible rain—with forked sticks, poles, and the broad fans from low-branching cabbage palms. These fans—as they are commonly called—or leaves, are just the thing for making a camp in a hurry. Two leaves will often cover a space the size of a large extension table. It was our object to "still-hunt" until dusk, return to camp for supper, and fire-hunt until moonrise, which was at 12 o'clock that night. After getting everything ready for preparing supper in the dark, we started out of the hummock into the open pine woods bordering the same, and took stands about one-half mile apart to watch, Spencer up a low cabbage palm and the writer near an immense pine. At this season of the year the deer stay in the hummocks during the day and come out to feed about sunset.

We were in a fine locality for deer. It had rained the night before, and the ground was broken with numerous fresh tracks. But after watching for over two hours we were compelled to return to camp without a shot. We had not gone far, however, before we saw a deer jump and shake his white plume, then stand still, about 200 yards off. We stood watching it for some minutes, but not having a rifle, it was useless to shoot, although the writer had a noted "deer gun," a 12-pound 8-bore muzzleloader, which had killed many a deer at over 100 yards. As long as we remained motionless the deer stood there looking at us. We then walked toward it a few steps, when with a few high bounds it disappeared in the edge of the hummock. Going back to camp we found Major had broken loose and got outside of a peck of sweet potatoes.

Having got supper we went back to the pine woods. With my camp axe we cut a lot of dry, fat (resinous) lightwood—old dead pine timber, so full of pitch that when a match is applied to a piece it will light and burn as though it had been soaked in kerosene. Placing some of this in the frying pan we soon had a bright blaze. All around us, outside of the circle of light, was "dark as a pocket." Spencer took the pan, which had a handle about five feet long spliced to it, and a sack of lightwood cut up into eight-inch pieces, and I followed with the gun. With the handle on his shoulder and the blazing pan behind his head we trudged along, through saw palmetto, water and low scrubby growth. All was silent (not a word being said by either of us), except now and then the "Ough, ough ough-ough, ough-ough, *ough-ough!*" of the great horned owl so abundant in our forests. Some time after though we heard the wailing cry of a panther off in a cypress swamp. Every little while we would put more wood on the pan to keep up a bright blaze.

All at once Spencer stopped, lowered the pan a little, then raised it again in his effort to throw the light further out into the darkness; one could easily tell that he saw glowing eyeballs staring toward the light. Slowly his right hand left the handle of the pan and was outstretched behind him, into which I at once placed the gun. He then walked stealthily toward the eyes, but only to find that it was a cow. The eyes of deer and cattle are readily told apart by one who has seen them several times, the principal difference being that the former are very near together and of a pale light. We hunted until the moon rose, but saw no deer, although we were fooled several times, for a moment, by cow's eyes. On the way back we got lost, and did not arrive at camp until about breakfast time, having spent two or three hours by a huge fire of lightwood knots about two miles away.

The morning before we left camp we each shot an otter in the creek, but one of them got under the bank and defied our efforts to get it out. The skin of the one we got will bring about four dollars.

So we returned home without our venison, but having had a good time nevertheless. Your true and ardent sportsman always manages to have a good time while out in the woods, whether successful or not, and rarely regrets a long tramp after game he does not get. Of all men, deliver me from your grumbling sportsman who keeps stating that "he knew it would be so," etc., etc. Another time we may have better luck, and I will tell you of it.

REDWING.

GLENCOE, Fla.

DUCKING IN VERMONT WATERS.

LATE in the afternoon, Oct. 9, as the weather suddenly turned around cold, the Doctor, Charlie, Tom, Dick, Harry and myself agreed that the next day would be a good one for ducks and that we had better try them. The Doctor, Charlie and myself started for the lake that evening, leaving the rest to follow in the morning, and reached the landing about 8 o'clock.

It was with some difficulty that we boarded the yacht, as the water was rough, and the clouds had shut down black and threatening. This was just what we wanted to see, as it is all that makes the ducks stop, for there is no feed in the lake. Hoisting our sail and getting our anchor aboard, we stand out into the lake and soon find we have got all the wind our cat-rigged "skimming dish" can stagger under. The spray comes over us in torrents, and it is no exertion at all to imagine ourselves under Niagara. We climb on the weather rail, but are soon warned by the skipper to man the pumps if we don't want to swim. After coming round on the other tack she goes much easier.

In half an hour we sight the point and soon round-to in the cove out of the wind, and after everything is made fast we put our traps into the tender and are soon at the cottage; and while the Doctor and Charlie shake out the bedding and wipe up the guns, I make a pot of coffee, which is very agreeable after our cold sail. Coffee over and a pipe smoked, we turn in and are soon fast asleep. We are aroused before daylight, and as soon as it is light we sight a flock of ducks to leeward, and, taking the tender, we start down wind for them, having previously put in some hemlock boughs for a blind. They do not like the looks of things and start up out of range, but settle again further down, and we follow, Charlie taking the paddle. This time we get nearer. They rise toward us, and as they quarter we give them four barrels from our 10-bores and seven fall dead, and watching the flock four more are seen to drop, which, after picking up the others, we follow and get after considerable trouble, for they seem to think it is safer under than above water.

We find that we have drifted some ways below our cottage, and as the wind is rising, we decide to make for it. So throwing overboard the blind we take the oars, and after a hard pull reach our landing. Leaving the others to take care of the guns and birds, I get breakfast. The *menu* consists of slapjacks and maple syrup, doughnuts and coffee. I never pretended to be much of a cook, but the way those slapjacks disappeared has raised my opinion of myself in that capacity several points. I at length got the boys filled up, and leaving Charlie to wash the dishes, the Doctor and I take the yacht and sail down to the landing for the others, where we find them waiting very impatiently, as they had arrived in time to hear us firing, and naturally wanted to do their share. On our way up we see another flock of ducks, and start after them. We get well up, and six barrels are emptied, but no ducks fall, and three disappointed gunners look at each other in amazement. However, we bear down on six more, and succeed in getting them all, which makes up in a measure for the previous failure. But the wind keeps increasing, and it is wet work. We decide to go in, but before we can reach the point we are thoroughly wet through. The wind blows hard all day; we try it again toward night, and get few more ducks, and then give it up. The next morning at daylight we start for home, but very unwillingly, as there are several flocks in sight.

B. AND H

BRATTLEBORO, March 28, 1885.

THE ST. CLAIR NATIONAL PRESERVE.

Editor Forest and Stream:

Early in May last a bill was introduced in the United States Senate for the purpose of setting aside the United States unsurveyed, overflowed and marsh lands in Lake St. Clair, in the State of Michigan, as a preserve in common for the people of the United States. The world-wide celebrated St. Clair Flats was fully included in the contemplated preserve, a territory which has long been most suitable for its fine shooting and fishing, and as a great public resort in summer.

The heralding of the bill and its introduction attracted much public attention. Previous attempts had been made by influential private parties to acquire possession of this territory, and very recently two bills had been introduced into Congress for the purpose of securing private title to the same on the score of claim of title to the land of a couple of contiguous islands, which titles purported to have been founded in the far back days of English rule.

This St. Clair territory belongs to a class which frequently borders the public waters of the nation in extensive tracts, and is almost invariably a locality of great resort for wildfowl and for those who shoot the same in season, is sometimes fine for fish, and is much frequented by the public.

The most desirable part of this class of territory, all primarily public domain, has now been largely acquired through the easy friendship of Congress, by private parties to convert into private shooting preserves, and while very valuable to the parties acquiring, the effect will be to entail forever a bar and loss to the public of privileges of which it ought ever to be the possessor.

Consider to what extent the borders of the public waters throughout the nation are plotted with close private shooting preserves formed from the class of territory described. These often belt a shore for many leagues, a single one sometimes consisting of many thousands of acres, and having miles of extent, all consisting of the choicest shooting territory afforded by the whole country, and often sold from the public domain for a trifling sum. And yet I believe I am correct in stating that not one such preserve has as yet been set aside for and privileged to the owners of the great domain from which all have been furnished—the public, the people.

When the grasp of private acquisition was stretched out after the St. Clair Flats, the relation and bearings of the measure and the policy it represented were taken into account; work was immediately instituted to counteract the scheme and secure the territory as a preserve for the public, with a determination to initiate a policy of like treatment and disposal hereafter of this class of territory in the interest of the public. The movement found the people almost unanimously in its favor, and received from it efficient support, but much hard work and engineering has been required to utilize this good will as a power, and to make head against influential opposition and arouse officials on a new line of action.

The bill to create the St. Clair preserve was introduced in Congress in May last, but no action was taken upon it during the session, the great political campaign sending everything to the wall that could go. There was, however, much public talk over the matter and much strong petition in its favor.

It was deemed best to add to the bill some amendments, and near to the last days of the session the amended bill was introduced, and at the next session will be earnestly pressed, with the expectation of success. It is in the hands of a popular and able Senator, the Hon. T. W. Palmer, of this State, who believes in its equity, good policy and success, and will do his part to justify this belief.

The two bills which were introduced the same session, but previous to the preserve bill, to give this overflowed territory to private claimants on the ground that it was legitimately an appurtenance to a couple of islands of which they claimed the ownership, had able presentation before committee, and strong influence, but nothing so far apparently very assuring to their cause has turned up, nor is there much hope that they will be successful further than recognition of title land proper of the islands or a part thereof. And yet but for the effort for the preserve, rolling over and showing up the situation it is not unlikely these bills would have been voted a success.

The recent action of the U. S. Senate, Jan. 26, 1885, in the case of territory formed by accretion from the water and adjoining private land, an island in Saginaw Bay, holding the same to be Government land and setting a price thereon, would seem to be in the line of a fatal bar to the aforementioned claim. F. M. WILCOX.

ROCHESTER, Mich., March 28, 1885.

NOTES FROM YELLOWSTONE PARK.

Editor Forest and Stream:

A friend of mine who has lived all winter at the old gamekeeper's cabin at Soda Butte, came into the Hot Springs about the middle of last month. He tells me that the main herd of elk of that section have ranged all winter on the divide between Calfee and Cache creeks. He thinks that he has seen as many as two hundred head at a time there. He also states that small herds of about twenty head are frequently seen between Soda Butte and Cache Creeks. The region where they have wintered is in the country that would have been thrown open to the public had the amended Vest bill passed. All these elk would then have been slaughtered.

One of the Assistant Superintendents, who has been stationed at the Lower Firehole during the winter, came through on snowshoes lately. He reports that there has been no game at the Firehole since winter set in, excepting three bison which passed through during the later part of February going toward the Lake.

Snow is going fast. I have caught several nice creels of trout in the Gardiner River since the first of Februery. It is amusing to see the trout taking the fly in midwinter, with the snow falling at the time. The warm water flowing from the Mammoth Hot Springs keeps the river open some distance down, and we can often see the trout jumping.

ICHTHUS.

LIVINGSTON, Mont., April 1.

FOWL IN RHODE ISLAND.—Fowl and geese have made their appearance here in their spring flight. Large flocks of eider ducks and shelldrakes were flying yesterday, and the indications are for a good flight of birds this spring. I killed two Wilson snipe on Monday, but cannot learn of any others being seen here; and this pair have probably been here all winter, as they were very fat.—W. M. H. (Newport, R. I., April 4).

NORTH CAROLINA DEER LAW.—*Editor Forest and Stream:* Since reading your editorial commending the action of our late Legislature with regard to the preservation of game in not allowing the quail, etc., to be slaughtered at all times and seasons, I feel some hesitancy in bringing before your readers anything calculated to lessen the respect which may be felt for our lawmakers. Candor compels me to say, however, that not in all points did the Solons at Raleigh act wisely in regard to our game interests. It is with grief and a sense of shame that I have to chronicle the fact that the protection of our deer has been withdrawn, and "all counties east of the Wilmington & Weldon Railroad" are entirely without a deer law, giving all hounders and others full license to kill as many deer as they choose, and at any season. This is the death knell of the few deer in this county, and they are few indeed, but were gradually increasing under protection from Feb. 15 until Aug. 15. Only last year one party killed eleven "does with fawn"—spotted fawns—during the close season, and would have killed more had they not been threatened with the penalty of the law. They had been fully warned of what they might expect if any violation of the law occurred during the present season, and would have been held in check, but the asininity of the late Legislature has thrown down all barriers, and deer hunting will soon be a thing of the past. The deer have only returned to this section within the past four or five years, and would with proper protection have increased to some appreciable extent. But we have seen the last of any sport worth mentioning, if the fawn slayers are to be allowed to hunt at all seasons, and allow their hounds to roam the woods at will during the spring and summer. We wished to have time shortened to Jan. 1 instead of Feb. 15, and would be glad to see the time on quail cut down to March 1 instead of April 1, as now. But for a few sportsmen who realize the good of game protection, the quail law would have been repealed also. Would that more of our citizens would subscribe to the FOREST AND STREAM.—A. F. R. (Belvidere, N. C., April 6, 1885).

IN NORTH CAROLINA MOUNTAINS.—The gray squirrel is as plentiful as might be desired, turkeys are quite numerous in some localities, partridges are abundant about the clearings, and pheasants are found in every direction in the forest. Those desirous of sport after deer and bear hie away to Whiteside, Hogback, Balsam, Coevee, Nautohala, Block, and Smoky mountains, where those animals are found in the greatest plenty. The "natives" use the old-fashioned, whole stock, long rifle, carrying from twenty-five to seventy-five bullets to the pound, and they look with derision upon a "scatter gun," one of which but few ever shot. An old hunter, eighty years old, says: "I never shot anything but a rifle in my life. I never had to shoot a bear twice, and never missed a deer that was half way fair to me. I have killed five deer in a day, with seven turkeys and three 'coons to finish on. Turkeys were so numerous once that I would not shoot one unless near home, because I could always get one close by when I wanted it, and as to squirrels, I never noticed them. I shot a deer one day, with the rifle, hit it on the side from me, made three holes in it, one of which was where the bullet entered, the other two on the side next to me. This is how it happened. The deer was licking the side toward me, so my bullet entered the neck on the side from me, went through and consequently came out on the side next to me, and re-entered on the same side, making the three holes. It dropped as dead as if lightning had struck it." The old man shoots a rifle well to this day. This is reached from Seneca City, S. C., on R. & D. R. R., Webster, N. C., on W. N. C. R. R., thirty miles from each place.—J. W. W. (Highlands, N. C., April 2).

PLENTY OF GAME.—*Editor Forest and Stream:* I frequently notice in your columns the cry of "no game," and where shall we go to enjoy the good old days of the past? I think I can answer the questions fully and entirely in a satisfactory way if quantity and variety are all that is desired. It is quite distant from the East, however, as I shall have to ask all those wishing fine sport to go with me to southwestern Kansas, along the Arkansas River. I spent two months there last fall, October and November. I am quite sure that during that time I saw one half million geese and thousands of ducks. On the plains I have shot quail, prairie chickens, rabbits and antelope during one trip. This, for variety, should satisfy the most exacting. It is a very common thing to bag thirty to fifty chickens in a day's hunt. The ducks are usually secured by waiting at the ponds, numerous near the river, and about 5 o'clock they come in. From this until dark you can have all the sport you may wish. Geese can be gotten by lying in the deep grass skirting the river or from blinds. They are not wild, but easily secured. I think, perhaps, there is less hunting in that section than almost any other in this country. The sportsmen all use 10-bore guns in that country, and smiled at my 12-gauge. I was perfectly satisfied with my success, however, and believe I made fully as long shots as any one with a 10-bore gun. To give you an idea of the abundance of game: A party of four went south from Newton (a town 300 miles west of Kansas City, on the A. T. & S. F. Railroad), near the Indian Territory, and in four days secured 90 dozen quail, 17 antelope and 300 chickens. To any one wishing fuller information concerning this paradise, I shall cheerfully answer all correspondence.—M. M. M. (Girard Manor, Pa., March 31).

NEW HAMPSHIRE.—Colebrook, N. H., April 10.—*Editor Forest and Stream:* Last year sportsmen had reason to complain of the lack of accommodations in this State. I send a statement of the prospect for increased facilities for the coming summer in some of the charming resorts north of the G. T. R. R. The Magalloway and Dead Diamond stream routes will have a new stock of fine model canvas canoes made and owned by Amasa Ward of this village. Second Connecticut Lake and "Uncle Tom Chester" will surprise the old timers by introducing a new house on the bluff near the old cabin. Mart Noyse and Diamond ponds are allied in the minds of visiting sportsmen; capacity enlarged one-half over last year's accommodations. To reach the various resorts named from North Stratford on the G. T. R. R., there is now an opposition line of stages to wake up sleepy drivers en route to Colebrook, from which point the routes separate. To get to Magalloway via Dixville Notch, apply to proprietor of Parsons House for livery, except Saturdays, via stage. To the Diamond Ponds livery only. To Second Connecticut Lake via stage, Tuesdays, Thursdays and Saturdays; 125 miles to Connecticut Lake, from which point conveyance by a line of buckboards. Apply to H. Shoppee, at Lake House.—NED NORTON.

GOGEBIC CLUB.—The annual meeting of the Gogebic Forest and Stream Club took place Saturday P. M., April 4, at Burke's Hotel, Chicago, Ill. Telegrams of regret were received from two absent members. The usual routine of business was attended to, and reports from special committees, secretary and treasurer were read. The latter was particularly interesting to all, as it was to a certain extent the shadow of 1885. The shadow was quite distinct, and a royal good time is expected this season. An election of officers resulted in the re-election of H. E. Thayer, President; S. A. Wolcott, Vice President; W. H. Morris, Treasurer, M. C. Clancy was chosen secretary in place of Geo. H. Loomis, who, owing to ill health, wished to be relieved of all cares. In the evening an elegant repast was served by the Chicago members of the club, to which all did ample justice but the treasurer, who, owing to an attack of illness, was compelled to withdraw. After a good cigar the clock warned us of the fleeting hours, and with many hearty shakes of the hand and the oft-repeated promise to be on hand when the day comes for our departure for Gogebic's rock-bound shores, we separated, each bound for his distant home.—NIMROD.

WHAT IS GOOD SHOOTING?—"Wells," in his last article on "Shooters and Shooting," says that when a man says he has killed thirty birds straight he stretches the truth, *i. e.*, lies. I do not know of any instance of the kind exactly, but know that a young friend of mine, a farmer's son, killed twenty-three birds (quail) out of twenty five shots, all on the wing, and the shooting was done with a common old muzzleloading D. B. gun. This shooting was done in the presence of two other young men, and all the parties are now living and close at hand at this writing. His average of one-half is good for a whole season, but may be badly beaten many times during the season while out for only a day's shooting. For instance, I have killed eighteen birds at eighteen shots; again, I have shot for an hour almost incessantly and killed—nothing.—A. F. R. (Belvidere, N. C., April 6).

THEY ARE WISE.—While at my desk writing this noon, I was called to the door by an urchin who urged me to "bring the gun," and on looking out I saw a covey of fifteen quail standing by the garden fence within gunshot. The said urchin was much "put out" when I quietly remarked to him that the season was up and the birds must not be troubled, and went off muttering wishes for his "fire stick." It is strange, but that covey of birds have been extremely shy and wild all winter, although only shot at a couple of times, and now that the law protects them they will be around our yards every day.—A. F. R. (Belvidere, N. C., April 6).

NARROWS ISLAND CLUB.—The annual meeting of the Narrows Island Club was held on Monday last in this city. The officers elected for the following year are as follows: President, D. G. Elliott; Vice-President, J. A. Hewlett; Secretary and Treasurer, J. B. Lawrence; Executive Committee: B. Dominick, Henry Sampson, W. G. Dominick and the officers above named. Dr. J. C. Barron was elected to membership.

SPORTSMEN'S ASSOCIATION OF THE CAROLINAS.—The Sportsmen's Association of the Carolinas will hold its fourth annual shoot at Charleston, S. C., May 13, 14 and 15. Our programme will be out in a few days, and will be furnished on application to me.—T. H. GIBBES, Secretary and Treasurer (Columbia, S. C., April 10).

PENNSYLVANIA.—One of our sportsmen was out after snipe on the 7th and bagged seven in less than an hour and a half; another four, when he broke his ramrod and had to leave the field. A few ducks are passing over.—SUB. (Fallsington, Pa., April 8).

ON THE PLATTE.—Have just returned from a goose hunt on the Platte, at Central City, Neb. Game plenty, and the three-barrel led the score, as the rifle would reach them nicely at from two to five hundred yards.—L. K. M. (Hastings, Iowa).

NEW JERSEY.—Brant and geese are plentiful this week at Barnegat and Tuckerton bays. Few have been killed owing to want of cover to hide boats.—HOMO.

Sea and River Fishing.

TARPON KILLED WITH ROD AND REEL.

THE angling event of the season is the killing of a tarpon, *Megalops thrissoides*, by Mr. W. H. Wood, of New York city, with a rod and reel. It has so long been doubted by expert Florida fishermen that this could be done that future almanac makers will be justified in placing among their "notable events," opposite the 25th of March, "First tarpon taken with rod and reel, 1885."

In our last issue our correspondent "Wing," writing from Jacksonville, gave an account of the capture of a tarpon by Mr. Wood, the weight of which was much understated. On Saturday last we saw a monster tarpon with a hook in its mouth hanging above one of the stands of Mr. E. G. Blackford in Fulton Market, and on inquiry we were directed to Mr. Albert Ferguson, of Conroy's fishing tackle house, 65 Fulton street. From Mr. Ferguson we learned that the implements of capture were a bamboo rod, 5 feet in length, of the pattern used by anglers for striped bass at the North, a bass reel holding 1,200 feet of 21-thread linen line and a knobbed No. 10-0 O'Shaughnessy hook.

Mr. Wood is an experienced striped-bass angler who has probably caught more bass of great size than any one in the country, and having read in FOREST AND STREAM of the great strength and endurance of the silvery-sided streak of lightning called a tarpon, or tarpum in Florida, decided to try his mettle. Old Floridian anglers smiled and thought that such attempts only benefitted the rod makers and prophesied disaster to a rod of less than seven feet and so fine a line. Mr. Wood paid no attention to this but laid in his bait. He lost ten good fish by the cutting of the line, and then put on several feet of "safety-chain," a strong brass chain with flat links, and made the last link into a swivel which revolved around the knobbed hook. He cut a bait from a mullet, in the same manner that the bass anglers cut menhaden, and bound it with the flesh side out, with a fine copper wire. He went out in a catboat with his two boys and towed a very light dingey astern. He sat on the catboat and after getting his boat well out uncoiled about twenty feet of line and laid it on the deck, and also laid the rod on deck, holding the line in his hand. Experience with this tender-mouthed fish had taught him that it was very

necessary to allow the hook to get well down, in fact, that they should swallow it.

The biting of the tarpon does not at all resemble that of a big fish. The bait is gently taken and moves slowly off. When Mr. Wood felt his bait move he threw the coil of line into the water, calculating that the bait would be swallowed by the time the line was run out. He then picked up his rod and struck. A boy was already in the dingey and cast off the moment Mr. Wood jumped in, and the struggle began. The maddened fish leaped into the air showing its sides of burnished silver and then dove with a rush that threatened to take the man and boat with it. The excitement was above fever heat and the gulls were frightened at the frantic leaps of the scared monster, and screamed as they hurriedly left the place. Only the fisherman was cool. Repeated experiment in lifting weights with his rod had taught him to know the amount of pressure his thumb should apply to the reel and, holding his rod nearly upright, he placed the strain at twenty pounds and made the fish drag the boat.

At no time was there more than three hundred feet off the reel, and the pressure was kept at the same degree until the fish weakened. The leaps grew less high and the plunges less ferocious, until after a stubborn fight of three-quarters of an hour the monster was brought to gaff. On this day Mr. Wood hooked and landed three fish, the smallest weighing 85 pounds and the largest 115 pounds, and before he left Florida he took two others. He does not doubt being able to kill this fish with an ordinary bass reel and 300 feet of 9-thread line. The requisites appear to be a cool head, good tackle and a hook placed well down where it cannot tear out. The curious can see the hook, chain and a portion of the line at Conroy's. It is worth seeing to prospective tarpon anglers, and in future tarpon fishing may be classed among the sports of America.

BLACK BASS FOR STOCKING WATERS.

Editor Forest and Stream:

Having noticed on different occasions inquiries in Forest and Stream in regard to black bass for stocking purposes, and never having seen any satisfactory answer, I made it my business to ask the gentlemen named below in regard to live black bass. Either of the three named are honest, trustworthy, business men, and catch and keep live fish for sale to dude fishermen who cannot catch them, but wish to take home a nice string to show in Pittsburgh.

Capt. Clark of the life-saving crew situated at the outer channel piers near the lighthouse, can furnish almost any number, but could not attend to shipping them. Capt. J. D. Pasch, at the Public Docks, a boatbuilder, who has all styles of boats to hire for fishing purposes, from a steam yacht to a small rowboat, nearly always has from ten to fifty fine bass in his boxes, from one and one-half to four pounds in weight. I have known the fish to spawn in his boxes often. Mr. Fred Knobloch, captain of the steam yacht Lena, keeps a hotel to accommodate fishermen and duck-hunters, can furnish them. Mr. Knobloch often ships different kinds of fish alive as far as Pittsburgh and the towns between here and there, and says he would not recommend shipping very large ones, as they require fresh water, according to the size of fish. The majority of bass taken here are the small-mouth, taken almost always on rocky reefs or hard bottom. The large-mouth are called here "swamp bass." Anglers, except green ones, do not care for them. They are not as large, on an average, and swimming as they do among the weeds and in shoal water, are not so good flavored, and taste of the sewers when caught near them. There is no marked difference in their fighting qualities, pound for pound, that I can notice, but the small-mouth is always taken in deeper water, and they average nearly twice the weight of the others. They do not seem to run at the same time. We begin to get the small-mouth from April 20 to June 15, when they slack off until September. About the first of June the boys may be seen wading among the weeds, catching sunfish and swamp bass with worms; they also take fly or spoon.

The addresses of the gentlemen named are: Capt. Clark, Life Saving Station, Erie, Pa. Capt. J. D. Pasch, Harbor Erie, Pa. Capt. Fred Knobloch, Harbor Erie, Pa. Any communication to either of the above gentlemen will receive prompt attention. Headlight.

Erie, Pa., April 16.

TROUTING IN PENNSYLVANIA.

We all feel very "trouty" since the opening of the season, and were it not for the presence of huge banks of snow on the north side of the mountains in the interior of the State your correspondent would have been one of many others to have jointed his rod the first of the month. One of our restaurateurs, who makes a display of both cultivated and wild trout on opening day, has had his representative make a tour of the inner counties of Pennsylvania in order to procure fish for his counters, but a return to Philadelphia with a meager supply proves the season's backwardness.

A letter below from an ardent fly-fisherman, with whom I have had many a day's sport, shows the condition of the streams within one hundred miles of our city:

"I tried the trout this morning and succeeded in taking about a dozen, not a short dozen, but a long one (fifteen all told). They ran from six to ten inches. My first cast was made from the bank in snow up to my knees—no rise, and after trying the stream at different points with no better success, I concluded to try the head of a dam some distance above—not the one you and I fished some years ago, but one lower down the stream; but judge of my astonishment when I found it completely covered with ice which may have been sixteen or eighteen inches thick. I found an open pool just where the creek enters it, and went to work, and for half an hour had the finest kind of sport. The morning was foggy, but as soon as the sun came out bright and warm I noticed the stream was getting 'riley' and knew my fun was up. The snow was melting on the sidehills and the muddy water poured into the stream from every direction, and in less than an hour from the time I made my first cast the water was fairly thick, so I unjointed my rod and started for home, feeling that I had made a much better beginning this season than in former. You know it has been my habit to try the trout on the 1st of April and woodcock on the 4th of July for years, and it often happens that I do not fare as well, after working much harder than I did to-day. If the water had remained clear I could have filled my creel by noon. The fish were fat and quite gamy, considering the circumstances under which they were taken. I want you and friend Roberts to come up after the Boston show."

It is needless to say I will be there, but fear considerable snow will still be on the hills. Reports from the State bordering the Susquehanna River state that the ice is melting gradually, and dangerous freshets are not expected. It will take a fortnight, however, to clear up the streams so they will be in condition for fly-fishing. Homo.

Philadelphia, April 8.

A REMARKABLE CATCH.

A friend while fishing at the Sault Ste. Marie from a boat anchored out in the stream got his hook fastened to something deep in the water. To free the line he laid the rod across the stern of the boat, and moved to the bow to raise the anchor in order to drop the boat down a little way. As soon as the anchor was free the swift current quickly swung the boat around, and his rod, weighted with a heavy reel, was carried overboard and disappeared. Of course he gave it up for lost. The following season found my friend again fishing in the same locality. At his first cast the hook succeeded in attaching itself to some mysterious obstruction. The line was new and strong, so pulling hard and steadily upon it, he brought to the surface what proved to be a rude fishing pole with several twigs at the end, around which was wrapped and tangled a common cotton twine line, in the tangle of which his hook was caught. Not it alone, for he was surprised to find a second hook with a line attached fastened in the wrappings. He drew in this line and soon appeared the tip of a second rod, which he secured, and instantly recognized it to be his own, the identical rod and tackle which he had lost the year before. The rod and reel were not seriously injured by having been submerged for so long. He has them still and may the good old man's health and strength be preserved to make successful use of them again in the fishing campaign he has already planned for the ensuing summer. The remarkable part of this incident is the fact that the rod and tackle which were recovered were lost out in the wide and open stream, in the swift current, and in very deep water, where the chance of finding them again as they were found was not one in a million. H.

CROPPIE, CRAPPIE, CRAPET.

Editor Forest and Stream:

Referring to Mr. James A. Henshall's paper in your issue of March 19, I beg to say that crapet is a French Canadian word—not French—generally employed all through the formerly Nouvelle-France, from the Atlantic to the Pacific. It is as old as Canada itself, but I could hardly give its etymology. Croppie or crappie is most probably the English spelling of that no-French word. In our country crapet denominates two distinct fishes: 1. The sunfish or common pond fish (*Pomotis vulgaris*). We call it *Crapet jaune* (yellow crappie). 2. The black-eared pond fish (*Labrax* [*Eupomotis*] *auritus*), called *Crapet vert* (green) or *Crapet mondoux*.

O. D.

Quebec, April 4.

Editor Forest and Stream:

I am curious to know the derivation of the word croppie or crappie. I learned to call the fish "crappie" while catching it in the Upper Mississippi, where the French settlers so call it. The spelling was learned from Norris's "American Angler's Book," read years after. Later I heard the fish called "croppie," and, because in some parts of the West a crop of grass or grain is miscalled a crap, I thought that the name of the fish had been changed to "crappie" in conformity with what they considered a more correct orthography. Hence, I wrote to Dr. Henshall the lines he quotes in beginning his article in your issue of March 19, which gives much information about the fish but very little about the name, and I am still in the dark. I have always preferred the name of crappie to that of "strawberry bass," used in Western New York; first, because it is short and pretty; and, second, because there is no "strawberry" about the fish.

Fred Mather.

ROYAL ANGLERS.

Angling is certainly one of the national sports of England. In London alone there are no less than 155 fishing clubs, and in the provinces apart from those associations which may be strictly referred to as "private," there are at the time of writing 117. Scotland has a list of seventy-eight, and the writer is by no means sure that the enumerations given include all. Anyhow, here is sufficient proof that angling is not "that solitary vice" (*pace* Byron!) but a sport indulged in with national British thoroughness.

All the prominent members of the Royal family, except the Queen, are fond of fishing. Even that lady, during the lifetime of the Prince Consort, took great interest in the cultivation of the splendid waters of Windsor Great Park, and it is an open secret that on the accession of the Prince of Wales the lake of the Royal demesne will be stocked afresh with trout and pike, and the black bass where practicable. The carp—up to thirty pounds weight—and eels are a proverb in these waters, the latter having been taken up to eight pounds. By the bye, one caught in the Wey (a little river about five miles from the largest lake of Windsor Park, into which an overflow might have found its course) scaled eleven pounds, and was cast in my presence by the late Frank Buckland in 1876. It was a true fresh-water land-locked fish. A pike of thirty-six pounds was also taken in the same year from Rapley Lake on the confines of Windsor Park and cast by Buckland, and near on a score of carp (*Cyprinus carpio*) averaging over fifteen pounds were also sent from the same locality to the aquarium at Southport (Lane's). So much for the capabilities of the waters of Windsor Great Park.

Personally the Prince of Wales is not much of an angler. He is, however, fond of taking a rod and amusing himself with his children in catching the smaller fish of Virginia Water. This lake is three miles long by about one broad, and so called by George IV. after Virginia, and is beautifully laid out with forest trees and shrubs, birch, beech, oak, chestnut, rhododrendon, wellingtonia, *et hoc genus*. The sport of the Prince of Wales is rather of a more robust and boisterous kind. For example, I recollect that he and Lord Charles Beresford (of "Condor" fame), after collecting a picnic party on board the fifty-gun miniature frigate stationed on Virginia Water, silently and unknown to the rest undid the moorings and thus permanently grounded her, to the loudly expressed dismay of Capt. Welsh (who afterward ran down the Missillo with the Queen's yacht in the Solent) and his not choicely-expressed anger; he being in charge.

A water *fête* or picnic is always held after the Ascot race week—sometimes on a Sunday—and boating and fishing are indulged in on all hands among the Royal party and their guests. At such times the Princess of Wales is the queen regnant, and with her children, who look even now like her brothers and sisters, so youthful does she appear, she accompanies the head fisherman (my father) and angles with enthusiasm quite worthy of a Cleopatra. Her interest in the results of the set lines, on which eels, pike, perch or carp may haply be secured, is very juvenile, and in 1878 I had a long conversation with her in reference to the characters of our English coarse fish. I found her intelligent in her questions, and affable to a degree well calculated to set an example among English-born ladies. The charming absence of affectation and repelling dignity existing between the Princess and her children is very noticeable.

The Duke of Edinburgh is of a different cast to his brother and certes so is his wife to that of Alexandra. I remember a water picnic soon after he brought the Grand Duchess Marie to England. It was also at the end of the Ascot week. The fisherman had expressly provided a beautifully finished rod and tackle for the Duchess. The three were out in a small punt together, when the Duke essayed to use the rod, and being impatient at the fineness of the lines and also awkward, he roundly swore at it and angrily demanded why such an inefficient weapon had been placed in his hands. There were hundreds of spectators on the bank within hearing. "Pardon me," said the Queen's fisherman, quietly, "Your Royal Highness is not using it properly. Allow me to show you. The fault is yours." And with that and no further trouble the bait went flying through the air a distance of thirty yards, and a pike soon rewarded the Duchess, into whose hands the rod was given, and whose previous petulance had equalled that of Prince Alfred. He is a very fair angler, however, and in the fishing cottage there is a stuffed pike taken by him in 1866 of twenty-five pounds weight. The wood of the case of it is made from a piece of the original Herne's oak from Windsor Park. Of course, a stone now only marks where this famous tree once stood. The Duke of Edinburgh also signalized himself at the great Fisheries Exhibition by a paper on the condition of English sea fisheries and fishermen, and showed himself well versed in the subject, and soundly practical in his advice.

The Duke of Connaught is a soldier, and though a good shot and not at all unused to handling the rod, he is not a typical angler. Huntsman he is, and that a good one, as Goodall, the royal huntsman at Ascot, will tell you, but angling is too slow. His seat in Bagshot Park, and Rapley Lake, from which the thirty-six-pounder was taken, is in this park, and the noble estate is a part of the Queen's property—yclept Windsor Park. Of the Duke of Albany, notwithstanding his continued ill health, more can be recorded. He was passionately fond of the exercise of the "gentle craft," when it alone remained as the solace of his many hours of inability to enjoy active recreation. I have seen him with Mr. Collins (his medical superintendent) and Mr. Dalton (his comptroller), fishing on Virginia Water when it was a positive pain for him to adopt any but the reclining position. Once I incurred Prince Leopold's anger—and I think I can almost claim to be the only one who ever provoked him to anger, so generally amiable was he. He had appointed with my father to fish for roach (*Leuciscus rutilus*)—a fish similar to the "shiner"—and I was told off to furnish the boat. I omitted nothing, but the most important part, namely, the gut hooks; and when Prince Leopold came limping from his carriage and was assisted into the boat, it was found there were no hooks in the tackle box. Only an hour or so was allowed him on the water, and it would take at least half the time to go by foot to get the necessary weapons. In tone of great annoyance I was ordered to get in the carriage and fetch what I had forgotten. When I got back the Prince thanked me with the greatest urbanity, and even my respected father condescended to unbend his face now that the Duke had.

The Duke of Albany, when he was Prince Leopold simply, and since, was of a most amiable disposition—never complaining, and meek much beyond the rest of his brothers. He was also a good angler when his physical strength was equal to it, which, in the summer of '77, '8 and '9 was not very infrequent.

Prince Christian of Schlewig-Holstein is the Ranger of Windsor Park, and is, if not of a piscatorial turn of mind, certainly true to the ichthyophagous instincts of his vaterland. Princess Helena (his wife) does not care much for water recreation, but their young sons, Albert, Victor and George, are enthusiastic anglers—a little too enthusiastic, sometimes, perhaps, when the fisherman isn't looking. During the last pike season they have been extremely fortunate from the lake, situated just behind their residence, Cumberland Lodge, and thirteen and fourteen-pound fish have fallen to their rods with pleasant frequency. I recollect it is quite ten years ago since these young gentlemen had two of the prettiest of silver-mounted roach rods given them as a first incentive toward the gentle art of angling. J. Harrington Keene.

RANDOM CASTS.

The South Side Sportsman's Club of Long Island had a famous opening of the trout season. Of the one hundred members thirty-seven were on hand to catch the early trout. This year the fish limit has been increased. Formerly each member was permitted to take eighteen fish daily and to return all of the others to the water. Now each member can take forty fish daily, but none must be returned, as it has been found a great mortality resulted from liberating the hooked fish.

Mr. Sheppard F. Knapp, on April 1, took eighteen trout below the mill flume at the South Side Club which weighed 21 pounds and 11 ounces. His largest fish weighed 2 pounds and 11 ounces. These fish were the first eighteen hooked, and the catch beats all previous records.

The South Side Sportsman's Club have in their preserves 12,000 two-year-olds and yearling trout. The former average nearly half a pound in weight. About 4,000 of the two-year-olds were turned out into the ponds and streams preparatory to the opening of the season. There were some pretty sketches of the club in *Harper's Weekly* of April 4.

Mr. Charles F. Imbrie, of this city, had some excellent fishing in Green River, at Sayville, L. I., on the opening day of the trout season. For several years past Green River has been rented by Mr. Imbrie and Mr. Wilbur.

Mr. John G. Heckscher has just rented a small trout pond at Quogue, L. I., which he will have restocked at once.

Mr. William J. Florence and Mr. John G. Heckscher, of this city, are preparing for a salmon fishing excursion to the Restigouche early in the season.

Mr. William Carpender, of New Brunswick, N. J., had magnificent fishing in Mr. William Floyd-Jones's pond at Oyster Bay on April 1. Mr. Floyd-Jones has invited ex-President Arthur to fish his pond this season.

Ex-Secretary of Navy Robeson has been fishing at the South Side Sportsman's Club since the opening day.

THEY THOUGHT THEY HAD BASS.

SINCE writing through FOREST AND STREAM for information concerning the bass placed in Black's Pond some ten or twelve years ago by a party of gentlemen interested in fish propagation, of which I was one of the members, I have made inquiry in reference to the fish purchased and am satisfied the two gentlemen who had the matter in charge were deceived by the person who furnished them. My part in the matter was to subscribe to the fund to be used, and the two who were to go to Hagerstown to buy the fish never saw them distinctly, and would not have known a bass if one was in plain sight before them.

Returning from Hagerstown, Md., they brought with them a large, firkin shaped tub, in which they only knew they had fifty fish of some kind. On arriving at Philadelphia the tub was transferred to the Swedesboro Railroad car, and reaching the latter place after dark, the vessel was at once carted to Black's Pond and it contents dumped into that body of water. Before the breaking away of the breast of this dam by freshet the pond contained numerous white perch, which were frequently caught weighing two pounds. These, it is known, were introduced into the pond from the tide water of Raccoon Creek, into which the pond discharged its surplus and overflow through a sluice gate, showing that it is suitable for the growth of other fish than bullpouts and sunfish. But what I want to get at is this. Before the two gentlemen of our party liberated what they bought for black bass into Black's Pond no chub or fall fish were known to be in its waters. Now it is swarming with them, and the writer has caught them there as "big as calves." May it not be that the fish emptied into the pond were chub or fall fish, and that the committee of two on purchase were deceived?

Black's Pond is a fair sheet of water, a mile and a half long at one of its branches and a full mile in length at the other, and I am sure that if tidewater perch were found to thrive there, the black bass also would, and I would strongly advise that another attempt be made on a large scale. I think the large fish that your correspondent stated was caught in Black's Pond would prove to have been a huge chub or fall fish. The rock bass would undoubtedly thrive there, and I am glad to learn that its introduction is thought of, as it is a gamy little fish, and will take the fly freely and furnish much better sport than the sunfish and chub now so numerous on the water referred to. HOMO.

LAKE TROUT IN A STREAM.

ONE hot day in August, 1882, Charley G. and myself arrived at the Connecticut Lake House about 2 o'clock P. M., and not having time to make a long trip that day I took a bait rod and thought I would try the fishing below the dam in the river. Climbing down the steep bank I threw my hook baited with a good-sized angle worm into the rapid water, and let it drift down into the pool below, when I saw it taken by a large fish, and trying to bring it to the top of the water the gut parted and it was gone. I went back to the hotel and got my fly-rod and landing net, and putting on a heavy leader and larger bait-hook went back, thinking "if you bite again, old fellow, I shall probably take you in out of the wet."

I fished around the dam awhile but got nothing until I cast the worm again in the same place and let it drift into the pool, when I saw a fish take it that I thought nearly twenty inches long, and appeared to weigh at least five pounds. "Well, if this is the size of the trout around here it beats all the stream fishing I ever saw," said I to Charlie, who had followed me down from the hotel and stood on the bank. "Is it a pickerel?" "No, it is a trout, I think, for I saw it when it took the bait." "I guess I had better help you land him then," and taking the net quickly he passed it under the fish as I reeled it up, and took out a lake trout that weighed, when we killed it before we left the lake four days after, three and a half pounds. We took it to the house and put it in the watering tub, and it soon was swimming around all right. I caught that night and the day we came away four more that would average two pounds each.

Mr. Smith, who was then proprietor of the hotel, and several people who had lived around there for years, said they never knew of any being taken below the dam at the outlet of the lake before.

The brook trout are quite plenty in the river between the dam and Perry's stream earlier in the season, but it was so late we did not catch any there. S. J. G.

LANCASTER, N. H.

THE MOST KILLING FLY.

Editor Forest and Stream:

In regard to the most killing fly in the American waters, I do not think that any person can tell which is best. Any one can have his opinion and may hit on a good killing fly for many waters. Where can the fly-fisher be found that ever saw a scarlet ibis on the stream, or most of those gaudy-colored flies? My experience for thirty years, both in England and America, is that fishermen that want good sport on any stream should take a box of fly-making tackle and simply watch for the fly the fish are taking, catch one, press it on a piece of clean paper, first noticing the color of the wings and legs. By pressing the fly on paper you can invariably tell what color the body is. Then tie your fly accordingly.

In Nova Scotia, in 1867, I fished a great deal, and noticed the difference between the fishing on inland ponds or small, deep holes. One could throw a fly of any description and be sure of a rise, because the trout are so confined in these pools that they will rise at anything that will fly in the shape of a bug of any kind. Not so in a good, clean, running stream, where natural flies of all kinds are setting on the surface, because the fish feed on one particular fly. A party of gentlemen from Pennsylvania, which I had the pleasure of being with in 1878, started on a week's trip up the Loyal Sock, a tributary of the Susquehanna, where, after fishing three days with very poor success, millions of small yellow sallys came and remained two days. I tied a few for each person on a No. 12 sneck-bent hook, using a bright yellow silk body with small yellow legs and yellow wings, which gave us all the fishing we could attend to for that day, after which not a fish could be taken with a yellow sally; in fact, the only good killing flies in Pennsylvania are the queen of the water, coachman, yellow dun, and cowdung, as in England, tied on the small hooks from No. 10 to 14.

In my opinion the best killing fly depends altogether on the state and color of the water. For instance, on the upper part of the Androscoggin River near the Middle Dam, and below, called Cedar Stump, where I had my best fishing in Maine, the fish would not take a gaudy fly but mostly the small gnat, professor and queen of the water as the best killing fly. Only in land-locked places where the fish are confined like a lot of convicts, will they take anything in the shape of a fly. But let the fly-fisher cast his fly in a good running stream and he has to fish for all the trout he gets, and if he has any luck at all, he certainly will not get them with an ibis or a gaudy fly, but with a good imitation of the natural fly. Here in Connecticut the best baskets of fish are taken with a very small fly, such as a small march brown, willow fly, dun, ledge, etc. Prof. Jackson, of Hartford, the most noted fisherman there, caught a fine basket on April 3, with march browns. As "S. J. G." says, there is in nature no such fly as the ibis, and certainly a man could use a dozen different flies to more advantage than the ibis, although a person might get up a particular fly of his own and it might prove a good killer in some waters but in others will not take a fish. In fishing I only use about a dozen kind of flies, none of which is the best killer, except at certain times of the day or evening.

For a night fly, the best in my opinion is the white moth, ledge fly, Welchman's button and the coachman, tied on a No. 3 hook. Perhaps for a bob fly a red spinner. The ibis is a splendid fly for chub, perch, shiners and other mud fish, but for trout I think there are twenty better flies. Let two good fishermen go on a stream, one with the ibis, the other with the queen of the water, small gnat of any color, in fact, any small dun fly. I say the scarlet ibis would be nowhere compared with those mentioned; or with any other unnatural fly.

For large flies, for day fishing, I think the best are a May fly and green drake tied to a No. 3 hook with woodduck tail, buff body (large), peacock tail for ribs, light brown legs, with woodduck wings. I have had good luck with those same flies in the Androscoggin waters, also in the Adirondacks; in fact, they are good killing flies in most waters from the first of June till the middle of July. In my next I will give you a little of my experience in fishing in the West Indies and Brazils. W. C. SPARRY.

HARTFORD, Conn.

TROUBLE AMONG THE SHAD FISHERMEN.—The gill-net fishermen who operate in the Delaware River and Bay are much excited over the late act of the Delaware Legislature which has just become a law by the approval of the Governor, providing that, "It shall be unlawful for any person not being a citizen of the State to catch or take fish of any kind on the Delaware Bay or River, or any creeks emptying into the same on the limit of this State." The State of Delaware claims under the original purchase deed from William Penn jurisdiction over all the river and bay below the Penn State line. In 1871 Delaware first attempted to enforce this claim, and the Pennsylvania and New Jersey fishermen resisted it and a number were killed in conflicts with the Delaware authorities. Commissioners were then appointed by the Governors of these States to settle the matter, and they arranged a case to be tried in the United States Supreme Court, where the matter has since rested until the recent oppressive action of the Delaware Legislature. The New Jersey gill-net fishermen were just about to commence operation when they learned that the Delaware officials had made preparation to enforce the law. The state of affairs was telegraphed to Gov. Abbett of New Jersey on Saturday and he was appealed to for protection. He arranged for an inter view at his office in Jersey City and a large delegation of fishermen headed by Capt. Whittecar, Assemblyman of Salem county, went on a special train to attend the conference.—HOMO.

HOW I CAUGHT A BLACK BASS.—In your issue of 2d inst. I read of an occurrence which I feel bound to support. The difference between the two cases being only that the writer of that note caught his bass in the stern of the kiff, while mine was caught in the bow. It occurred in this wise: The late Dr. Lister and myself went out on one occasion to shoot wood ducks. Having shot until after sundown, we were in a great hurry to catch our steamer. We were rowing side by side in our skiffs at the best pace possible through the marsh, when I heard a great commotion in the bow of my friend's boat. Nothing was said until we reached the landing, when I asked the Doctor what caused the row in his boat. He said he didn't know. We placed our boats on the steamer, and then investigated the cause. We found in the skiff a large-mouthed bass, which we put on the scales and found to weigh six and one-quarter pounds. The theory is that his boat struck it, which caused it to leap from the water, and the speed caused it to drop into the bow. Many a time since I have asked persons to conjecture as to how it was captured, but never found one to hit it.—R. P. L. (Picton, Ont., April 6).

TAPERED HOOKS.—Redditch, England, March 31.—*Editor Forest and Stream:* We note in your issue of March 19 a letter signed "J. W. T.," in which he remarks that tapered hooks are not marked because at the end of the shank are too slender. This is an erroneous idea. Fish hooks tapered shanked can be marked same as not tapered. All the hooks we snood on to gut we have them marked. It is a little extra expense to us, but by doing this our snelled hooks on gut give greater satisfaction. If the end of the gut was made rough the hooks would still be firmer. If hooks are tied in this way and properly varnished, there will be few complaints from anglers. The rage is for cheap hooks and cheap tackle. If tackle dealers will keep the best goods, they will be able to get a fair price for their goods and insure an increasing sale.—S. ALLCOCK & Co.

A COLD OPENING.—Fishing season opens with two feet of ice on our lakes, and only very rapid streams free from ice. Snow deep yet in the woods, and from my library window I can see drifts ten feet deep now. Thermometer 10° above zero to-day; lower yet yesterday. We hope for better weather this side the Fourth of July.—NED BUNTLINE (Eagles Nest, N. Y., April 10).

LARGE STRIPED BASS.—Mr. C. M. Raymond, of Sing Sing, N. Y., took a striped bass weighing sixty-eight pounds in the Croton River, with hook and line, on the 8th inst. The fish was sent to Mr. S. H. Everett, and was shown in front of his hotel on Barclay street. Cuttyhunk and Pasque Island will have to look to their laurels when such fish are caught in the Croton.

A VALUABLE FISH.—The statement is made in the papers that while fishing in Chattahoochee River, near Cedar Springs, Ga., John Leedom caught a catfish weighing five pounds, and in its stomach was found a gold $20 coin dated 1816.

Fisheulture.

OYSTER FARMING FOR NORTH CAROLINA.

[Written by Professor W. K. Brooks, Johns Hopkins University, Baltimore, upon request of S. G. Worth, to be read before Fishermen's Convention, at Raleigh, October 15, 1884.]

From very early times the cultivation of the land has been recognized as one of the most propper fields for private industry, and an extensive area of productive laud in the hands of private owners and under thorough cultivation, is the most convincing evidence of permanent prosperity which a State can exhibit.

I suppose that no one of my hearers doubts this, but a little thought will show you that the whole world does not agree with you. There are men living to-day in our country, who are bitterly opposed to all agriculture, and who believe that the country should be preserved in its natural state as a public hunting ground, and nothing but armed force restrains them from asserting their opinions by the murder of the farmers who have trespassed upon their rights.

Much as we may sympathize with the hardships of the uncivilized Indians, we all know that they must either change their opinions or die. There is no room in this country for an unproductive race.

The natural resources of the earth are sufficient for a scanty population of savages, but we might as well try to supply the demand for horses in our cities and farming regions by catching colts on our prairies, as to hope to support a civilized human population upon the natural products of the uncultivated earth.

We all recognize that this is true of the lands out of the water, but many people believe that it is not true of the lands under the water. Private industry can do very little to increase the supply of migratory sea fishes, and it is therefore obvious that no one person should be permitted to monopolize the supply which belongs to the whole people.

Now does this hold true of the oysters? It is true that the natural resources of the State belong to the whole people, but an oyster is as stationary as a potato, and if it is true that private industry can promote the wealth and prosperity of the State by the cultivation of the oyster grounds, public rights must give way, just as the public rights to the lands above water have given way, for the good of the public as a whole, before private agriculture.

In order to show you that private oyster culture is possible, and that it would, like agriculture, bring wealth and prosperity to the State, and would greatly increase population and taxable real estate, I wish to call your attention to a few facts regarding the value of cultivated oyster grounds, as compared with the natural facts.

Five years ago the system of private oyster farming was introduced into the State of Connecticut. Previously to this time the Connecticut oyster planters were compelled to obtain more than half a million bushels of seed oysters from the Chesapeake Bay each year for planting, but the owners of private farms are now able to supply all the oysters which are needed by the Connecticut planters, as well as those of Massachusetts and Rhode Island. Most of the seed oysters planted in New York and New Jersey are now purchased from the Connecticut farms, and, in addition to this, one firm in 1883 shipped to San Francisco fifteen million seed oysters which had been reared upon a private farm.

The State of Maryland has more than 640,000 acres of oyster ground, which is managed by the State, and from this area the fishermen obtain about $2,000,000 a year. In France a crop valued at $8,000,000 was raised in three years from a farm of less than 500 acres, where there were no natural oysters.

The State of Virginia has more than 1,000,000 acres of oyster ground, yet a Connecticut farmer states that the annual crop from his farm is now equal to one-third that of Virginia.

In 1879 there were in Rhode Island 962 acre of oyster ground under a very imperfect system of cultivation, yet the oysters were sold for $680,500. If the oyster grounds of Maryland were used to no better advantage they would yield $550,000,000 a year, instead of the $2,000,000 which the fishermen now obtain from them.

So much for the return to the individual. Now a word about the advantage to the State. The oyster grounds of Maryland give employment, for a few months in the year, to about 50,000 fishermen. If they were thoroughly cultivated they would give profitable employment to more than 500,000 people for the whole year.

Besides the great advantage to the State which comes from the wealth and prosperity of its people, oyster cultivation may be made to contribute to the public revenues by direct taxation.

The revenue of the State of Maryland, from 640,000 acres of uncultived oyster ground, for the five years from 1878 to 1883, was $210,000, or about $40,000 a year, but the expense of collecting it was nearly $218,000, or more than $9,000 in excess of the receipts.

In 1883 the revenue of Rhode Island from 1,100 acres of cultivated oyster grounds was $11,000, and on the same basis the annual revenue of Maryland should be more than $6,000,000.

These facts will, I trust, be sufficient to show to every one the great advantages of oyster culture, and the subject should have an especial importance at this time to all public-spirited citizens of North Carolina.

The near-sighted policy which the States of Maryland and Virginia have pursued is rapidly leading to the extermination of their natural supply, and the demand for oysters from all parts of our rapidly growing country must be met in some way.

The clear-headed citizens of Connecticut have discovered this, and they are rapidly developing a system of private oyster culture with very remarkable success, but their climate is unfavorable, and oysters in shallow water are often destroyed by starfish and other enemies which are much less dangerous in our own land-locked and brackish waters than they are in Long Island Sound.

If the people of Maryland and Virginia would adopt laws for the encouragement of oyster farming, they might draw into their State the energetic men and the millions of dollars of capital which are now engaged in this business in Connecticut.

Unfortunately there is, in each of these States, a large and influential body of fishermen, who have always made their living by fishing upon the public beds, and these were all bitterly opposed to any system of private cultivation so long as the natural beds are not entirely destroyed.

Before this happens the Connecticut farmers will have obtained control of the market, unless they shall have been drawn to North Carolina by the advantages of a warmer climate, the absence of marine enemies to the oyster, and the much more rapid growth of the oyster in Southern waters.

Here, then, is the opportunity of North Carolina. In her great land-locked shallow sounds and tidal rivers there is a great undeveloped source of wealth, which can be made to support hundreds of thousands of people. I am unable, in the absence of exact survey, to state just how large the territory is which is favorable for oyster farming, but it is certainly not much less than a million acres, and the possible revenue from this source is so great as to seem almost fabulous; but I wish to call your attention once more to the fact that the Rhode Island oyster grounds yield on the average $700 per acre each year.

This great source of wealth cannot be much productive without the investment of a large capital. The establishment of any oyster farm itself requires capital, and in addition to

this, there must be a town with ice-houses and canning and packing establishments, and there must also be means of rapid communication with the centers of oyster consumption before the natural advantages of North Carolina can be made available.

I therefore wish to impress upon you the fact that now is the opportunity which may never occur again.

Between the destruction of the natural beds of the Chesapeake Bay and the establishment of a great oyster industry in Long Island Sound, North Carolina can by wise action do much to draw the business into her own favored waters.

I, myself, am a student rather than a practical business man, and I therefore make no suggestions as to the manner in which this may be accomplished.

For several months in each year, for several years past, I have been a citizen of North Carolina, and I have, therefore, been much pleased to have this opportunity to point out to the people of the State that the times are now especially favorable for developing the great resources of their seacoast, but I must leave to men who are more versed in public affairs the task of devising how this shall be brought about.

I had intended to take this opportunity to say a few words upon the manner of establishing and conducting an oyster farm, but as I learn that Lieut. Francis Winslow, U. S. N., one of the highest authorities upon this subject, is to address you, it will not be necessary for me to consume time which he will supply to much better advantage.

THE KANSAS COMMISSION.—We learn that Mr. W. S. Gile, Fish Commissioner of Kansas, has been removed for political reasons, and Mr. S. Fee, of Wamego, Pottawatamie county, appointed to succeed him. We always regret to see removals of Commissioners for political reasons, because it takes years for a man to become familiar with practical fish-culture.

The Kennel.

FIXTURES.

BENCH SHOWS.

April 7 to 10, 1885.—First Annual Dog Show N. E. Kennel Club, Music Hall, Boston. J. A. Nickerson, Secretary, 159A Tremont street.

April 21, 22 and 23.—Annual Dog Show of the St. Louis Gun Club, W. A. Albright, Secretary, St. Louis, Mo.

April 28, 29, 30 and May 1.—Ninth Annual Dog Show of the Westminster Kennel Club at Madison Square Garden. Entries close April 14. James Mortimer, Superintendent, 48 Broad street, New York.

May 5, 6, 7 and 8, 1885.—Second Annual Dog Show of the Cincinnati Sportsman's Club, Cincinnati, O. W. A. Coster, Superintendent.

May 13, 14 and 15.—Third Annual Dog Show of the Toronto Dog Show Association. W. S. Jackson, Secretary, Toronto, Ont.

May 19, 20, 21 and 22.—Show of the Philadelphia Kennel Club. F. A. Diffenderfer, Superintendent, Philadelphia, Pa.

June 2, 3, 4 and 5.—First Annual Dog Show of the Illinois Kennel Club, John H. Naylor, Secretary, 3,182 Archer avenue, Chicago, Ill.

FIELD TRIALS.

November.—Seventh Annual Field Trials of the Eastern Field Trials Club, High Point, N. C. Entries for Derby close May 1. W. A. Coster, Secretary, Flatbush, L. I.

Dec. 7.—Seventh Annual Field Trials of the National Field Trials Club, Grand Junction, Tenn. Entries for Derby close April 1. B. M. Stephenson, La Grange, Tenn., Secretary.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription $1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed **2312.**

SPANIELS AT NEW HAVEN.

Editor Forest and Stream:

It was with pleasure not unmixed with a little fear of my decisions being roughly overhauled that I read in FOREST AND STREAM of Mr. Mason's intention to criticise the spaniels at New Haven. A few owners of dogs, generally poor ones, are very fond of running down Mr. Mason as a judge, but you never hear an owner of a good dog do so, and C. H. M. having become a little more Americanized, and, if I may be permitted to say, having had the unpleasant angularities of his John Bull character rounded off, seems to me to be fast taking the position in the opinion of all true fanciers his sound, "all-round" knowledge of dogs entitles him to. No one who is an admirer of spaniels, but has done as I have, read Mr. Mason's letter on the spaniels at New Haven over more than once. To me it was a real treat, betokening, as it did in every line, such a thorough and intimate knowledge of the breed, one, by the way, in which Mr. Mason figured to advantage in England, though such is not generally known.

Mr. Mason's comments on Mr. Willey, and what the breed owes to him and his wonderful little dog Obo, are fully deserved, and though I do not desire in the least to detract from what is due to my Salmon Falls friend, we must not overlook priorities. The first push to the ball which has resulted in such genuine improvement in our cocker spaniels was the establishment of the Cocker Spaniel Club. But for that we would still be where we were four years ago, when anything on four legs with long ears was a cocker spaniel.

The spaniel club started the breeders on the quest for improved stock and among other importations was the dam of Obo II., for which we are indebted to Mr. F. F. Pitcher, a member of the spaniel club. It was here Mr. Willey joined in as the purchaser of one of the puppies, the now justly celebrated Obo II., and by judicious breeding, and here he must be awarded full credit—has been able to show a daughter of the old dog which is not only his superior, but is, in my opinion, the best cocker spaniel in the country, if not in the world. I refer to Shina, the bitch Mr. Mason says he would have placed over Obo II. for the special. With regard to Shina I do not fully agree with Mr. Mason on one point—her condition. It was that almost alone which caused me to decide in favor of her sire. It must be remembered that I judged the spaniels early on Wednesday, the first day of the show, and Shina had only been got in from walk by Mr. Willey to bring on to the show so that he had no opportunity to prepare her, and when shown she was a little rough in coat and slightly wavy. Now she was universally admired and was constantly being handled and stroked, and a couple of days of this kind of work makes a wonderful difference in a black dog of the right texture of coat. It would therefore materially depend upon the time when Mr. Mason took his notes upon Shina's condition as to how she looked compared with her appearance when I was called upon to decide between her and Obo II. Another thing is that Mr. Willey was absent when the two were brought in for the special and Obo's flat coat could stand showing better in the rough (taken off the bench and brought in without brushing) then could Shina's. Then again the dog will never be better and the eleven-months Shina will yet improve, so taking all things into consideration I voted for the old dog. I think, however, it is the last time he will ever best his daughter, and I so told Mr. Willey.

With regard to how I placed the bitches in Shina's class, I took Helen for second place because she was almost a perfect mate for Shina in height, length and general characteristics. I had the advantage of having them all together to compare closely, and although I know Helen, while on the bench, shows a few peculiarities, yet she never does so in company in the ring, and I cannot go beyond what is in front of me. The four I picked out as the best of the class were Shina, Helen, Dinah W. and Black Meg, and Mr. Laidlaw said to me afterward, "I saw who would get second as soon as you put Helen alongside of Shina." I think that when an exhibitor who gets what I might call fourth honors tells the judge that, the latter ought to feel very happy with himself, and I can assure you I was. I don't take it at all ill that Mr. Mason does not agree with my placing of the bitches. I am simply giving my reasons for what I did. Next came Dinah W., a little higher on the leg and shorter in back, while a shade higher was Black Meg, with her short head and dowed skull, but grand coat and bone. I think that, without exception, this was the best class of dogs of any breed I ever judged. All through until I came to Rose Obo—Mr. Mason missed the wonderful Western criticism on this bitch—each only suffered by comparison with those in front. Mr. Mason says of Dinah W., the reserve, that three or even two years ago she would have taken highest honors. Quite true, and the same holds good of the last of my vhc.'s, Darling, a liver bitch, badly shown, but with good, short legs, not always out at elbows, and good length of body. Let Mr. Mason recall Hornell Ruby, that won so many prizes as late as 1883, and I am sure he will agree with me that she could not compare in any way with Darling, indifferent as the latter appeared in such company. Looking upon her as showing such marked improvement in general spaniel characteristics, and not by way of comparison with the blacks ahead of her, I gave her the vhc.

With regard to Newton Abbot Lady and Black Prince being so close together, I differ with Mr. Mason. That gentleman gives an illustration in his communication, and I'll follow his example to explain my meaning. A pug exhibitor asked me to look at his dog, and as he was a new beginner, to show him wherein the dogs ahead of him were better. At first glance his dog looked hardly dealt with, as he had a better head than the winner, but on stirring them both up in their cages, it was apparent that my inquirer's dog was a slack-built dog, whereas the winner was a compact, cobby little dog. The second was of the same type, and it was easy work to show the seeker for information what the judge had arrived at in making his selections. Now, in spaniels I want a dog low down with plenty of bone and straight legs. Newton Abbott Lady was the only one of that type in the class. I admit she is faulty every place Mr. Mason says, but my main objection to her is the lack of the extra inch in length. With all her faults she is a spaniel, and her every action while in motion is that of a spaniel. On the other hand, Black Prince is high on the leg, to me the worst fault in a spaniel; he is, therefore, comparatively speaking, short in the back, his ears are not so well placed as Lady's, he is faulty in muzzle and so is she, he lacks the bone the bitch has, his coat, though it looks well, is no flatter than the bitch's, and lacks the closeness and density of hers. Added to this, Black Prince was not himself, having fretted all the way coming on the steamer from New York the night before to the extent of losing several pounds weight, and being off his feed he was so tucked up that it made him look higher off the ground than he otherwise would have done if shown heavy.

We need to improve our field spaniels, get them lower and longer and with better coats than the average run: it is therefore with pleasure I hear the Cocker Spaniel Club propose extending their field of good work and taking hold of the heavy weights with a view of improving them as much as has been done with the cockers. We may therefore look for a marked change hereafter in the field spaniel, as an incentive will be given toward their improvement. JAS. WATSON.

PHILADELPHIA, April 11, 1885.

RETRACTION.

Editor Forest and Stream:

I look upon this Mason controversy from the standpoint of a spectator, and take in it only the interest of a sportsman who desires that right should prevail for the better advancement of our interest in general. I think that Mr. Mason deserves the thanks of every true sportsman for the frank, open warfare of principle against the would-be powers that be. It may be that at times his arguments have been a little severe, but show us the man who could draw it lighter when he felt—

> "* * * who steals my purse steals trash;
> But he that filches from me my good name,
> Robs me of that which not enriches him
> And makes me poor indeed."

Since the New Haven show it seems that the application of a quotation from Byron applies to Mr. Mason's case admirably, and here it is:

> "For time at length sets all things even.
> And if we do but watch the hour,
> There never yet was human power
> That could evade, if unforgiven,
> The patient search and vigil long
> Of him who treasures up a wrong."

And as Mazeppa returned to conquer, so shall Mason, backed by those who feel that the right must prevail. The war cry is sounded at New Haven and we hear the order of onward which is felt at Chicago. Troops marshaled by those who, by misguidance heretofore, had meant to destroy.

Lead on. The time has come when the petty dynasty must crumble under the force of popular opinion. What true sportsman, when he reads the retractions of the past two weeks, which were used heretofore to assail the character of Mr. Mason, does not feel that those retractions should be copied on the walls of the editorial office at Chicago with a pencil ipped in the sorrows of the editor. VERITAS.

AMERICAN KENNEL CLUB MEETING.

THE meeting of the A. K. C. called for April 8 was held at the rooms of the New England Kennel Club, Boston, President J. M. Taylor in the chair. Mr. Elliot Smith, Second Vice-President; Mr. E. S. Porter, Secretary, and G. N. Appold, Treasurer, were present. The following clubs were represented by delegates: St. Johns Pet Stock Association by H. W. Wilson, Philadelphia K. C. by Mr. W. H. Childs, New Haven K. C. by Mr. G. E. Osborn, New England K. C. by Mr. A. W. Pope, Montreal K. C. by Mr. J. F. Campbell, and the following by proxy: Kentucky K. C., Illinois, Cincinnati, Cleveland and Baltimore.

The report of secretary and minutes of last meeting were read and approved. A committee on credentials consisting of Messrs. Smith, Childs and Osborn was appointed, to which the president was added.

The committee on credentials reported favorably on the application of the Manitoba Pet Stock Association, Western Pennsylvania Poultry Association, Eastern Field Trials Club, and National Field Trials Club for membership, and they were elected. Application from the Knickerbocker Kennel Club of Jersey City for membership was laid on the table. It was moved that the executive committee of the A. K. C. be the committee on discipline.

A committee of five, consisting of Messrs. Appold, Munhall, Taylor, Osborn and Childs was appointed to revise and correct the constitution, by-laws, rules and regulations of the A. K. C., to report at the annual meeting. Concerning the disqualification of Mr. W. H. Pierce by the Philadelphia Kennel Club, after testimony had been taken the following was decided upon: That, Whereas it is the judgment of the A. K. C. that Mr. Pierce did not intend to commit a fraud upon the Philadelphia K. C., but that the action of that club was within the rules, yet upon investigation of the case the A. K. C. reinstate Mr. Pierce. All prizes won by him since his disqualification to be retained by him. It was decided to hold the annual meeting at Cincinnati, on May 8, at 8 P. M., place to be decided upon. The secretary was instructed to notify each member of the A. K. C. that it has been assessed the sum of ten dollars to defray current expenses. Moved that the National and Eastern Field Trials clubs be requested to appoint so many of their members as they may agree upon as a special committee to agree on field trial rules.

The meeting adjourned after passing a vote of thanks to the New England Kennel Club for their courtesy in extending the use of their club room for the meeting. E. S. PORTER, Sec.

"WILDFOWLER."

Editor Forest and Stream:

You will find inclosed Clement's ("Wildfowler") letter of agreement and coupon of draft stating amount paid to him, with date, and also letter from steamship company showing Clement has not done as agreed. As for the dog which he has sent me, I have no description or pedigree of it. Clement was to furnish all on receipt of $80. Any one in want of such a dog, direct from the swill potteries of London, where Clement procures all his renowned world-beaters for a few shillings, can have him by paying the charges to the steamship company. I have no use for such stock at my kennels.

C. F. KENT.

MONTICELLO, April 8.

Following are the letters referred to:

LONDON, E. C., Jan. 26, 1884.

DEAR SIR—I can send you a good beagle dog, hound-marked and with good ears and stern, and fit to show and win, for £10, delivered at Liverpool, or £16, delivered at a United States seaport, carriage paid, and declaration for breeding all paid by me; so that you would have no trouble or bother in the matter. I know what you want and would take care that you get it. I suppose you would want him between 12 and 13 inches. I have several of various sizes, and I would choose one to fill your bill entirely. You may rely upon that.

Yours truly, L. CLEMENT.

NEW YORK, March 30, 1885.

Mr. Kent, Monticello, N. Y.:

DEAR SIR—By the steamship Grecian Monarch we have a beagle dog consigned to you. The steamer has been in and gone, and the dog is at the bonded stables. Will you please call here and get an order for its delivery? There are £4 18s. expenses.

Yours truly,

PATTON, VICKERS & CO.
(per R. Renfrew.)

HIS MASTER'S PICTURE.

Editor Forest and Stream:

I send you the inclosed from the *Courier-Gazette* of Rockland, Maine, Feb. 17, 1885, not so much to establish the human that is in the dog, as to recall the pleasant memories of the master. Mr. A. B. Cobb, of Rockland Me., will be remembered by many readers of the FOREST AND STREAM as an ardent sportsman, a capital shot, a staunch friend and a great lover of nature. He passed the early part of life in Wisconsin, and shot there as many as one hundred deer in a season. If not the best he was one of the very best rifle shots of the old school this country ever produced. Many a "Thanksgiving turkey shoot" won by him furnished a turkey dinner for a poor family. But the shotgun and a well-trained dog were his favorites.

Commencing in Maine in September on woodcock and partridges, he would follow the birds into Virginia and shoot quail, pheasants and wild turkeys as long as the season lasted. I went with him to Virginia for five successive seasons, shooting until the first of February, when the season ended. On one occasion, while shooting in Connecticut, Mr. C. flushed two partridges by a brook, in an open piece of woods, destitute of underbrush. He shot both birds, but his dog could find but one. Calling me to his assistance, we discovered feathers floating down the brook and also discovered the tail of the partridge protruding from under a rock lying under the water. The bird could find no cover and seeing the open place under the rock, dove under the water and hid itself. The bird was dead when we took it out, probably having hastened its death by drowning. On another occasion we were shooting quail in Frederick county, Va., near a little church called Mount Olivet. We flushed a very large bevy which flew directly to the church. Following them up we found they had gone under the church and could not get out except by the way they went under. We soon made it possible for only one bird to come out at a time. Utilizing two boys that came up to see what was going on, we placed one at the hole, with instructions not to let more than two birds out at a time, and put the other boy under the church to drive them out. They came out one, two, three and four at a time, but we had it very nearly our own way and but few birds escaped.

Now if you will pardon this digression I will append the dog story:

"One year ago last August A. C. Cobb of this city, one of its most respected citizens, passed away. Mr. Cobb during his life was a zealous sportsmen, and owned several valuable dogs, all of whom were deeply attached to him. One of these, "Lem," was the favorite, and was seldom absent from his master's side. During Mr. Cobb's long and severe illness this faithful follower kept constant watch at his master's bedside, and could not be induced to leave it for any length of time. Since the death of the master the dog has been constantly on the watch, apparently awaiting his return. Thomas McLoon, our artist, has recently completed a platinum portrait of Mr. Cobb, a most excellent likeness. Sunday the dog was admitted to the studio. As soon as the picture was seen the dog became frantic and leaped upon the high shelf on which the picture was placed in his efforts to reach it. He was seized just in time to prevent the demolition of the portrait by canine caresses. It was with difficulty that the dog was dragged from the room." CLIFFORD.

MAINE.

LITTLEJOHN'S FRITZ.—Several gentlemen who are aggrieved at the insinuation recently made by our correspondent, "Saxon," that pointers got by Beaufort are not good in the field, have come to their defense by citing the performance of Mr. Littlejohn's Fritz. Among the testimony brought forward to show that Fritz is a good dog is (1) a letter from Mr. J. B. Wickery, of Chicago, in which he says: "I have just returned from a delightful trip through the West, and had the pleasure of shooting over the pointers Fritz and Pilot, owned by Mr. Littlejohn, of Leesburg, Va. * * * I consider Fritz the grandest and the coming dog of America. He combines speed, nose and bottom, and is as cheerful a worker as one wishes to see in the field." (2). Correspondent *Mirror* newspaper, May 15, 1884, says: "Not a more staunch, industrious, active and pleasant brace has it ever been my good fortune to fire a gun over or follow on a day's hunt." (3). Certificate.—"We certify that we have followed Mr. Littlejohn's brace of pointers Fritz and Pilot in the field, and consider them fast, staunch, with excellent noses and of good bottom, Fritz showing unusual speed and endurance, and Pilot an excellent retriever.—W. E. Ganin, Clerk Circuit Court; J. B. McCabe, Judge City Court; Samuel L. Moore, C. M. Gingrich." (4). Another certificate, which says: "May, 1884.—The undersigned having owned and hunted dogs, and partially making a business of breaking and training the same for the last thirty years, will say that never in all my experience have I seen the superior of Mr. Littlejohn's Fritz as a fielder, he showing unusual speed and bottom, a fine noser and is staunch. (Signed) Alex. Wynkoop."

ENGLISH KENNEL NOTES.

XXVIII.

THEY say in the clubs that the new Kennel Club secretary is a Mr. Aspinall, who was formerly "something in the city," an accountant, I believe. This is a new departure, though not quite unforeseen; whether the choice of a purely business man as opposed to one possessing a knowledge of dogs and their owners will prove satisfactory time alone can show. It used to be one of former secretaries' duties to manage the club's London shows, for which they were paid some £30. Mr. Aspinall will probably delegate the task to Mr. Edwardes, who has before been the working manager. This will not make any monetary difference to Mr. Aspinall, as I understand that he will be salaried at a rate to include the "bye-sums" that accrued to the late secretaries. Roughly speaking, the pay is £200 a year.

The few members who use the Kennel Club house for social purposes must be heartily pleased and relieved that the election is over. They say the steps were blocked with hungry applicants; this goes to show that secretaries are more plentiful than housemaids. I hear that each member of the committee was flooded with epistolary and verbal applications. One of them, a married man, on coming down to breakfast, quite blushed as he followed the severe gaze of his spouse to the big bundle of correspondence by his plate. He quickly regained his self-composure on remembering that there is only one 14th of February in the year. Among the eager aspirants were, I believe, a gallant military captain, a gallant civil "capting," a limb of the law, Mr. Boardman, the head clerk, and a north country reporter. Among those who had no chance were Mr. Felix, of London; Mr. George Wilson, of Huddersfield; Mr. Carew Gibson, of Littlehampton; Mr. Emmerson, of West Kirby; Mr. William Page, of Leadenhall Market, London, and his friend, Mr. Fred Gresham.

I am astonished that so little notice has been taken of the peculiar food given to the dogs at Hanley show. From all accounts its effect upon the poor brutes was disgusting to a degree. Visitors to the show say the stench was unbearable, and exhibitors state that on their return home the dogs' hampers were found to be in a filthy condition. As the feeding arrangements of Hanley show were not intrusted to Spratt's Patent, I consider these disclosures the finest advertisement for their well-known biscuits that the firm has ever received. *Dictum sapienti sat est.*

"Lillibulero" being as strange to "Spratt's Patent" as the man in the moon, the above can be accepted for disinterested testimony to merit. I am happily unable to profit by a puff, but when the reporter of the *Live Stock Journal* goes out of his way to praise biscuits, benches, collars, chains and straw, people "take it for what it is worth"—and that you may be sure is something to the writer.

It is said that Mr. Mackie, commonly called Captain, as he has the command of a yacht, intends paying the States a visit with his team of Scotch terriers, alias die hards. You will be glad to see him, for he is a hearty and frank good fellow, much respected in his own country, and esteemed by whomever he meets. His unvaried success on the show bench has not succeeded in diminishing his popularity. Fanciers are surprised to understand where and how he got together such a redoubtable kennel. The owner of that typical hard-haired Scotch terrier, Ashley Morag, Mr. Adamson, of Aberdeen, will have to put on his thinking cap to keep up with the breed. Messrs. Ludlow, of Norwich, and the Constable of Norfolk, Captain Paynton Pigott, where are they?

Mr. Geo. Lowe has written a valuable paper upon lemon and white pointers. "Leatherhead" (his *nom de plume*) is always readable and instructive. Mr. Lowe has noticed an increase of late in dogs of this color, and gives it as Mr. Whitehouse's opinion that "the lemon and whites of a litter are invariably stouter workers than the liver and whites of the same family, and that from puppies they are always pluckier." While mentioning the correct shade of color required in a lemon and white pointer, he falls into an error in describing the "hare pie" of the foxhound, which he says is a "mixture of yellow and gray hairs;" that is a "badger pie." The hare pie is a mixture of tan and black hairs, and as the coat changes the hues become very rich, at times nearly pure black, and then nearly all tan. Mr. Lowe repeats a belief that is now pretty generally accepted, that our modern pointer is the result of a cross between the foxhound and the Spanish pointer. To obtain these bright lemon and whites my own experience would guide me to breed from the old livers in preference to black and whites like Dr. Salter's. The black would be likely to make the color too deep and to even produce hare-pie blends.

It would be a sensible step on the part of the Kennel Club to make Mr. Lowe absolute editor of the *Gazette*, for he thoroughly understands dogs, and can write about them. The present editing of the paper exposes both incapacity and carelessness. In the current number we have an article on toy spaniels headed "Points of Toy Terriers."

Mr. Carew Gibson is bankrupt, so we may hope to have seen the last of him in kennel circles. He used to describe himself in his advertisements as "master of hounds," but I am told that his hounds consisted of a few officer-toed broken up beagles chained to the wall in a disordered kennel. I can't punish a man when he is down, but I am sorry that I did not know earlier the nature of revelations that have since reached me. I should have felt it my duty to stop his career short and sharp. Mr. Gibson is well connected and should any of his friends happen to read and object to these remarks I will simply invite them to obtain a satisfactory explanation of the collie dog Donovan affair.

While on painful subjects I will just give breath to a rumor that is already on wings, referring to certain shady tricks being performed on the credulous and unwary by a man of some reputation in the doggy world. If I have to take up the task of censor it will not be to hurt a man's reputation with vague surmise but to blast his character with irrefragable facts.

The Irish red setter is the last breed to be honored with a specialist club. The club has been started in Ireland by a few resident breeders, who have with very Irish humor invited the Rev. R. O'Callaghan to join in the English interest. Well, now, who would have thought O'Callaghan was not Irish and that the volatile naval chaplain was an Englishman!

Mr. Whittle's case furnishes another warning against impetuously rushing into print. "Corsincon," in commenting upon Mr. Whittle's letter of Feb. 26 (FOREST AND STREAM), has fully borne me out upon the subject of veterinary surgeons. There is all the difference in the world between a V. S. and an M. R. C. V. S. The first is a description by sufferance of the college, the second has the relative value of a medical degree, as in order to obtain it a man must go through a course of education and pass an examination. I gather from a letter in the *Stock Keeper* that the little man is wrath with "Corsincon." Did Tom Hood foresee this dispute when he wrote:

"Sure Mr. Whittle
Loves thee but little."

But they are more likely to drink than fight when they meet.

It is nice to know that Mr. Whittle is pleased with the "jocular style" of my letters, and so gracious to concede that I am "a good sort of fellow," and that "he trusts he and I will be none the less friends." Thank you, not so chummy as that, and since I gave him the chance of writing that artful little puff of his canine wares, I hope he will continue his subscription, bearing in mind that I gossip to amuse you *pour faire rire; pour vous ennuyer* if you like, but never with a wish to give pain or do harm.

Messrs. Jeyes, manufacturers of disinfectants, have offered to provide shows with a bath of their liquid in which to immerse dogs that on arrival are found to be lousy. Mr. Dalziel has properly condemned such an undertaking on the part of show officials. It is the owner's place to see his animal in a fit state for exhibition, and the manager's duty to turn it away at the gates if it is suffering from any form of infectious ailment.

I was not surprised to see the corrections in respect to Mr. Wm. Graham, of Belfast, and "the great faker." He is too good a man of business to do anything that was not straight and just. As for the Irish terrier Garryowen, I am assured that he is an honest dog. Would that—but no, I am nearly finished, so will close without invidious philosophical comparisons.

LILLIBULERO.

MARCH 24, 1885.

THE BOSTON DOG SHOW.

THE New England Kennel Club's first annual dog show may fairly be said to have been one of the most successful exhibitions of the kind that has ever been held in this country. It dawned with bright prospects and closed with brilliant promises for the future.

Boston is a doggy city, but this of itself was not sufficient to insure success. It was from the sister States that the main support must come; and as these are never behindhand when men of honor, independence and ability are appointed to pass judgment on the dogs, it was not likely they would respond in any half-hearted manner. The selection of judges means either the life or death of a dog show. A man does not care to enter his dogs for competition when he knows long before the show is held what the awards will be; but if he sees that men of independence, whom neither fear nor favor can influence, are to be the judges, he not only enters his own dogs, but persuades his friends to enter theirs. The old system of "running" dog shows is tottering to the grave; its days are numbered, and neither the wailings of a disappointed minority nor the frenzy of a Punic press can save it. Judges no longer dream of rising with the lark (while the innocent exhibitors dream of blue ribbons, silver cups and leather medals) and sauntering off to a show, catalogue in hand, to take down the numbers of dogs owned by "jolly good fellows" and "friends of the club." The independent press called for a change and the public were not slow in according support. The result is already apparent. A glance down the benches tells one there is some consistency in the awards; and though there are times (and always will be) when exhibitors and judges do not agree, the former feel a certain amount of confidence in the judges, knowing well that if errors are made, they are nothing worse than errors of judgment. That there were several mistakes in awarding the prizes is beyond contradiction, but they were not of the sort we have had to allude to more than once during the last few years

The club accepted more entries than Music Hall is capable of accommodating, and consequently the dogs had to be judged in a large room in the basement by electric light. It is well nigh impossible to judge of the color of Irish setters, for instance, in such a light, and it is only fair to suppose that under other circumstances several of the decisions would be reversed by the same judges. If a more suitable building can be found next year, it is to be hoped the club will secure it.

Another word of advice to the New England Club. Never again allow exhibitors to bench together entries made in different classes. It is wrong in the exhibitor to ask such a favor, and it is wrong in a club to grant it. Every dog should be benched in the class to which it belongs, and neither members of the club nor anybody else should be permitted to bench dogs except in the classes in which they compete. It is by comparison that persons are enabled to judge of relative merit, and the convenience of the public should at all times be consulted. Another mistake is the benching of any breed of dogs in different parts of the building. Some of the exhibitors objected to their dogs being in the gallery, at least we were told so, and to oblige them the club put itself and everybody else to trouble. There were Irish setters in the body of the hall and Irish setters in the gallery, pugs up-stairs and down-stairs, beagles benched next to bulldogs up-stairs, and beagles next to fox-terriers down-stairs. So confusing was this, we may safely say, that had the show been three days instead of four, it would have been impossible for us to have printed a reliable report unless we had followed the example set by a contemporary and appealed to exhibitors and judges for notes. This is not a desirable practice, as some men are apt to underrate an opponent's dogs or overrate their own, or perhaps both, and especially when the reporter makes himself responsible for anything they may say to him. As to the judges, it is not very probable that they would point out their blunders, even if they were satisfied they had made any. Therefore a report gleaned from such sources cannot be always trust worthy, but it may sometimes serve as a blind to conceal a reporter's ignorance. It is impossible, within our limits, to detail all the good and bad qualities of the dogs mentioned. The public is best served by calling attention to faults and it is the object of a report to thus indicate what is to be avoided. When a dog is not spoken of as bad therefore it may be inferred that he is good.

The management was in the hands of John Read, who had considerable experience in Mr. Lincoln's time. Of all the men we know he should be the best fitted for the post. A hard worker, always civil and never negligent of his charge, he earned a kindly word from all. The dogs were supplied with clean straw every day, and the benches as well as the floor were thoroughly disinfected.

Mr. Watson, owing to illness, was not present; and his absence called forth expressions of regret from many a friend. The classes assigned to him (toy terriers excepted) were carefully judged by Mr. Kirk, Mr. Barlow took the toys.

There was a meeting of the A.K.C. on the evening of the second day of the show. It must have been galling in the extreme to the New Haven and Montreal delegates when an adjournment was voted until the Cincinnati show. It is to be hoped that notwithstanding the inconvenience certain gentlemen are put to, they will deem it wise to be present, no matter how many adjournments are called or where the meetings are held. New Haven, Boston, Philadelphia, Montreal and Baltishould be represented by live delegates (not by proxy) even if the meetings are ordered to San Francisco.

To the New England Kennel Club we tender our sincere thanks for their courtesy and kindness during our very pleasant visit to their first annual show.

Last week we gave a full list of the awards, several of which were made so late as noon on Wednesday, and the FOREST AND STREAM was as usual ahead of all contemporaries.

Following are the awards in the special classes that were not received in season for publication last week: Best Yorkshire terrier (three), Bill. Best Beddlington terrier, Lillie. Best Clumber spaniel, Romp. Best Skye terrier, Souter Johnny. Best black and tan terrier, Bessie.

MASTIFFS—(MR. DUDLEY).

In champion dogs Hero II. was alone. A big fine-looking dog, faulty in head, tail and back, too leggy, heavy in ears, and lacks true mastiff character. Champion bitches, Dolly Varden alone. A fair good bitch, faulty in muzzle, markings and eyes, besides which defects she has a superabundance of dew lap. The open dog class was a compliment to Mr. Dudley. There were twenty entries and the class was as good as the same class at New Haven. Ilford Caution, vhc. and reserve, is a big dog with a good head and plenty of bone, but he is bad in loin and cow-hocked, also heavy in ears. Turk, c., is a big dog with a wolfish expression and head. Rosco, vhc., has fair size but is plain in head and heavy of ears. Prince Waldemar, the winner, is a nice little dog and was shown in excellent condition. He has a pretty good head that would be improved by more depth of muzzle, beautiful small black ears, a good back and strong quarters, also straight legs and good feet. Faults—light eyes, too short a barrel, a short tail and lightness of bone. Ilford Cromwell, second prize, was not looking quite so well as at New Haven. He is too long in the muzzle, but it is deep and square in the right place, his eyes are light, and like his sire he gets his tail up too high. He beats the winner in length, size and strength of limbs, and is his equal in head and tail, but the Prince is a taking, catchy looking dog whereas Cromwell is not, but he grows in favor the longer you look at him. We shall expect to see the decision reversed, when Cromwell puts in an appearance in as good condition as the fawn. In the corresponding bitch class one prize only was awarded, and that to the recently imported Bal Gal. She is a good-sized, broody-looking bitch, a trifle long of face and slack in back. Fly, c., has the same defects but more pronounced and she is light of bone. Mastiff puppies, under twelve months, dogs, were a wretched lot. The winner is not a mastiff and therefore should not have been noticed. Tony, second prize, although light of bone, leggy, shelly, open in feet, and long in face, is a better dog, and so were the three 11 months old puppies. Minerva scored an easy win in the bitch class. She is a compact little bitch, too small for the age, light in eyes and more underhung than we like. Hero II. beat Prince Waldemar for the special prize, a decision we cannot indorse. Hero beats Prince at two points, eyes and size, but nowhere else; at all other points Prince beats Hero. Mr. Dudley is a painstaking and consistent judge and a gentleman we are pleased to see connected with dog shows, but we cannot agree with some of his awards on this occasion.

ST. BERNARDS—(MR. DUDLEY).

In the open rough-coated dog class Cæsar, vhc., is faulty at both ends, but good in bone, legs and feet. He was not in good condition, his coat being soft and fluffy. Rodney has size enough to recommend him, but is very snipy, faulty in eyes, and lacks character. Prince, c., shows too much bergHund and too little St. Bernard, and should not have been noticed. Leo, vhc. and reserve, is a big, handsome dog, but not a St. Bernard. He stands on the best of feet and has capital legs, but his color and markings are against him, and he is short and rather slack in the back. Jack, hc., was in luck's way. He is a curly, snipy dog, with no claims to be a St. Bernard, beyond being entered in the St. Bernard class. Romeo, first prize, should have been content with a much less distinguished position. He is a little short-faced, cheeky dog, sour in expression, pig-jawed, straight behind, light of middle and ring-tailed. Hermit, second prize, should have been first beyond doubt. His head is above the average, he has lots of bone and stands on the best of legs and feet. He is faulty in eyes and loin, and does not move well behind. Cæsar was our choice for second honors. In the corresponding bitch class, Empress, hc., has a long, wolfish face, and is short of coat. Cadess, vhc. reserve, is of bad color and her ears are badly placed. She has a fair good head. Heidel, c., is also of bad color, and has a long, snipy face. Baronne, first prize, is short of coat, and her head is not massive enough. She has good length of body, fair good legs and feet. Stella, second prize, was our choice for first. She is full at the cheeks and would be improved by more coat. She carries her tail a bit high, and does not move as well as we would like to see her. The classes for rough-coated puppies were both indifferent. Julian, first prize, will never make a good specimen. His head is very poor, and there is a decided lack of St. Bernard character all through him. The other prizes were withheld. The winner in the bitch class will never distinguish herself in a class for aged dogs. She is snipy and faulty behind. Miss Otho was not worth the second prize that was awarded to her. She has a shocking bad head, and the only redeeming qualities are good feet and plenty of bone. In the open class for smooth-coated dogs, Savoy, hc., was lucky to get a card. He is of poor color, has crooked forelegs, and is plain all over. Grant, vhc., lacks size, is light of middle, carries his ears badly and is snipy. Ion, vhc., was not worth a card. He was in very bad condition, is faulty in muzzle and carriage of ears, straight behind and is underhung. Veronne, first prize, is a long way removed from first-class form. His head is by no means typical, and he is hollow in back and not very straight on his forelegs. He has plenty of bone, his best point. Mentor, second prize, is light of bone, snipy and faulty in ears. The bitches were no better than the dogs. Avis, vhc., is plain in head, faulty in pasterns, and is small. Lotta is of better size, but is snipy, light in pasterns, a bit slack in the back, and carries her tail too gaily. Wanda, first prize, is a compact one, but is plain in face, slack in the back and faulty in carriage of ears. Snowball, second prize, is of the same type, but not so good in markings. She has the same faults as Wanda. There was only one smooth-coated puppy, and he a poor specimen. Romeo won the special for the best rough-coated specimen in the show. We thought Hermit fairly entitled to it. In the smooth-coated department Veronne was successful. The St. Bernards were a poor lot.

NEWFOUNDLANDS—(MR. DUDLEY).

We cannot follow the judge in his awards in the open dog class. First was given to Sam, who is faulty in back, curly, bad in tail, and is on the small side. Besides these faults his mouth is not good. Away in front of everything in the class stood Bruno, the second prize winner. He is a big dog, with good legs and feet and plenty of bone. He carries his tail too high and is too curly in coat. Second prize should have gone to Goliath, who was not noticed. His head and ears are faulty, but bar that he was the best dog in the class. Charley has a fair good coat, but is too much of the Spitz type. Noble, vhc. and reserve, is small and curly and has a very bad tail. Jalma is a little dog, faulty in tail, ears and shoulders, and marked "dangerous." A bad temper is one of the worst faults a St. Bernard or a Newfoundland can have. Jumbo, hc., is small, curly, short of coat, and faulty at both ends. Rocks should have been vhc. at least. He is a big dog, with a fairly good front and a straight coat. In bone and feet he is also good, and he was in good condition. He is too leggy and does not move well behind. In the bitch class Fly was alone and received the blue ribbon. She is a long way removed from first-class form, being much too small, curly and slack in the back. The puppies were a wretched lot. Evangeline was the best of them.

POINTERS—(MR. APPOLD).

Although the entries in these classes were fairly good, the quality of the exhibits was not what we expected to see. Mr. Appold, who made his *début* as a judge, seemed at times to be very nervous, and although we find ourselves compelled to differ with him in several of his decisions, we must say we never saw a judge work harder, and we feel confident that his next attempt will be more successful. In the champion dog class Sensation was alone, and with the exception that his color is washed out he was looking well. There were no champion bitches. In the open dog class for large dogs, Rex, vhc., has fair good head and ears, but is faulty from the hocks down, does not move well behind and is heavy at the shoulder. Dash is a big, houndy, coarse-looking dog. William Tell, first prize, carries a pretty good head and has plenty of bone, but he is light behind, a bit stilty, light of eyes and short of quality. Prince is stilty, light in loin and lacks true pointer character. Ned carries his tail too high, and is a bit cheeky, throaty and shallow. He deserved a card. Dick has heavy shoulders and is faulty in loin and tail. Toots, vhc. and reserve, was the best dog in the class. He is heavy at the shoulders and knuckles over a bit at times; fair good head, bone, feet, coat, color and stern. Donald, second prize, is a catchy-looking dog, but won't stand pulling to pieces. He is light of bone, leggy, bitchy in head, carries his tail high, and is faulty in shoulders and feet. He was in his right place, and William Tell should have been next. In the corresponding bitch class, which was not a good one, Flirt was placed first, a position she was not entitled to. She is light of limb, coarse in tail, snipy and very throaty. Lucille, vhc., from same kennel, should have been first. She is a bit heavy at the shoulders, and a trifle coarse perhaps all

over, and might be better in the back and tail. Sal, vhc. and reserve, is slack in the back and open in feet, also light of bone. Lassie, vhc., is heavy at the shoulders, throaty, straight behind and moves badly. She has good legs, feet and bone. Madstone, second prize, is a well-bred bitch, but not fit for the show bench. She is weak in second thighs, faulty in feet and light of bone, has light eyes, isthroaty, and stands badly on her forelegs. This was a poor class. In the open small dog class, Prince, vhc., is good in head, coat and color, but is stilty behind. Robin Adair, although not in his best condition, had no difficulty in beating Bang Bang. Robin is a fair, good little dog, but not by any means a crack. He is bitchy in head and straight in the stifles, his feet, too, are not of the best. Bang Bang has good forelegs, feet and bone, and a fair, good middle; but his short, throaty neck, high carried-tail, faulty stifles and spaniel eyes, will always keep him back in good company. He was not in good condition, his coat being stained with mange remedies. Prince of Orange, vhc., is snipy and weedy; his coat was all stained and he was not in show condition. In the bitch class Mr. Appold got all wrong. Rosa, vhc., was points the best bitch in the class. In head, nose, stifles and shoulders she might be improved to advantage. Lady Bang, vhc., was in her right place, She is heavy in head and throaty, also a bit off behind. Mistrel, vhc. and reserve, is a niceish black, light of eyes, and weak in second thighs. Countess, first prize, was about the worst specimen in the class; a little sway-backed weed. Lucky Stone, second prize, is a better bitch, but is leggy, lathy, bad in shoulders, light in eyes, carries her ears badly, and is light of bone. Nellie, sent out of the ring without a card, should have been second; she was claimed at the catalogue price, $100. She is faulty in tail and second thighs, and was shown too thin. In the dog puppy class, Daniel Webster, a fair good youngster by Fritz, was first. He stands on good legs and feet and carries himself well. His ears are too heavy and not well placed, and he is fine in muzzle, there is also too much daylight under him. Shot, vhc., has a poor head. Beacon, vhc., is washy in color, slack in the back, moves badly, ears set on too high, not worth vhc. In the bitch class, Lou, the New Haven winner, had no trouble in beating Victoria. She resembles her sire, Beaufort, in head, and has the best of legs, feet and shoulders, as well as a good tail. She is too long cast and throaty. Victoria will never make a winner, she lacks true pointer character. The special for the best large pointer went to Sensation. We would have given it to Toots, better in color, head, shoulders, body and stern. Robin Adair took the prize for the best small-size pointer. Rosa (from the same kennel) deserved it. The special for the best pointer in the show went to Sensation. Toots and Rosa were our choice. Special for best kennel of pointers went to the Westminster Kennel on account of their having one more entry than the Clifton Kennel. We should have reversed the decision, believing, as we do, that quality is more difficult to procure than quantity.

SETTERS—(MR. WESTCOTT).

These classes were carefully handled by Mr. Westcott, who is a painstaking judge. He got through his work in a meritorious manner, and it is only fair to say that in a better light some of the awards in the Irish classes would have been reversed.

English Setters.—In the champion English dog class Plantagenet scored an easy win over Dash, who is curly and shows age. In the open dog classes Jester, hc., is strong in head and underhung. His legs and feet are good. Frank, hc., was all out of condition. His hocks are faulty. Rockingham, the winner, scored an easy first. He beats Foreman in head, shoulders, straightness of forelegs and carriage of tail, and is his equal in other respects. The latter was rightly placed second. Mack B., vhc. and reserve, is an over-rated dog. He is faulty in ears, muzzle and tail; is wide in front, short and broken in coat, and moves badly behind. Coin was our choice for the reserve card. He is a well-built dog, but is too coarse. Gus Bondhu, vhc., was properly placed. He is a bit heavy in head and a trifle underhung, also throaty and heavy at the shoulders. He has a nice straight coat, a good back, and capital legs and feet. Charm had no charms for us. He has a bloodhound eye, is curly, heavy in head and throaty. Scot we thought worth a card, though he is light of bone. Tip's eyes won't do in a setter. Ponto is weak in second thighs. Spot has a plain head and a nice straight coat. Royal Sultan, c., has a good head, but is too long cast, besides being faulty in eyes and long in tail. Colonel, c., is leggy, light and throaty. His head is fairly good, and he has plenty of bone, but does not stand straight on his forelegs. This was a good class. Among the ladies, Forest Dora was the winner. Our choice was Modesta, and we thought Mr. Cornell's bitch points the best specimen in the class. She is a trifle heavy at the shoulders, and does not carry her ears quite *comme il faut*, added to which defects she was not well shown. Forest Dora stands on good legs and feet, and has a straight coat; but her faults are many. She is heavy at the shoulders, throaty, a bit plain in face, does not carry her ears close enough, is faulty from the hocks down, has a short flag which she does not carry well, and stands too low at the shoulders. Bess arrived too late for competition. She is a niceish bitch, a trifle heavy at the shoulders and light of limb. She has a fair good head and a nice straight coat. Her ears might hang closer. We thought her one of the best in the class. Eudora, vhc., is by no means a bad one. She has a good straight coat, but is a trifle weak in muzzle and light all round, excepting at the shoulders, where she is too heavy. Zou, hc., won her card on account of her excellent legs and feet. She has a short, sour face, is throaty and was not well shown. Queen Bess, c., deserved a vhc. card. She is a fair, good little bitch, stands on excellent legs and feet, and has a straight coat. She does not carry her ears well and was not in good condition. Grace B., vhc., has a straight enough coat, but it is hard and like pin wire. She does not carry her ears at all well, and is faulty in feet, tail, stifles and eyes. Coomassie, vhc., got more than she deserved. She is a weedy little bitch, heavy in shoulders and faulty in ears. Lady May was absent. The dog puppies were not a good lot. Nunky is curly and Crimps has fair good legs and feet, but is very throaty for a youngster, and does not carry his ears well. Prince Albert is leggy and faulty behind, curly and light of bone. His head is his best point. Budd, vhc., is faulty in head, ears and tail, but has a good coat and rare good legs and feet. He was the best dog in the class. Ino, hc., is plain in head and curly. Count Fosco, who took second prize, was in luck's way, and we venture to say it will be many a long day before he will take another prize. He is heavy at the shoulders, curly, plain in head, crooked in forelegs, does not carry his ears well and has a bad tail. First prize was withheld. In the bitch class Speed, who won first, is a nice little bitch and was well placed. She has a good straight coat, plenty of bone, and good feet, also a well-carried flag and she shows plenty of quality. She turns her forefeet out a bit, and her ears are short and not well carried. She will be heard of again. Royal Spot, placed second, was absent when we took our notes. She was ordered home, as she showed symptoms of distemper. Flossy, vhc., is not so good a bitch as Kitty Wells, c. The former is plain in head and faulty in ears. The latter is faulty in mouth, but good in coat, legs, feet and bone and has an average head. The English setters were much better than the pointers.

Gordon Setters.—In these classes all types under the sun were on exhibition. Nobody seems to know what a Gordon ought to be, and the clubs only mix matters by making classes for black and tan setters at one show, and at the next show classes for Gordons. If the Gordon setter proper, owing to his heavy proportions, is not well adapted for work in this country, why not introduce the Irish cross and get rid of him. One of the handsomest black and tan setters we have ever seen was by a crack Irish dog out of a Gordon bitch. He was a nailing good dog, with a superb coat and color, but he was not a "Gordon." The Boston prize lists called for Gordon setters, consequently we cannot indorse Mr. Westcott's decision in placing Turk over Argus in the champion dog class. One is a Gordon, the other is not. In the open dog class first went to Gem (Taylor's), the best dog in the class. His head will stand inspection, he is of good color, and has a rattling pair of forelegs and feet. His coat is not quite straight, he carries his flag too high, is a bit throaty and straight behind, and could be improved at the shoulders. Duke of Whippany, placed second, has good legs and feet and a nice straight coat, but he is faulty in muzzle, short of ears and throaty. Jack, vhc. and reserve, got a little more than he deserved; he is curly, throaty, and out at the elbows, as well as shallow in the middle. Dick, vhc., was also rather lucky. He has a plain head, does not carry his ears well, and is throaty and light in eyes. He does not carry his tail in the orthodox style, and is a bit straight from the hocks down. Gem, hc., has a sour face and is of poor color, but then he has a nice, straight coat and good legs and feet. Rollo, hc., is faulty in color, markings and eyes, but fairly good in head, and very good in coat. Ponto, vhc., is a niccish little dog, barring his plain head. Rex, c., has a pretty good head and a straight coat, but he is not free from white, and his feet are turned out; he is also a little throaty. Tom, hc., is short of ear, plain in head and light of bone. In the bitch class, Heather Lass was well placed first. She is too fine in the muzzle, and was shown with too much flesh on her bones. Topsy D., vhc., is a little weedy bitch, snipy and light of bone. She was lucky in getting her card. Rhoda, hc., was worth another letter. Daisy Malcom, vhc., was our choice for second place. Her head and coat are good, but she does not stand well on her forelegs. Topsy, placed second, is of poor color; we would have given her the hc. card. The puppies were a wretched lot. Argus II., who took the only prize in the class, is faulty below the eyes, and has a bad tail. In legs, feet and bone he is good. Eric, hc., is shallow and plain in head. Bijou, the recipient of the only prize awarded in the bitch class, is very deficient in head and ears; we preferred the vhc. Diana, for that award. She has fair good legs, feet and coat, but her head is too much of the Irish type. Neva, vhc., was a bit overrated. She is open in feet, light of bone, weedy, and faulty in tail and muzzle.

Irish Setters.—The Irish classes were good, and the splendid entry (sixty-two) was of itself substantial evidence of the confidence placed in the judge. Mr. Callender's dogs unfortunately arrived too late for competition. In the champion dog class, Glencho, a sterling good dog, had matters all to himself, and Fawn, a bit faulty at both ends, represented the ladies. Blarney, second in the open dog class, is a promising youngster, good in head, coat and color, but a little heavy at the shoulders and too long in barrel. We thought him the best dog in the class. Triumph does not carry his ears very well, and is plain in head; his hocks are not well placed but he was worth a card. Page, hc., is heavy in head, light in eyes, weak behind, and too long from hocks to ground. Duke, hc., is too heavy in head and is throaty. He is all right in bone, feet, coat and color and is a strong dog. Dash is a bit plain in head, leggy and light of bone. Rocket, vhc., is light in second thighs, and faulty from the hocks down. He is also a trifle heavy at the shoulders. His head will pass inspection, and his legs and feet are of the proper stamp. Chester, c., is throaty and faulty at the hocks and straight in stifles, his head will do. Max was not in show condition, he is leggy and light of middle. Sport has a sour, stumpy head. Dash, vhc., is a stylish looking, well built dog; in body, legs, feet, coat and color he is very good, but he is not deep enough through the skull and muzzle, and is too flat between the ears. He is a slashing-looking dog, and was our choice for second honors. Bruce, the winner, is a good-looking little dog, with a nice clean-cut head, good shoulders, legs and feet. His ears are too short and thick, and are not carried to our liking; he is also a bit slack in the back and light of bone. We would have given him the reserve card. Major, c., is light in color and straight behind, also deficient in tail, coat, and carriage of ears. Chief, at all times a good dog, was "not for competition." Pride of Glencho, vhc., has a good coat and is of splendid color, but he is weak in muzzle and is too light and weedy. This was a splendid class. Jennie Glencho, among the ladies, is good in coat and color, but faulty in muzzle, carriage of ears, loin and strength of limbs. Nettie, hc., is fine in muzzle, light of bone and short of coat, also heavy in ears. Syren, the winner, has a fair good head, but would be improved by more depth of muzzle. She is also light of bone and a bit heavy at the shoulders. In coat and color she is good. We would have placed her second, with Noreen II. first. The last-named was shown too lusty, but is a good bitch, a trifle flat in skull and fine in muzzle. Her ears would look better if set on lower, and she is a trifle too long cast. Dollie M., vhc., is faulty in color, light of bone and turns her feet out. Daisy, c., is faulty in ears, muzzle and middle. Fama, vhc., has a nice flat coat and is of good color, but her hocks are badly placed and she is faulty at the shoulders, pasterns and muzzle and is light in second thighs. Romaine, hc., is too strong in head. Jessie, vhc. and reserve, is light of nose, a bit coarse in coat and throaty. Becky, hc., is weak in pastern, light in eye, faulty in thighs and does not carry her ears well. Nellie M., c., is houndy in expression, full at the brow, throaty and a bit open in feet. In other respects she will do. Peggy O'More, hc., is too strong in skull, light of eyes and not straight enough in coat. This was a good class. Puppies were much better than either the English or the Gordons. Cleveland won in the dog class, but we preferred the second prize winner, Con. The former has fair good legs, feet, bone, coat and color, but his head is a bit plain, and he is very throaty for a youngster. Con has a better head and neck and is as good at other points. Brian Borue did not deserve his card (vhc.); his legs and feet are bad all round and he is too full in the brow. Distemper will soon visit Brian Borue. The Shamrock Kennels' entries were absent and are reported down with distemper. In the bitch class Lulu III., good in coat, color and feet, won. She is snipy, light of bone and thin through the thighs. She should have been second with Molly Bawn first. The latter is not quite straight in coat and does not carry her ears very well, but she is good in head, bone, color, legs and feet.

SPANIELS—(MR. KIRK).

Spaniels fell far short of our expectations, and the quality was much below what we had seen at New Haven. Mr. Leavitt, who was one of the Committee of Management, did not make any entries, and several of Mr. Willey's dogs were absent, owing to the distemper having broken out in his kennels. There was only one entry in the Irish classes. She is faulty in head, light of eyes, short of ears and not close enough in curl. In the field classes, Benedict, Black Prince, Bob, Jr., Newton-Abbott Lady and Critic, have all been fully criticised of late. They were well placed. Obo II., Young Obo, Raven, Helen and Pauline Markham were properly placed in the cocker classes. The beautiful Shina was absent. Belle, in the bitch puppy class, repeated her New Haven victory. Black Busy has a poor head, is weedy, curly and light of bone. The New Haven winners were to the front in the "any other color" classes. Dash, in the puppy class, is faulty in head, short of ear, dark in color and light of bone. Bateman was our choice for first in the Clumber dog class. He is a better dog than Jockey. A critical description of these dogs can be found in our last issue. Romp, in the bitch class, was alone. Her good and bad qualities were alluded to last week.

GREYHOUNDS—(MR. PIERSON).

Mother Demdike and Memnon saved these classes from mediocrity. Mr. Huntington, who refuses to exhibit under Mr. Pierson, did not enter his large kennel. Friday Night is strong in head and coarse in tail. Memnon, a grand dog, is a bit short between the couplings. Demdike is a bit light of bone. Dell is not a show dog. Why Guard was given a vhc. card we do not know. He is coarse all over, strong in head and straight in stifles. Honor Bright, too, did not deserve a vhc. card when competing against a bitch like Mother Demdike. She is a little weed. Stormy Night, in the puppy class, was not worth a first prize. He will develop into a black dog, but never into a greyhound.

DEERHOUNDS—(MR. PIERSON).

Mac, Lance, Lorna, Bran, Heather, Thora and Perth are all well known, and have been fully criticised of late. Mac and Perth are the best of the lot, but neither is first-class. Mr. Pierson, who has had little experience with the breed, is to be congratulated on having placed the dogs correctly.

FOXHOUNDS—(MR. KIRK).

These classes are improving and dogs of the Italian greyhound type were not so conspicuous as they generally are. Forester II. was the only champion. He has a fair good head, but is a bit leggy, open in feet, and light of bone. In the open class for dogs Dashwood, good in legs, feet and bone, and fairly good in head and body, won. Notary made a good second. He stands on good legs and feet, but is a bit plain in head and wide in front. Dixie, hc., is too fine in coat, is long cast, weedy and faulty in feet. John's color is all against him. Dixie Jim, vhc., is light of bone, he is not a modern foxhound. Stainless, the winner in the bitch class, is a niceish bitch, she is a trifle slack in the back and is too long cast, and her ears do not hang as well as they might; in legs, feet and bone she is good. Rebecca, from the same kennel, was well placed second, she is a bit out at the elbows, and not short enough in the back; her legs and feet are good. Stainless won the special and deserved it.

BEAGLES—(MR. KIRK).

Rattler and Music were alone in the champion classes; one is faulty in neck and wide in front, and the other light of bone—two fair good hounds. In the open dog class, Rattler II., too long cast and light of bone, was second to Little Duke, who was well shown. His ears are too short and are not properly carried. Leader, vhc., is out at the elbows, fine in coat and thin in tail. His ears will do. Rough, hc., is faulty in ears and is not straight in forelegs, besides which he is long cast. In bone he is good. In the bitch class, Bush, the winner, was in good condition and is a fair specimen. She is a bit faulty at the shoulders, light of bone, and open in feet. Little Beauty, placed second, is good in ear, but is too long cast. Hasty, vhc., is long cast, open in feet, and not straight enough in forearm.

BASSETTS—(MR. KIRK).

Nemours is above the average, but he is underhung—a serious defect.

COLLIES—(MR. APGAR).

Mr. Apgar's ability as a judge was fairly tested on this occasion. The very large entry (75) is the best proof that exhibitors have confidence in his judgment. In the champion dog class, the Maltese terrier-coated Robin Adair was alone and received the award. He was never a good one and grows worse with age. Zulu Princess and Effie are nice bitches, but were out of coat on this occasion. The next class was a hot one (29 entries), and the meeting of Bruce of the Fylde and Ben Nevis caused some excitement among the collie fanciers. The Boston fraternity was for Bruce, but that did not alter the result. The blue ribbon went to Ben Nevis, and after a very careful examination of both dogs, we cast our vote with the judge. Bruce of the Fylde is not clean enough in head, and he is heavy in ear and pig-jawed. He has plenty of coat, which is a bit soft on the top, and he carries his tail too high. In color, mane and frill he is good. Ben Nevis is a bit faulty in muzzle, and his ears are set on low and are a little heavy, besides which he gets his tail up higher than we like to see. They are both good-looking dogs. Talisman, vhc. and reserve, got all he deserved; he is full at the brow and woolly in coat. Scottie, though short of coat, deserved a card. His head is good. Tip's ears won't do for the show bench. Scot, vhc., has bad ears, tail and muzzle. His color is bad and he has a poor coat, added to which he is pig-jawed. He was not worth a card. Topaz is heavy in head and short of coat. Pippo has a short, sour face, and we failed to find his coat. Laddy, c., a bit plain in head, heavy in ears, and not so good in coat as we have seen him, is a much better dog than Scot. Prince is faulty in ears and short of coat. Santa Claus is full at the brow, round in eyes, short of coat. Cinder, is of the Spitz type. Pedro has a short, stumpy head and a round eye. Collie lacks character, is plain in head, and has a scanty coat. Scottie is faulty in head, ears, tail and loin. Lorne is short in head and does not carry his heavy ears well. Clyde has a soft, fluffy coat. Shep was not well shown, he lacks coat and his ears are not good. Marco was all out of coat; he has a plain head. Douglass is not good in head, his ears are heavy, and he is lippy, added to which his coat is soft and short. Hiram, hc., heavy in ears and faulty behind, deserved another letter. Craft, faulty in ears, expression, and coat, deserved his hc. card. The bitches were also good. Winnie was properly placed at the head of the class. A fair good bitch, too short and soft of coat, a bit plain in head and faulty in carriage of ears. Drumlin Isle has a short brush and is scanty in coat. We would have given second to Gem, who took the reserve card; she is faulty in ears and did not show to good advantage. Phyllis, c., is short of coat and has no mane or frill; her ears are not well carried. Lass o' Lowrie, vhc., has heavy, badly carried ears, a high carried tail and a faulty brow. Lady Hempstead lacks coat, is heavy in ear and short in face. Meg, vhc., has thick ears, a short coat and a faulty brow. Fairy is heavy in ears and faulty behind. In the dog puppy class Collie B., whose coat does not harden, had to give way to Joe Nettles, a good-coated dog, faulty behind. We cannot agree with Mr. Apgar in awarding second prize to Joker. He is a very ordinary specimen with as poor a body as we have ever seen. The bitches were better than the dogs. First went to Daisey, who was by far the best in the class. She is a little strong in head and straight in stifles, also heavy in ears. Madge, who took second, has a short tail, no undercoat, and is weedy. We preferred Kilmarnock Belle, a much better puppy, but faulty in carriage of ears. Topsey, vhc. and reserve, we do not like; she is bad at both ends. Nettie, hc., will never make a good one; she has heavy ears, does not carry them well, and is short in tail. Ben Nevis won the special for the best collie of all classes.

FOX-TERRIERS—(MR. BARLOW).

All the winners in the fox-terrier classes, with the exception of Di, were described in the report of the New Haven show. Lyra once more beat Nannie, whose mouth is gone. The New Haven winner, although but five months old, scored an easy win in the dog puppy class. Di is good in body, legs, feet and coat. She is a bit off in head and would do with more bone.

BULL-TERRIERS—(MR. BARLOW).

The winners in the bull-terrier classes, with the exception of Young Baroness, were reported on at New Haven. We did not agree with Mr. Barlow in placing Baroness over Nellie, with the exception of a good head she has nothing to recommend her. Dutch, Jr., would be a rattling good dog but for the brindle patch on the root of his tail. Young Bill should be retired. Surely the old champion has earned a rest.

BLACK AND TANS AND SKYES—(MR. KIRK).

These were poor classes, the only decent specimens being Bessie, Souter Johnny and Watty.

YORKSHIRE TERRIERS—(MR. BARLOW).

The judge did not appear to be at home with this breed. In the heavy-weight class, Dandy, the only blue and tan in the

class, should have been first. The winner had more coat, but is light on the back and without tan on head and legs.

SCOTCH, DANDIE AND BEDLINGTON TERRIERS—(MR. KIRK).

The Scotchmen, as usual, showed more Irish than Scotch character, but Mr. O'Shea says they are Scotch terriers. We incline to the opinion that they are a breed of his own—nice little dogs, but not Scotch terriers. Garry Owen represented the Irishmen. His nose is as black as indigo, and it is by no means certain he was entitled to the prize, seeing that a certain editor says the nose of the Irish terrier should be white. Erin lacks substance. This time she was down as Baron, whereas she was Aaron at New Haven. Blucher and Lillie are two of the best Bedlingtons we have seen in this country.

BULLDOGS—(MR. BARLOW).

These classes were splendidly represented. We have seldom if ever seen a better lot. Tippoo, Bellissima, Robinson Crusoe, Romulus, Rhodora, Bellona, Josephine and Boz could any one of them have out-scored anything in this country three years ago. They were fully described in this paper after the National Breeders' Show. Mr. Barlow handled them well.

PUGS—(MR. BARLOW).

These were fairly good classes, although there was nothing very good in them. Doctor, the winner in the open class, is too large, he does not carry his ears well and is faulty in muzzle. Punch, vhc., got more than he deserved. He has a long face, bad ears and white toes. Young Othello has a fair good head but is smutty in color and faulty in tail. Young Toby, vhc., should have been second, if not first. A critique on him can be found in the New Haven report. Echo, who took second, is of nice size, but is small of eyes, out at the elbows, crooked in forelegs, and is not tight enough in curl of tail. In the bitch class we thought Flossie just about the best. Dolores is very faulty in muzzle and does not carry her ears well. Lady Pilkington was not deserving of the equal second prize that was awarded her. Her toes are not black, she is long in face and her nose is not black. Tot, a well bred one, is long in muzzle. Tra-la-la was absent. The winners in the bitch puppy class should have exchanged places, Almah is much the best.

TOY TERRIERS—(MR. BARLOW).

In the class for dogs a fair Maltese, not long enough in coat, was first. Jumbo did not deserve second. His color is all right for the pit, but not for the show bench. In the bitch class Tony, a black and tan, faulty in head and markings, won. Dot, also faulty in markings, light of tan and faulty in head was placed second.

TOY SPANIELS—(MR. KIRK).

King Charles spaniels are improving. Young Prince Arthur, the winner, has a poor tail, but is good in ears and has just a fair head. Duke, placed second, is not so good in head as the winner and is thin in tail. Toronto Charlie is faulty in muzzle and short of ear. JoJo is curly, short of ear and thin in tail. The winning bitch has a niceish head and is good in color, but short of ear. Dolly, placed second, is short in the face, but her muzzle is not deep or square enough. She has a nice coat; her tail is too thin. Minnie, hc., is curly and her ears are not well placed. Blanche, hc., is long in face. Toronto Prince, vhc., is faulty in ears and carriage of same. His face is too long. The first prize Blenheim is small of eyes and short of ears. His coat is too curly, but can be improved. He has a good frill and his head will pass inspection. He is perhaps the best specimen in the country.

ITALIAN GREYHOUNDS—(MR. PIERSON).

First prize was withheld in the dog class, second going to a large specimen, faulty in head and not of good color. Among the ladies Fanny, a sweet specimen, faulty in color, took first; her opponent is much too large. The other classes call for no comment.

THE FOREMAN ROCKINGHAM MATCH.—South Attleboro, Mass., April 11, 1885.—*Editor Forest and Stream:* As Mr. Windholz has accepted my challenge to show Foreman against his dog Rockingham, I inclose draft for $50, and request him to cover it. Mr. Windholz, in accepting, expresses a desire for a match against Plantagenet too. I will gladly accommodate him, each match to be for $100 a side; Foreman against Rockingham and Plantagenet against Rockingham, to be decided at the coming New York show. Each principal to select a judge and the two judges to select a referee. I name Dr. Wm. Jarvis as my judge. Mr. Windholz will please name his judge and have him confer with Dr. Jarvis in the matter of a referee and such other detail as they may think it advisable to consider.—W. TALLMAN. [As we have often remarked, the FOREST AND STREAM does not hold stakes or forfeit money, and cannot make an exception in the present case. We shall recommend Mr. Windholz to make his deposit with our neighbor the *Turf, Field and Farm.*]

VARIOUS NOTES.—Mr. Edmund Orgill, formerly of Brooklyn, and now of Memphis, is at present in this city..... Mr. F. A. Diffenderffer, of Lancaster, Pa., passed through this city on Monday on his way to Boston. He was looking well. He contradicts the statement that he is to judge at Cincinnati. ....It was not definitely settled that Mr. Hugh Dalziel should judge at the New York show until the 13th ultimo, since then Mr. Dalziel has been ill from slight congestion of the lungs, enough to lay him up and keep him in bed. He is much better, however, and will sail from Liverpool next week....Gillies—who is bringing out a team of terriers for Captain W. W. Mackie—has in charge some prick-eared Skyes. These dogs will be shipped from Glasgow on April 10, and will be shown at the New York Show....Mr. Pierre Lorillard will enter a draft of setters from the Rancocas Kennels, N. J., in the New York show....A number of New Jersey sportsmen are talking of organizing a New Jersey State Kennel Club, with the object of holding an annual bench show and field trial meeting.

THE NEW YORK DOG SHOW.—The entries for the New York dog show closed on the 14th. It is impossible to give the number as yet, but the superintendent assures us that there will be over a thousand. Many of the most noted dogs in this country as well as from Great Britain will be present. Among the latter are the mastiffs Crown Prince, Maxmilian and Cambrian Princess, the pointer Graphic, the fox-terrier champions Spice and Delta, the collie Strephon and two bloodhounds. Capt. W. W. Mackie will also send several Scotch and Skye terriers. The special prize list promises to be the most valuable that has yet been offered. In addition to those already published there will be one of $50 for the best mastiff in the open classes, $25 each to rough and smooth St. Bernards, and many others. The Fox-Terrier Club have offered six cups, valued at $25 each. The usual arrangements have been made with the railroad and express companies, except the Adams Express Co.; they will charge full rates each way.

THE CINCINNATI DOG SHOW.—*Editor Forest and Stream:* The Cincinnati Sportsmen's Club have chartered a special baggage car of the Erie Railroad, to leave Jersey City at 8:25 P. M., Saturday, May 2, for the special purpose of bringing dogs to the Cincinnati show and returning them. No charge will be made for transportation of dogs in this car in either direction. The number of dogs in this car necessarily will be limited, and all dogs must be in crates. Space will be allotted as entries are received. A good responsible person will be appointed to superintend the car. The following appointments for judges have been made: Major J. M. Taylor will judge English, Gordon and Irish setters; B. F. Seitner will judge pointers, and Hugh Dalziel will judge all other classes. —WASHINGTON A. COSTER, Supt.

EASTERN FIELD TRIALS CLUB.—There was a meeting of the Board of Governors of the Eastern Field Trials Club on Tuesday evening at the St. James Hotel, New York. The committee on revision of running rules made their final report which was adopted. Changes were made in points of merit as follows: Pace 10 instead of 8, range 15 instead of 12, and retrieving 5 instead of 10. Retrieving will not be required in the Derby. All the stakes will be run the sameas last year. Nominations for the members' stake will require $5 forfeit with $5 additional for starters. The stake will be commenced on Thursday, Nov. 12, and other stakes on Monday, Nov. 16.

GREYHOUND CHALLENGE.—Worcester, April 13, 1885. —*Editor Forest and Stream:* I wrote you a short time ago in answer to Dr. Van Hummell's offer that I would not be able to show at Cincinnati. I have now made arrangements so that I will be able to, therefore in order that it may be proved who has the better dogs I send to the secretary of the Cincinnati dog show a check for $25, and ask Dr. Van Hummell to send a like amount and the whole ($50) to be given to the best greyhound of all classes at that show, the specials to be judged by Mr. Hugh Dalziel, judge of greyhounds at that show.—H. W. SMITH.

AMERICAN FOX-TERRIER CLUB.—The first annual meeting of this club will take place at Madison Square Garden during the coming show. Timely notice will be sent to members of the day fixed. Fox-terriers belonging to members who have not paid their initiation fee and annual dues by April 24, cannot compete for cups at this show. The cups offered by the American Fox-Terrier Club, for competition at the coming Westminster Kennel Club show, are in process of making at the factory of the Gorham Manufacturing Company. They promise to be very handsome.

GRAND DUKE.—We can add to the winnings of the bull-terrier Grand Duke, of which our monthly contemporary, the *American Kennel Register*, gives an excellent portrait in its last issue, first and special in champion class at the National Breeders' Show in Philidelphia last Autumn. By the way, the *Register*, for two successive months now has picked out winning dogs for its illustration. Its editor must have a pretty keen knowledge of what constitutes a good animal to enable him to do this.

THE CHICAGO DOG SHOW.—*Editor Forest and Stream:* The premium list of the first annual dog show of the Illinois Kennel Club, to be held at the armory of Battery D, Chicago, Ill., June 2, 3, 4 and 5, will be ready in a few days. It has been decided to make the entry fee $2. It is expected that the list of special prizes will be second to no other show held in America.—JOHN H. NAYLOR, Secretary (3182 Archer avenue, Chicago, Ill.).

"THE KENNEL RECORD."—"The Breeders' and Exhibitors' Kennel Record," advertised this week, is a very handy book for any one keeping a number of dogs. It contains blank forms for the keeping of a complete record of kennel events, and for future reference it will be invaluable.

BOSTON DOG SHOW CATALOGUES.—Catalogues of the late Boston dog show will be sent free to any one sending a stamped and addressed newspaper wrapper to the New England Kennel Club, 159 Tremont street, Boston, Mass.—J. A. NICKERSON, Secretary.

BRITOMARTIS.—Messrs. R. & W. Livingston have sold to John E. Thayer, Lancaster, Mass., the bull bitch Britomartis. An extended notice of her appeared in FOREST AND STREAM of March 19.

A NEW JERSEY DOG SHOW.—The New Jersey State Agricultural Society are talking about holding a dog show in connection with their annual fair next fall.

"SHOOTING."—Mr. Dougall's book on "Shooting" is certainly one that should be in the hands of every man who uses a gun. We can furnish a few more volumes. Price $3.—*Adv.*

KENNEL NOTES.

NOTICE TO CORRESPONDENTS.

Kennel notes are inserted in this column free of charge. To insure publication of notes, correspondents MUST GIVE the following particulars of *each animal:*

1. Color.
2. Breed.
3. Sex.
4. Age, or
5. Date of birth, of breeding or of death
6. Name and residence of owner, buyer or seller.
7. Sire, with his sire and dam.
8. Owner of sire.
6. Dam, with her sire and dam.
10. Owner of dam.

All names must be *plainly* written. Communication on one side of paper only, and signed with writer's name.

NAMES CLAIMED.

☞ *See instructions at head of this column.*

Aten's Beauty. By Dr. Henry F. Aten, Brooklyn, N. Y., for black and tan setter bitch, whelped Aug. 16, 1884, by Glen III. (A.K.R. 378) out of Nellie Horton II.

Rex Crook, Dan Crook and Maximus Crook. By Dr. Henry F. Aten, Brooklyn, N. Y., for two black and white and one orange and white English setter dogs, whelped Oct. 23, 1884, by Dashing Monarch out of Crook (A.K.R. 281).

Jessie Crook. By Dr. Henry F. Aten, Brooklyn, N. Y., for black and white English setter bitch, whelped Oct. 28, 1884, by Dashing Monarch out of Crook (A.K.R. 281).

Dozell. By Master Arthur Aten, Brooklyn, N. Y., for dachshund dog, whelped Jan. 1, 1885, by imported Fritz (Zanke—Freda) out of Zulu (Zigzag—Janette).

Count Rouge, Rex Rouge, Duffey Rouge and Aileen Rouge. By Post & Watson, Sacramento, Cal., for red Irish and Gordon setters, three dogs and one bitch, whelped Nov. 30, 1884, by their Rouge (Tigue—Beauty) out of their Dido (Ben—Jessie).

Leo Rouge. By Post & Watson, Sacramento, Cal., for red Irish and Gordon setter dog, whelped April 9, 1884, by Rouge (Tigue—Beauty) out of their Dido (Ben—Jessie).

Maxim. By Horatio L. Finch, South Norwalk, Conn., for orange and white pointer bitch, whelped Aug. 16, 1883, by Wheeler's Vic (Rush—Belle) out of Pitzer's Flirt (Sensation—Flirt).

Mabel Blue. By G. A. Coleman, Charlestown, Mass., for blue belton English setter bitch, whelped Jan. 7, 1885, by Royal Blue (Gladstone—Mersey) out of Eudora (Druid—Jess).

Argus, Jr. By C. T. Brownell, New Bedford, Mass., for Gordon setter dog, whelped Dec. 1, 1884, by champion Argus out of Zealah).

Marcella. By Walter B. Peet, New York city, for orange and white English setter bitch, whelped March 7, 1884, by Davey's imported Prince Phœbus (Tam O'Shanter—Prue) out of Stella (Paris—Lill).

Glenwood. By Walter B. and Geo. H. Peet, New York, for blue belton English setter dog, whelped Sept. 13, 1884, by Ted Llewellin (A.K.R. 599) out of Blanche Lewis (A.K.R. 581).

Ted, Jr. By Walter B. Peet, New York, for blue belton English setter dog, whelped Sept. 13, 1884, by Ted Llewellin (A.K.R. 599) out of Blanche Lewis (A.K.R. 581).

Hydrogen. By Walter B. Peet, New York, for black, white and tan English setter dog, whelped Aug. 1, 1884, by Ted Llewellin (A.K.R. 599), out of C. S. Fitch's imported Queen Bess.

Harry Crook. By A. C. Hallfisch, Brooklyn, N. Y., for orange and white English setter dog, whelped Oct. 23, 1884, by Dashing Monarch out of Crook (Carlowitz—Dell).

Goodwood Farm Kennels. By S. C. Graff, Pittsburgh, Pa., for his kennel of English beagles.

BRED

☞ *See instructions at head of this column.*

Scarlet II.—Grand Duke. F. F. Dole's (New Haven, Conn.) bull-terrier bitch Scarlet II. (Randall—Scarlet) to R. & W. Livingston's Grand Duke (A.K.R. 524), Feb. 16.

Daisy—Turk. J. L. Mott, Jr.'s, Gordon setter bitch Daisy (Glen—Fanny) to H. C. Glover's champion Turk (A.K.R. 717), March 21.

Wanda—Verone. Mill Brook Kennels' (New York) St. Bernard bitch Wanda (A.K.R. 1941) to their Verone (A.K.R. 418), Feb. 20.

Snowball—Verone. Mill Brook Kennels' (New York) St. Bernard bitch Snowball (A.K.R. 416) to their Verone (A.K.R. 418), March 6.

Ruby—Gowrie. John M. Leckley's Chesapeake Bay bitch Ruby to Geo. E. Poyneer's Gowrie, March 13.

Gypsy—Ted Llewellin. Dr. J. B. Hay's English setter bitch Gypsy to Walter B. Peet's Ted Llewellin (A.K.R. 599), January, 1885.

Blanche Lewis—Ted Llewellin. Walter B. Peet's (New York) English setter bitch Blanche Lewis (A.K.R. 581) to his Ted Llewellin (A.K.R. 599), Jan. 22.

Lurline—Ted Llewellin. Chas. S. Fitch's (Fort Washington, N. Y.) English setter bitch Lurline (Don—Daisy) to Walter B. Peet's Ted Llewellin (A.K.R. 599), March 29.

Lil—Bannerman. A. C. Krueger's (Wrightsville, Pa.) beagle bitch Lil (Warrior—Rosey) to his imported Bannerman (A.K.R. 1709), March 17.

White Daisey—Bannerman. J. E. Lord's (Gildersleeve, Conn.) beagle bitch White Daisey (A.K.R. 1828) to imported Bannerman (A.K.R. 1709), March 21.

Katie Gates—Shot. A. W. Pearsall's (Huntington, L. I.) red Irish setter bitch Katie Gates (A.K.R. 1086) to Gen. Schuyler Hamilton's Shot.

Princess Phœbus—Rockingham. Frank Windholz's (New York) imported English setter bitch Princess Phœbus (A.K.R. 1287) to his imported Rockingham (Belthus—Bess), March 7.

Grace—Count Rake II. Old North State Kennels' (Weldon, N. C.) English setter bitch Grace (Prince—Victoria) to Count Rake II. (Rake—Meg Merrilies).

Beauty—Count Rake II. Old North State Kennels' (Weldon, N. C.) English setter bitch Beauty (Sussex—Grace) to Count Rake II. (Rake—Meg Merrilies), Feb. 22.

Jill—Mixture. Surrey Kennels' (Ellicott City, Md.) fox-terrier bitch Jill (A.K.R. 529) to John E. Thayer's Mixture (Spice—Fairy III.), Feb. 28.

Clio—Black Pedro. C. A. Hamilton's cocker spaniel bitch Clio (A.K.R. 429) to Black Pedro (A.K.R. 1474), March, 1885.

Darling—Young Obo. Walter Scott's cocker spaniel bitch Darling to Young Obo (A.K.R. 861), March 30.

Belle—Obo II. Andrew Laidlaw's (Woodstock, Ont.) cocker spaniel bitch Belle to Obo II. (A.K.R. 432), March 29.

Beauty—Obo, Jr. J. P. Willey's (Salmon Falls, N. H.) cocker spaniel bitch Beauty (A.K.R. 1472) to his Obo, Jr. (A.K.R. 1487), March 3.

Daisy Zulu—Obo II. I. M. Dewey's (New Haven, Conn.) cocker spaniel bitch Daisy Zulu (A.K.R. 381) to Obo II. (A.K.R. 432), March 9.

Killarney II.—Glencho. Edward W. Taylor's (Baltimore, Md.) red Irish setter bitch Killarney II. to W. H. Pierce's champion Glencho, March 15.

Sibyl—Cæsar. Forest City Kennels' (Portland, Me.) St. Bernard bitch Sibyl (A.K.R. 797) to their Cæsar (A.K.R. 22), March 15.

Lottie—Cæsar. Forest City Kennels' (Portland, Me.) St. Bernard bitch Lottie (A.K.R. 933) to their Cæsar (A.K.R. 22), March 19.

———*Nevison.* Thos. McMurray's mastiff bitch ——— to Chas. H. Mason's champion Nevison (Gurth—Juno), March 9.

Rye—Rattler. George Leick's (Tarrytown, N. Y.) beagle bitch Rye (Ringwood—Roxey) to C. R. Hoe's imported Rattler (Chancellor—Careless), Feb. 25.

Bessie T.—Don Gladstone. Highland Kennels' (Ashfield, Mass.) English setter bitch Bessie T. (Gladstone—Floy) to their Don Gladstone (Gladstone—Juno), March 28.

WHELPS.

☞ *See instructions at head of this column.*

Blanche Lewis. Walter B. Peet's (New York) English setter bitch Blanche Lewis (A.K.R. 581), March 26, six (two dogs), by his Ted Llewellin (A.K.R. 599); all blue belton.

Daisy. H. W. Holmes's (New York) bull-terrier bitch Daisy, March 28, five (three dogs), by Grand Duke (A.K.R. 524); all white.

Birdie. N. Elmore's (Granby, Conn.) beagle bitch Birdie (King—Music), March 26, five (two dogs), by his imported Ringwood (Ranter—Beauty); all white, black and tan.

Lady Mac. G. H. Nixon's (Leesburg, Va.) pointer bitch Lady Mac (Faust—Gertrude), March 30, ten (five dogs), by Joker, Jr. (Beaufort—Nymph).

Dido. Post & Watson's (Sacramento, Cal.) red Irish setter bitch Dido (Ben—Jessie), April 9, 1884, eleven (seven dogs) and Nov. 30, 1884, thirteen (seven dogs), by their Rouge (Tigue—Beauty).

Katie Gates. A. W. Pearsall's (Huntington, L. I.) red Irish setter bitch Katie Gates (A.K.R. 1086), March 24, seven (four dogs), by Gen. Schuyler Hamilton's Shot.

Me-Dina. G. F. Clark's (St. George's, Del.) English setter bitch Me-Dina (A.K.R. 824), March 26, six (three dogs), by his imported Lava Rock (A.K.R. 369).

SALES.

☞ *See instructions at head of this column.*

Psyche. White bull-terrier bitch, whelped Jan. 16, 1885 (President—Scarlet II.), by Frank F. Dole, New Haven, Conn., to Ernest R. Adee, West Chester, N. Y.

Konig. Rough-coated St. Bernard dog, whelped Oct. 13, 1884 (Hermit, A.K.R. 24—Theon, A.K.R. 94), by Mill Brook Kennels, New York, to Mr. Harper, same place.

Kara. Smooth-coated St. Bernard bitch, whelped Oct. 11, 1884, by imported Mentor II. out of Brunhild (A.K.R. 29), by Mill Brook Kennels, New York, to J. Leighton, same place.

Patsey Rouge. Red Irish setter dog, whelped July 13, 1882, by Shokoe (Don Zooler—Mollie Plunkett) out of Dido (Ben—Jessie), by Post & Watson, Sacramento, Cal., to Dr. J. Clark, Woodland, Cal.

Rex Rouge. Red Irish and Gordon setter dog, whelped Nov. 30, 1884 (Rouge—Dido), by Post & Watson, Sacramento, Cal., to P. C. Jurgens, Traver, Cal.

Duffey Rouge. Red Irish and Gordon setter dog, whelped Nov. 30, 1884 (Rouge—Dido), by Post & Watson, Sacramento, Cal., to Patsey Duffey, same place.

Rouge—Dido whelps. Red Irish and Gordon setters, whelped April 9, 1884, by Post & Watson, Sacramento, Cal., a dog to James Conroy, Salt Lake City, Utah Ter.; a dog to Dr. J. Clark, Woodland, Cal.; a dog to Geo. Davis, Salmon Falls, Cal., and a bitch to Samuel Lawson, Sacramento, Cal.

Leo Rouge. Red Irish and Gordon setter dog, whelped April 9, 1884, by Rouge (Tigue—Beauty) out of Dido (Ben—Jessie), by Post & Watson, Sacramento, Cal., to H. Washburst, same place.

Rouge—Dido whelps. Red Irish and Gordon setters, whelped Nov. 30, 1884, by Post & Watson, Sacramento, Cal., a dog to Jas. Gannon, San Francisco, Cal.; a dog to Carey Barney, Woodland, Cal.; a bitch to Dr. J. Clark, Woodland, Cal., and a bitch to Howard Campion, Napa City, Cal.

Hydrogen. Black, white and tan English setter dog, whelped Aug. 1, 1884, by Ted Llewellin (A.K.R. 599) out of C. S. Fitch's imported Queen Bess, by Walter B. Peet, New York, to R. H. Smith, Dunkirk, N. Y.

Ted Llewellin (A.K.R. 599)—Blanche Lewis (A.K.R. 581) whelps. Blue belton English setter bitches, whelped Sept. 13, 1884, by Walter B. Peet, New York, two to G. E. Osborn, New Haven, Conn., and one to B. W. Prentice, Worcester, Mass.

Cleo. Lemon and white English setter bitch, whelped May 26, 1884 (Robin Hood, A.K.R. 1461—Leah, A.K.R. 1284), by J. R. Housel, Watsontown, Pa., to W. A. Stauf, Baltimore, Md.

Pickwick. Black, white and ticked English setter dog, whelped May 26, 1884 (Robin Hood, A.K.R. 1461—Leah, A.K.R. 1284), by J. R. Housel, Watsontown, Pa., to W. A. Stauf, Baltimore, Md.

Gem—Pearl Blue whelp. Black, white and tan English setter bitch, whelped Feb. 9, 1885, by Charles York, Bangor, Me., to W. B. Peet, New York.

Rosey. White, black and tan beagle bitch, whelped Nov. 21, 1883 (Mark Antony—May Belle), by Pottinger Dorsey, New Market, Md., to A. C. Krueger, Wrightsville, Pa.

Bannerman—Floss whelp. White, black and tan beagle dog, whelped Feb. 11, 1885, by A. C. Krueger, Wrightsville, Pa., to S. Jacobs, same place.

Zealah. Gordon setter bitch, age and pedigree not given, by P. H. Hadley, Marion, Mass., to C. T. Brownell, New Bedford, Mas.

Beauchief. Liver and white pointer dog (A.K.R. 1773), by Surrey Kennels, Ellicott City, Md., to Otis A. Worthington, Cooksville, Md.

Surrey Will. Fox-terrier dog (A.K.R. 1905), by Surrey Kennels, Ellicott City, Md., to Associated Fanciers, Philadelphia, Pa.

Joker, Jr.—Viola whelp. Lemon and white pointer dog, whelped Oct. 17, 1884, by Surrey Kennels, Ellicott City, Md., to W. H. Cookson, Hudson, N. Y.

Surrey Ned. Fox-terrier (A.K.R. 1903), by Surrey Kennels, Ellicott City, Md., to W. B. Brueckner, Cincinnati, O.

Ringwood—Maid whelp. Beagle bitch, whelped Aug. 27, 1884, by N. Elmore, Granby, Conn., to Chas. Brooks, Birmingham, Conn.

Ringwood—Gay whelp. Beagle dog, whelped Jan. 13, 1885, by N. Elmore, Granby, Conn., to Warren Cammett, Osterville, Mass.

Zoo. Black and white English setter bitch (A.K.R. 1830), by Edward Butters, Lynn., Mass., to Chas. Nutting, same place.

PRESENTATIONS.

☞ *See instructions at head of this column.*

Ted, Jr. Blue belton English setter dog, whelped Sept. 13, 1884 (Ted Llewellin, A.K.R. 599—Blanche Lewis, A.K.R. 581), by Walter B. Peet, New York, to Chas. M. Donnelly, same place.

Miss Belle. Pointer bitch, whelped Jan. 5, 1885 (Bruce II., A.K.R. 695—Mistletoe, A.K.R. 1254), by J. W. Houston, Stewart, Neb., to John T. Taylor, same place.

DEATHS.

☞ *See instructions at head of this column.*

Nicholas. Lemon and white English setter dog (A.K.R. 1957), owned by Prof. R. M. McIntosh, Oxford, Ga.

Katydid II. English setter bitch, whelped April 7, 1883 (Dash III.—Katydid), owned by Eugene A. Austin, Providence, R. I., March 10, from poison.

Countess. Imported beagle bitch (A.K.R. 1713), owned by A. C. Krueger, Wrightsville, Pa., from rupture.

Cyrus. Lemon and white English setter dog (A.K.R. 1949), owned by Prof. R. M. McIntosh, Oxford, Ga.

KENNEL MANAGEMENT.

☞ No Notice Taken of Anonymous Correspondents.

C. F., New York.—I have a young Newfoundland puppy. She is four months old and although she eats plenty she is very thin, her appetite variable, her spirits the same. Please give me your advice on the subject? Ans. Watch the habits of your puppy. Satisfy yourself that she is not passing worms, that she is not suffering from distemper. These being excluded, her symptoms may be due to the evolution of her sexual organs. In such cases a tonic and strengthening diet is called for, soups with bread, some cooked meat in meal and so on. Also give five drops of Fowler's solution of arsenic twice daily in the food for two weeks.

J. H. H., Glenville, Conn.—I have a valuable three-year-old dog weight 65 pounds. He at times seems to lose all or nearly all action of his limbs, bunches up his back, staggers, becomes weak, but lies down when told. Consciousness unimpaired No whining or growling attending these convulsions. His health is good otherwise. When he barks he carries his head sideways and shakes his head and ears as if something there was wrong. He had those turns last summer, and has had four this year so far. Ans. Your dog suffers from chorea. This may have come from dysentery, diarrhœa or worms. He may have canker in the ears as well. Examine them carefully. For the chorea give five grains of the valerianate of zinc in the food three times daily for two weeks, and then discontinue it, and commence giving ten drops of nux vomica tincture morning and evening in sweetened water or milk. Continue this for three weeks. If he suffers from canker, use the lead and opium wash which every druggist keep.

C. H., Erie, Pa.—My setter has been troubled with sore eyes this spring. At first the inflammation was inside, now it is in the eyelids. They are very much swollen and seem to have a watery matter in them. He rubs his head a great deal with his paws and against different articles. His spirits seem to be good. I have consulted a D. V. S. but would prefer your opinion. He also has and has had for some time at intervals, lumps, small, on his nose, generally on the bridge. Ans. Have your druggist put up a prescription as follows: Sulphi carbolate of zinc, 10 grains, laudanum, 1 drachm, rose water or distilled water, 2 ounces. Mix. Drop two or three drops into the eye after pulling the lower lid forward. Do this twice daily. If it seems to smart, dilute a little. The "humors" may be the stopped up ducts of the sweat glands due to the condition of the skin, or they may be from flea bites if the skin is very tender. In either case a borax and glycerine wash would be beneficial, a teaspoonful of borax and a tablespoonful of glycerine to a teacup of water.

F. G. H., Galt, Ont.—My setter dog that I am having fitted for the American shows does not come readily into shape. All winter his coat has been rough and dry. Nose at times dry and warm. Eyes sometimes quite red, at other times normal. Appetite good, keeps fat (too fat) on but a moderate meal of meat and meal once per diem. Appears to feel well, is playful, etc. Have given him castor oil followed by 120 grains of areca nut and repeated, without any appearance of worms. What is wrong and how cured? Ans. Give your dog at once a dose consisting of ½ ounce castor oil and ½ ounce syrup of buckthorn. Feed him on vegetables and buttermilk, about one pint of the latter per diem. Give him plenty of exercise, letting him run as much as possible after a wagon. Give also daily with food 5 drops of Fowler's solution of arsenic in his food. At the end of a week increase to 10 drops and at the end of another week to 15. Then reduce gradually to 5 drops again and stop the treatment. The treatment should be entered on at once if he is to be conditioned for the American shows. You have but little time.

E. G. K., Williamsport, Pa.—Will you please inform me through answers to correspondents column of FOREST AND STREAM, first, if "Hallock's Gazetteer" is right or wrong where it says that true distemper rarely if ever occurs in the United States? Second, is true distemper characterized by any symptoms or developments at certain stages of the disease, that distinguish it from all other diseases of a similar nature? Am about to lose a beautiful and valuable spaniel puppy and am "groping for light." Ans. The distinction between true and false distemper has never been clearly pointed out, if such distinction exists. The disease is pleuro-pneumonia of a virulent and infectious type, starting as a naso-pharyngeal catarrh, traveling down the air passages and consolidating the lungs; with it are nervous symptoms, as twitchings and finally convulsions. A fully developed distemper has its diagnostic points, which should not puzzle a professional, but are not easily appreciated by the laity. They depend principally upon the physical signs in the chest produced by the disease.

J. B. R., Texas.—I have a pointer bitch 5 months old, which appears to have some trouble inside of her ears though nothing wrong can be seen on the outside or as far as I can see in. There is no discharge. She is continually rubbing them with her paws as if something was in them she wished to get out. 2. I am having great trouble with her from gun-shyness. Can this have any connection with the ear trouble? When I first got her I used the "tin pan banging" scheme and she did not mind the noise in the least, but she just bates the report of a gun no matter how light the charges. She has no reason to be afraid of the gun. Ans. 1.—Your bitch apparently has canker in some form or other and we should be inclined to recommend the following treatment. Goulard's extract of lead 4 ounces, laudanum 2 drachms. Mix. Apply twice or three times daily on piece of cotton or sponge, having first cleansed the ear with warm water and soap and dried carefully. 2.—It does not seem likely that the local trouble has any connection with the gun-shyness. The latter is probably due to nervousness. It can no doubt be cured by patience, but unless you have a strong affection for the dog it would probably be better to get another one which was not so timid. If you are determined to try to cure her, follow the method laid down in "Training vs. Breaking."

Rifle and Trap Shooting.

OLD DOMINION RIFLE PRACTICE.

Editor Forest and Stream:

It has long been my purpose to send you something descriptive of the mode of rifle shooting—or rather the kind of target used by our riflemen—which is now, and has been in vogue in the mountains of Virginia for many years, and which the oldest hunters tell me, was handed down to them from a previous generation. The wind gauge, the globe sight and many other appliances have been invented since this system was adopted, and are, no doubt, very good things in their places, but to my mind, the old-fashioned way is the best. It at least has the merit of simplicity, is founded in common sense, and the experience of many years has confirmed its use. I do not know any better definition of it than to call it the "adjustable target." The principle is this, viz.: that instead of having a fixed center—and artificial implements to meet certain conditions of wind, light, etc.—the same ends are attained by a movable center or movable object at which the gun is aimed.

To illustrate. The modern target is composed of a certain number of rings at fixed distances from a round spot, called the bullseye, and the center of this bullseye is the true center of the target. The target of which I speak, is a simple piece of paper, usually white, of any size you may choose, tacked upon a black surface, usually upon a piece of burnt board. The center is any point that the shooter may select, and designate by a cross mark, thus ×, anywhere on the board, either taking the true center of the paper, one corner, or above, below, or either side of the paper, and at any distance from it. This cross mark is cut into the board with a penknife, and in shooting a match there is to be but one such mark on the board. We will now suppose the shooter to be ready to shoot his match. Having made a trial shot he discovers that, from some cause, wind, light, or some other cause, the ball has struck to the left of the mark, say one-half inch, on a horizontal line with the true center of the mark. He now moves his paper from that position, and tacks it to the board at another place, and makes his cross mark or center in the same relative position that the former bullet hole occupied to the paper.

Now it is evident that if all the conditions are just as when he fired the first shot, and his gun is reliable, he will shoot exactly in the same spot relatively that he shot the first time, and will knock out the center, and every ball so fired, under like conditions, will do the same thing. And while the shooter will never touch the object at which he is aiming, he may yet be doing splendid shooting, that is, regular shooting, showing that his aim is good, his nerve steady, and that the reason he doesn't hit the object aimed at, is because of the light, the wind, or some other extraneous cause which he cannot control. Here, it will be seen, is a natural way to accomplish all that the wind gauge is intended to do. The same process can be used to counteract the deflection occasioned by the trajectory. If the target be placed at a distance equal to the highest point of the trajectory, the ball will of course strike above the object aimed at, and if the sights be true, and the wind and light are right, the center should be marked above the object aimed at on the vertical line passing through the center of the object. The guns used by our sturdy mountaineers are generally the old-fashioned Kentucky muzzleloading rifles, long of barrel and 38 to .44-caliber. The front sight is usually of brass or silver, and this is one reason why the character of the light prevailing at the time of shooting forms such an important part in the results, and is an element that must be consulted. A person shooting one of these guns, or any gun with a bright metal front sight, with the sun on the right-hand side of them, will shoot to the left, and *vice versa*. This is partially avoided by using a shade of light sheet iron over both sights when the sun is shining very brightly, and all of our best marksmen endeavor to have the range over which they are to shoot located in such a way as to shoot directly toward the sun.

My experience and observation teach me that there is no one element that should be as closely watched and studied as the light. I prefer a day when the sky is overcast with a regular cloud, and the sun completely obscured otherwise. Unless the shooter moves his position with the movement of the sun, he cannot do regular shooting with any gun.

I went out one afternoon this winter with my old rifle. The sky was overcast, and not a breath of air stirring. I tacked a No. 12 gun wad on a piece of black board, and at 25 paces off-hand I sent seven bullets consecutively into the lower edge of the wad, every one of which could have been covered with the wad itself. I went one afternoon afterward when it was clear and bright, and over the same range I shot the same number of bullets, and at the same sort of a target, and while they all covered a space very little larger than the first mentioned target, they were at least a half inch to the left of the wad and lower than the others. Now if I had been shooting a match, according to our mode here, I should, on the second occasion, have made my center or cross mark at the point where the first bullet struck, and in the case of the first experiment would have had the intersection of my cross mark or my center in the lower edge of the wad. In both cases the shooting would, under our rule, have counted the same, although in the second instance I would not have touched the wad or object aimed at with a single ball, and if the center of the wad had been the center of the target would not have made a single center or been within an inch of it. If you know that the sights of your gun are properly adjusted, and, under favorable conditions of light and wind, you don't strike the object aimed at, you can at once conclude that your aim was defective; that the fault is not in the gun but in you. But how often is it that a man goes out with a rifle, and, without noting the conditions prevailing at the time, shoots wide of the mark, and tries to correct the trouble by "making allowances" in his next effort, and finally retires disgusted with his gun or with himself, or both.

To beginners in rifle practice I recommend the system I have attempted to describe, and will say to them, aim the same way every time, and mark your center where the ball first strikes, and if each successive shot strikes in or about that point you may know that you are not in fault. Careful experiment of this sort will insure regular shooting.

The temptation to try to overcome the prevailing causes of your apparent want of accuracy by "making allowances" by the eye, will result in no good. No man at 60yds. can overcome these difficulties by aiming to the right or left, above or below, the mark. My rule is to raise my gun until the line between the bottom of the object and the board upon which it is placed is reached and then fire. I don't attempt to find the center of the object aimed at (I prefer a square object to a round one), but "draw black and white," as our old mountaineers term it, and by doing this you will achieve regular shooting. Of course the modern target can be used as well as the one I have described, provided the exact point at which the center is to be designated is determined upon before the match begins, but by having the object aimed at movable, it can be moved to any position during the match without disturbing the center or cross mark. It frequently becomes necessary in variable light and wind to move the paper or object several times in the course of a match. I have seen matches begun with the cross mark covered by the paper, and before all the shots were fired the paper or object would be from half-inch to one and a half inches from the cross mark or center.

No doubt this system is well known to many of your rifle readers, but it is, in all probability, unknown to a great many. I have prepared this in order to show how our forefathers contrived to do, by a very simple and natural process, what science has accomplished by the use of costly, complicated and delicate machinery. The only difference is that by the modern appliances the object aimed at can be approached by the bullet more nearly under unfavorable conditions of light and atmosphere, but as a test of accuracy in aim, nerve and the other requisites of good marksmanship, they are not as good in my opinion as the plan I have described. WHACK.

STAUNTON, Va., March 20.

RANGE AND GALLERY.

BOSTON, April 11.—There was a fine attendance at Walnut Hill today, and the weather conditions were good. The wind was from 6 to 10 o'clock and the light rather bright. On and after Thursday, April 16, the range and regular match will be open for competition on Thursdays and Saturdays. The spring meeting will occur May 28, 29 and 30. Below are the best scores to-day, together with the result of a team match shoot with the Minneapolis Club, April 2.

SPRINGFIELD, Mass.—The Rod and Gun Rifle Club shot a telegraphic match against the Massachusetts Rifle Association on Saturday, April 11. Teams of 10 men, 10 shots each, 200yds., off-hand, Massachusetts decimal target. The wind blew a gale here from 4 to 6 o'clock quarter, and played havoc with the scores. The match was interesting, as it proved to be an individual test of small calibers and light bullets against .40 and .45-cal., with 300 to 500-grain bullets, shot from military and sporting rifles. The Farrow Fire Arms Company, which has lately started here with the champion marksman Capt. W. Milton Farrow as manager, had a new .32 cal. rifle in the match, using 45 grains of powder and 185 grains of lead. It is claimed for this rifle that with flatter trajectory, greater velocity and less recoil, the ordinary marksman can improve his scores from 10 to 25 per cent. This rifle was the victor in this gale of wind, beating two Bullards, four Ballards, two Maynards and one Springfield. The following are the scores:

W H Farrow	10	10	5	6	7	8	10	10	10	5—81
M W Bull	5	7	10	10	7	7	9	8	8	7—78
J D Marks	10	8	10	3	5	5	9	8	6	9—73
T B Wilson	6	8	7	9	5	10	8	6	2	6—67
Z C Talbot	4	5	10	7	4	7	4	7	7	9—64
E T Stephens	9	6	7	4	8	6	9	6	4	9—59
H K Cooley	5	5	0	0	10	6	6	8	6	8—54
L H Mayott	4	5	4	4	5	5	4	6	8	3—48
S S Bumstead	2	3	3	4	5	4	4	7	7	5—44
F R Bull	4	6	2	3	6	2	4	5	5	3—40—608

The Massachusetts Association was victorious with the grand total of 703. A sweepstakes followed, five shots each, same targets and conditions, with the following result:

Capt Farrow	9	10	8	7	10	—44	F R Bull	4	6	4	9	7	—30
J D Marks	5	8	7	10	9	—39	J H Bullard	5	5	3	8	2	2—5—28
F B Wilson	4	4	8	8	7	—31	J J Neeson	3	2	9	2	2	3—5—23
Z C Talbot	5	4	4	10	7	—30							

The rifles used by the different marksmen were: Capt. Farrow, the new Farrow, .32 cal.; M. W. and F. R. Bull, Bullard, .40-cal.; J. D. Marks, Z. C. Talbot, E. T. Stephens and L. H. Mayott, Ballard, .38-cal.; T. B. Wilson, Springfield; H. K. Cooley, Maynard, .32-cal.; S. S. Bumstead, Maynard, .40-cal., and Springfield.

BRATTLEBORO, April 3.—There was a good attendance at Oak Grove Range on Fast Day (April 3), and some good scores were made by the Brattleboro Rifle Club on a Massachusetts target, 200yds., off-hand:

Cobb	12	12	11	12	11	12	10	11	12	11—114
Hone	11	12	12	12	10	11	10	11	12	11—112
French	11	11	12	10	12	11	12	11	10	11—111
Taft	11	11	10	11	12	12	12	11	10	10—110
Hannon	11	11	11	10	10	10	9	10	12	11—105
Stearns	10	11	11	11	9	12	10	8	12	11—105
Cook	11	11	9	11	12	11	11	6	9	12—103
Barnes	11	10	8	11	11	10	10	10	12	8—101
Thorn	11	11	12	9	11	10	8	9	9	10—100
Whitney	10	8	9	8	8	9	11	11	9	11— 94
Parker	10	10	7	8	12	11	10	9	8	7— 92
Powell	10	9	8	11	10	9	11	9	10	4— 91
Jones	11	12	7	9	8	8	9	4	9	10— 87

CONLIN'S FINE RECORD.—Billiards, bowling and shooting vie with each other in securing the patronage of the frequenters of New York's "white elephant." The interest given to shooting has shown a marked increase lately, and every evening the rifle ranges, managed by J. S. Conlin, the vetern rifleman, have been used to their utmost. The varieties of targets at the disposal of the shooters are seemingly innumerable and the rifles and pistols of all the popular manufacturers are used. Noted marksmen as well as beginners are patrons of the place. The "crack" shots delight to show their prowess, and the beginners persevere with more or less success. The proficiency attained by many of the marksmen are duly attested by their scores which equal, if not, in some cases, excel any records ever made elsewhere. The following may give the reader an opportunity of judging their merits. The following scores were made with rifle at 200yds., Creedmoor target, reduced for the range:

	Bullseyes.	Shots.		Bullseyes.	Shots.
D Crocker	100	100	Whiting Arnold	34	35
N T Brisac	100	100	R Lockhart	38	30
J E Soule	89	90	F F Kinney	40	40
J S N Crane	50	50	G N Bliss, Jr.	20	20
E E Tiffany	49	50	W E Livingston	10	21
Wm Kelley	64	66	J F O'Connors	38	40
G N Bliss	62	63			

The following named gentlemen made full scores in 10 shots with rifle at 200yds., Creedmoor targets reduced for the range: Thomas Doolittle, J. J. Kelley, H. Matlege, R. N. Madden, F. S. DeForest, G. D. Coen, Barrie Jarrett, J. F. O'Connors, J. W. Cochran, H. Billini, C. S. Toule, J. H. Matthews, Leon DeBost, H. F. Hermance, C. A. Zummis, W. W. DeForrest, S. N. DeForrest, F. P. Keene, A. S. Watson, E. F. Wright, N. P. Gardner, H. M. Bradhurst, C. W. Minor, S. E. Johns.

The following scores were made at the noted French targets, possible 49: N. F. Brisac 49, A. S. Watson 46, G. D. Coen 44.

Scores at Swiss man target: N. F. Brisac and D. Crocker full scores, A. S. Watson 8, J. H. Gregg 10.

Scores at Teaser target, possible 35: N. F. Brisac 35, D. Crocker 35, H. G. Gardner 33, H. M. Bradhurst 32, E. F. Keller 29½, T. A. Holcomb 29.

MANCHESTER, April 1.—The riflemen of the Manchester Rifle Association turned out in good numbers to-day and enjoyed an afternoon of rare sport. The scores made are given below, 3 cards, 7 shots, possible 105:

Creedmoor Target—Practice Match.

C D Palmer	33	33	33—99	J S Cole	28	29	29—86
E C Paul	30	31	33—94	W Graham	27	28	29—84
J Hodge	30	30	31—91	E Parridge	27	27	—54

Creedmoor Target—Match A.

T C William	32	33	33—98	John Mason	27	29	29—85
L W Colby	31	32	32—95	C D Palmer	32	32	—64

THOMASTON, Conn., April 11.—At the weekly shoot of the Empire Gun Club to-day the weather conditions were a strong, gusty 9 o'clock wind. Position standing, off-hand, 200yds., Massachusetts ring target:

G P North	12	12	11	11	9	10	10	10	11	11—107
W H Dunbar	10	8	7	12	10	11	9	10	10	8— 95
F Carr	9	11	10	12	6	10	10	6	11	7— 92
C F Williams	6	7	10	12	8	11	10	6	10	7— 90
C L Alling	3	10	10	9	11	10	10	8	9	6— 84
Fred A Perkins	6	8	9	3	10	6	12	9	5	9— 76

CREEDMOOR.—The fall meeting at the range of the National Rifle Association will begin on Sept. 16 and last eight days. Several changes were made in the programme of last year. The fee in the match for the directors' championship gold badge was reduced to $3. Six entries will be allowed in the Judd match, and the cash prizes were raised from $100 to $315. To the Wimbledon Cup match $50 in four prizes was added. The President's match for the military championship of America will present 52 prizes and $700. Ten shots instead of seven will be allowed in the Shorkley match. The awards in the Governor's match were increased to $200. In the all-comers' and marksmen's badge match the prize will be $250, and the match will be shot only with .50-caliber rifles. A team match of four was substituted for the Jones match of last year, with prizes of $80, $60, $40 and $20, with six points allowed for military rifles.

RICHMOND, Ind., April 4.—The first shoot of the Richmond Rifle Club held to-day: Mahlon Hampton won the gold badge and John F. Howley the silver one. The score out of a possible 50 was as follows: Hampton 41, Howley 36, Johnston 35, Snavely 32, Goth 31, Saunders 30, Sharik 30, Holton 29, Hutchinson 29, Pennell 29, Morris 29, Converse 24, Lynde 18. The next shoot will be on the 25th of April. The one-armed shooter Snavely did very well, but Morris, with a broken wrist from roller skating, did not hold up to his record. The club will soon shoot a telegraph match with the Indianapolis Club.

A QUESTIONABLE SUGGESTION.—Boston, April 6.—There seems to be considerable prejudice against the .22-caliber rifle for light sporting purposes. This is perhaps on account of its lacking range and penetration or killing power. Couldn't these defects be remedied by making the shells 7/8in. long, if necessary, substituting pyroxyline (gun cotton) for powder, and making the bullets 10 or 15 grains heavier. Undoubtedly this would not do in a larger caliber on account of the great power of gun cotton, but in so small a caliber the recoil and the strain on the piece would be very slight. What think some of your older correspondents about the use of gun cotton in a .22 rifle.

G. B. YOUNG, of Columbus, asks whether any of the cartridge makers make hollow or express balls for the Baker combined shot and rifle gun, .44-cal.

A FIRE in the warehouse of John P. Moore's Sons, on April 9, did several thousand dollars damage, mainly in fishing tackle and such.

THE TRAP.

Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

WASHINGTON HEIGHTS VS. ENGLEWOOD.—A clay-pigeon match took place at Englewood, N. J., on the 11th inst. between the above clubs at 10 birds each, resulting in favor of the Englewood team. The following is the score:

Englewood Gun Club.		Washington Gun Club.	
H Van Brunt	0100011111—6	Glasser	0111100000—4
Townsand	1110101101—7	Cassiberry	1011111101—8
Heritage	1111101111—8	Disbrow	0101111110—7
Eichenburg	1111110011—8	Van Schaick	1111110011—8
Wells	0110101110—6	Terwilger	1111101101—8
Kelly	1011001111—7	Laudly	0000111111—6

M Baker	1111111011—9—77	Fountain	1110106111—7—69

MINNEAPOLIS, April 3.—There was a fair attendance of sportsmen and spectators at the weekly shoot of the Minneapolis Gun Club this afternoon, considering the poor weather. A stiff breeze was blowing from the northeast, and it was disagreeably cold, which made it anything but pleasant for a man to shoot in. After several matches came the shoot for the gold medal at 20 Peoria blackbirds, 18yds. rise. The match was won by Charles H. Russell. The score is appended:

Kreuger	1111110100100000011—11	Latz	0101001011110010101—11
Elliott	0111111010111011101—15	Penfield	1111111101010111111—17
Lawrence	1110001101111111011—16	Hoblitt	1031111011111111111—16
Cassedy	0101011111101111100—14	Pratt	1110111000010100101—11
Russell	1111111111101111111—19		

HARRISTON, Ont., April 3.—The members of the North Wellington Gun Club had a practice shoot at Palmerston to-day, at clay-pigeons, Peoria blackbirds and snowbirds. The following is the scores:

First shoot—5 clay-pigeons, 31yds. rise: L. H. Clarke 4, J. Craig 4, Dr. Stewart 2, W. H. Lingwood 3, A. Irvine 5, A. Hemley 3, Wm. Carthew 5.

Second shoot—5 Peoria blackbirds, 18yds. rise: L. H. Clarke 4, J. Craig 3, Chas. Milne 3, A. Irvine 4, W. H. Lingwood 2, A. Hemley 2.

Third shoot—20 snowbirds, 18yds. rise: L. A. Clarke 16, J. Craig 10, Chas. Milne 11, A. Irvine 18, W. H. Lingwood 12, A. Hemley 10.

THE NATIONAL GUN ASSOCIATION.

THE National Association is rapidly overcoming the friction incident to a new undertaking, and notwithstanding the inevitable criticisms and objections that must be expected, refuted and overcome, meets with an extent of hearty co-operation and encouragement, much greater than its projectors had any right to expect.

The Cincinnati Independent Shooting Club have adopted the trap shooting rules of this Association.

Mr. Washington A. Coster, of Flatbush, L. I., has duly qualified as a director of the Association.

We answer numerous inquiries as to the National Gun Association hand book, containing history, constitution and by-laws, trap shooting rules, etc. Arrangements have been made to place same on sale through all the news companies, so that a copy can now be ordered through any news dealer.

As to the arrangements of traps as adopted at New Orleans, note the following cut:

The arrows—full lines—indicate the directions toward which the arms of traps point before being set and toward which the birds should fly.

As to the tournaments to follow the Springfield, O., May 5 to 9 tournament, definite action will be taken at the meeting at Springfield, May 4. Kansas City, Mo., Worcester, Mass., and Philadelphia, Pa., will probably be named for the places. Formal applications and invitations from clubs to hold the tournaments in their vicinity will be then and there acted upon.

Arrangements for reduced rates to the Springfield tournament have been made with the L. S. & W. C. C. & I., and N. Y., Penn. & Ohio railways, as follows: Pay full rates going and one cent per mile returning, upon presenting a certificate signed by the secretary of the Association, obtained on the grounds.

On May 20 the secretary of the Association will open a New York office, where he will be joined about June 1 by Capt. A. H. Bogardus, with the assistance of the New York city members of the Association. A Bogardus Gun Club will be there established, suitable club rooms and shooting grounds secured, etc. It is proposed in the course of time to divide the shooters of the Association geographically into four subdivisions or clubs, as follows: The East, with New York city as a center; the West, with Chicago as a center; the South, with Louisville or Nashville as a center; the Pacific Coast, with San Francisco as a center; in each of which centers a large gun club will be established, which will tend to centralize and promote friendly rivalry in shooting contests between the most distant shooters.

NEW YORK, April 11.—A pigeon-shooting match for $500 a side was shot to-day on the Hackensack Meadows between Mr. J. H. Jordan, of Indiana, and Mr. F. Schwab of New York city, which Mr. Jordan won somewhat easily. The conditions were to shoot at 200 birds each, at 26yds., from three ground traps, with an ounce and a quarter of shot. Mr. Jordan was a strong favorite, owing to his recent successes at Washington and Philadelphia, where he won with scores of 48 and 47 killed out of 50 to his opponents' 46 and 46. The score to-day was as follows:

Jordan—11111, 11011, 11111, 10111,11110,01111, 10111, 10111, 11111, 11111, 11111,11111,11111, 11111, 11111, 11111,11111, 11001, 11111, 11111, 11111, 11111, 11011,11111,11111, 11010, 11111, 11111,11111, 11111, 11111, 11111, 1110, 11111, 01110,11111,01111, 11111, 11111, 11101. Total, 200; killed, 185; missed, 15.

Schwab—11111, 10101, 01111, 11111,11111, 11111, 11111, 11111, 00111, 11111, 11111,11111,11101, 01111, 11111, 11111,11100, 10011, 11110, 11111, 11111, 11111, 11111,11111,01111, 10111, 01101, 11110,11111, 11111, 11110, 11101, 11111, 01011, 11111,11111,01000, 11111, 01111, 11110. Total, 200; killed, 173; missed, 27.

Mr. Jordan used a Scott gun weighing 9¼ pounds, with two sets of barrels. Mr. Schwab used a gun by Dougall that weighed 10 pounds. Efforts are being made to arrange a match between Mr. Jordan and Fred Erb, who is now in Indiana.

STAUNTON GUN CLUB.—Staunton, Va.—Club shoot, April 8, 10 clay-pigeons: A. Ayres 10, B. D. Tams 10, C. M. Whittle 10, T. Bissell 9, E. F. Wayman 8, T. F. West 8, M. M. Allen 7, E. Echols 7, H. B. Brown 7. April 9: J. M. Carroll 7, L. F. Abby 6, C. Bargamin 6, E. Berkeley 6, M. A. Cushing 6, C. Berkeley 5, C. L. Cooke 5, T. J. Crowder 4, P. A. Baylor 4.

WELLINGTON, April 11.—The various events shot by the Malden Gun Club at Wellington to-day were won as follows: 1. Five blackbirds—Snow first. 2. Five pigeons—Snow and Black first. 3. Three pair pigeons—Martin and Snow first. 4. Five blackbirds—Parker first. 5. Five blackbirds—Snow and Stanton first. 6. Five pigeons—Black first. 7. Three pair blackbirds—Parker and Loring first. 8. Five blackbirds—Loring first. 9. Five pigeons—Snow and Stanton first. 10. Five blackbirds—Shumway and Snow first. 11. Five pigeons—Shumway and Snow first. 12. Seven blackbirds, straightaway—Parker and Snow first. 13. Seven blackbirds—Snow first.

CLEVELAND, O.—A novel contest for $2,000 in cash prizes has been announced by the Chamberlin Cartridge Co., to commence April 10 and continue until Aug. 31. The shooting is to be at 50 single rises and 25 pair doubles, Clay-pigeons are to be used and the contest is open to the world, baring only Bogardus and Carver. A peculiar feature of this tournament and one that cannot fail to be especially gratifying to sportsmen is that every club or individual can enter the contest and shoot the score or scores on their own grounds, they can make as many trials for a perfect score as they see fit, and when they have a record that is satisfactory a copy of it can be sent to the Chamberlin Cartridge Co., accompanied by a certificate from two responsible judges and a referee certifying to the correctness of the score, when it will be entered on the score book in competition. When all the competition scores are in, those who have tied for the several prizes, there are six in all, will be notified, the ties will be shot off at Cleveland in October, when all the crack shots will meet each other for the final and decisive contest.

PHILADELPHIA GUN CLUB.—The Philadelphia Gun Club will hold its spring meeting at Andalusia, Pa., on Thursday and Friday, April 16 and 17. The card of events is as follows: Firt day—Single bird match, at 10:30 A. M., 10 birds, 30yds. rise, 3 misses out; same day at 2 P. M., 5 pairs, 25yds. rise end traps, ties one pair. Second day—Philadelphia Gun Club Cup, teams of four, 20 birds each man, 30yds. rise. All the matches will be shot under the Philadelphia Gun Club rules and open to members of the following clubs: Westminster Kennel Club, South Side Sportsmen's Club, Meadow Brook Hunt, Carteret Gun Club, Queens County Hunt, Staten Island Gun Club, Orange Gun Club, Riverton Gun Club and Philadelphia Gun Club.

SAN ANTONIO, April 9.—A pigeon-shooting match between Dr. Carver and A. H. Penrose, the San Angelo cowboy, for $500 a side, 100 birds, 30yds. rise, came off yesterday and was won by Penrose by a score of 90 to 81.

THE STATEN ISLAND GUN CLUB has disbanded and fourteen, of its most prominent members have applied for admission to the Carteret Gun Club, of Bergen Point, N. J. Several of the Westminster Kennel Club's members have been practicing on the Carteret's ground for the Philadelphia Gun Club's meeting.

BROOKLYN, April 8.—At the monthly shoot of the Maybee Gun Club to-day at 20 clay-pigeons, the leading scores stood: Mank 15, Knebel, Jr. 12, Short 11, Link 10.

CAHILL VS. POLWORTH.—Almost the whole of Staten Island big slices of Long and Manhattan Island with a large delegation from New Jersey assembled at Sam Burbank's half-mile track, New Dorp, S. I., on Wednesday the 8th inst. There were sportsmen and sporting men. Those who understand handling a dog in the field or in the pit. Hard faces who knew what a main was and keen judges of the merits of the blue pyles and dark reds. Men who could use a split bamboo, handle a trigger or the reins over a trotter with equal accuracy and judgment. There was the goodlooking and genial Col. Endicott (I had liked to have said commissioner, but his modesty forbids) acting again as master of ceremonies. The Colonel is very popular with the boys. He knows all about rods and guns, dogs and birds, and his decisions are always prompt and just to all. The irrepressible Bob Goggin was of course on hand and added largely to the hilarity of the occasion. Bob is decidedly a character. He is called the "Irish Jew," for he possesses in a large degree the prominent elements of the two characters. The rollicking devil-may-care nature of the "son of the Ould Sod," with the business shrewdness of the "son of Israel." Always ready for fun and a venture, he will bet on a cock fight, a foot race, trot or pigeon match, and his judgment is rarely at fault. The occasion of all this multitude and excitement was the third match at live birds between Capt. P. Polworth of the Aquehouga Club and M. Cahill of the Stapleton Club. The match was 50 birds a side, 30yds. rise, 80yds. boundary, both barrels, second barrel anywhere, trap and handle. J. P. Silva acted as judge for Polworth, J. J. Maher for Cahill. J. J. Von Langerke, referee, with Elsworth and Erlin, as scorers. The birds were a good lot, especially those furnished by that prince of caterers, "Old South Paw" (Al Heritage) of the J. C. H. Gun Club. They tarried not to pick grass or even look back, but were off like young streaks of electricity, escaping both barrels without even a feather ruffled, but alas often to be brought down by the merciless pirates and pothunters on the border. At the score some comparatively easy shots were missed and some exceedingly good ones made by both parties. The eleventh of Capt. Polworth was magnificent. Cahill was first at the score with a miss followed by a kill, the Captain stopping his two first easily. The bets were in favor of Polwerth with occasional change until about the 20th bird, when the Captain seemed to get nervous and Maher got his fine work in in coaching Cahill, and what Jerry don't know about coaching a man that is at all off or shaky at the traps Tom Davis or Bill Taylor can't tell him. Cahill showed the benefit of following instructions in his 20th, 21st, 22d, 23d and 24th bird. Five killed straight and the sixth died out of bounds. The bets were then 30 to 20 on Cahill and continued so. Over to the left where the sporting men congregated, the betting was quite lively, from one to five dollars called on a bird. Money changed hands rapidly only to be handed back perhaps at the next shot. But it was a big day for New Dorp. The following is the official score:

M Cahill.....	0100102022102102110212110	02012221201200100331031—32
P Polworth.....	1100012020100120010200000	20020201101110100120110010—24

JACOBSTAFF.

FINE GUNS AT AUCTION.—In another column will be found a notice of the sale of R. V. R. Schuyler's entire stock of guns and general sporting goods, which occurs on Tuesday and Wednesday, April 21 and 22.—*Adv.*

Yachting.

FIXTURES.

April 22—Annual Meeting N. E. Y. R. A., Parker House, Boston, 8 P. M.
April 25—Pacific Y. C., Opening Day.
May 2—San Francisco Y. C., Opening Day.
May 3—Newark Y. C., Opening Cruise.
May 25—N. J. Y. C. Match—Catamarans.
May 30—New Haven Y. C., Opening Day.
May 30—South Boston Y. C., Regatta, City Point.
May 30—Knickerbocker Y. C., Regatta.
May 30—Newark Y. C., Regatta.
May 30—Dorchester Y. C., Club Race, Dorchester Bay.
May 30—Fall River Y. C., Open Regatta.
June 9—N. J. Y. C., Annual Regatta.
June 9—Atlantic Y. C., Annual Regatta.
June 11—New York Y. C., Regatta.
June 13—Boston Y. C., First Club Race.
June 13—S. C. Y. C., Annual Regatta.
June 17—Harlem Y. C., Annual Regatta, Oak Point.

THE CUP RACES.

WORK is going on very rapidly with the sloops now building. The iron one is in frame and partly plated, and the Boston boat is as far advanced, and there is every prospect that they will be ready in good time. Two more sloops are talked of, one to be built by Mr. Henry Steers, at John Roach's yard at Chester, and one from a model by Mr. Chas. Elliott, of Greenpoint, to be built at the Continental works, but neither have yet been commenced. A letter was received last week by Secretary Minton, N. Y. Y. C., from Mr. J. Beavor-Webb, dated March 26, acknowledging the receipt of the N. Y. Y. C.'s answer to the challenge, with a promise to lay it before the owners and to answer at once. Genesta is at Henderson's yard in Glasgow, where she was built, fitting out, under Capt. Carter's direction, for her trip across.

SEAWANHAKA CORINTHIAN Y. C.

A SPECIAL meeting of the club was held at Delmonico's on Monday, April 13, Rear Commodore Alley presiding. The minutes of the previous meeting were read and accepted. Messrs. E. C. Van Wart and Geo. Gordon King were elected members. The report of the Board of Trustees was read by Mr. Simonds, stating that the present quarters of the club must be vacated by May 1, as the lease cannot be renewed. The yachts now laid up there will be cared for by the club if belonging to members, but those not owned by members must be removed by their owners. An offer by Mr. Wiman of a site near New Brighton was considered, but it is not practicable to accept it at present; steps are being taken, however, to provide suitable quarters for members and boats. Concerning prizes, the Trustees do not approve of the suggestion to add second prizes, but are considering a scheme for extra races later in the season. It is proposed to make the opening sail on Decoration Day, a race over a definite course in the Bay, prizes to be offered by the club. A collation will be served after the race, probably on board some of the yachts. Nothing has yet been settled concerning a club boat, as the one offered was found to be in bad condition, but a boat of about 50ft. waterline will be chartered and put in commission with two men as crew, to be used by non-owners. The report was accepted, and a motion to refer the matter of a club boat to the Trustees, with power to act was carried; also a motion to refer the question of responsibility for damage to boat to Law Committee.

Mr. C. S. Lee reported in behalf of the Committee on Rig Allowances, recommending that the sail area of a yawl be obtained by measuring as a base line the distance from bee hole of bowsprit to bee hole of jigger boom, the height to be measured as in a sloop. The formulas for rig allowance of schooners and yawls recommended at the last meeting, the cube root of 3-5 of the cube of the length for the former and the cube root of 4-5 of the cube of the length for the latter, have been put in a simpler form, in which the cubes and cube roots do not enter. The same results are obtained by multiplying the length by the constants, .85 for schooners and .94 for yawls. The results in the cases of Montauk, 93.8ft. corrected length, and Fortuna, 92.33ft., would be 79.7ft. and 78.5ft. respectively, being the lengths on which time would be allowed them when competing with sloops and cutters. The report of the committee was accepted with thanks. The following motions were then presented, all being passed except the one relating to Rule XXXII., which was voted down.

By Mr. J. F. Tams: 1. The addition of a new chapter to the By-Laws to be entitled "Annual Cruise" to read as follows: "There shall be an annual squadron cruise, the date for which shall be fixed at the regular meeting of the club held in May."

2. The addition of a second paragraph to Rule I. of the Sailing Regulations to read as follows: "Yachts entered for a race shall be amenable to these Regulations from the time the preparatory signal is given."

3. To strike out in Rule II. of the Sailing Regulations entitled "Classification" the words "corrected length" wherever they occur, and substituting therefore "load waterline length."

4. To strike out as inoperative Rule XXXII. of the Sailing Regulations reading as follows:

TIME OF MAKING RACES.

§ I. In case a race is not completed within the time prescribed by the Sailing Committee, it will be considered as "no race," and shall be repeated on due notice from the committee until it conforms to this rule.

§ II. If any yacht shall make the race in the time prescribed for her class, it shall be deemed a race for that class.

§ III. This rule shall not apply to the regular Corinthian Race.

By the Secretary: To adopt in Rule IV. of the rules for hoisting colors, etc., the flag known as the "blue absence pennant" in order to secure uniformity with the New York, Eastern and Atlantic yacht clubs.

By Mr. John Hyslop: To amend a portion of Rule XII. of the Sailing Regulations by substituting for the words "or approved and certified by him" the words "approved by him, and their correctness duly certified."

Mr. Geo. H. Warren, of Boston, was proposed for membership by the secretary, seconded by Mr. M. Roosevelt Schuyler The prize won by Oriva on the memorable Saturday in June last when she led Gracie around the lightship, was on exhibition in the meeting room. The trophy was in the form of a clock, the case being an 8-inch block of lignumvitæ, with sheave, strap and sisterhooks of solid silver. The works were placed in the sheave, which was hollow, the side of the block, which was the face, being ornamented with silver hands and figures. The block is suspended by the hooks from a silver eyebolt in a plank of polished oak about 2 ft. long and 1 ft. wide, on which are carved the names of the owner, crew and yacht, with that of the club and the date of the race. The design is most elegant and appropriate, and a fitting memento of a famous race.

ELECTIONS.

Cleveland Y. A.—Commodore, George W. Gardiner; Vice-Commodore, R. R. Rhodes; Rear Commodore, Percy W. Rice; Secretary, J. George Davis; Treasurer, W. P. Francis; Measurer, H. Geriach; Surveyors—C. C. Goodwin and Frank W. Brewster.

Carolina Y. C., Charleston, S. C.—E. C. Williams, Commodore; H. M. Tucker, Vice-Commodore; W. D. Porcher, Secretary, and H. M. Tucker, Jr., Treasurer.

Neptune Y. C., New Jersey.—George Chase, Commodore; Jabez Harris, Vice-Commodore; John W. Jacobus. Rear Commodore; Geo. B. Deane, Jr., Secretary; Alexander H. McGarren, Treasurer, and Wm. Frisbie, Measurer.

Columbia Y. C.—Commodore, R. P. H. Abell; Vice-Commodore, Chas. Dietz; Secretary, C. M. Armstrong; Treasurer, Jos. A. Weaver; Measurer, E. A. Holbert; Steward, C. H. Knubel; Regatta Committee—W. H. Stone, A. H. Varley, W. J. Greacen, Charles Dietz and G. W. Pinchbeck.

Savannah (Ga.) Y. C.—Commodore, Wm. Hone; Vice-Commodore, I. N. Johnson; Rear Commodore, Thos. P. Bond; Secretary, Frank White; Treasurer, M. A. Cohen; Regatta Committee—M. G. Henderson, L. Hartshorne and S. P. Goodwin.

SMALL STEAM LAUNCHES.

Editor Forest and Stream:

I have read with pleasure your article on small steam launches, with letter from Mr. E. E. Roberts. It has frequently occurred to me that something of the kind would be quite an institution. The distance from civilization and even habitation of our best hunting and sporting grounds, and the cost of transportation of a camp outfit of any size prevents many from enjoying this manly and healthy pleasure. A small launch, therefore, properly fitted up and with simple machinery so as to be easily transported must certainly become popular.

I send you with this a rough sketch of ideas I have for such a boat, with the hope of bringing out better ideas from others. I would use a hull with high washboard and wide waterways, in order to make plenty of locker room for stores and supplies. The dotted lines show the lockers. For the machinery I would advise the use of the methods proposed by Mr. Roberts. For a roof I wood use wagon bows for supports, fitted in sockets in the decks Over this canvas might be stretched and rigged so that it could be rolled up as shown in the sketch, or run down and fastened to the deck with snap hooks at night or during foul weather. I would also suggest the use of two skids or runners as shown, equi-distant from the keel, on which the boat may be rolled or even dragged over ground or ice in the winter.

I am much pleased that you have brought this matter before your readers, and have no doubt but that so enterprising and energetic a man as Mr. Roberts will make a success of it. L. O. B.

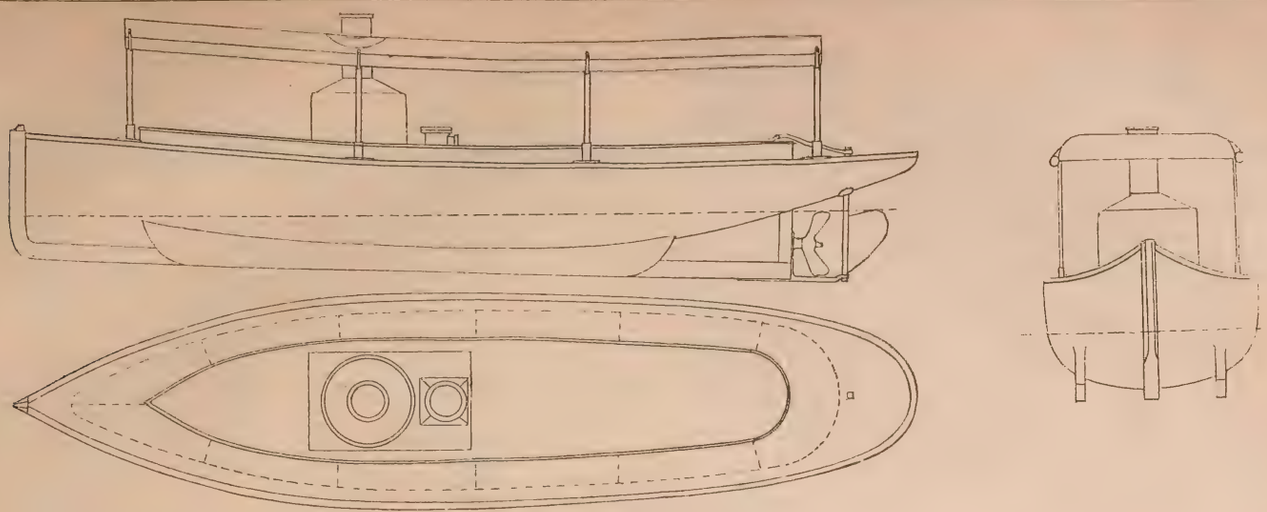
NEW YORK.

THE HERRESHOFF WORKS AT BRISTOL.

WHATEVER place the torpedo may occupy in the naval wars of the future, whether its place be first or last in the modern trio of ironclad, heavy gun and torpedo that have become the main factors in warfare on the water, it must be in any case the most important one for America when her present condition as well as that of the near future, as far as ships and guns are considered. On them our defense, for a time at least, must depend, and one of our first needs, in the event of a war, would be a fleet of swift torpedo boats. Such being the case it is an important question what facilities we have for the creation at short notice of such a fleet. The fastest vessels of this class yet produced have been from the shops of the Herreshoff Manufacturing Company, at Bristol, R. I., equally well known for their steam pleasure yachts and their sailing craft.

Beginning in a small way many years ago, the firm at first became famous for their centerboard yachts, of which they have built a number, the best known being the sloop Shadow. Besides her, the list includes the Triton schooner, Kelpie, Violet, Ariel, Sadie, Qui Vive, Nimbus, Faustine schooner, Orion, and many others. Of late years they have turned their attention to steam and have given to the engineering world the Herreshoff engine and coil boiler. The list of steam yachts is a long one, including some of the fastest afloat, Leila, Aida, Permelia, Ossabaw, (No. 100), Gleam, Marina, Orienta, Nereid, Magnolia, Camilla, Dolphin, Xantho, Juliet, Sinbad. Another branch of their business is that of catamarans, in which they have also attained a high degree of success.

The establishment of the Herreshoff Manufacturing Company is on the shores of Bristol Harbor, and in the suburbs of the pretty little village of Bristol. Along the waterside are the boiler house, planing mill, bending room, ship house or building shed, wharf, crane and coal sheds; while on the other side of the road, on ground that rises rapidly, and from which a beautiful view of the harbor and its shores with Prudence Island opposite may be had, are the offices, drafting and model room, machine shop, boiler shop, pattern and joiner shops, all in one large building. A short distance inland is the new and handsome residence of Mr. B. John Herreshoff, while on the beach just below the works is that of Mr. Nathaniel G. Herreshoff. Everywhere about the grounds and shops is conspicuous the order, system and care that have aided in making the Herreshoff boats famous wherever high speed is called for, either under sail or steam.



Neatly kept lawns and walks, clean floors, bright machinery, all testify to a thorough supervision of the smallest details, the results of which are seen in the excellence of all the work that hails from Bristol. The most interesting point of all to the yachtsman is the ship house in which all yachts are built, the like of which certainly is not to be found in America. The building itself is 140ft. long, 30ft. wide, and equal to three stories in height. The floor is of wood, the middle portion being made in small sections. When these are all removed a pit is disclosed, running down the center and outside into the water. This pit is lined with cement and fitted with an iron railway for hauling up and launching, the water end of the house being composed of large doors opening to the roof. A second floor is laid at the height of the eaves, on which are stored the wooden moulds on which all the vessels are built. Long windows running up almost to the roof give ample light; six steam radiators keep the building warm in all seasons, and everything is fitted to give every convenience for rapid, economical and thorough work.

Overhead, running on railways on the plates of the walls, are two traveling cranes, each lifting up to seven tons. On the main floor are work benches along the walls, and on each side is a gallery, giving additional room for woodwork or for getting out rigging. Outside of the ship house are two wharfs, one fitted with a powerful steam crane by which a yacht may be lifted bodily on to the dock.

On the north side is a large one-story building, used for bending the frames and for boatbuilding; while to the north is a sawing and planing mill, fitted with the latest machinery, adjoining which is the brick boiler house, with a coil boiler of the well-known Herreshoff type.

The main building on the hill is 150×120ft., three stories high. Down stairs are the offices, in the rear of them being the machine shops, fitted with improved tools. Here are stored several new engines, ready to swing into boats, some of them being in stock. We have described before in detail the engines and boilers of the Herreshoff boats, so need not repeat the description here. The visitor to the room next to the machine shop is inclined to doubt the fact that it is a boiler shop, owing to the absence of the usual noise and also of anything resembling the conventional steam boiler. The heavy riveting of most boiler shops is entirely dispensed with, the sheet iron shells being the only portions that are riveted. The boilers, as is well known, consist of square coils of pipe in a square casing of sheet iron, making them very light and of compact form. Up stairs is the pattern and joiner shop, fitted with improved wood-working machinery, and over the office is the drafting room. Every room is clean, warm and well lighted. The tools are driven by a compound engine, built in the shops.

The methods of building followed by this firm are in some respects different from ordinary practice. The keel is of oak in all cases and of ample dimensions for the proposed boat. Moulds are made from the floor for every frame, the spacing being about 1ft. Each mould is made of two thicknesses of 1in. pine, making a total thickness of 2in., and is made solid. When all are made they are taken to the bending room, and the two pieces which constitute the frame, usually

SMALL STEAM LAUNCH.

sided about 2¼in. for a boat of 80 to 90ft. are steamed, and each bent on one side of the mould, being held by dogs. These moulds and frames are then taken to the shiphouse and set up on the keel. The garboards are of oak, 3in. thick, and side bolted into keel. To them and the keel each frame is securely bolted, iron floors being added. The hull is strapped diagonally with iron outside of the frames and under the planking, preventing any likelihood of twisting or working. The wales are also of oak, well bolted to the frames, while about 2ft. below the planksheer an oak strake is worked. This, with the inside clamps and stringers and bulkheads, constitutes a frame that is a tonce strong, light and rigid. Above the garboards the planking is of white pine, in two thicknesses of about 1in. each. The first or inner skin is laid, being screwed to each frame with brass screws, and over it, the seams coming in the center of each of the planks of the inner skin, is the outer skin, fastened with brass screws in the frames and also along the seams. No caulking is required, and the hulls are very tight. The deck beams are also of oak, light, but closely spaced, while the deck is of two layers of ½in. pine, screwed down with thick white lead between. Inside the shelf, clamp and deck beams are well tied with iron knees. Some of the steam yachts are fitted with metal cutside to steady them either in the shape of an iron or lead shoe on keel, or in a padding of lead in the angle between keel and garboards, rounding the angle into a curve. After the keel is laid and frame set up all work goes on simultaneously, planking, decking, joiner work, finishing, painting. All is done in a warm room, much of the work is reached from a dry level floor, detentions from the weather are unheard of, while the material is all kept dry and clean, and the men all work in comfort. Boilers and engines are lifted in by the cranes with little labor, and as much as possible is done by machinery. Under these circumstances it is no wonder that work is done quickly. Within three to four weeks of the time that the keel is laid a yacht of 90 to 100ft. will be ready for her trial trip, and this under no special pressure, but in the ordinary course of work. As soon as a boat is nearly completed, if it is not desirable to launch her, she is lifted by the cranes to one side of the shop and a few minutes later the keel of another, previously prepared, is in her place on the ways and the frames are being erected.

A new idea in the shape of deck fittings which we noticed is a combination of cleat and chock, the latter being cast of such a size as to fit the waterway, with two horns or arms added, making it also a cleat. Another neat device is a light iron arm to carry monkey rail and netting in place of the common wooden stanchion. Small boats are built as quickly and as light as the larger yachts. Moulds are made for every timber in the boat, the ribs or timbers are bent, and the moulds with them on are set in place on the floor, "keel up:" on these the frame (stem, stern and keel) are laid and fastened. The boat is now planked, the strakes being fastened to the ribs with brass screws, and then it is taken from the moulds, the planks riveted between the ribs, and fittings put in. Sets of moulds are kept for each size, and from them a boat may be built almost in a few hours. In addition to their wooden yachts, they build composite vessels, and have the full plant for iron or steel.

Their work this winter has been entirely in the line of steam yachts and engines, the first boat and the largest being No. 118. The main object in view in this boat is speed, and it is expected that she will excel all previous records, as the long experience of her designers and builders has been drawn upon to produce the fastest boat afloat. Her appearance outside is peculiar, as she shows the regular hull and ordinary sheer, but above the hull proper the sides are produced upward to a deck, the line of which is curved in an opposite direction to the sheer line, which it meets at bow and stern. By this construction the hull and cabin are one structure, the deck serving to brace the hull firmly, and with the cabin sides making a strong box girder of the entire ship. The effect is entirely unconventional and novel to any one familiar with the ordinary type of steam yacht so common in our waters, but it is not unpleasant, while the gain in strength is apparent. The dimensions are 94ft. over all, 11ft. 4in. beam, 4ft. 6in. draft. Her engines are 12 and 21x12in. with coil boiler, and are rated at 450 H. P. The screw is of bronze, 4ft. diameter, and has four blades, while the rudder, also of bronze, is balanced, and steers by steam. On deck she has only a pilot house, masts, stack, windsails and low skylights, there being as little exposed surface to catch the wind as is possible. The pilot house and deck saloon give access by a stairway to the lower part of the ship, where are situated a square cabin, the owner's stateroom with two berths, and a w.c. A bulkhead on each side of the engine and boiler space separates it from the rest of the hull, and makes watertight compartments. Abaft the second bulkhead are two staterooms, the galley and the crew's quarters. The hull is divided into six watertight compartments, all of which are connected to a bilge pump which throws a 6in. stream. This yacht, not yet named, is intended for a high speed pleasure boat, for use on lakes or rivers, such as the St. Lawrence or Hudson, for such work as is now done by many steamers about New York, whose owners live on the Sound or Hudson and go to and fro in them every day, and for this purpose she is excellently adapted, but she is also so fitted that little change is necessary to convert her into a first-class torpedo boat. Her rig is that of a three-masted schooner with pole masts. She will make a trial trip shortly and will visit New York, when we hope to describe her more fully.

The next by number, 119, is a little fellow, 35ft by 7ft. 6in., built of mahogany, with engines of 50 H. P., which have driven her 14½ miles per hour, the greatest speed ever atained by so small a boat. She was built as a tender to the steam yacht Atalanta, and is the boat that has been noticed as costing from $10,000 to $30,000. Her construction and finish, being built entirely of mahogany, has made her cost more than most boats of her size, but the fabulous prices given are entirely incorrect.

No. 120 is a steam yacht 69ft. long, 9ft. beam, and 3ft. 6in. draft. Her engines (of 54 H. P.) are 6 and 10½×10in., driving a 36in. screw. She is building for a yachtsman whose name is not yet made public, and is intended for day use only, and is not fitted for living on board. She has a light upper deck and also a toilet room and saloon. The latter is fitted with lockers which may be made up into berths if required, and an oil stove is also provided, so that a stay on her for one or two nights would be no great discomfort. It is expected that she will make 17 miles. Her name is Polly.

No. 121 is a small steam launch for Mr. Weld's schooner Gitana, 20ft. long, 4ft. 6in. beam, and weighing 1,800 pounds only. The speed is 7½ miles.

No. 122, not yet named, is building for Mr. Chas. Kellogg, of Athens, Pa., a fast cruising yacht for lake and coast work, designed to accommodate the owner's family. She is 90ft. long, 11ft. 6in. beam, 4ft. 6in. draft, engines (105 H. P.) 8 and 14×14in., with screw of 45in., and a guaranteed speed of 16 miles. At present she will carry no canvas, but will ultimately be schooner-rigged, with two masts.

The last boat in hand, No. 123, is for Mr. George Gordon King, of Newport and New York. She will be 97ft. long, 13ft. beam, and 5ft. draft, with the same power and screw as No. 122. Her fittings will be more elaborate than the others, including two large staterooms, a saloon, pantry, and toilet room, while the companion is fitted so as to be converted into a small stateroom with one berth.

An order for four sets of launch machinery for the navy is now under way, while two sets are also building for two hulls which Poillon Bros. are setting up in Brooklyn, each 42ft. long. The firm has made a specialty of small navy launches, and in the bending shop are stored two, one small one that was on the Tallapoosa when she sank, being on its way to join its ship, the Dolphin. It broke loose and floated to the surface, where it was picked up and sent to the builders for renovation. Beside it is a larger boat of similar build, also for navy use. Both of these boats are fitted with folding hoods of peculiar construction. The framework is composed of a series of bows or arches of bent wood, running fore and aft. The ends of each are hinged to the deck, one forward and one aft of the cockpit, and when they are folded down half the bows lie on the starboard deck and half of them on the port. Each of these sets of bows is covered with canvas, one edge of the latter being secured to the deck. In use the two sides may be swung up until they meet at the top, their general arrangement being somewhat on the plan of an ordinary buggy top. When in this position they form an arched roof over the boat. If desired, the windward side only is raised, making a shelter, or in rough water one or both sides may be raised a few inches, keeping out all spray.

The members of the firm are no less noted as boat sailors and practical yachtsmen than as designers and builders, and to them directly are due many improvements in rig and fittings. They have tried and made successful the cat yawl, of which the most notable is the Consuelo, the property of Mr. Nathaniel G. Herreshoff, her designer. She is a keel boat, 28ft. 6in. on waterline, 32ft. 6in. on deck, 8ft. 8in. beam, and 5ft. 6in. draft, with lead keel. Below her accommodations are surprising, as the room is not cut up by bulkheads. The finish is very fine, being all in mahogany. She has good headroom, a light and roomy forecastle, wide lockers in cabin, and above them folding berths on the Pullman plan. Under the deck, at after end of cabin is a large platform used for stowage, with room for a couple of beds if required. The steering gear is peculiar, an invention of the owner. The head of the rudder stock is fitted with a brass segment, lying horizontally under the cockpit floor, in which gears a brass pinion on a vertical shaft supported by a standard. The steering wheel, on the upper end of this shaft, may be locked by a slight motion, so as to secure the helm in any position, while it may be as easily released, a great feature in single-handed sailing. The rig consists of a cat sail stepped well forward, the boom being short enough to allow a mizzen mast aft of rudder head. Both sails are fitted with booms and gaffs, but the mizzen boomkin is dispensed with, the boom being held down by a sprit from the mast, while the sheets lead to each quarter.

The Romp, built by the firm for Mr. Geo. A. Thayer is rigged in the same manner. For many years the Herreshoffs have been celebrated for their small sloops and catboats, both centerboad and keel, and they have now a fine specimen of the latter class in Julia, owned by the father of the present partners, a deep and able cruising boat. She has a large portion of her ballest on the keel, but is fitted also with a sliding carriage containing a weight of 600lbs, fitted to ways running thwartships, about level with the floor. The carriage is held either amidships or in either bilge by a catch which is easily operated. In working it the catch is released by the steersman just before the boat comes about, and while there is still inclination enough to carry it down to leeward, where it fastens itself, and on the boat paying off it is on the windward side. The boat, including this arrangement, is handled entirely by one man. Forward there is a nice cuddy giving room for two to sleep and cook, and dry storage for clothing and bedding, so that the boat is well adapted for extended cruises.

Perhaps the most noteworthy feature of the work of the Herreshoffs is its scope and variety coupled with the success of each effort in widely different fields. Small catboats and sloops, larger centerboard yachts, both sloops and schooners, singlehanded boats such as Consuelo, torpedo boats, family cruising yachts of the Magnolia and other special types, high speed yachts of all sizes, yacht and navy launches, engines, boilers, screws, and numberless minor details, in their hands have reached a high degree of perfection that has made the names of Herreshoff and Bristol familiar whenever yachts are used.

CRUISE OF THE CORA.

[CONCLUDED.]

The next morning at sunrise a plunge over the rail into the clear water and a delightful swim, then breakfast. The decks were scrubbed and the brass work all polished, and by the time everything was in trim our friends of the Oshkosh Club began to arrive, and the morning was spent in greeting new friends, inspecting the yacht, chatting and smoking. In fact, the whole day was spent on board in receiving visitors, both ladies and gentlemen, inspecting the yacht, as she was the largest vessel of the kind ever seen in those waters, and therefore to many an object of great interest.

Next day Commodore Munger arrived by rail from Chicago, and met with a hearty reception, both from his many friends of Oshkosh and from the crew. A small volume might be written of the hospitalities and enjoyments that we all received from the generous friends who spared no time, trouble nor expense to make our stay pleasant, and after a very interesting regatta of the Oshkosh Club, we with many regrets announced our departure for the morrow.

The next morning we started for the bay accompanied by several friends on board the Cora, and a large party in a small steamer alongside, who kept us company to the foot of the lake, where, amid fluttering of handkerchiefs from the ladies, adieus and good-byes we parted with many regrets and a ringing salute from the gun, with the hospitable yachtsmen of that beautiful little city, singing with the middy his "Villikins and his Dinah."

"Of all the fine cities you'd find in the West,
The crew of the Cora think Oshkosh the best,
The yachtsmen are so jolly, and girls are so fine,
We'd advise you to go there if you want a good time."

The trip back through the big locks was interesting, and at Green Bay we cast off the tug which had towed us, with

"Come alongside Cap, and get your pay."

"Nothin' to pay, gentlemen, it's all settled."

"Why, how's that?"

"Well, that's our orders, good bye, come again," and with a parting screech from the whistle and a splash under its stern, the tug sheered off toward the dock.

We were soon underway, headed for Menominee with a fine westerly breeze, and though we had had a week of delightful enjoyment at Oshkosh, it was more a week of fashionable dissipation than the yachting and cruising we had come for. The broad blue water of the bay, the cool breeze, the swelling canvas and curling white cap was welcome enough after all. The Commodore nominally took his place in the second watch with the master's mate and did his duty like a good sailor and seined to enjoy it very much. The master's mate had been presented with a spoon and line from a fisherman friend at Oshkosh, and after passing Chambers Island, he rigged it up, and tying a shingle to one end, he prepared to catch another Mackinaw trout. Though we were ploughing through the water at a rate that would make it lively work for any trout short of a Maud S. to catch it, he patiently fished without a bite till he got tired out, then swinging the end with the shingle on once round a cleat over the counter he left it to itself. Just at daylight next morning, when going out through Washington Island passage into Lake Michigan he was on watch and had the wheel when a sudden ker zip-splash away went the shingle 20ft. astern, and now on its edge, now on the flat side, now disappearing entirely for a moment, away it went for the shore a mile away.

"Here, take the wheel," he yelled, and springing into the dingey astern, he seized the oars and started in pursuit. The commotion and noise brought all hands from below, and they stood looking at the fun. The wind was very light, and for a while the shingle kept nearly abeam in its zig-zag course, with the M. M. vainly trying to follow it until it finally disappeared in the distance heading across for Escanaba.

We could see the Mate stand up and gaze wistfully after his shingle, his new line and spoon, to say nothing of the fish at the end of it, then resume his oars and pull slowly and sorrowfully back to the yacht.

He had several jokes cracked at his expense as he climbed over the side and made the painter fast, to which he only answered, "Oh! you be blowed," and disappeared below, while the Middy yawned and said, "Boys, in the words of the great Bardwell Slote, n. c.—no chowder—to-day," he followed for another nap.

The wind strengthened as the sun rose across the lake, and we passed out through the channel between Washington Island on the starboard, and Poverty Island on the port, laying our course N. E. toward the Big Beavers, and with the wind free on our port side.

When Gull Island was sighted in the afternoon we hauled closer, and kept more to the north and west of High Island, Whisky Island and Squaw Island, and next morning bore away due east to the north of Garden Island, toward St. Helena and the Straits of Mackinaw. By 9 o'clock we were off McGulpin Point, and were here treated to quite a lively thunder shower and a squall from the west, which sent us along at a lively pace toward Mackinaw, where we dropped anchor about noon, and for a change of yacht diet we all went ashore and dined at the hotel, after which we spent the day in seeing what few sights the island affords.

The island is a bold, rocky one, standing up high with deep water close in shore, and has quite a number of historical places of some interest to the visitor, besides several good hotels, from the piazzas of which one may always get plenty of pure air and a fine view across the straits, upon whose waters the white sails of the passing vessels are constantly visible. The propellers and steamers from Chicago to and fro to all points touch here, which renders it accessible at all times, and relieves somewhat the monotony of the place. It is said to be a fine place in summer for invalids and those suffering from hay fever, but to me it would be woefully dreary loafing about the hotel piazzas, or playing croquet and ten-pins, which seems to be the principal amusement of the visitors. For the sportsman or yachtsman there is nothing to attract. There is no hunting on the island and no fishing about it without going a long distance over to the upper or lower peninsulas with a steam tug or a Mackinaw sailboat. Still many like it and I would not detract from it any of its pleasures or attractions. We were wind-bound here several days, with not enough wind to beat out of the straits, and this I suppose is why I do not enthuse over the place.

We desired to circumnavigate the island before leaving for the south, and one morning with a light breeze we bore away toward Bris Blanc Island, and coming about for a leg to the north as soon as we thought we could stand clear to the eastward of Macinac Island. When we got to the north of the latter and about a half mile from shore, the wind all died out leaving a slight swell from the north setting toward the rocks. We were soon drifting slowly toward the big boulders on shore over which the breakers dashed, while for a hundred feet or more above them towered the almost perpendicular cliffs of the island. The bottom, seemingly about fifty feet, was plainly visible through the clear water. The sun was broiling hot, and every one but the unfortunate who had the trick at the wheel sought shelter wherever shade could be found and whistled for a breeze. The Middy scratched the mast, and wanted to know of the Captain what else could be done to raise a breeze, and got for his pains:

"Stand by there and drop anchor."

"Great Scott, Cap! don't do it. If you anchor I shall be fried into a Saratoga chip in another hour," said the Mid. Down went the anchor, and when about all the chain had gone over, there that blessed old mudhook hung, apparently twenty feet from the bottom, so deep was the water, yet we were not twenty rods from shore. The gig was manned, and four of the crew, including the Middy—much to his disgust—took a line and pulled hard and strong to stop her drifting shoreward.

A slight breeze was soon noticed coming from the west, though some distance off on the water, the boat was recalled, and as soon as aboard the order "All hands up anchor" was welcome enough, for none of us realized what that implied till we had worked a half hour at the winch under a broiling July sun before the old hook broke water and was safely catted. Then how welcome was that cool breeze, as exhausted with heat and labor, we sought the shady side of the mainsail and listened to the rippling of the water at the bows. We soon rounded the island and came to alongside the steamboat dock. The wind seemed likely to hold good, and we resolved to sail that afternoon. While preparing to get under way the steamer Duluth came in from Lake Superior bound for Chicago, and as she landed almost the first passenger leaning over the rail was recognized by the master's mate as an old-time friend, Mr. D., of Chicago, who had been at Oshkosh at the regatta, gone from there to Duluth by rail, and was on his way home by steamer. He at once came aboard the yacht, and was informed that we sailed in an hour, and urged to take the trip on the Cora instead of the steamer. After expressing some doubt as to her being large enough for such a voyage, he consented, and his baggage was at once transferred to the yacht.

Now, Mr. D., familiarly known as Jim, was quite a fashionable young man, and while a whole-souled sensible fellow was given to fashionable clothes, and therefore had nothing suitable to wear, and it was at once decided he must have something that looked more like a sailor and would stand rougher weather than would his silk hat and Prince Albert coat. So a visit to the Island store he picked out from among the Indian curiosities, mineral specimens, groceries, etc., a pair of blue overalls, which by turning up the legs full six inches at the bottom, managed to fit him pretty well about the waist. A cheap Mackinaw hat was added and a pair of buckskin slippers. These, with a blue flannel shirt which the captain kindly loaned him, transformed him from a city gent to a first class salt—in appearance.

It was only in appearance, however, for Jimmie was more familiar with a light side bar wagon and horses than he was a yacht, and did not know the jib sheet from the topping lift, as came near proving to our sorrow on the voyage. We got under way and giving Mackinaw a parting gun we soon were making a long leg for Waugoshance Point and Lake Michigan. The wind held good and Isle aux Galets light—called by the sailors "Skillagalee," soon beamed out like a star above the water, due south, as we bowled along under full sail.

We sat about the deck enjoying the evening and each—

"Whiffed his cares away,"

thoroughly tired from our experience north of the island during the day. Jim was much interested with the yacht and all about her, asked what this rope was for and that "thing," etc., and insisted on being placed on watch as one of the crew, in which he was duly gratified.

How we slept that night after our labors in that hot sun, and in the

morning when the South Fox Island light-keeper was "dousing his glim" on our starboard bow the breakfast disappeared in a way that fairly made the Doctor pale when he contemplated what he was to have left. The wind shifted during the morning and came from the S.E., so we had to beat against it all day off and on down the east shore, and at night we had passed South Manitou Island and were off Sleeping Bear Bay. The wind continued warm and fresh from the southeast all night and the next day, which kept us with a long and short leg beating south along the east shore, until about sundown we reached Manistee.

Here we cast anchor at the mouth of the river, there being no harbor you can get into it without a tug. The jib was stowed, and the mainsail left standing, the wind being very light, but what there was from the S. E. The boat was sent ashore for provisions, as supplies were getting low, and when it returned all went below for supper. We had barely got to eating, when a sudden lurch to the starboard sent every dish on the floor, and all sprang to the deck to see what was up, only to find the wind shifted from S. E. to N. E., and a squall had struck us broadside on, the yacht heeled down to her coamings, and run out to the end of her cable, much as the Mohawk went down off Staten Island some years ago. Everything was in confusion for a few moments, the Captain gave the wheel a turn, called to mate to put it hard down, and sprang forward to release the cable with some of the rest to help. She righted somewhat and swung round with her head in shore. The cable was finally slipped as there was no chance to raise anchor then, and the jib hoisted to make her come round toward the lake as a lee shore was only a few rods away and the wind blowing hard.

Having no way on when the jib was up she payed off so rapidly that she was soon heeled down on the port side, and the master's mate with no one aft but Jim D. had tried to tend jib sheet and the helm both. As she began to pay off he was at the jib sheet, which he started a little and taking a turn about the cleat handed the end to Jim, telling him to "hang on to that," sprang to the helm to put it hard down. Before she had got way enough to answer the helm the water was pouring over the combing, into the cockpit, and Jim up to his knees in water and pale as a ghost was holding hard on the jib sheet, as if his life depended on it. Twice the order was yelled to him to "let go that jib," once from the captain forward and once from the mate at the wheel, but Jim held on, when the M. M., realizing the situation, yelled in his ear:

"Jim, why don't you let go that rope; you'll drown us all," which he at once understood, and letting go all he sprang up to the windward, while the sheet went out from the cleat with a snap that made it fairly smoke.

After getting her before the wind and when we had time to talk things over, Jim said:

"The fact was the master's mate gave me the rope and told me to 'hang on to it,' and I didn't know you were yelling at me till the M. M. said, 'Jim, why don't you let go that rope,' then I understood him, but I have no idea you called the blamed rope a sheet. I thought a sheet was a sail."

Alas, poor Jimmie; he will never sail with us again, since then he has joined the great majority, peace to his ashes. Long will be be kindly remembered by those who knew him well. After getting well out in the lake the wind increased to a northeast gale, and the seas grew rough and wild. The mainsail had to be lowered by midnight and the big boom securely lashed, and with the jib set we ran till morning, every moment it seemed as if a big sea must "poop" the yacht, but she stood it nobly and not a drop of water came over the stern. At daylight we were off Milwaukee, about 90 miles, if I recollect rightly. After breakfast we put a double reef in the mainsail and hoisted it, and just as dark was settling down on the water Grosse Point light was sighted, then the light on the Crib and Government Pier at Chicago Harbor, and as we rounded to at Cora's berth off the Leland, the lights spaced off the regular intervals down Michigan avenue and we were home again. DORSAL FIN.

AN EXCURSION CRUISE IN A STEAM YACHT.

Editor Forest and Stream:

I am now arranging an excursion by steam yacht, the details of which I would like to lay before your readers, as some may desire to join us.

The yacht is designed and being built expressly for this purpose; will have powerful machinery to give her speed, and so constructed that quite small rivers and creeks can be navigated. She will have excellent accommodations for a party of sixteen ladies and gentlemen, has two cabins, one 19ft. 6in. long by 10ft. wide, and one 15ft. 3in. by 10ft. wide; double partitions, separate boiler and engine rooms from cabins.

The cabins, when necessary, will be warmed by steam. All the details necessary to make the accommodations pleasant have been well carried out. The writer having had much experience in cruising in this manner, can vouch for the success of the trip far beyond the expectations of many who have enjoyed the pleasures of cruising by canoes or sailing craft, either large or small, as he also has done his share in such crafts. Small light boats will be carried along that we may navigate small rivers and creeks where portaging is required. Many may say, "I cannot afford cruising in this manner," but before deciding on this matter write me and learn the cost, as you may be astonished if it should be less than in the ordinary way.

We shall start from Wheeling, W. Va., go down the Ohio River to Cincinnati, up Miami Canal to Toledo, across Lake Erie to Detroit River, through it to Lake St. Clair, through St. Clair River and coast up the east side of Lake Huron until we enter Georgian Bay, thence among the many islands on its east shore up to French River, where we will take small boats and portage up said river to Lake Nipissing, and returning will coast along north shore of Georgian Bay, through north pass of river Sault Ste. Marie into Lake Superior, and here on the north shore of this lake we shall be treated to scenery and sport with rod and gun, the combination of which is nowhere else to be found. All of its rivers are swarming with fish, the majority of which never have had a fly cast among them; on the Nipigon River fish have been taken weighing six and one-half pounds. On leaving this paradise we reach Duluth, thence continue on the south shore, going back through the south pass of Sault Ste. Marie River, thence through the Straits of Mackinaw down the west shore of Lake Michigan. At Chicago we will leave the lakes, taking the LaSalle Canal to the Illinois River, through it to the Mississippi River, proposing to cruise upon it and up some of its tributaries during the autumn months. At New Orleans we shall leave it and coast along the Gulf shore we reach the southwest shores of Florida. Here among the many keys and everglades we will spend the winter, and, time permitting, shall run to Havana and Nassau.

Too close application to business has done for the writer what it is doing to hundreds of others daily; my short trips having been of great benefit I concluded to try a long one. And having room for a few more ladies and gentlemen I would respectfully solicit correspondence from any one who would like to join us. A trip of this kind, offering special opportunities to scientists, both professionals and amateurs, I should be much pleased to have among us a number of such persons. Any questions as to details cheerfully answered.

ROCHESTER, N. Y. A. H. SHIPMAN.

YACHTING NOTES.—Norna, schooner, lately purchased by Mr. Alexander J. Leith, is in commission and anchored off Stapleton.... Falcon, steamer, has been sold by Mr. R. J. Bush to Mr. Jas. Stickney....Mr. Bush's new schooner, now in frame at Poillon's, will not be named Ocean Queen, as at first reported....A new fishing schooner was launched last week by A. D. Story of Essex, who built her for Capt. A. S. Hammond. She is 88ft. long, 22ft. beam, 9ft. depth, with 4,000ft. in lower sails....Tioga, schooner, has been sold by Mr. H. W. Collender to Mr. Hugh Cochran of Boston....San Francisco,—Most of the yachts are now in commission and cruising every week. A committee consisting of Dr. Merritt, Capt. Turner and Chas. G. Yale, has been appointed by the San Francisco Y. C. to consider the question of a change of time allowance....Cramp & Sons are building in stock a steam yacht 160ft. on deck, 22ft beam, 12ft. 6in. depth, and 8ft. 6in. draft. She will be built of iron with triple expansion engines ....In spite of the backward season and cold weather many yachts are fitting out. Norseman, schooner, is fitting out in the Harlem River; Hope, sloop, at City Island; Resolute, schooner, Mr. J. A. Brooks, is also repairing at City Island; Rover, sloop, Mr. F. C. Swan, will fit out at once at Bay Ridge; Huron and Thetis at Boston, will be overboard in a few days; Bedouin, cutter, is now fitting out at Newburgh, Captain Pettuck having come over with his crew a couple of weeks since; Grayling, Ashlon, Titania, Republic, Ray, Hildegard, Agnes, Stella, Amelia, Mystery, are all fitting out. Of the steamers, Normahal, Utowana, Stranger, Orienta, Corsair, Layonda, will shortly be ready for service. Norma, steamer, Mr. N. L. Munro, will have some changes made before fitting out, Stranger will have a new propeller, and Atalanta is undergoing some alterations. Dauntless, schooner, is fitting out at Newport. Lawleys have launched both Edna and Saracen, and are very busy fitting out the large fleet laid up at their yards. Ruth, schooner, Mr. Horatio Hathaway, has been sold to Mr. Henry Marquand of New York....Two yachts have been added to the fleet of the Newark Y. C., Beatrice, schooner, W. M. Walton, and Florence, sloop, Dr. Mandeville....Cruising. Wanderer arrived at St. Thomas on Nov. 28, and sailed two days later for St. Croix. The schooners Mohican, Mr. H. D. Burpham, and Gitana, Mr. W. F. Weld, lately sailed a scrub race from Charleston, S. C, to Cape Henry, Va., starting at 9 A. M. on April 1, the former boat winning easily from her smaller rival, and winning the prize, a gold cup. They are now at Fortress Monroe, and will soon sail together for New York. The steam yacht Leila was last reported at Charleston.

A CHANGE FROM CENTERBOARD TO KEEL.—Extensive alterations are going on in the Vixen, of the Portland (Maine) Y. C. She is to be cut in two amidships and eight feet added to her; her centerboard will be taken out and a deep rocker keel put on. Her deck (main and cockpit) will be of soft pine, her house, top and sides are to be of cherry. Her cabin will contain two staterooms, one on each side. The main cabin will have four berths, with drawers underneath, and also abundant locker room. The general plan will be similar to the schooner lately shown in the FOREST AND STREAM. The cabins and staterooms are to be finished in cherry. Forward of the main cabin and staterooms comes the galley, which is to be provided with the best of cooking apparatus, a good-sized pantry, ice chest, and sleeping accommodations for the cook. The forecastle to be provided with two wide berths for the men, forward of this the chain locker. Entrance to forecastle by forward hatch, and to the galley by patent manhole. The rig will not be changed. Her boom and gaff will be a little longer, a few more cloths put into her new mainsail, but no more hoist than before. She has made her record as a racer, and her owners propose to have comfort in her from now on. The alterations are being done by her builder, John Walker, at Yarmouth, Maine. Her sails will be made by Sawyer, of Portland; he has not the reputation of your New York wonder, but he can make an "awful good setting sail."—RICH.

STRANGER.—Mr. Warren's cutter will soon be ready for her Atlantic voyage. She is thus described in the *Field*: "She is of composite build and her dimensions are, length on waterline 65ft., beam 13ft. 6in., draft of water 11ft. This yacht is 48 tons Y. R. A. rule. She has 40 tons of lead on her keel, and this fact, looking to her fair amount of beam, points to the conclusion that she will be put to do some racing. In form she is one of the most beautiful vessels ever designed, so far as her under-water body goes, and doubtless she will look well when underway, but it is impossible to judge of a vessel's sheer when she is under a shed. She will be in charge of Randall, who took the 15-ton Maggie to America and raced her there for Mr. Warren."

NARROW AND DEEP BOATS.—At the last meeting of the Institute of Naval Architecture, Mr. R. E. French, in the course of a discussion on measurement and time allowance, spoke in favor of the modern type as being more weatherly and having better accommodation than the old. Mr. J. Reid claimed that a great improvement had been made of late years in the type of yachts, and that the deep boats were the best. He cited the fact that the modern racing yachts were always found at the posts where races were held, in spite of weather, when the so called good sea boats dare not put out of harbor.

BUFFALO Y. C.—At the last meeting of the club it was resolved to attend the Lake Erie meet at Ballast Island. It is also proposed to institute a ladies' day. Two new members, Messrs. Hill and Roberts, were elected. The regatta committee have decided that a boat of a smaller class may enter a larger class at the minimum limit for the larger class, if the entry be made and approved by the regatta committee twenty-four hours before the race.

ALICE.—This little yawl is nearly completed, and her builders have turned out a fine job. Messrs. Powell & Douglass are also building a small steam launch, 25ft. x5ft., for Mr. R. O. Hammond, of Palatka, Fla. Their place is in Waukegan, Ill., not Michigan as we lately stated.

CENTERBOARD BOATS ABROAD.—The Royal Southampton Y. C. will this year admit centerboard boats under 25ft. and over 15ft. to race with keel boats, having arranged five matches for the season.

Canoeing.

CANOEISTS are invited to send us notes and full reports of cruises club meets, information about canoeable waters, and other communications of interest.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signals, etc, of their clubs, and also notices in advance of meetings and races, and reports of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

FIXTURES.

May 30, 31—Hudson River Meet.
May 30 to June 1—Connecticut River Meet.
July 18, 28—Western Meet, Ballast Island, Lake Erie.
July 24 to Aug. 8—A. C. A. Meet, Grindstone Island.

AMERICAN CANOE ASSOCIATION.

SECRETARY—C. A. Neidé, New Orleans, La. Candidates for membership must forward their names, with $2 for initiation fee and first year's dues, to the secretary, who will present the names to the executive committee. Money should be sent by *registered letter* or money order.

A. C. A. PRIZE FLAGS.

SINCE the former acknowledgment the regatta committee have received promises of prize flags, as follows:

Mrs. C. K. Munroe, Jacksonville, Fla.
St. Lawrence C. C., Canton, N. Y.
Secretary Chas. A. Neide, New Orleans.
Mr. Grant Van Deusen, Rondout.
Mr. F. S. Rathbun, Deseronto, Ont.

The committee thank these members for their support and wish to remind the Association that a very small number of replies to the flag circular has been received so far. Nineteen flags are now promised out of about fifty required. Doubtless many members who intend to contribute have been unavoidably delayed, but it would be best if the circulars could be answered before they are forgotten.

R. W. GIBSON, Chairman.

CANOE PILOTAGE.

A FAVORITE scheme of Mr. N. H. Bishop, when he first set in motion the various forces which have given birth to the American Canoe Association, was that of a handbook, to be issued once a year or oftener, under the title of the "Canoe Pilot," which book should give all possible information regarding the water courses of the United States and Canada. The scheme was fully provided for from the first, but is it obviously a matter that could not be carried out by a few individuals, requiring the co-operation of many, and in spite of Mr. Bishop's vigorous efforts it has never been a prominent feature of the Association. So many other points incident to the formation and extension of a new body have claimed precedence that this one has received little attention.

Now, however, the organization is complete, the government and rules are definitely settled, and a large body of enthusiastic members in all parts of the country are ready to help, while the increasing interest in cruising has created a demand for more knowledge of canoeable waters. Like Mr. Bishop, Commodore Oliver is also a cruiser and interested in all that will aid or encourage that branch of the sport, and he has taken up in earnest the matter of canoe pilotage. A short time since he sent out the following circular to all members of the A. C. A., with the results shown below:

DEAR SIR—It is desirable, in the interests of the Association, to procure a list of all cruises made by the various members, to be used as a reference, for the benefit of all. Please enter below the cruises that you have made, and concerning which you are willing to furnish information upon application, and return this circular to

ROBERT SHAW OLIVER,
Commodore A. C. A., Albany, N. Y.

A few weeks brought out seventy answers from members, which altogether cover a large territory. A list of these members has been published in pamphlet form as follows, and will be sent to all A. C. A. men. It gives references to all parts and will prove very valuable even in its present form, but now that the scheme is fairly started there is no limit to it. As men appreciate its value they will take a greater interest in its extension and an enormous amount of really valuable information will be at the disposal of the Association in a few years, information that is valuable not only to the cruiser but to the naturalist, the sportsman, the geographer and to science generally. Commodore Oliver can congratulate himself that his administration has been marked by the practical execution of this plan, and in furthering it he has earned the thanks of every cruising man, whether a canoeist or not. Those who are willing to aid the work are requested to send their names and cruises to Com. R. S. Oliver, Albany, N. Y.

AMERICAN CANOE ASSOCIATION.

1. The following list of cruises and references is hereby published for the benefit of the Association.

2. The members mentioned have consented, in so far as they are able by correspondence, to give information regarding the cruises to which their names are appended.

3. Applications to them will specify in concise form the information desired, and must have the A. C. A. membership number appended thereto.

4. All members who may have had experience of cruises other than those named, and who are willing to give information regarding same, will report to the commodore.

5. Many references and minor cruises in addition are on record, and will be furnished on application to the commodore.

6. All members are especially urged to forward for reference the name of any cruise they make hereafter, and it is hoped that the manifest benefit to all cruisers may induce all unattached canoeists to enroll themselves under the A. C. A. burgee.

ROBERT SHAW OLIVER, Commodore A. C. A.
ALBANY, N. Y., March 31, 1885.

CRUISES AND REFERENCES.

ALLEGHENY RIVER.—James K. Bakewell, Washington, D. C.; E. D. Wetmore, Warren, Pa.; G. A. Howe, 110 Diamond st., Pittsburgh, Pa.

ADIRONDACK LAKES.—Henry A. Harrison, Newburgh, N. Y.; I. F. West, Watertown, Dak.; Frank A. Jones, Box 1317, New York city.

ATLANTIC COAST—NORTH.—A. S. Flint, U. S. N. Observatory, Washington, D. C.; R. B. Burchard, 24 West Fortieth st., New York city.

ATLANTIC COAST—SOUTH.—N. H. Bishop, Lake George, N. Y.; Chas. A. Neidé, Schuylerville, N. Y.

BLACK RIVER AND LAKE.—J. C. Wilson, Watertown, N. Y.

CHAUTAUQUA LAKE.—Geo. A. Howe, 110 Diamond st., Pittsburgh, Pa.

PADDLING CANOES AND PADDLING RACES.

Editor Forest and Stream;

The liberal offer made by Mr. Rushton ought to be accepted by the Regatta Committee, but I think the contests would have to take place in equal canoes. I am very doubtful if any system of handicapping would prove satisfactory. It would be quite easy for two or three pairs of canoes—or say a pair of each class—to be provided, and the races for Mr. Rushton's paddles be contested in them.

It may be taken for granted that on equal measurements the smooth-built Canadian canoe is the fastest. They are generally lighter, and having no centerboards, the slot does not interfere with the speed.

Last season Mr. Rogers, of the Ontario Canoe Company, told me he would provide two canoes—exactly similar in all respects—for any paddling contest that might be considered necessary. No doubt he would do the same this season.

While on this subject I desire to call attention to two statements in Mr. Rushton's catalogue, the first might mislead and the second is not correct. On page 17 is quoted Article II. of the constitution, adopted in 1880:

"A canoe, in order to be placed on the Association list and to be entered for races, must be a boat sharp at both ends and not more than 36in. wide on deck."

It is quite true a canoe can be built of that beam, but the length would be limited to 12ft., and a canoe of that size would not have the ghost of a chance in racing with the longer and narrower craft of say 15×31½ or near that size. Nothing under 14ft. will be fast.

Again on page 20, in describing the Princess model, Mr. R. says, *re* the Nellie, 15×31½; "She was also second in a half mile race, the first in the race being Mr. Johnson, in a canoe built especially for racing." This is not true, and is unfair to Mr. Johnson. No one will deny that the canoe used by him was not faster than the Nellie, and I, for one, also believe that in spite of that, Mr. Johnson could have repeated the victory after changing canoes with Mr. Kipp; but for all that the Mamie is not a racer, unless we concede that every Peterboro canoe present at the meet was built for racing. The Mamie is an ordinary open basswood canoe 16×31 and 12in. deep, weight 70 pounds; more of that size are in use than any other. See the catalogues issued by English, who built her, Ontario Canoe Company, Gordon, of Lakefield, and others.

BOREAS.

A CRUISE ON THE WEST COAST.

II.

AN early breakfast in the morning, a hand shake and I am away. The wind is very light but fair, and as I am in no hurry I make sail. Haste should never have part or place in a canoe cruise. Plan as well as you may, have every condition favorable as possible, but take no thought of speed. Once let the Demon of Hurry get possession of you, good bye the pleasure. I sail along quietly, peacefully, the bay is smooth, the air is soft and pure; a few birds are seen, now and then a fish darts from the quiet water. Off seaward are two sails, but everything seems sleepy and good natured, and I am enjoying it all. Happy!

About noon I reach the wharf at "Disston City." I don't see any city, but the map says it is here, and of course I am bound to believe it. I find a long wharf, a large, unfinished barn-like structure which I am told is the hotel, and a store, but although I fail to find the city, I find an old friend here and he says, "Dinner is just ready." My friend is, like myself, an old cruiser, and although we have never cruised in company, we can talk of places we both have visited—the west coast of South America, Chili, Peru, the Bay of Panama, the Sandwich Islands, the South Seas, etc., and so the dinner hour passes away pleasantly, and then another hour for a smoke, and at 3 P. M. I fill away for Point Pinelles. Reaching the point I find a little bay with clear water and a beautiful sandy bottom. This is the place for a swim, so here goes.

After my bath I sit under an immense live oak, fill my pipe, and settle myself for a contemplative smoke. Close at my side is a large, dead bush, across which a huge spider is weaving his web. A fine affair it is, too; the strands nearly as large as saddler's silk. Alas! it is catch or be caught with us all. At my feet are various specimens of the fiddler crab, and each as busy as if the weight of the universe rested on him alone. On one of the points which form my little bay sit a group of pelicans, ungainly, but very solemn withal. But they are not considering any weighty questions of law or ethics. Oh, no, they are simply digesting their dinners.

But I must get around the point and make camp; the wind is ahead, so, stowing sails, I grip the paddle and away. Around the point and some two miles up on the eastern shore I find the spot I am looking for. A little cove facing the east, a low, white beach, back of which are a line of tall palmettoes, and back of these a high shell ridge, covered with dense scrub. The first thing on landing is to secure the canoe, then a glance around shows me the place for my fire, which is soon burning, for a camp without a fire is no camp at all. The weather looks threatening, and so I use extra care in making everything snug. First the wood for my camp-fire. This is easily gathered, enough to last all night; then, as it might rain, I invert the canoe, stow everything under it safe from a wetting should it come. Then I build a little lean-to as a resort in case it does rain, swing my hammock between two of the palmettoes and I am fixed. After supper I promenade the beach at peace with myself and all mankind. Ten o'clock comes, no rain yet. My favorite pipe is out; I am sleepy, too. If it rains I shall find it out. So, fixing my fire, I roll myself in my hammock and sleep undisturbed by rain.

Out early in the morning. No birds, no fish; so I fall back on the ship's stores, and as I have a long, hard paddle ahead of me (it's always a head wind in Tampa Bay), I'll take something solid in mine. A few flapjacks are soon fried, a can of Boston baked beans opened, some coffee made, and the whole disposed of in about the time it takes to tell about it. At sunrise I push out. What wind there is is dead ahead. I work along close to shore, and as the sun climbs over the trees the wind rises and the sea follows suit. Courage is good, however, and I work along in the hope of a slant. The sea gets up fast, and before I am five miles on my way I begin to believe all the stories I have heard about Tampa Bay. By 9 A. M. I am tired; I want to rest; I want to smoke; but the wind is howling right in my teeth, the sea is short, sharp and vicious, and between me and the shore is a long line of ugly looking breakers through which I can see no opening. To stop is to get in the trough of the sea, and that might cause trouble. Nothing to do but set my teeth and paddle. At 10 o'clock the wind and sea have increased to that extent that I would like to be ashore, but to turn back would be fatal. I have read somewhere that a canoe would live as long as a man could hold its head to the sea. It looks as though I might have a chance to test it. But as my strength is near gone I sight a break in the land, then a dark strip of smooth water, and I go for it. Ten minutes later I am inside the breakers and paddling into a little land-locked bay. I haul around the point and land at a little sand beach under the lee of some dense mangrove bushes. It is quiet here, the sun is warm and bright, and I'll have a rest.

After getting the pipe in order I overhaul the chart and find I am in Little Bazoo; three miles beyond is Big Bazoo; must try to reach the latter place, and then if the weather is no better, go into camp. An hour passes, I am rested, and although the biceps are getting tender, I feel like trying it again, so arranging my seat carefully and tying down my storm apron I push out once more for a tussel with wind and water. I find it no worse, and after some two hours' or more of good honest work I reach Big Bazoo. I find here a little settlement, a few dwelling houses, a store, post-office and boat shop. While here I notice two large shell mounds. They were of a different shape from anything I had seen, and so I examined them closely. In shape they were nearly a perfect cone, some fifty feet in diameter and perhaps thirty in height, and were formed entirely of oyster shells. I found here also an establishment for smoking mullet. Sampling them I found they were very fine, superior, I think, to smoked halibut.

My course now lay N. E. across quite a stretch of water, and if I had not made a long run I had certainly done what I thought was enough for one day. The wind was from the north. It blew heavily. The sea was running very high, I was very tired, and it was a splendid camping place, and so, instead of being cuffed about on the bay, I landed on a little sandy point just at the entrance to Big Bazoo, and made just the snuggest camp that ever was. Back from the water a hundred feet was a large live oak; around and under it clean white sand and shells. Setting the canoe up on its side for a wind break, and building a "Nessmuk" camp-fire in front, I had soon an appearance of comfort that was cheering and home-like.

After supper some ladies called to look at the canoe, or perhaps they came to see the canoeist; at all events they came, and we had a jolly time. They were blessed with the average feminine curiosity, and of course had to be enlightened on all that pertained to canoeing. In return for the information I so freely gave them, they related many little anecdotes, legendary and otherwise, that were very interesting. It was a late hour when I bade them good night. The wind was still blowing furiously as I rolled into the blankets, and as I waked the next morning, I found everything unchanged.

After cooking and eating breakfast, I looked the situation over; it was about like this: The shore lying nearly north and south, Gadsden's Point, fifteen miles away northeast. The wind blowing half a gale, and the sea choppy and nasty. But my course is by Gadsden's, and by working up along the land a few miles I find a large shoal that reaches nearly half way across the channel. On the opposite side, stretching out from the point is another shoal, and between them scarce a mile of rough water. I get myself in shape and go at it, and after being cuffed by the sea till I am about tired out I win the fight. I take a long rest on the point, shoot some beach birds and get up a dinner, and finally, late in the afternoon, push out for Ballast Point, five miles away. I reach it at dark and make myself a snug camp. There is no one near to make calls, and so I keep good hours.

At four the next morning I am up. Coffee is soon made, and I am paddling away for Tampa. I reach Tampa about eight o'clock, and finding quarters for the canoe I look about the city. Tampa is one of the oldest settlements on the west coast, has a court house, jail, opera house and a narrow-gauge railroad.

Below the city is the old Barracks, a beautiful place. The old parade ground, surrounded with large live oaks, would make a splendid site for a residence.

But I have already made this yarn too long. I might go on and tell you of my trip up the Hillsboro River, and of my cruise home, but I think it will be best to reserve that until another time. I want to say to canoeists, however, that this is the place for fun, and if any one contemplates dodging cold weather he can't do better than come here. Should they wish to learn any points in advance they have only to write to

TARPON.

TARPON SPRINGS, Fla.

TOLEDO C. C.—At the annual meeting of the Toledo C. C., March 26, the following officers were elected for the ensuing year: Geo L. Butterfield, Commodore; J. W. Richards, Vice-Commodore; Gus G. Keip, Secretary and Treasurer. The executive board is composed of above officers and Mr. J. W. Hepburn and Geo. G. Loeb. The club are now making arrangements for building a club house and for an early race.—GUS G. KEIP, Secretary and Treasurer, T. C. C.

STILL MARCHING ON.—The picture of the Snake under sail, which first appeared in the FOREST AND STREAM of Jan. 22, promises to rival, as a traveler, the Wandering Jew, John Brown's body, and Daniel Pratt, G. A. T. It has since appeared in nearly all the American magazines and weeklies, and now has reached Germany, whence it comes to us in the April number of *Ahoi*. The same paper promises next month an article on American canoeing.

"THE CANOE AURORA."—Dr. Neide's charming book is out and eagerly welcomed by canoeists all over the country. It abounds in capital hints and experiences, and will be a welcome addition to the library of each one who swings the paddle.

PERSONAL.—Canada is already preparing for the August camp. A large turn out of men and canoes is promised, besides a full attendance at Squaw Point.

ONTARIO CANOES.—Eight of the cedar rib canoes and a canvas boat were lately shipped from Peterboro to the Antwerp exhibition.

ANSWERS TO CORRESPONDENTS.

REX.—Will you please let me know whether a dog having the end of his tail (say about three inches) cut off, is disqualified from taking prizes? Ans. No.

E. B., Falsington, Pa.—Where can I get a book on Florida game, fish, etc., and the price of the same? Ans. We know of no book which will fulfill your requirements.

H., Spring Valley, N. Y.—Three shooters are members of two gun clubs. A match is to be shot between the two and the club to which they have belonged for the longer time claims the right to draw them on its team. Ans. The matter is one to be decided by the men themselves. They can elect with which team they will shoot.

"FOREST AND STREAM SERIES."

DEER HUNTING.

BY JUDGE JOHN DEAN CATON.

BY and by it will be time to hunt antelope and deer. It is always time to read about them. Judge Caton's book on the antelope, elk, deer, moose and caribou of America discusses in a readable way the life history of these animals and the methods of their capture. It is the work of an enthusiastic sportsman who has had a wide experience and has devoted the leisure of years to studying these interesting game animals. The volume is very fully illustrated, and is a perfect storehouse of information and entertainment. The first edition was sold by the Boston publishers at $4. Price $2.50.

WOODCRAFT.

BY "NESSMUK."

A COMPACT pocket handbook of condensed, boiled-down, concise, clear, comprehensive, sensible, practical camp gumption. "Nessmuk" has been "in the woods" in Michigan, New York, Pennsylvania, and South America, and this is a book for outers, wherever they kindle their camp-fire. The author believes in "smoothing it." He has learned how; now he tells others. It is much easier to learn from "Nessmuk" than from Dame Experience. We should not be surprised if "Woodcraft" completely revolutionized the methods of camping out. If you are going to the woods, read "Woodcraft" before you go. It may add to your trip a hundred fold. Price $1.00.

DOG TRAINING.

BY S. T. HAMMOND.

HE was a promisig puppy, and when you turned him over to the breaker to be educated, you thought he was bound to make "the best dog in the world." And you'll not soon forget how disappointed and disgusted you were when the dog, the breaker and the big bill—all three turned up together, and you saw that the animal's spirit was broken and it would take a steam calliope to make him mind. Now, this could not have happened if you had been wise enough to buy a copy of Hammond's book, and in your odd leisure moments *train* the dog yourself instead of having him *broken* by some one else. We are selling edition after edition of this book, and it is revolutionizing the system of preparing dogs for work in the field. Price $1.00.

SHORE BIRDS.

A PAMPHLET for those who "gun" along the shore. Tells of: I. Haunts and Habits—Where the bay birds live and what they do at home. II. Range and Migration—Where they go to breed and where to spend the winter. III. A Morning Without the Birds—An episode of shore shooting. IV. Nomenclature—A list of our American species of *Limicolæ*, with a description of each species. V. Localities—Where to go to shoot them. VI. Blinds and Decoys—How to shoot them after you have reached the grounds. 45 pp., paper. Price 15 cents.

ANGLING TALKS.

BY GEORGE DAWSON.

AS a political writer of conceded power, Mr. Dawson wielded a trenchant pen: when he turned from the conflict of parties to the praise of the favorite pastime of "simple wise men," his essays, limpid as the crystal streams, are aglow with the soft summer sunlight and melodious with the songs of birds. When angling was the theme, he wrote from a full heart and in closest sympathy with the scenes and pursuits described. These "Talks" are brimful of manly, wholesome sentiment; there is in them all not a particle of cant. Their sincerity and overflowing spirit at once win the reader, and he perforce shares the author's enthusiasm. The effect is magical, like that of the mimic players in Xenophon's *Memorabilia:* he who reads, if he be an angler, must go a-fishing; and if he be not, straightway then must he become one.—*Extract from Publishers' Preface.* Cloth, price 50 cents.

CANOE "AURORA."

BY DR. C. A. NEIDÉ.

A CHARMINGLY written and always entertaining accoun of a canoe cruise from Lake George, New York, down the Ohio and Mississippi Rivers to the Gulf of Mexico, by the Secretary of the American Canoe Association. To read the cruise of the "Aurora" is the next best thing to having made it; and the reading is decidedly more pleasant than would have been participation in some of the misadventures related. 216 pp., cloth. Price $1.00.

Send for Illustrated Catalogue stating kind of goods wanted.

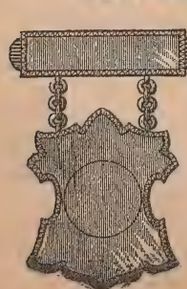
Reads like a romance from beginning to end.—SPRINGFIELD REPUBLICAN.

Old Saint Augustine.

BY CHARLES B. REYNOLDS (FOREST AND STREAM).

THE famous Florida town's three centuries have been crowded with romantic incidents; and a story of wonderful interest is this, with its Huguenots and Spaniards, Franciscan Fathers, English Sea Kings, Boucaniers, Minorcans, Liberty Boys, and Seminoles. It is told vividly, in the briefest possible compass, with strict historical accuracy, and with an enthusiasm that is manifest from the very first page to the last. Among the illustrations are copies of some of the very rare drawings by Jacques Le Moyne, the French artist, who so narrowly escaped massacre by the Spaniards in Florida, three hundred years ago. Another very rare engraving is the plan of the city in British times. The *artotypes* (or photographs in permanent ink) are among the most beautiful book illustrations of the day. They are made from negatives taken expressly for "Old St. Augustine," and are: Fort Marion (four views), the Matanzas Fort, the City Gateway, the Cathedral, the old Palm-tree, Garden Overlooking Plaza, and two very characteristic St. Augustine Houses. Cloth, pp. 144, 8vo. Price, $1.50. **Forest and Stream Publishing Co.**

FISHER'S ISLAND.



Important to Club Men and Investors!

The Eastern end of this Island, comprising about two thousand acres, is offered for sale (to close a trust). Its location is peculiarly adapted for club purposes—having good covers, fertile soil, and a chain of fresh water lakes and ponds extending through the Island, affording opportunities for stocking with Game, Fish, etc. Its situation and climate being cool in the summer months makes it very desirable as a summer resort. Being surrounded by salt water, and several miles from the main land—with the Atlantic Ocean on the South and the waters of Fisher's Island Sound on the North, with fine beaches for both surf and still water bathing, good roads, etc. A large section of the west end is surveyed and mapped for cottage purposes. A number of fine cottages have been erected. Steam communication from New London, Conn. For maps and full particulars address,

J. H. LYLES, Trustee. 104 John Street, N. Y.

Explanatory and Suggestive.

FOR THE CASUAL READER.

Arma virumque cano—"Arms and the man I sing." And, indeed, it would take the genius of a Virgil and the roll of Latin hexameters fitly to tell the deeds of this man, whose arms are shotgun and fishing rod. Go where you will, he is there. You run into him on the crowded city street, encounter him on cars and steamboats; he perches atop the country stage, bestrides the burro, and doubles up like a jacknife in the kanim. Seek out the most distant, most tortuous streams, his line has been wet in their waters; penetrate into the wilderness, the tin can of the sportsman's camp is yet further on. He goes for game—if the fates shall send anything within reach of his ammunition; for fish—if by good fortune a trout shall rise to his fly or descend to his worm. But, good luck or bad luck, game or no game, fish or no fish—fun always, fresh air, ozone, quicker pulse beat, brighter eye, more elastic step, all the multitudinous rewards, which, after all, outweigh the biggest "bags," and tip up the longest "strings." Is it not true that only a poet could tell his deeds as they ought to be told? Perhaps so. Perhaps not. He can usually tell them himself. And he does, with a thousand different pens, in a thousand different ways.

You may read it in the FOREST AND STREAM.

And that is better than if it were put into verse between book covers.

One who does not understand these things might imagine that after being told so often, this story of the man—him with the rod and gun—might in the end become hackneyed. But it is not so. Why? Well for pretty much the same reason, we venture to say, that the fields themselves and the woods and the lakes and the streams never become hackneyed. However that may be, one thing is certain. Our columns every week, and month after month, give ample proof that there is still an abundance to tell of what is seen and what is done afield and on angling waters; and that hosts of people still delight to read the telling, our subscription books show with ever increasing emphasis. The FOREST AND STREAM is in the best sense

A Journal of Recreation.

It tells of the recreation found by busy men, in out-door, open-air life. It *is* recreation to those same men and to others. Explain it how you will, this recreation found in the pages of the FOREST AND STREAM is different from the diversion afforded by other papers. Why? Because (may be answered again) the recreations of field and stream are always ten times more potent good than are those found in almost any other way.

Look through the pages and you will see that the departments include a pretty large field. It is a wide scope of subjects. But if you look carefully you will see that the paper, from front cover to back cover is homogeneous. What is in it belongs in it. There is not the mistake of trying to foist upon the reader, who is interested in angling and shooting, a lot of stuff about horse racing or base ball or prize fights. There is no sawdust-ring odor. Everything is redolent of the woods. There are plenty of other papers devoted to the other subjects. If you are interested in them, you need hardly spend time to read the rest of this explanatory advertisement. The FOREST AND STREAM'S field is broad, but it is not broad enough to take in all creation. The editors are perfectly contented with the scope of the paper as it is at present.

In a word—this is what we started out to say—in 1885 the FOREST AND STREAM will be newsy, bright, wholesome—a journal of out-door recreation.

Terms:—$4 per year, $2 six mos., 10cts. per copy. Sold everywhere. Make orders payable,

FOREST AND STREAM PUB. CO., 39 Park Row, N. Y.

THE AMERICAN CANOEIST,
5 Union Square, New York.

Publications.

CANOE

THE FOREST AND STREAM began a year ago the publication of a series of papers on canoe construction, by Mr. W. P. Stephens, of the New York C.C., widely known as an expert on canoe design and building. These papers, having appeared through the year in our columns, have since been rewritten, and with numerous additions are now published in a handsome volume under the title of "Canoe and Boat Building for Amateurs." Mr. Stephens is peculiarly fitted for the preparation of such a work, beginning as an amateur, and having after a long experience of the difficulties attending a learner, taken a prominent place among canoe builders, due both to the model and workmanship of his canoes. Realizing fully the difficulty of explaining to a novice an art in itself far from easy,

AND

and with which he is entirely unfamiliar, the book begins with a description of the various classes of canoes in general use, with their main features and dimensions, and definitions of the terms used in connection with them. Numerous examples of canoes are given, and in connection with them, such plain instructions in designing as will enable the beginner to select intelligently the proper craft for his pur-

BOAT

pose, and to plan her dimensions, details and fittings. To this end designs of all classes of canoes are given, with full dimensions and details. The object has been not merely to enable the tyro to build one boat as described, but to teach him the principles of designing and building in such a way that he may construct such a craft as he desires. Following the chapters on designing, the construction of a canoe is taken up in detail, the tools and appliances being first clearly described, as well as the various materials, after which follows the actual work of building. Every operation is taken up in order, from the selection of the keel to the varnishing of the finished boat, and illustrated with numerous diagrams.

A chapter on sails describes all the varieties in use by canoeists, down to the new Mohican settee, with directions for making, rigging and measuring them, while the method of proportioning the sails to the boat is clearly explained, all the calculations

BUILDING

being worked out in detail. The many minor points of a canoe, paddles, steering gears, rudders, aprons, and camp outfit are also described at length, while a chapter is devoted to canvas canoes.

The subject of boat building is fully treated, a rowboat of the usual construction being taken as an example, and described in all its parts in such a manner as to make clear the principles involved, and their application to any form of boat, either lapstreak or carvel build. Each of the numerous technical terms belonging to the subject is defined clearly when it first occurs, and as the index is full and complete, the book is in itself a glossary.

In addition to the numerous diagrams in the body of the work, twenty-four large plates are printed on bond paper, containing the working drawings of canoes for paddling, sailing, cruising

FOR

and racing, with their sail plans, rowing sailing boats, large canoe yawls, and various boats for special purposes, such as gunning boats, yacht boats, and the widely known sneakbox.

The canoe yawl, a boat between a canoe and a yacht, is illustrated by examples of various craft from 17 to 20ft. long, and suitable for a crew of two or three on a cruise. This class of boat, while little known among us as yet, is admirably fitted for cruising, and will meet the wants of many who object to a canoe as being too small, and yet desire a boat with the same excellent qualities. The boats and canoes illustrated are in all cases among the best of their class, the list of canoes including English, Scotch and American craft, and are all drawn

AMATEURS.

to scale, so as to be available as working drawings. The plates, for convenience in using, are placed loose in a tough manilla envelope and accompany the book.

Pp. 168, with 24 plates of working drawings. Price $1.50. Address,

STUD FOX-TERRIER

Champion Raby Tyrant,

(K.C.S.B. 11,179.)

Lupped October, 1880. Weight 16½ pounds.

Raby Tyrant is a white dog, with an even marked rich black and tan head. He is a thoroughly game and stylish terrier, possessing a beautifully shaped long punishing head, with perfect drop ears, small eye, rare neck and shoulders, deep chest, well ribbed and muscular quarters, short, straight legs, excellent feet, great bone and substance, with an exceptionally hard and dense coat.

Raby Tyrant is without doubt one of the most successful terriers of the present day. He has been exhibited 67 times, 33 different judges having adjudicated upon him, and has won 47. First 10 cups and specials; 12 second and 2 third prizes. His breeding is undeniable, combining as he does the choicest and most valuable blood that can be obtained. At the stud Raby Tyrant is proving himself eminently successful.

Fee, $15.00.

JOHN E. THAYER, Hillside Kennels, Lancaster, Mass.

Stud Dogs Proper.

ANSWERS TO CORRESPONDENTS.

A CHANGE NEEDED.

WE urge the prompt removal from office of the Superintendent of the Yellowstone National Park, for the reasons given in our issue of April 9.

These are: (1) that he has neglected his duty as Superintendent, and has devoted his time to working in the interest of the Improvement Company; (2) that during the past winter he has made it impossible for the Assistant Superintendents to do their duty, and (3) that he has, under the impression that the amended Vest bill was about to become a law, laid claim to a portion of the reservation, and so has enrolled himself among the number of the land-grabbers who have endeavored to wrest from the people a portion of their pleasure ground.

A man who, while occupying the position of guardian of the people's interests, lends his aid to those who are striving with all their might to seize for themselves the public domain, has manifestly extremely vague and misty ideas as to what is required of him by his office. He should be replaced without delay by some one whose comprehension of the duties of the Superintendent are more intelligent.

The claims which Superintendent Carpenter filed on portions of the National Park, will, no doubt, be found in the Land Office at Bozeman, Montana. At all events it is here that they were filed. Nine names were on the claim on the supposed coal lands on Mt. Evarts, the land being taken up in partnership. As to the claim on the water right, it is alleged that it was at first made in the names of four men, only one of whom, a Mr. Hoppe, was on the ground at the time, and that afterward he changed it so that three of the names, Armstrong, Hobart and Carpenter, were stricken off, and that of Hoppe alone appeared. The claim notices were torn down after the fourth of March, but the records at Bozeman should tell the story, and from these Secretary Lamar can obtain the whole history of these claims, and the men who were interested in them.

The facts in this case are very clear, and we have no doubt that the matter will receive attention before very long. There will probably be no difficulty in finding plenty of people who are willing to take Carpenter's place, but to secure for the position a man who is honest and competent, may be very difficult. The appointment is such an important one, that we are extremely anxious to see it held by a fit person. Almost any one will be better, however, than the present.

COLORADO GAME LAWS.

EXCEPT for the Virginia deer and an occasional bear, no large game is now to be found in the United States east of the Rocky Mountains. A dozen years ago, one who went so far West could kill all the species of Western game in a summer's hunt; now the man is fortunate who can kill enough to keep the camp in meat. Slowly the idea is working its way into the heads of the Western people that the game must be protected. We of the East did not learn this lesson until the large game had all been destroyed, and even now those of us who thoroughly comprehend it are few in number.

The people of the West are quicker of apprehension than we are. They have seen the necessity of enacting laws for the preservation of the game. It is to be hoped that they will be more energetic in the execution of these laws than we have been, and will provide means to enforce them before it is too late. With the laws of several of the Western States and Territories little fault can be found, but laws alone can accomplish nothing.

We have noted with great satisfaction the excellent provisions of the acts passed by the Legislature of Colorado during its last session. The sections which shorten the open season on all large game, and which absolutely prohibit the killing of mountain sheep for a period of ten years, will receive the hearty approval of the better class of sportsmen all over the country. Such restrictive measures are called for more and more each year by the alarmingly rapid diminution of our game.

It is to be regretted that the killing of buffalo is not forbidden in this law. Practically there are no buffalo in Colorado, and yet it is possible that somewhere, hidden away in the rough mountain fastnesses of its western portion, there may be a few individuals of this species, which, by rigid protection, might so increase in numbers as to form a little herd, which in the years to come could show the children of that day, the game which their fathers used to pursue in the olden time, before the railroad had brought destruction to the shaggy black herds whose tramp once shook the prairies from the Arctic slope to the land of the Montezumas.

Colorado is to be congratulated on its good laws. Now let it model its method of enforcement on that of the State of Maine, secure one or more fish and game commissioners who are thoroughly devoted to their work, a corps of mounted wardens or police, who can be trusted, and by energetic action at length put an end to the wholesale slaughter of large game, which has for years taken place within its borders. It may cost a little money, but this will all be returned in the increased travel which an abundance of game would bring in, and the capital expended for game protection would prove a good investment to the inhabitants of the State. In Maine this has been the case, and similar results will be attained in any other State that has brains and foresight enough to follow out the example set by the Pine Tree State.

THE NEW TROUT LAW.

A NEW law has been suddenly sprung upon the anglers of the State of New York, which closes the season after it has been legally opened. We give the law in full in another column, and commend a careful reading of section nineteen.

For years the law of the State has allowed trout fishing on April 1, and the season was so opened this year, but about the 13th of April a law was passed which "takes effect immediately," that suddenly closes the season until May 1, in all the State except the counties of Suffolk and Queens, which comprise nearly the whole of Long Island. The bill is known as the Owens bill, and is in many respects unjust and faulty.

It is unjust in closing the season after it has been legally opened, thereby rendering an innocent and law-abiding angler who went forth, believing that it was lawful for him to take trout, liable to arrest and punishment on his return. It would not be possible to get a jury to convict a man under these circumstances, but as the law went into immediate effect he would have unknowingly violated it. The law is unjust in exempting two counties of the State. These are mainly fished by residents of New York city, who may go there and fish, but may not have the fish lawfully in their possession in their homes. We do not think there would be any objection to making the first of May the legal opening of the trout season throughout the State, without exception of any locality, if done at a time when due notice could be given to anglers, so that all would be able to conform to it.

The law is faulty in its definition of "private waters," see section 18, because this phrase is not made to include streams which, while flowing through an owner's land, do not rise on it. The fact is, that an unnavigable stream is private water from where it enters a man's land to where it leaves it, no matter how far below the source it may be, and the owner may post it and forbid any person from fishing in it.

By exempting the two counties named, the door is opened to send fish from the interior of the State into those counties in April, by persons who are ever on the alert to turn a dishonest penny by violating the law, and the only benefit of the exemption accrues to such persons.

The good points of the enactment are the prevention of trout fishing through the ice at any time, and the forbidding of taking or selling trout under six inches in length. No doubt Mr. Blackford will feel relieved at the change of date, as he will make no more expensive "trout openings" in the market, but his gain is the loss of an annual ichthyological treat to the angler, who received all the benefit from the displays.

Taking the bill as a whole, it contains many objectionable features. In fact they almost overshadow the few desirable ones, and therefore we consider it, to say the least, very ill-timed. The clause forbidding State officers to stock Adirondack waters with predatory fish is very good, but as these officers have already placed black bass in some of the lakes, from which the fish will naturally extend to many others, this clause seems to be useless, as the offense has been so loudly protested against in our columns, that there is no fear of its being repeated.

A FORTUNATE APPOINTMENT.—Our New York readers will learn with great satisfaction that Mr. J. A. Allen has recently accepted the position of Curator of Birds and Mammals in the Museum of Natural History at the Central Park in this city. This is an event upon which New York city is to be cordially congratulated. For twenty years past Mr. Allen has had charge of the mammals and birds in the Museum of Comparative Zoology at Cambridge, where for fifteen years he has held the position of assistant in ornithology. He is known as one of the first of American ornithologists, is President of the American Ornithologists' Union, and is the author of many important works on ornithology. Although Mr. Allen for a long time devoted himself chiefly to the study of birds, it may truly be said that his contributions to our knowledge of some groups of mammals are still more important. His monograph of the "American Bison" is a grand work well performed, which will be a lasting monument to his fame. The more recent monograph of the "Pinnipedia," as well as his contribution to the joint monograph of the "North American Rodentia," by Dr. Coues and himself, are both of very great value. The excellent collections in the Museum at Central Park ought to be under the charge of a man of Mr. Allen's attainments and experience, and all who are interested in this institution will rejoice that he has been induced to accept the position.

NEW YORK GAME LEGISLATION.—The bill forbidding the use of dogs in hunting deer has been ordered to a third reading in the Senate, but has not yet been reached. Mr. C. K. Baker's Assembly bill for the protection of fish in some of the fresh waters of Northern New York (Assembly 501) has passed the lower house and now goes to the Senate.

DR. C. H. MERRIAM has returned from Europe, where for nearly three months he has been working in the English, German and Dutch museums. His labors have been chiefly on the Pinnipeds.

THE DOG SHOW SEASON is now in full blast, and until early June reports of shows will follow one another in quick succession.

WRITE ON ONE SIDE of the paper only. Never roll your manuscript, always fold it.

THROUGH TWO-OCEAN PASS.

XIV.—DOWN ATLANTIC CREEK TO THE LAKE.

TWO-OCEAN PASS has long been known to mountain men. The earliest traditions speak of it as a pass in which is a spring whose waters, flowing by two channels from either side, take their way down the opposite slopes of the divide to flow at last into the Atlantic and Pacific oceans. General Raynolds, in his report of the exploration of the Yellowstone in 1868, refers to it; Jones passed through it from the east in 1873, and Hayden visited it in 1878, also from the east. Both of these writers describe the Pass, and give sketch maps of the valley and the drainage. Jones's examination was confessedly very hasty, as he traversed the Pass in a driving storm, and seems to have taken a good deal for granted. Hayden's, though professing to have been made somewhat carefully, took place in October, at a time when there is usually considerable snow on the ground, although he says nothing about this. As the snow was from one to two feet deep when we crossed the divide, we can add nothing to their observations. The Pass is in a wide meadow, and the divide between the waters flowing to the two oceans is evidently very low, probably not more than a few inches in height, and in times of high water, that is, in spring and early summer, when the snows are melting, it is very likely that there is standing water in the Pass from which streams flow into both Atlantic and Pacific Creeks. The principal heads of the latter flow from the mountains on the north side of the Pass, and have their sources to the east of the heads of Atlantic Creek, which rise in the mountains to the south.

The country in the neighborhood of the Pass is very beautiful. The valley sometimes narrows almost to a mere gorge, or again spreads out in a wide meadow. On either side, the hills rise steeply, first in timber-covered slopes, and then above these are the precipitous square-shaped, rock-faced summits. There is a good deal of game here too, chiefly elk, so far as I could observe, and some bears, and the country looks like a good hunting region. It is, however, within the limits of the Park as proposed to be increased, so that when this change takes place, there will be no hunting to be had here. Still it is a delightful region to visit, and no more delightful trip could be made than to follow our route, gaining thus an excellent idea of a stretch of country which must for several years be away from the route of the ordinary tourist, and passing through scenery as varied and as lovely as can be found on this continent. This route is indicated by the white-lined trail on the map of the Park published in Forest and Stream of Feb. 5 last.

The Park ought to be extended if for no other purpose than to include the beautiful country about Two-Ocean Pass.

Two or three miles beyond the Pass we camped on the west side of the lovely valley. We were close beneath the woods, and opposite us rose the pine-clad hills, showing occasionally bare precipices, naked and rough with huge fragments of rock. Here and there in the openings among the dark timber were seen patches of snow, and the valley before us was a shining plain of white, broken only occasionally by an elk trail. The snow was deep and somewhat crusted, and the poor horses and mules had to work hard for their dinner, gathering scanty mouthfuls of grass from the sheltered spots beneath the trees, where there was least snow. The creek here was still very small.

We shovelled away the snow from beneath the tree where our tent was to be pitched, and so were enabled to spread our blankets on what might, by a figure of speech, be termed bare ground. There was only an inch or two of ice and snow beneath them.

The night was bitter cold, and although well provided with blankets, I found it impossible to sleep. About 3 o'clock I got up, and looked out of the tent door. It was one of the most brilliant nights I have ever seen. The moon, in her last quarter, was nearly at the zenith, and, shining on the frozen snow, made it almost as light as day. The stars shone with unusual brightness and the great planet that hung in the eastern sky fairly blazed. Everything was frozen hard as a rock. Over by the aparejos was a bright fire, and by it I saw Stuart standing. I called to him, asking if he, too, had been frozen out. He replied that he had not, but that he did not propose to be left afoot It was too cold to ask him then what he meant, and I again sought the shelter of my blankets. The next morning he told the story of the night.

He had been in bed some time when he was awakened by hearing a curious grinding noise, for which he could not account. As he listened it grew louder, and its cause suddenly flashed upon him. The horses were starting back on the trail. Jumping out of his blankets, he tried to put on his boots, but they were wet and frozen, and the case being desperate, he reached for Saddlemeyer's, put them on, and crawled out of the tent. As he did so he could see the horses coming. Without showing himself he crept behind the aparejos, which stood close to the trail, having first provided himself with a good-sized club from the stock of wood piled up by the fire. On came the unlucky thirteen, tiptoeing over the trail, in which the frozen snow crunched and creaked under their hoofs. Old Rocket was in the lead, and close behind him came all the others, the mules with their ears well forward, as they looked suspiciously at each shadow cast on the snow by the trees. When Rocket reached the aparejos, Stuart sprang out with a yell, and thumped him soundly with his club, and in thirty seconds there was not a horse or a mule in sight. They had all turned and hurried back into the valley whence they had come. Then Stuart turned into his blankets again.

He had once more fallen asleep, when he was again awakened. This time it was the bell that he heard, and it kept growing louder and louder. Again he arose, put on Saddlemeyer's boots, and looked out to see that again the herd was stealthily coming along the trail. This time old Prickly was ahead, and this time when he reached the aparejos the leader's ancient hide resounded to the blows of Stuart's club, and once more the herd vanished. Seeing, as he thought, that they were going to keep this up all night, Stuart made up his mind to watch until morning, and spent the remainder of the night sitting by the fire, smoking, drying his boots and so on; and he swore that every half hour until sunrise either old Prickly or Rocket would cautiously come up the face of the bluff, stick his head over, look at him, sigh and then disappear again.

The reason for all this was that the animals could get nothing to eat. They remembered that they had had good feed one or two camps back, and knew that there was a trail all the way to it; before them the snow was unbroken and deep, and besides they did not know what was in store for them if they went on.

In the morning everything that had been wet or damp the night before was frozen stiff. It took some time to thaw things out so that the packs could be put on the mules, and we did not get away before 10 o'clock. Just below our camp, the valley narrowed, and the trail appeared to lead over the low ridges, which ran out from the mountains, and we attempted to follow it, but the snow made this somewhat difficult. After traveling for a few miles, winding in and out among the timber, we came out into a broad valley, bounded on either side by mountains. This valley is from one to two miles broad and eight or ten long, and is almost perfectly level. The mountains which directly hem it in, are perhaps 1,000 feet in height, and are composed of the volcanic rock which is so characteristic of this region. Where this rock is visible, as it is near the top of this inclosing wall, it has the appearance of being stratified, for the horizontal lava sheet which overspreads the country when exposed to the elements weathers off with a cubical fracture. For three-quarters of the distance from base to summit the pine forest obscures the precipice, but above this the rock is bare, and rises like the ruin of some ancient wall or battlement. At times the ascent is less steep and these rock walls stand further back, and at their foot is seen a little basin which collects the precipitation from the whole mountain, and from which a brawling water course hurries down through the pine timber to the level plain below. Higher peaks standing somewhat back from the valley, and seen through the cañons, which here and there run down into it, are heavily covered with snow, and upon them can be seen heavy drifts, and, extending over the brows of the steep precipices, curling snow wreaths reach out their thin edges. The erosion which has taken place on this hard lava produces very striking effects, and the faces of the cliffs look as if worn and guttered by rain or by streams of water, having thus somewhat the appearance of the *Mauvaises Terres* formation seen along the Missouri and in Southern Wyoming.

Though so attractive in appearance and apparently promising an easy road, this broad valley was in reality impracticable. One could see at half a glance that it was miry, and the fact that it was covered with snow made it all the more dangerous, because places, which, if bare, would be readily recognized as impassable, were now hidden. It was necessary, therefore, to keep close to the hills on the north side, and even then we frequently encountered soft spots in which the animals sank rather deeply. We were, however, remarkably fortunate. Hell fell down once, and Granny mired, so that we were obliged to take her pack off, but except for these two trifling mishaps there were no accidents. Occasionally, on reaching some narrow valley, down which a little mountain stream poured, we would find the rich black soil so very shaky and unstable that it would be necessary to strike back away from the valley and over the timbered ridges, and here the fallen trees gave us a little trouble. Travel was somewhat slow, but on the whole we got on very well.

There were abundant signs of game here. Most of the tracks seen were those of elk and bear, but here and there I noticed those of deer. On this side of the Pass the elk were traveling eastward—going down the Upper Yellowstone into the Park—and late in the afternoon, after reaching that stream we saw a band of thirty or forty on the other side of the river, and so quite out of our reach. In the timber here quite a number of tracks of the large gray wolf were noticed about the remains of a cow elk, that had been killed only a day or two before.

Late in the afternoon we forded the Upper Yellowstone, which is here a wide, deep stream, and camped on the east bank on a beautiful bit of level, grassy meadow, with a few pines about the tents and a wide willowy flat just below. All through the day, as we followed down Atlantic Creek, the snow had been growing less deep, and here at our camp it lay upon the ground only in isolated patches. I was glad for the sake of the poor animals that the camp was so advantageously situated, for during the past three days they had had scarcely anything to eat. Our tent was pitched with its back to the river, and so faced the east and the beautiful snow-covered mountains. The black face of Turret Mountain stood out prominently a little to our right as we looked toward the hills.

During the day's march we had seen several broods of ruffed grouse, all of which were so tame that they would scarcely move out of the horses' way as we rode by them. Ducks were abundant in the river. They were chiefly red-breasted mergansers and buffle-heads. Kingfishers and white-headed eagles were seen here, and soon after we camped we were visited by a dozen meat-hawks, who sat about the cook tent very much as if it belonged to them. These birds appear to possess considerable mimetic powers and have a great variety of calls.

The next morning, as I was down at the water's edge, just after rising, I witnessed a dash at a family of buffle-heads by a young goshawk. The brood of ducks were flying down the river, when the hawk flew out of the timber almost above my head and darted toward them at once. They all tumbled into the water with a great deal of splashing, and the hawk made a stoop at one of them, which was a little apart from the main flock, but the duck flapped to one side and easily avoided him. The hawk then gave the matter up, and flew into a tall fir, where he sat and watched the brood as they sailed swiftly down the stream to the rapid below. When the ducks first saw him they all set up a shrill, peeping cry, as if of warning. A little spotted sandpiper, that happened to be flying up the stream at the moment, was frightened nearly to death, thinking that the hawk was after him. He dropped into the water as if he had been shot, and sat there with his head cocked on one side watching the enemy, and evidently prepared to dive at an instant's warning if any demonstrations should be directed toward him.

The mules were all saddled before breakfast, and we made rather an early start. The river bottom is here quite wide, and is evidently often overflowed when the snows melt in spring. It is intersected by sloughs which are sometimes miry and very deep. For some time we followed the bottom down, edging over to the hills on the eastern side. Once only we were delayed by a wide slough which was very miry. Several times we drove the Pinto through it, but could find no satisfactory place to cross; but at length, just as we were about to give up the attempt and had started to go round its head, Stuart found a place where the bottom was hard, and here we passed over without difficulty. From the little sloughs in this bottom we started many mallards and teal.

A little further on the trail passes by a very steep ascent up the bluffs and follows along the hillside through the green timber. At several points the way crosses places where ditches have been torn out, trees uprooted and great rocks thrown about, evidently by the sudden and violent action of water, perhaps a cloud burst or something of that nature.

Along this mountain side we noticed great boulders of the hard volcanic conglomerate which constitutes so large a part of the rock of this region, and which we had seen almost everywhere since leaving Snake River. Rolled boulders of it were observed in the stream beds of Buffalo and Pacific creeks, where we crossed them in the valley of Snake River, the rock was seen in place at our second camp on Pacific Creek, and the day before, we had seen several isolated pyramidal masses of the same rock standing in the level valley of Atlantic Creek. This conglomerate is composed of bits of volcanic rock of many kinds. Sometimes all the fragments are rolled and water worn, at others all their edges are sharply angular as if they had not been at all transported. These fragments vary in size from that of a pea to a hogshead. They are cemented together by a hard clayey matrix, which, on exposure to the weather, readily decomposes and seems to contain some yellow sand. The boulders are of all sizes, from a pound to fifty tons in weight. They are no doubt forced off from the main mass of the mountain chiefly by the action of water which, penetrating the cracks in the rock, and alternately freezing and thawing, gradually wedges them out of position, and away from their beds high up on the hillside.

We stopped to examine these boulders, and while we did so the packs were tightened. A few hundred yards further on, just as we were dipping down into a narrow gully, I saw three deer slip out of the brush just ahead of us, and run out of the timber across the sage-brush covered hillside. I slipped off my mule, ran across the ravine and out beyond the timber. For an instant as I looked about I could see nothing of them, and then I caught sight of three does standing near the top of the ridge, and just below the edge of the timber. I fired with a coarse sight at one of them, and as I lowered my rifle saw her drop her ear, as if I had shot through it. I fired again as they were running, and one, as I thought, limped over the ridge. The last one stopped almost at its crest, and looked back, and my third shot brought her down. Hurrying back I mounted, and we rode up the steep hill to the top. The last doe lay dead near where she had fallen. The ball had struck her back of the short ribs and had ranged forward. Nothing was seen of either of the other animals, and as no blood sign could be found, the presumption is that neither of the other shots did any damage. From the high point where the deer lay we could look out over the distant waters of the lake and the surrounding country. At our feet, flowing through the thick timber was the broad river with high mountains beyond it. Then looking toward the lake we saw the dark green pines, beyond them the paler willows at the river's mouth, then the deep blue of the lake, again the green pines beyond, and above them the snow and the pale blue sky in which hung a single white cloud. It was a combination of coloring seldom

to be seen, and wonderfully effective and beautiful. Certainly this is the most wonderfully beautiful country in all the Rocky Mountains.

Packing the deer on one of the mules we kept on down the river, and during the afternoon reached its mouth, and crossing the wide marshy bottom where several streams poured into it from the east, started along the lake shore. Here Mr. Hague and I stopped and climbed some high hills, from which most superb views of the lake and the surrounding country were had. Here, somewhat to my surprise, I found fresh elk sign very abundant, and also, what seemed still more remarkable, some fresh bison signs. All accounts agree in making the bison rare, if not almost extinct in the Park. Rea told me that a year or two since there was a little band of about a hundred head over on the head of Clark's Fork. Ten years ago they were quite abundant here, but in that time their numbers have been greatly reduced. It was encouraging to find any evidences at all of their recent presence.

We lingered for some time on the hills enjoying the beauties of the scene, and then started on to follow the pack train to camp. It seemed a long ride through the timber and over the pebbly beach before the white tents and the feeding animals, scattered over the little park, came in sight, and told us that we had reached home.

On their way to camp the pack train had come upon a bull elk, which did not seem at all alarmed, but stood looking at them until Saddlemeyer spurred old Prickly close to him and tried to hit him with his quirt. Then he trotted slowly off into the timber. Several other elk were seen by them, and signs were very abundant here, but as we were now within the limits of the Park, there was no further use for a rifle.

This camp was beautifully situated in a smooth, grassy park. Before us was the broad lake, and behind and on either side the timbered hills. The tents stood in a little grove of pine trees, which furnished shelter and fuel, and the hungry animals luxuriated among the rich grass. The bright fire lit up the trees, and the tents, and the aparejos, and as it flamed and flickered, curious shadows peeped out from the dark caverns that stretched away beneath the pine branches to the gloom beyond, and sometimes creeping stealthily forth, danced for a moment within the circle of the firelight, and then chased one another back again into the darkness, and were swallowed up in it. The soft murmur of the waves on the beach came to us in a monotonous undertone, and now and then from far out upon the water sounded the weird laughing cry of a loon, while the mountain sides behind us at intervals re-echoed to the fierce, shrill challenge of the angry elk.

So the evening wore away.

The Sportsman Tourist.

THE BUCKTAIL IN FLORIDA.

III.

I WROTE you last from Camp Tarpon, on Oak Point, where I lived a sort of half-hunter half-hermit life for just forty-six days, having spent my first night there on Feb. 6, and moved my duffle to my present quarters on March 24. It was a pleasant, idle, dreamy life that. I hunted a little, fished more, loafed a good deal, and passed the days in virtuous ease for more than six weeks of an exceptionally hard Florida winter. There were two light frosts during the winter, that did no damage, however; and there were repeated "northers" that rather upset my notions of camps. I had calculated that a closely-laid double-boarded roof, placed at an angle of three feet pitch in six would turn any rain—which it didn't; for the rain came horizontally from every point of the compass, and it took three wettings to teach an old camper the possibilities of a Florida norther. I got in line at last, and the two last storms left the camp dry, with a bright fire in front.

It was something of a new experience, that forty-six days on Oak Point. It was only two miles to the Springs, where there were plenty of winter boarders intent on fishing and shooting; but they almost never came in sight of my camp, though the best quail shooting near the hotels was on and near the Point, and I only once saw a sportsman there during my stay. "Tarpon," who had selected the camping ground for me while I was yet amid the snows of a Northern winter, occasionally paddled up for an evening's smoke and chat, and on two or three occasions Mrs. Kendall came with him. But mostly I had the camp, the live oaks, and the numerous birds all to myself; and I enjoyed it, oh, so well. The birds were excellent company and of infinite variety, the home birds being most numerous. Bluebirds, bluejays, highholders, chewinks, bee martins, kingbirds, downy and spotted woodpeckers, with redwings and meadow larks—all were daily visitors, and all were familiar and fearless.

Two bevies of quail came daily about the camp, and at first I was disposed to utilize them as food. But, on following them up and watching their cute, beautiful ways, my heart failed me. It seemed such an ogreish thing to crush an ounce of shot into such an innocent family that I might gobble a few mouthfuls of quail, and they were so graceful on the ground or on the wing, that I decided to leave them in peace, believing that I could get more enjoyment from them alive than dead. And I did. There was not a morning on which I did not hear their clear, mellow whistles, and I saw them almost daily. There was not one of them shot while I was there, and when I left they were pairing for the season.

The tameness of the crows surprised me most. On the first day a pair of them settled in the oak overhead and held a consultation, which ended in dropping down within ten yards of the shanty to pick up bacon rinds, crusts, etc., that I had thrown out. Next morning they had increased to five, and I was so pleased with their familiar behavior that I took some pains to feed them. "You will be sick of them in a week," said "Tarpon" when I mentioned the incident to him; and I was. I never saw such senseless, incorrigible thieves. They stole for fun, and made themselves needless trouble picking up bits of dishrag, paper labels, hard soap, teaspoons or anything they could lift. When I caught a glossy old rogue actually in camp tugging at my watch chain, my patience gave out; and baiting five of them into a bunch, I cut loose at them with five drams of powder and a teaspoonful of damp sand, distance ten yards. I never saw crows make such time. Every fellow went the way he looked, and all confidence between us was destroyed forever. They did not come back.

Every day I heard the crack of the rifle or roar of the 12-gauge as the guests of the hotels went for ducks, blue herons, snake birds, sandhill cranes, white egrets and marsh hens. The clatter of rowlocks came plainly to the ear from the river across the marsh. The upper half of a white sail was often seen slowly winding its way among the dense bulrushes; but no one came up the bayou to Camp Tarpon. There was an impression that the bayou was only a pocket, and a long, crooked one, with nothing attractive about it, and no chance for wildfowl; where there was no inlet, and one could only row up it, and then row back.

And I had been told that the water in the bayou was too salt for washing hands, even. And so for three weeks I toted water a mile in the canoe, until at last being short on water I tried a piece of brown soap in the bayou. To my surprise it seemed almost as soft as rain water. I tried it as drinking water and found it sweet and cool. I made tea and coffee with it, and could see no difference between it and spring water.

Now, it is true that there is a tide rise of some two feet in the bayou; but it is also true that there are two narrow channels at its head through which a boat may be pushed, and through which the surface water of the cool, clear Anclote rushes with force on each ebb tide. Of course the water is fresh and sweet, and I carried no more water jugs in the Bucktail.

I paddled the canoe at least every other day down to the Springs for mail or supplies, and the numerous and irrelevant questions asked me by city sportsmen and outers would have made a country schoolboy laugh. What was I doing up in the woods alone, and did I always live out o' doors? Wasn't I afraid? And how did I live, anyhow? On game or fish? What should I do if a bear attacked me in camp? And did I ever see any panthers, or wildcats?

One old patriarchal looking party from Philadelphia, of the Greeny Muggins order, asked all of the above questions, and many more. He was a dignified old party of position and family antecedents at home; also an authority on fish and game laws. But as regards genuine outing, woodcraft—so green.

Considering that the winter was a hard one for Florida, I managed to put in forty-six days of pretty fair outing at Camp Tarpon. There was not a day when the weather permitted that I was not up before the sun, and out on river or bayou, or roaming among the pines and live oaks. I usually had a rod or gun along, but fished little and shot less. One or two fish, or a bird, or squirrel were not far to seek. And, although I levied a per capita tax on nature's gentle woodfolk, I was very lenient on collections. So long as there was fish or game in camp three or four days in the week I did not hanker for gore. It was an easy-going, lazy, dreamy outing, one very beautiful feature of it being the bright, clear, moonlit nights. There were two half moons during the time, and I usually managed to get out about twelve to one o'clock in fine weather, and spend an hour or two smoking and roaming about the point.

Whoever visits Camp Tarpon will find several clusters of live oak within a furlong of the camp, and these oaks have a tendency to arrange themselves in groups around an open center that seems left purposely for the shanty or tent of the outer. I was never tired of admiring the sturdy, gnarled, crooked, broad-branching oaks. Every twist, bend, or crook known to shipwrights might be found among their rugged trunks and limbs; every timber used in ship building—except the straight ones. They wagged their long gray beards and giant arms against the midnight sky in solemn protest against straight lines.

And the days went by without note, and I lost the day of the week and of the month, and my watch, catching the infection of laziness, failed to keep time at first, and finally declined to run at all. There was no need. Friends sent me papers every week, which I turned over to the Captain without reading even the local news from home; and I only knew what was going on in the outside world by the occasional remarks of others. Nor did I care. I came to Florida for an all-winter outing, not for an inn-ing, and I was taking it in, pure and simple. Bright fires in front of the shanty at night, soft, elastic pine leaves and palmetto for bedding, exercise by day, and wholesome fresh air; these, with good, well-cooked, plain food, were bracing and lifting me to health very certainly from day to day. And I was content. The shanty faced to the southeast, looking directly to Lower Salt Lake. Lying in camp of a bright moonlit night, I could see the silvery glitter of the lake through the tall, reddish-brown boles of the pines. Lower Salt Lake was eighty rods away to the southwest, and over a dry oak and pine ridge at the head of the lake was Lake Butler, a favorite resort of all the boarders at the hotels, who seldom showed a boat on either of the salt lakes because of their bad reputation for duck shooting and trolling. And so every fair morning wagons were sent over to Lake Butler from the hotels with strong delegations of sportsmen and tourists.

They usually arrived at the lake about 9 A. M., just as the bass and ducks, having breakfasted, were taking a forenoon siesta. And then they strolled up and down the white, sandy beach, complaining of poor sport. It struck me that these sports had just the right knowledge of how not to do it.

I had formed the acquaintance of several natives—"crackers"—who lived near the lake, and who had the reputation of crack shots and successful anglers. I knew that some of them had walked to Lake Butler in the early gray of a morning and returned in time for breakfast with more than fifty pounds of bass, ranging from two to thirteen pounds, and this by still-fishing, with cut bait and a rig costing less than twenty-five cents.

Taking a hint from my cracker acquaintances, I carried the Bucktail over to Salt Lake, paddled to its head, made the carry of sixty rods over to Lake Butler, and went into camp one bright evening in February prepared for fishing at daybreak the next morning. A few casts with a red ibis salmon fly resulted in a two-pound fish for supper, and I was on the water betimes next morning ready to try the bass with red ibis, split ibis, silver doctor, or any fly they might fancy. Considering that the sport was new to them, they seemed to enjoy it remarkably well, taking the red ibis freely and hanging on to the hook with commendable pertinacity. I caught all I needed and got my tackle smashed besides in about twenty minutes. And the question arose: Did it pay to come two miles, make two carries, and camp over night for twenty minutes' fishing? Had the fish been scarcer or more wary the sport would have lasted longer, or had they been smaller I should have saved some tackle.

But I paddled and carried back to camp under a hot sun with a notion that, on the whole, the trip had been pretty satisfactory. NESSMUK.

Oak and Pine, March 20, 1885.

CAMPING LIFE.

"WAWAYANDA'S" "Camp Flotsam" found eager readers in one family, who know how to enjoy life in camp, and say Amen! quite heartily to his many suggestions. I believe my better half has ventilated her views on this subject in Forest and Stream, but I cannot let one thing pass without some comments thereon.

Five years ago I was preparing to go camping. Previous to this time she had joined me each summer, but boarded at the club house, the hotel, or stopped with some friends near where I was fishing. Each time I promised if her health improved I would take her and the boy into camp with me, but I must say I dreaded the experience. Always a sufferer from bronchial and catarrhal complaints, and taking cold so easily, I knew the danger of sleeping under canvas to such a bundle of frail humanity. When the hot July days came again almost the only thought, from early morning until sunset, filling the mind of "that boy of mine" was, "Well, pap, when can you get away for camping?" Finally I told them to get ready. I found things for camping in an advanced stage, and it only needed my fishing tackle to be overlooked and the provisions made for sleeping. Here was the rub. I said little about sleeping on the ground, but thought a heap more. Words were useless. It was, "I am going! You promised if my health was better I should go into camp with you. I am better, and if I get ill I won't complain one word; but I'm not going to get ill; I am just going to enjoy myself." Twenty years' experience in married life has taught me—

> "When a woman says she will, she will,
> You may depend on't;
> And when she says she won't, she won't,
> And that's the end on't."

So I devised a cot to keep us about twenty inches from the tent floor, and got into our kit all the "calamities" our friends, "the Kingfishers," so aptly describe; among them was a hot-blast stove burning kerosene, to use in the tent if we should get any wet weather. My heart misgave me when we jumped from the train into what appeared almost a forest. The gray of the morning was just passing off, we were cold, tired and hungry; we found a way to get into the small depot and waited until some life appeared. I got some help, moved the tent fixings over into a grove of maples on the edge of the forest, got up the tent, went about a mile to get some milk, but found we could get breakfast, and soon learned I was in a splendid trouting country, and within a few miles of as fine a grayling stream as any angler wants to put eyes on. By noon our tent was floored with pine boards, the boy's hammock swung, a table made of our camp chest by putting on a drop leaf, the stove fixed, and everything in good shape. We ate as good a supper, cooked in just as good style as though in our city home, we were very tired, and after fixing up the cot and preparing for rain, we went to rest. All my fears were forgotten; it was broad daylight and the sun hours high when I awoke. The tent was decidedly cool, and jumping out I lighted the oil stove, put over the oven, and in fifteen minutes our tent was warm. I then put on the kettle, while the wife prepared breakfast, the cots were cleared away, water was brought in from the spring, toilet finished, and breakfast was made a leisurely meal.

Tent life was a series of pleasant days—trout fishing, grayling fishing and taking a few days on the big lakes after bass, until the time came to return to the city. During our stay we had two rainy days; we kept the stove running almost all day, lay in the hammocks and indulged in many a hearty laugh over the experience of a camping party given in Forest and Stream. We always take plenty of papers and some interesting books into camp with us. We don't believe in grumbling, and have learned to make the best of everything. Our camp life is not designed to make us bears, but is intended for a delightful change and for the rest that comes from such a change.

The greatest surprise came to a woman that for ten years had scarcely been out of the care of a family physician, a gentleman who loved camping and canoeing, and who almost feared sleeping under canvas was too great a risk, but advised the wife to prepare for any sickness. It was "Medicine might be thrown to the dogs." Not a cold or symptom of cold followed, she came out of camp ruddy and brown, stronger and heavier than she had been for years. The benefits are all on our side; the boy and I live like epicures, but no fuss is made about preparing meals, breakfast over and we are off fishing.

Now each summer as camping time draws near, I find many things prepared, many articles devised for camp use. This summer we anticipate sleeping under a tent devised and made in part by this wife of mine. The cot is a matter of deliberation in which a woman's wit has been exercised, but it's going to be comfortable. Some time when it is finished I will send a sketch for "Wawayanda's" inspection. Our new camp stove is different from the one described, and will bake, boil and broil, or toast at the same time. I am inclined to think if ladies would go with their husbands into camp, the men would find a vast improvement in camp life. We take things too much as they come, our camps are too often "makeshifts," "higgely piddely" sort, as "Wawayanda" aptly expresses it. We run into too many risks, get wet, and half dry ourselves; too many exposures when unnecessary.

I am fond of roughing it, but find a vast change for the better since the 115 pounds of feminine angler took charge of the camp and its fixing.

Another word and I am through. Experience has taught us that one family in a camp is sufficient; if others want to go camping, all right, but let each family make its own provisions and arrangements. If one individual undertakes to provide for a crowd (three or four families), he's going to have a splendid time of it, and if he keeps a cool head, he is too good for this sighing world and is fit to be translated.

We all fish; but the boy takes his mother under his care, and will paddle from morning till night to give her some bass fishing, or to get a good pickerel for supper. This allows me to go up into the creeks for trout, where the thick undergrowth prevents them joining me in this pleasant sport. NORMAN.

Duluth, Minn.

Natural History.

WINTER AND SPRING BIRDS AT ST. LOUIS, MO.

THE following notes are selected from the reports on migration at St. Louis, sent by Mr. O. Widmann: Particular attention is called to the form in which the notes are kept. There can be no doubt of the utility of keeping a regular journal of ornithological and meteorological phenomena, but the difficulty is to find readily and easily the note wanted out of the large mass to which such a journal or diary rapidly grows. It will be found that by entering the birds' names and other subjects in the side columns, the desired item can be obtained with but little difficulty. Two forms of the journal are given. The first or descriptive is the better if one has the time to spare necessary to its writing. The second, beginning with March 2, presents the facts in their most condensed form. Both of these forms and a happy medium between the two have been used by Mr. Widmann in his reports. The latter form was most successfully used in a recapitulation of last spring's migration in which the whole subject of bird movement, weather, "contemporary phenomena," etc., from Jan. 1 to May 20, containing nearly a thousand items, was condensed to twelve written pages of foolscap. The record this year reads as follows:

This winter was unfavorable both for birds and observer. We not only had three ordinary winters consolidated into one, but we have also had more snow than usual, and in consequence more slush and deeper mud during the short warm spell that separated the second winter from the last and the severest of the three. The first winter was from Dec. 10 to 27; the second from Jan. 16 to 30; the third from Feb. 8 to 26. Snow covered the ground from Dec. 11 to 28, and from Jan. 16 to Feb. 26.

The Mississippi never froze over nor even gorged at this place, although it was several times at the point of closing. An open river is an important factor in the well-being of our crows, and is a necessity for the presence of gulls, ducks and bald eagles. The offal of the city, which is dumped into the river, affords, even during the coldest term, easily accessible food for all these species. When everything is covered with deep snow or frozen as hard as a rock, the crows depend for a large part on the food which the open river affords. Hundreds and thousands are then seen sitting in clusters on the edge of swimming ice fields floating down for miles, returning by wing to begin another trip further up near the dump. It is amusing to watch the crows fishing choice morsels out of the current, and astonishing is the skill they display in seizing food while on wing. One of the crows' companions while subsisting on the refuse of the city, is the bald eagle, which is a winter visitant so long as the river is open. During the coldest days of the winter, the noble bird was seen sitting on the running ice engaged in the same manner as the crows. The other species which is fond of inspecting the Mississippi below the dumping places of the great city is the herring gull. Plying with heavy wing strokes up and down the river, so low that it seems to touch the waters, it suddenly folds its wings and sits down to devour its booty while swimming or resting on the wave. As long as the river is open some of the ducks remain with us, and since they can find hardly anything else, it must be supposed that they feed on the same kind of food as gulls and crows. During the two warm spells the ducks began to push northward, and the first birds of the year (beside sparrows and crows), on New Year's day at 7:20 A. M., were seven ducks flying north along the river. On the afternoon of Feb. 7, just before the wind turned to the north, three large flocks of ducks (50 to 70 each) passed coming from northwest. Next day the third winter set in.

There can be no doubt that less birds (residents and winter visitants) than usual wintered with us. By the term "wintering" is meant remaining all winter. Some species remained during the first part of winter and perhaps until the middle of January, but when it grew colder after the snowstorm of Jan. 16, they left, and were not seen until the opening of early spring about the last of February.

FEBRUARY 26.

First warm sunny day, maximum 50°, southerly winds. This day does away with the snow which has been covering the ground since Jan. 16.

FEBRUARY 27.

Second warm day, maximum 58° (in sun 75°), light south wind, clear. At 9:30 A. M. the first ducks go north, fifty to sixty sprigtails. At 10:15 another large flock was seen at a distance, and several more during the day, and in the evening a flock of blackheads. *Dafila acuta* *Fulix*

FEBRUARY 28.

Third warm day, maximum 68° (in sun 102°), increasing south wind.

Never has a season opened more gloriously than this year's has to-day. From 7 A. M. till noon, an almost steady stream of ducks passed over in flocks of from thirty to sixty, the larger part being sprigtails so far as I could see. There was hardly any time when at least one flock could not be seen in some direction, but oftener half a dozen could be counted at the same time. Many flocks followed the Mississippi, but the majority turned off to the west just south of the city in order to reach the Missouri River or the large tracts of low land between the mouths of the Missouri and Illinois rivers. Thousands have passed this city to-day and their usual companions were with them. *Anatidæ* *Dafila*

In the early morning gulls were seen going north in regular migration-wedge, taking their annual overland route just in the rear of the city, cutting short the great bend which the Mississippi makes north of St. Louis. Many gulls, of the same species, old birds in beautiful plumage, were seen all day soaring in majestic gyrations at enormous heights above the Mississippi. *L. argen. smiths.*

At 10:45 the Raptores appeared on the scene of northward migration, the golden eagle taking the lead. A grand sight it was to see the stately band-tail passing by only a few hundred feet above one's head in wide circles, leisurely, but energetically moving north. Immediately behind came another interesting migrant, the goshawk, readily known by its great size in connection with its peculiar accipitrine shape of flight. At 11:40 another large hawk came near, passing within fifty yards, showing his dark whiskers, but disappearing with rapid wing beats as fast as it came; it was no less a personage than the duck hawk himself, the powerful peregrine falcon. At 12 two old white-headed and white-tailed bald eagles came passing by in bold circles, keeping close together and moving up the same way all others went, the way north. Within the next hour four red-tailed hawks appeared in the south and disappeared in the north, sailing dexterously amid the now stronger blowing southwest gale. *Falconidæ* *Aquila* *Falco pereg. nævius* *Haliœetus* *Buteo borealis*

During the night and in the early morning the wind was a light south, but in the upper stratum a northwest current made itself felt more and more as the day advanced. Vapory clouds in long streaks appeared in the west and cut their way toward the zenith. The wandering birds took advantage of the lively southern current of the lower atmosphere and all ducks and raptores kept at about five hundred feet above the ground, while the Canada geese, which moved at noontime, were still lower—about three hundred feet above ground. The temperature rose steadily from 44° to 68°, and a thermometer exposed to the direct rays of the sun showed 102° at noon. The heat at that time was oppressive, and bees and flies became numerous, although the frost is not yet out of the ground. *Atmosphere* *Bernicla canadensis* *Temperature* *Insects*

In the afternoon the wind became more and more westerly, with increasing cloudiness and falling temperature. During the afternoon the flocks of ducks appeared at long intervals, but just before night several large flocks passed in quick succession. At 9 P. M. it began to rain and the wind relaxed for a while. *Rain*

Besides the wandering of Anatidæ and Falconidæ, it was especially the arrival of our bluebirds that made the day a gala day for the ornithologist. The bluebirds had arrived in force, and during a seven-mile walk in the southwestern part of the city, fifteen males were counted warbling at their old stands; four of them were accompanied by their females, the others appeared to have arrived singly, at least no female could be detected in their neighborhood. A second new arrival was met in the shape of the cedar bird. It was 7:30 A. M. when a flock was seen to alight on a tree at the east border of a grove. Drawing near and watching them for a few minutes, they were seen sitting in utter silence, but busily engaged arranging their feathers. All at once they stopped this occupation, stretched their necks, and began to call as loud as they could. Looking up in a southeast direction, a number of small bodies were seen at a great elevation, but rapidly growing larger as they came down in a slightly oblique line, and in another instant a second flock of cedar birds had settled among the first. That they were tired, appeared from the fact that a bluejay which seemed to dislike the new comers and tried to harass them, could not dislodge them even with his ugliest cries. *Sialia sialis* *Ampelis cedrorum*

Another feature of the day was the ubiquity and conspicuousness of the horned larks. After 9 A. M. their searching call was continually in the air, and single birds were seen hovering aimlessly over their former haunts. It was the disbanding day of the flocks, the pairs taking up their old stands which they made resonant with the oft-repeated "ickle, ickle," and the young folks searching mates and suitable ground to settle for an early season of love and parental joy and sorrow. Still another feature of the day, not less characteristic and significant for the approach of early spring, was the excited state of the crows. This bird is very sensitive to the first warmth of the young year, and thinks of match-making as soon as the ground is free from snow and the air not below zero. The crows have a common roost to which they resort all winter, but they have also a certain place for their courting, where those meet which have a matrimonial scheme in view. Any sunny, mild day in winter finds collected there a party of amorous crows in animated conversation. Certain actions which they perform on these occasions seem to bear some relation to their match-making. With peculiar sounds, different from their common cawing, they fly up some fifty feet into the air, against the breeze, and with outspread wings floating in a graceful curve, return to their former station on the trees. The continual darting up and circling back of a number of the birds at the same time produces a strange spectacle. *Eremophila* *Corvus frug.*

To complete the picture of the day let us not forget to mention the singing of numerous redbirds, the weak but welcome attempts of junco, the clamorous calling of the tufted titmouse, the real music of the happy chickadees, the excited and melodious mood of some tree sparrows, the spring notes of the hairy woodpecker and the flicker, the efforts of the bluejays, and the lofty play of the red-shouldered hawk above his favorite wood. *Cardinalis* *J. hyemalis* *L. bicolor* *Parus atric.* *Spiz. mont.* *Picidæ* *Cyano. cristi* *B. lineatus*

MARCH 1.

A strong cool west wind, which arose during the night, continued all day, speeding dark clouds across the sky and keeping the temperature at a few degrees above freezing. Flocks of ducks continue their northward flight in spite of the stiff breeze, and also several flocks of Canada geese. The first red-winged blackbirds make their appearance in a large flock within the city limits; old acquaintances probably because well acquainted with the topography of the city, crossing the river at the same point and going low above the very same roofs over which they used to go last year, on their way to and from their roost. With the exception of ducks, geese and blackbirds, hardly any movement seemed to be going on to-day, the wind being too strong for small birds. At 8 A. M. a party of eight bluebirds was seen battling their way northward, but it looked as if they would not proceed far. At 5 P. M. a party of twenty bluebirds, male and female, were found together in a sink hole of about an acre, sheltered by a grove from the cool west wind, here they were busily engaged in feeding on the ground in perfect silence. At 7 A. M. next day they were gone. *Weather* *Anatidæ* *Agelæus* *Sialia*

March.

2. Night—Clear, cool, light frost; birds move a little.
   Day—Bright, clear, light W., shifting to S. W. and S.
   F.—Lanius ludovic., Merula, Spiz. pusil., Carpodacus, Aix, Oxyechus.
   Increased—Sialia, female.
   Ducks and Canada geese move slightly, and all at great height.
3. Night—Clear, warm (50°), but strong S., turning W. after midnight.
   Day—Clear, increasing W., with nearly stationary temperature.
   F.—Astragalinus, Sturnella.
   Second time—Lanius ludov., Carpodacus, Merula.
   Move—Anas boscas, Nettion, Agelæus, Laridæ, Ampelis cedr. All movement ceased suddenly about the middle of the forenoon, when the force of the increasing W. began to be felt.
4. Night—Cool, clear, light frost, lively N. W.
   Day—Cool, clear, turning to N. and N. E.
   F.—None.
   New parties of Merula, Agelæus and Astragalinus.
5. Night—Cool, foggy, calm, and light N. E.
   Day—Fair, turning S., but chilly.
   F.—Passerella.
   Increased—Astragalinus.
   First song of Melospiza fasc.
6, 7 and 8—Strong and cold N.; temperature at night a little below and during the day a little above freezing. A few flocks of ducks, geese and blackbirds excepted, no change is apparent. Birds and observer take a rest.

SUMMARY.

Feb. 26—S. winds, first warm day; snow disappears.
Feb. 27—S. winds, second warm day; migration begins.
Feb. 28—S. winds, third warm day; first "wave" strikes.
March 1-3—Westerly winds prevailing, frosty nights, warm days. Some migration during morning hours.
March 4-8—Northerly winds, chilly air, frosty night.
Migration=0. W. W. COOKE.

MOORHEAD, Minn., April 1, 1885.

HABITS OF THE PRAIRIE DOG.

Editor Forest and Stream:

Personal observation of the habits of a pair of prairie dogs, which were presented to me some years since, leads me to believe that your correspondents are mistaken who believe that the animals burrow to find water to drink. For nearly three years I kept this pair in a close cage, in which they throve and grew fat, but could never be induced to touch a drop of water. A dish of water placed in their cage was immediately overturned by them, if possible, or if not, filled up by them with grass or hay to get the water out of the way. After some time, seeing the futility of offering them water, I gave them no more, and they lived with me for two years certainly without drinking. The communication of your Salt Lake correspondent confirms my observations of their habits, in captivity at least, and probably in a free state their wants and tastes are the same. W. L. M.

HARTFORD, Conn., April 12.

Editor Forest and Stream:

Living in a country where prairie dogs are very numerous, I can state that I have seen them come to water and drink. One day last summer one came to drink at a lake where I was fishing. I had my setter dog with me, and he rounded the prairie dog up and drowned it, knocking it down with its paw. I have watched them coming from their holes while hunting antelope, and with a powerful field glass. They have had the appearance of being wet after coming from their holes. They are good swimmers, as several times I have seen them cross water chased by my dogs. Some of their holes are very deep, as I have tried running them full with water. My opinion is that their holes go to water where surface water is not near. ALMO.

HENRIETTA, Tex., April 13, 1885.

MAINE BIRDS.—Among the general notes of interest in the last number of *The Auk*, there is record of a wood thrush (*Turdus mustelinus*) "shot Sept. 6, 1884, at Saco, Me.," by Mr. Joseph L. Goodale, and an account of a humming bird kept in confinement as a pet is contributed by Mr. S. W. Willard. In FOREST AND STREYM of Dec. 28, 1882, there was published the record of a wood thrush shot in Kennebec county, Me., and no doubt this species visits Maine only as a straggler, as there appear to be no other public records of its occurrence here. In the number of this journal for Jan. 25, 1883, a brief allusion was made in the catalogue of "The Birds of Maine" to the keeping of a humming bird in confinement as a pet by a friend of the writer, and the fact that the bird subsisted for many months upon sugar dissolved in water. Attention was also called to the desirability of humming birds as pets for those who love birds and flowers, and have facilities for gratifying their tastes in this respect. These birds may be caught with but little difficulty where flowers are abundant, by means of an insect net or by opening to their easy access a conservatory of flowering plants, and entrapping them by preventing egress after once allured within. However attractive the skins of these birds may be in the cabinets of collectors or toilets of ladies, the beautiful creatures are far more attractive in life, and may be made very enjoyable pets for naturalists and for ladies.—EVERETT SMITH (Portland, Me.).

THE WASHINGTON PRAIRIE CHICKEN.—The pinnated grouse killed near Washington City, as related in last week's FOREST AND STREAM, may have been the descendant of birds liberated by Dr. Purnell of Snow Hill, Md., several years ago. The writer has positive proof that they bred, and several broods are known to have been raised. These were seen by the natives of the section where the grouse were put out. I believe a second planting of prairie chickens has been made since in the neighborhood of Snow Hill, Md.—HOMO.

Spring Notes.—The arrival of the spring birds is earlier this year than last, March 12. I saw first robins three days earlier than last year. The 15th saw first bluebirds and song sparrows; 18th, saw a flock of cow buntings; 26th, robins and bluebirds abundant; April 4 saw purple grackle and meadow larks, also observed nearly eighty wild geese flying northwest; first field sparrows. April 5, saw several Phœbe birds; first flock of black snowbirds, and one solitary Savannah sparrow. Snowbirds are with us yet.—G. A. Knapp (Onondaga Hill, New York, April 6).

In spite of the decidedly wintry weather, which is here still prevailing up to April 13, a good many of our migratory species of birds have promptly put in their usual appearance. Robins, bluebirds, song sparrows and phœbe birds are now frequent sights, although it is difficult to conceive how some of them, particularly the latter, being strictly insectivorous, manage to exist. A solitary pair of the white-bellied swallow was seen on April 9 hovering over the shallow waters near the edge of the Niagara. A fine specimen of the fox sparrow was shot by Mr. Bergtold on April 5, near the Cattaraugus Creek, this being the first time that this species has been obtained in this vicinity on the spring migration. The specimens thus far noticed were shot in former years in the early part of November, when passing through on their fall migration. The open waters of the Niagara are still literally alive with hundreds of the long-tailed duck (*Harelda glacialis*), which have donned already their fine dark-colored spring suits. The great northern diver, better known by the name of loon, is unusually common this spring near the mouth of the Niagara, and four of these bulky birds have thus far been taken by fishermen on their night lines, which they bait with minnows, and thereby capture these flying fishers which, they assert, bother them greatly when they haul up their lines in the morning. That winter is only slowly yielding is also manifest from the occurrence of the snow bunting, which still lingers here. A fine-plumaged male bird of that species was shot as late as April 4. A Wilson's snipe has also been killed at Batavia, a town forty miles east of Buffalo, on April 8, but it has been thus far the only one, although no pains have been spared by our ambitious local gunners to secure the customary premium of ammunition which is offered by our enterprising gun dealer, Mr. LeValley, for the first bird of the season.—C. L. (Buffalo, April 13).

An Old Squaw in Michigan.—About the end of February, Capt. Fred Johnson, of the steamer Queen of the Lakes, who, by the bye, is well known to many of your readers, chanced to see a duck which Fred Thayer had shot near where Calm River empties into Torch Lake, in this county. It was new to Fred and also the Captain, who brought it to me for identification. I found it to be a male "old squaw" or "south-southerly" (*Anas glacialis* Wilson) [*Harelda hyemalis*]. Speaking of it about that time to a neighbor, he said a boy had shot or shot at one of the same kind in the mouth of the river at this place at about the same time, but I could learn nothing further. Fred Thayer, who shot the one brought to me, has lived near the place where it was shot for many years, and it was strange to him. I do not know that I have ever seen one, except along the coast of New England until the present occasion. There is no doubt as to identity, and I wish to know if it is not unusual to find one so far inland.—Kelpie (Central Lake, Mich., April 15). [This species occurs regularly on the great lakes, but is chiefly a sea-coast bird.]

Game Bag and Gun.

MINNESOTA DUCK SHOOTING.

During the past two years I resided fifteen months in the garden spot of Minnesota at Faribault, where I became acquainted with many kind gentlemen sportsmen, and enjoyed many pleasant shooting excursions in the surrounding country. About the second week in November, 1883, it was reported among the shooting fraternity that the duck shooting at the pass on Geneva Lake, in Freeborn county, was very fine, and upon that report a party consisting of C. W. Fitch, H. Kester, L. Newcomb and myself, proceeded at once to make our arrangements for a duck slaughter at that point.

We left Faribault at 11 o'clock P. M., and arrived at the "Blooming Prairie" station at 1 o'clock A. M. Before retiring we made arrangements for a team at 6 o'clock next morning to carry us twelve miles across the country to Geneva Lake.

Promptly at the appointed time the team was at the door, and you should have seen that spring wagon after we had loaded in our traps, ourselves and four dogs. Was it full? I do not believe a sandwich could have been put in the bed or on it. It was a fine morning, clear and bright. The atmosphere was cool, dry and bracing. The roads were hard and dry and in splendid condition, and the team carried us over the road at a spanking pace. The country we passed through was a fine rolling prairie sparsely settled. We saw large flocks of ducks flying as we drove along, and now our spirits rose to fever heat in anticipation. But as is often the case, the anticipation of a pleasure gives more delight than the realization. When about half way out to the lake, Kester's English setter sprang out of the wagon and was allowed to run. While passing a farm house a large cur dog ran out and pitched on to the setter. Of course, that raised Kester's ire; besides, there was danger of the setter being badly injured. Kester sprang out of the wagon and struck the cur with his gun. The consequence was a broken gun stock. Moral—Never strike anything with your gun.

We arrived about 1 o'clock at a Mr. Holmes's, who owns a large farm of some two thousand acres, lying along the lake, and who (in a manner) entertains sportsmen. We made arrangements for our lodging while we remained at the lake, and the pleasant information was imparted to us that we were at least two weeks too late, and that the majority of the ducks had migrated south. Notwithstanding this news we hurried down the lake shore to a point of land extending out into the lake, and which almost cuts it in two, and practically makes two lakes with a connecting flaw of water between them. Over this point the ducks fly in passing from one lake to the other, and at the proper season it is a capital good place to shoot, and some large bags have been made there. But when we arrived there, the wind had raised and was blowing hard and cold, so that much of the time we were obliged to keep under the sheltering banks of the lake. We remained on the pass during the day, and at dark we could only count eight ducks. The flight was high and wild and many had misses were scored.

After supper we were told by Mr. Holmes that three miles east of the house there was a small lake, well filled with wild rice, and which formed the head waters of a large creek, and that he was sure we would find plenty of mallard ducks there feeding on the wild rice. Being much discouraged with the pass shooting, we hired Holmes's son to take Kester, Newcomb and myself, with two boats, to this lake, next morning, while Fitch concluded he would not risk a boat ride in a rice swamp with the waves running two feet high, but would get more pleasure by remaining and shooting on the pass.

At supper we found a house full. Nine sportsmen in addition to the family of eight. On retiring we were shown beds in the garret, which contained four beds in which that night slept eight men. The garret was unceiled and unplastered, without a stove, and the sash entirely out of one window, with the mercury below freezing. Newcomb is one of the Aldermen of Faribault. But he swore it was the airiest bedroom he had ever occupied. To close the window he hung his fur overcoat over the opening.

We were up and off for the rice swamp by daybreak next morning. When we reached the swamp we were forced to wade and drag the boats quite a long distance, by hand over the wild rice and rushes before we could get to open water. But we finally succeeded, and got out into the center where we were rewarded for our labor with about an hour's fair shooting. By that time the wind had risen again, as it had done the day before, and blew a perfect gale, and it caused the water to become so rough that we could not row the boats against it, consequently we did not get any shooting in the middle of the day. But between sundown and dark we had very good sport. We would have lost more than half of the ducks we shot if it had not been for my strong Gordon setter Sergel, and this trip fully demonstrated to my satisfaction that a sportsman needs a good strong dog for a duck retriever. We had with us two cocker spaniels, and they are good ones. But they are too light for duck retrieving, especially among wild rice and rushes, with a soft mud bottom.

We effected our return to Holmes's at 10 o'clock almost frozen, and with twenty-eight mallards. But a hot stove and a warm supper soon thawed us out; and while eating it we were regaled by old Mr. Holmes with the story of the "big snake" of the Geneva Lake, which Newcomb believes to this day. It is the old story of the sea serpent modified to suit the fresh-water lakes.

That night the weather turned so cold that all the still water was frozen over, and nearly all the remaining ducks started on their long journey to the sunny South. We tried the pass again next morning for two hours, but I only succeeded in killing two ducks. At that time the livery team from Blooming Prairie had arrived for us, and we packed in our baggage and started for home with a bag of thirty-eight ducks, consisting of canvasbacks, mallards and teal. We arrived at Blooming Prairie station in time for dinner and at Faribault at 4 o'clock P. M. We were too late for good shooting, and we had a hard, rough trip; but it was a benefit to all of us in the improvement of health, and we had much sport and pleasure, if the slaughter was small. R. E. S.

Newport, Ind.

BATTERY-SHOOTING.

Editor Forest and Stream:

As the question of battery-shooting has been argued by "Sinkbox" and "Sagamore" through the columns of your paper for some time past, I trust it will awaken enough enthusiasm among all interested, either way, to give the subject a fair discussion. In giving you my views, I do not propose to enter upon a prolonged argument, but to state my experience, gained from eight years' shooting from shore and sinkbox. I think all shooters, or at least sportsmen, will agree with me when I say that, could we obtain as good shooting at wildfowl from the shore as of yore, sinkboxes would immediately fall into disuse, for the work encountered in putting out and taking up the sinkbox, handling the iron decoys required to sink the box, and a flock of from one to four hundred decoys, each with a separate string and sinker, whether the day be fair or foul, is a labor which few, compared to the great number of sportsmen, care to undertake. Aside from the labor involved in shooting from a sinkbox, it is far more comfortable to sit in a good blind on the shore, where you are generally protected from the wind, and are at least dry, than to lie, perchance, in a cramped position in a sinkbox, with the sun glaring down in your eyes, or the spray flying over you, while the box is jumping enough to make one of the "kid glove gentry" or point-shooter seasick. But, Mr. Editor, I for one, an ardent lover of the sport, prefer all the discomfort attending a boxshooter, to sitting on the shore waiting for a stray shot (for stray it certainly is our days in this vicinity), and seeing the fowl by the hundreds sitting or flying a half mile or more from the shore. I say a "half mile or more," for it is a thing of the past to find "good ducks" in our narrow waters, where they would be comeatable from the shore. Many people are so apt to forget that the country has advanced in the last fifty years, and that wildfowl are becoming better educated and harder to deceive; they now naturally look upon the land as a place where an enemy may be hidden, and so seek wider waters.

And why should they not, when where they were once harassed by one gunner they have now a score to avoid? Where there was one boat fifty years ago there are fifty now, and woe to the duck that is so unfortunate as to let one of those fifty boats approach within gunshot, for there will certainly be a scared if not a dead duck the more. Ducks have changed their habits, as partridges have, and from being constantly chased and driven in our narrow waters by sailboats, each one of whom carries the inevitable gun, they have retreated to broader waters where they are more alone. It is not the much dreaded sinkbox that has done this in all cases, as I can affirm, but it is largely, if not entirely owing to the above explanation, as I do not consider that shooting from a sinkbox in wide waters will have the effect of driving ducks from the narrow waters. My experience has been mainly gained from shooting on the Chesapeake Bay and tributaries, though it has been extended west of the Mississippi.

I am an advocate of, and believer in sinkboxes, and have never yet found them to be the terrible engines of destruction described by some theoretical sportsmen, especially those who are the fortunate possessors of points, in waters where point-shooting is yet occasionally to be had, as upon the Bush, Gunpowder and a few other rivers of the Chesapeake Bay. I maintain, as "Sinkboat" says, that shooting from a sinkbox has no more effect in frightening the ducks than a like amount of shooting from the shore. I admit that every gunshot frightens the fowl, but why should it frighten them more when fired from the water, say out of a box, than from a carefully constructed blind on the shore? Constant shooting at ducks from the shore and from sailboats (the greatest evil, save night shooting, of all) has driven them to seek wider waters, now let us see if sinkboxes will drive them away from their present haunts. Happy thought, maybe the sinkbox will be the means of chasing them back to their "old hunting grounds," the narrow waters.

In the days of our fathers and grandfathers, ducks were plentiful in all the little streams. They were tame and innocent and had not attained the wisdom of the present day, so knew not the danger of flying over a point until educated up to it by the increased number of gunners. Then it was that they began to leave our narrow waters, and we saw, as our fathers did, the last duck leave before the advent of a sinkbox. We, who love shooting for the sport that is in it, and own not a favored point, will uphold the sinkbox as our point, just as long as we see no detrimental effects from its use.

Were it not for the box-shooters at Havre de Grace, the point-shooters would have little sport, as was illustrated several years ago, when the oyster police force went there to see that the law repealing the use of boxes was obeyed.

Where there are fifty ducks killed from one sinkbox there are ten men who kill five ducks apiece from the shore, aye, there are far more than five shore-shooters to each sinkbox. If it is the wish of the other side to restrict the use of sinkboxes, let there be at the same time restrictions laid upon shore-shooters; do not make "flesh of one and fish of the other," but let both share equally all advantages and disadvantages.

What "Professional" says about sinkboats having been in use on the Susquehanna Flats nearly "fifty years" and still no diminution of the fowl, but on the contrary, "countless thousands" still frequent the waters, and as here, are on the increase, is very true.

"J. J. B.'s" experience would appear to be confined to one locality; and I think it far more probable that the "cannonading down there from sundown to dark and after dark" for twenty-five years had more to do with driving away the ducks than the few (compared to the many other gunners) sinkboats. And why was it that ducks left this locality before the advent of sinkboxes and are returning now when they are used in greater numbers every year?

It is but natural for a man who owns a point and can't get good shooting to envy the man who owns a sinkbox and can.

In conclusion, let me say that I fully indorse "Sinkboat" in his views and facts, for facts they are. Amateur.

Oxford, Talbot County, Md.

Editor Forest and Stream:

I was not aware, until I read the article in your paper in favor of sinkboat shooting, that there was a man in the United States who was vain enough to imagine that he could persuade any of the readers of Forest and Stream to believe that the wholesale slaughter of ducks on the Havre de Grace flats by the sinkboat-shooters has not greatly diminished the number of ducks and ruined the shore-shooting on all the tributaries of Chesapeake Bay.

I understand, while writing, that there was a man a few years ago, in the interior of Africa, who thought the murder of five thousand ducks a day by the sinkbox-shooters would rather tend to increase than diminish the number of ducks, but unfortunately for the sportsmen who indulge in duck shooting from the shore, that chap has passed away.

I have been a duck shooter for more than thirty years. I have killed ducks upon nearly all the good points between Havre de Grace and Carroll's Island, when canvasbacks and redheads were literally swarming in Bush, Gunpowder, Back River and Saltpeter; when countless millions could any day be seen on the Susquehanna Flats, when a man could go out any day and kill from thirty to fifty ducks, when it was not an uncommon occurrence for two men to kill from a point blind, over one hundred canvasbacks and redheads in a day when the ducks remained upon their feeding grounds until the rivers were frozen up. There were a few sinkboats in operation then, but not one to every hundred now.

How is it now? Instead of the ducks remaining with us two or three months in the fall, as they did twenty years ago, most of them leave a week or two after the sinkboat-shooters have opened their batteries upon them, and those which do remain are so wild that they afford no shooting either for the point-shooter or decoyer; and a man is doing well now who can kill half a dozen ducks in a day.

To give you some faint idea of the number of ducks killed during the ducking season on the Havre de Grace flats, I will give you the number killed on the first day's shooting in the fall of the year, commonly called the opening day, from 1879 to 1883. In 1879 the sinkboat-shooters killed on the Havre de Grace flats—this is official—on the opening day 5,478; in 1880, 5,211; in 1881, 4,654; in 1882, 4,230; in 1883, 3,529. Last year's number I did not get, but I understand they only killed about 2,300. Recollect this is only for one day's shooting, the opening day. They had five times as many sinkboxes in 1884 as they had in 1879, and yet they only killed about half as many ducks, which must prove to every intelligent man that they have either been killed or driven away.

Every genuine and high-minded sportsman will indorse all I have said, and every sinkboat-shooter or men who rent sinkboxes and shoot for the market will deny it. It is one of the few questions, Mr. Editor, that is not even debatable.

If this thing is not stopped, it will be but a few years when a man can get quite as good shooting out of a washtub in front of his door as he can at Carroll's Island or Maxwell's Point. I do not propose to have any controversy with any of the sinkbox-shooters, but merely state a few incontrovertible facts that any schoolboy must know, as it is merely a matter of calculation. Canvasback.

Philadelphia, April 16.

No New Thing.—To show that you are not the first to publish "Remarkable Shots," I send you the following, both of which are from "Sporting Anecdotes," by Pierce Egan. New York, 1823: "An Extraordinary Shot.—A clergyman in the eastern part of Sussex, a few years since, at a single discharge of his gun killed a partridge, shot a man, a hog, and a hog-sty, broke fourteen panes of glass, and knocked down six gingerbread kings and queens that were standing on the mantle-piece opposite the window. The above may be depended upon as a fact; not exaggerated, but given literally as it happened." "Extraordinary Snipe Shooting.—On Saturday, June 10, 1818, Mr. Elliot, of Lentham, in Kent, shot four snipe at one discharge. Mr. E. marked two of them on a pond, and was about to shoot when they rose on the wing, joined by two others. Three dropped instantly into the pond and the fourth at a small distance from it!"—B. A. G. (Utica, N. Y., April 11).

CRUSTERS AT WORK.

Editor Forest and Stream:

We are still having winter weather up here on the northern borders of the Adirondacks, and there is but little prospect of being able to have any sport with the trout before the latter part of May. There is still a depth of from one to four feet of snow on the ground, and the ice on the lakes and ponds is from two and a half to three feet in thickness, all of which will have to melt and run off before we can expect any good trout fishing.

As usual, there have been quite a number of deer slaughtered in the St. Regis district, south of here, by crusting during the past winter. And only a week ago Sunday night last two men were caught with two bags full of fresh venison, near the lumber company's new sawmill on the St. Regis River, at the foot of the Nine-Mile Level. They had killed the deer during the day on the crust and had hid it at the mill until night, so as to take it to their homes at St. Regis Falls after dark. They probably would not have been molested if they had not run off, when they saw the parties that caught them coming up. The latter, when they saw them make off, supposed they had been stealing property from the mill. As it was, quite a fracas took place between them. Revolvers were drawn and threats made of shooting, etc. They were finally arrested and taken to Dickinson Centre for trial. One was fined $40 and the other $15, and sent to Malone Jail for thirty days.

But neither the fines nor imprisonment were imposed for violating the game laws, for which, so far, nothing has been done, but on the charge of assault with deadly weapons. But it is hoped that Protector Leonard will now take the matter in hand, and see that they are prosecuted to the full extent of the law. There will be no trouble in getting all the evidence against them required; and as they are some of the very worst violators of the game laws in Franklin county, the opportunity should not be lost to get them convicted. Heretofore they have, as well as some others in that vicinity, managed to escape prosecution on account of its being impossible to get evidence against them. There have been no convictions of any of the violators of the game laws in this part of the county as yet, and now is the time to make an example. I am credibly informed that besides crusting deer, these same parties, with others, have been catching trout through the ice nearly all winter. St. Regis.

Near the Adirondacks, April 14.

ON DUCK NETTING.

THE following letters in relation to the outrageous netting of ducks in Shinnecock Bay express the opinion of hundreds of the residents of Long Island. Both Mr. Foster and Mr. Lane have been experienced fowl shooters for a great many years, and what they say should have the earnest attention of all sportsmen who are interested in Long Island wildfowl shooting:

Editor Forest and Stream:

I think the bill introduced in the Senate by Mr. Otis to prevent the capture of wild ducks in nets a good one. Netting ducks is the most destructive method that can be employed. As the bill now reads I think it will meet with strong opposition. I think it would be better to strike out from April 1 to October 1. Should netting ducks continue, in a few years there will be no ducks in our waters to protect.

William S. Foster.

Ponquogue, L. I., April 12.

Editor Forest and Stream:

I assure you it would be a good thing if the law could be passed prohibiting the use of nets without corks, as the fishermen now do not use nets without corks for catching fish in the bay, but use such nets wholly to catch ducks. I know what I am writing about when I say this, and you can depend upon what I say. The duck netters sometimes catch 1,000 in one night, and have been known to take out 400 ducks at one run. There is only one party netting ducks now in Shinnecock Bay, but there are ten parties who have had hundreds of new nets built on purpose, and who will not set them until ducks are in abundance on the bay. You can depend upon it that if this thing continues, in five years from this time we shall not be troubled with any more ducks in this bay. But I am getting tired of trying to protect game without some help. Shooting at night and "fire lighting" is doing great damage here; and I have been trying to have the whole thing stopped. But I find I do not get any help from the sportsmen in any shape, and as one man cannot do it alone, I have given the business about up.

I think there were 1,000 guns shot at night during last winter at the ducks that were frozen out and had to come to the open streams in the night time to get food; and this was done within a mile from the game protector's house, he, of course, paying no attention to it. As long as the sportsmen keep such a game protector there will be no attention paid to game protection. If we had a good game protector we could work together and stop the thing in a hurry, but the sportsmen know that our game protector is not good for anything, and yet keep him in, and as long as they do they need not look to me to have anything to do with game protection. I would not be mixed up with him. We all think Captain Gill Penny would make a tip top game protector. We need a change badly. William A. Lane.

Good Ground, L. I. April 13.

Editor Forest and Stream:

In your issue of this day, on the editorial page, is given a transcript of a bill for amending the law pertaining to netting ducks, which is ostensibly drawn to overcome the power of the word "intent" in the law as it now stands. Even should the proposed change take place, it does not seem to me that a game warden will be better able to fulfill his duties or prevent netting ducks. Of course that is the object of the proposed amendment. The matter of floats will make no difference with ducks. The angle at which nets are placed for catching ducks will not be interfered with by attaching floats to the nets, as weights can be used to counteract the effect floats "upon the surface of the water over such nets when set" will have to naturally keep "such nets when set" in a perpendicular position. On the contrary my belief is that an active game warden, even one who honestly desired to prevent the netting of ducks, would be still more hampered by finding all nets with floats attached when set, whether for the purpose of capturing ducks or taking fish, and would then be obliged to say they have conformed to the law in all "the waters of the counties of Queens and Suffolk," and no seine or net has been found without floats properly attached. Then indeed the warden's hands would be more effectually tied then they now are. The excuse would be perfect for a warden who felt disposed to shirk his duty to avoid prosecuting persons who net ducks in the waters of those counties. I don't think one of the duck netters will oppose this proposed amendment.

It seems to me an amendment would be better which would make it the duty of a warden to constantly watch those waters and inspect, with care, for nets, not only in deep water but the shoals on which ducks are accustomed to feed. Make it obligatory upon the warden to destroy the nets when found containing ducks, and when no ducks are found a proper replacing of the nets should relieve him of liability to prosecution. Really the proposed amendment appears to me to have hidden a meaning for a warden to have less duty to perform than is open for an active man now, and instead of a protective measure will result in more destruction. It is my belief that the "intent" to catch ducks could be established by proving that nets found with ducks in them were set on the accustomed feeding grounds for ducks and set at an angle with the bottom different from that at which nets for catching fish are set. It is said in your editorial, "It is alleged, upon what appears to be good authority, that the only nets used without floats of any kind are those which are set for the express purpose of capturing ducks, and that all nets used for taking fish invariably have floats." Concede that your information is reliable, there exists an item of proof that nets taken up by a warden were set with intent "to capture or kill any or such birds" provided there were no floats attached. There are a number of men who, no doubt, could be watched and found to visit certain nets time and time again, and who are known to ship ducks to market; proof could possibly be established in that way and a warden be released from prosecution. Possibly the "good authority" could inform your readers whether ducks are ever found in nets set for taking fish with floats properly "attached thereto in such manner that the same shall float on the surface of the water over such net when set." Wollat.

New York, April 2, 1885.

Some time since complaint was made by the Brooklyn Gun Club against the Long Island warden. As to this matter the following information is received:

New Hartford, Oneida County, April 13.—The complaint of the Brooklyn Gun Club against George W. Whitaker, Protector, was forwarded to the Governor the day it was received. The power of removal in these cases is with the Governor, not with the Fish Commissioners. They have no official duty in the case after transmitting the complaint to the Governor. I have no information of what has been done in the case.—R. U. Sherman.

Again from a most reliable source it is discovered that a number of letters were addressed to those in power, by the friends of Mr. Whitaker, our informant says: "I judge a strong influence was brought to bear on the Governor by personal and political friends of Whitaker in his favor. I think it would be well for those who make the charges to call Governor Hill's attention to the matter."

AN UNACCOUNTABLE.

LET me tell you about my remarkable shot, and how I missed the biggest buck I ever saw by the meanest shot I ever fired. I will give you the whole of it just as it happened. It was in the fall of '76; my chum and I were on our annual deer hunt on the shores of Whitestone Lake in the valley of the Maganetawan.

I had sold my old muzzleloading rifle, and had made up my mind to go in for a breechloader that fall. But before I had got armed for the autumn hunt, the first fall of snow came, and along came my chum and the annual hunting fever. I borrowed a muzzleloading rifle from the village postmaster, got our outfit ready and loaded up a team, and sent it on ahead. We followed on foot, and in due time we reached our rendezvous, unloaded our supplies and packed them into camp. We spent the rest of that day in fixing up our camp and cutting up a supply of wood, and got everything ready for the next day's hunt.

Next morning we were up long before the dawn of day. A slight fall of snow during the night just made it what we wanted. We parted at the camp-fire, one going west and the other going east, each with a determination of making a record on the first day's hunt.

I had not tramped more than a quarter of a mile from camp when I struck a fresh track on the new fallen snow, which I followed on to the foot of a ridge. I proceeded around the hill until I came back to my tracks. I knew my game was on the hilltop and no mistake, and going back to the opposite side of the hill, cautiously crawled and sneaked up to the top. Here I peered and scanned through the thick underbrush, looking for my deer, but I could see nothing, and dared not move.

I waited, watched and prayed for a breeze of wind to break the stillness, which was oppressive. Oh, for a howling storm among the trees—something or anything to make a noise, so that I could move further on. But hold fast, there is the snow showering off a small balsam not a hundred feet away from me. I squatted close to the roots of the tree that sheltered me and pulled my rifle out the cover. I was ready.

Out stepped a bouncing doe, followed by the noblest buck I ever saw. There he stood, a picture of pride and beauty, a model for a Landseer, a free-willed and untrammeled monarch of the forest, an antlered beau of the wildwoods. I coolly and deliberately raised my rifle, drew a bead on his big, honest eye, and fired—fired and missed him. He bounded toward me, and then back to his female partner and rubbed his nose against her neck, gave a defiant snort, and left for over the hills and far away. And there sat in the snow one of the most digusted still-hunters that ever pulled a trigger, and that was me. I returned to camp and hung that Irish sporting rifle on the hooks, and vowed that I would never fire another shot out of it. I never violated that vow.

I have hunted over the same grounds several seasons since, and, believe me, I have stalked up that same hill to the same old hemlock tree as stealthily and cautiously as I did on that calm, still morning; I have watched and waited as eagerly as I ever did, and hoped to see the same monarch of the forest, but though I have made dead venison of many a deer since then, I cannot forget that deer—and that unaccountable miss. Time and again have I raised my rifle to my shoulder and squinted through the back sight, and drawn bead on some twig or piece of bark about where that deer stood and sent the bullet to the spot. I held on, but for all that I missed the biggest buck I ever saw, and one of the easiest shots a hunter would ever wish for. Caberfeigh.

Parry Sound, Ont.

PROTECTION IN MONTANA.

Editor Forest and Stream:

Montana, rich in its mines, its fertile prairies, its vast ranges, is fast becoming a highly civilized Territory. The vigilance committee no longer hold their nocturnal entertainments, otherwise known as "hanging bees," with the frequency that they were wont to in the past. The buffalo trails, stretching here and there over the prairies like a great serpent, and now and then a skull overlooked by the hungry coyotes, is all that we have to remind us of those vast herds that only three or four years ago roamed over these very hills and throughout these self-same valleys. Civilization has come, bringing with it towns and villages, dotting the valleys with farms, and the ranges with stock.

Game is very abundant. The streams are alive with fish. The prairies abound with chickens, the hills with grouse. Antelope and deer, though mercilessly hunted in the past, are still plenty. Elk, bear and mountain sheep can be found by striking away from the trails, or roads as they say in the East, and going into the wilderness. Elk, however, are very rare, as they have been almost exterminated by the Indians, who, as you know, prize them above every kind of game.

And now as the Territory is fast becoming settled up, there comes the necessity of giving the game a chance for life, and a fair one at that. A right step in this direction has been taken by the town of Billings, an enterprising city, situated on the banks of the beautiful Yellowstone River, in the very heart as it were of the Territory.

A club has been formed here for social and sporting purposes, but particularly with a view to enforcing the game laws, and protecting the game. The club extends a hearty invitation to all sportsmen who may chance along the Yellowstone. At its headquarters may be found all the sporting papers of the country, and from its members all information in regard to game will be cheerfully furnished.

If more clubs shall be organized throughout our Territory of this same sort, and we can protect our game, then indeed Montana will be the great paradise of sportsmen for years to come. Parmly Billings.

Billings, Montana, April 14, 1885.

REYNARD'S WAYS.

Editor Forest and Stream:

During the fall of 1869 I witnessed the very shrewd performance of an old fox that had given me the "dodge" for at least a half dozen times. I was a boy then, but I kept as fine a pack of dogs as Middle Georgia afforded. Two of my cousins, living near my father's, also kept a number of splendid hounds. We hunted together, and the sounding of one horn brought all the dogs together. We rarely failed to catch a fox if we could once strike his trail; but the one under consideration had succeeded in worrying us not a little. We always lost the scent at the same place. After running for an hour or more, and allowing the dogs to come very close on her, she would make the circuit of a small mountain, and start directly from that to another on the opposite side of the little creek, but the dogs invariably failed to carry the trail more than thirty or forty rods from the stream. Her bridge was a large pine log that lay across the creek, fifteen or twenty feet above the water. The banks were very high.

One fine frosty morning, after a race after her that terminated as all the others had done, it was decided that the next Monday morning—this was Saturday—the other boys were to proceed with the dogs to the "striking" ground and that I should make for the pine log at once and watch for the trick. Our plan was carried out and the secret discovered.

I took my position on a knoll about one hundred yards from the log, with it in plain view, and waited for developments. The "striking" ground lay one mile west of my post, and I had just begun to feel like nodding, when I heard Forest, one of the truest and best foxhounds it has ever been my lot to know, strike the keynote, and pretty soon the game was up and the whole pack of eighteen in full cry, sweeping around the base of Anawaka Mountain. It was a clear, calm morning with a gentle breeze from the west, and every note was borne to my ravished ear. There were four or five dogs in the pack with a liberal supply of English deerhound blood in their veins, and they sounded the bass notes grandly. The very thick cover of brushwood gave the fox a decided advantage, and one turn around the mountain gave her the lead by at least a half mile. I was listening very intently to the cry, trying to decide which one was ahead, when on the top of the ridge across the creek, and directly in front of me, I saw the fox dash into view, clear the little strip of tableland at a few bounds, run across the creek on the old pine log, and make straight up the little knoll on which I sat as motionless as a statue, whirl directly back, after coming within ten feet of me, recross the creek on the same log, leap as far off the log up the creek as she could, and lie as flat as a fox could on the bare ground.

I sat still to watch her panting sides and await developments. In a few seconds, on came the pack in full cry led by Alec, a fine young dog of my cousin's. They dashed across the creek past me in a twinkling despite my frantic efforts to turn them back. Casting my eye back to see what had become of the game, I caught one glimpse of her scudding back toward the mountain on the line she had just come over a few minutes before. Here was the trick. I knew her secret, and as soon as the over-eager hounds had satisfied themselves that they had been duped by the wily brute and had come back to strike the scent anew, I succeeded in explaining the trick to them, and in forty minutes after the dodge, around her breathless body I explained it to the other boys. J. C. W.

Wetunka, Indian Ter.

The West Chester (Pa.) *Record* says: "On Wednesday Wilham Eachus drove from West Chester to the Roberts farm, in West Goshen, at which place he has a wood-leave. While walking around looking for a place to locate a bridge across a creek Mr. Eachus was surprised to see a fox hanging from a limb of a tree directly over the stream. Upon closer inspection it was found that the fox's head was firmly held in a fork on the limb. It is Mr. Eachus's supposition that reynard attempted to cross the creek during the recent freshet, and while so doing ran his head directly into the fork, and in consequence was drowned. When the stream had returned to its natural size the fox and limb were left several feet above water, swinging in the breeze. The animal was well preserved, and the brush in the future will adorn one of the lead horses of a team."

MAINE LEGISLATION.

THE action of the Maine Legislature in relation to the fisheries and game of Maine was noted, and is entitled to credit more for what it omitted than for what it committed.

The Legislative Standing Committee on Fisheries and Game were Senators Kimball of Sagadahoc, McAllister of Hancock, and Heath of Kennebec, and Representatives Hinckley of Georgetown, Sprague of Monson, Patten of Brewer, Frisbee of Kittery, Googins of Millbridge, Lincoln of Perry, and Duncan of Northport. These gentlemen considered petitions and memorials setting forth and alleging multifarious grievances and wrongs in relation to the laws for the protection of fish, game and birds, and listened attentively to long and protracted hearings bearing upon these questions, and which were generally conducted by able lawyers on either side.

The great mass of petitions demanding a change in the close time for killing deer were carefully and intelligently investigated, and the committee were unanimously agreed that such a change would be disastrous to the deer. Nearly every member had read the arguments *pro* and *con* which appeared in the FOREST AND STREAM prior to the assembling of the Legislature. What few bills the committee did report were in the interest of a more stringent enforcement of the game laws. That drawn by Mr. Sprague, of Monson, himself a practising lawyer, conferring original and concurrent jurisdiction upon trial justices in all prosecutions under these laws, became a law, and will prove of great importance and value to the Commissioners in their legal warfare against the poachers. As evidence of the wonderful change which has taken place in this State in regard to this subject, the fact is significant that only one bill reported by this committee was defeated in the Senate or House, and that was one to repeal the protection of seals in Casco Bay, and was not agreed to by all of the members. Even the act establishing a third commissioner for the shore fisheries and appropriating $2,500 in addition to the regular appropriation of $7,500, passed both branches unchallenged.

At last the people of Maine have become aroused to the importance of protecting their interests, and are awake to the fact that their forests, rivers and lakes, and their game and fish are so much capital bestowed upon them by the lavish hand of nature, and in their keeping to destroy and devastate or to preserve for their own benefit, gain and pleasure and for the benefit of future generations.

A writer recently well said: "Maine may as well as not become the paradise of the Eastern part of the Union. And it pays in hard dollars to be one of the world's paradises in these modern days. Look at the Italian cities and the health resorts of the Mediterranean."

The idea of protection is so well grounded in Maine and is so firmly sustained by her newspapers and public men that I predict that we shall never again see a legislature assembled at Augusta opposed to such of these laws as are manifestly reasonable, just and equal. MAINE.

BANGOR, Me., April 6, 1885.

SPRING IN DAKOTA.—I again find myself in the hunter's paradise—Dakota. Although the sun was shining brightly when I left my home in Michigan on Tuesday last, there was little appearance of spring, the ground being covered with snow two feet deep on the level in the woods, and the winds from Lake Michigan cold and bleak. I took the C. M. & St. P. R. R. at Chicago at 9 P. M., and was surprised to find the long train of cars crowded with passengers, at least three-fourths of them being settlers bound for Dakota. I wondered why these farmers were starting for the so-called "cold regions" so early in the season. This morning I found myself bowling along over the Dakota prairies, and on looking out of the car windows was astonished to see the farmers busy putting in their spring wheat. The mystery of the crowded cars was explained. The railroad officials tell me their trains have all been crowded to their utmost capacity for the past two weeks. I arrived at Redfield at 11 A. M., and immediately started with a team for this point, distant twenty-nine miles. Eleven miles west from Redfield we strike Cottonwood Lake, and the first glance at the lake as we came over a rise of ground revealed a picture good to a sportsman's eye. Perched on the top of a small straw stack within a rod of the door of mine host Sutton's house, were two of his domesticated wild geese, and they were doing their best with their loud honk, honk, to call in a large flock of wild geese, which alighted on the ice in the middle of the lake. How I did want to crawl up behind that straw pile and wait awhile for those geese. But this trip is for business, not pleasure, and I consoled myself with the thought that what I leave now will be here next fall and bring their broods with them. When starting from home last Tuesday evening, I had my duck gun all packed to bring with me, when my good wife quietly suggested that if I intended to be back by April 2 (when I had an important business engagement) I had better leave my gun at home. And I wisely followed her advice. We saw many white or sharp-tailed grouse skulking in the grass as we drove over the prairie. We doff our hats to them and express the wish that we may see them later. The winter here was favorable, and the increased acreage of wheat soon promises an abundant crop—of birds this fall.—P. M. (Howell, Hand county, Dakota, March 26).

GUN-SHYNESS.—*Editor Forest and Stream:* "Elk" advises the readers of FOREST AND STREAM, in your issue of March 19, not to try my plan for gun-shyness, viz., making the trigger-pull very light. The plan has been tried in several cases to my knowledge, and every time with success, and no evil results. As to its being "conducive to a great many more accidents," I do not believe this to be a fact. Sensible sportsmen will not carry their guns at full cock; any one who does so, especially if another person is with him, should be shunned by every one who places any value on his life. From "Elk's" communication, I judge that he is among the number who should learn to cock their guns when the game starts up; there is plenty of time to do it, thus avoiding all risk. While I am on the subject, I will say that, in my opinion, nine cases out of ten of gun-shyness are caused by an extremely hard trigger-pull or a gun which the shooter knows is not absolutely safe, or both combined. Almost any one who has witnessed pistol-shooting, for instance, has noticed the one about to shoot flinch if the hammer does not fall after a hard pull at the trigger, or when the hammer finally falls and the cartridge fails to explode. I would not advise any one to make a hair trigger, but to have the hammers fall by a light pressure.—RED WING (Glencoe, Fla.).

THE WOODCOCK COMING.—Hudson, N. Y., April 16.—The first member of the woodcock family put in an appearance this spring in this city on the evening of the 14th inst. He seemed to be somewhat of a tramp, carrying all he had on his back, and after the manner of the fraternity betook himself to a shed for his night's lodging. His arrival and location becoming known to Dr. C. E. Fritts, who has a tender spot in his heart for all tramps, and for this species in particular, he was generously prescribed for by him, and after being kindly cared for and introduced to many of their mutual friends, was sent on his way at the dawn of day rejoicing that he had fallen into the hands of so kind a physician. It is understood that before departing he made a special arrangement with the Doctor to return in the autumn with a large delegation from his family, from which he might choose any reasonable number for his dissecting table. They were seen to smile on each other. The Doctor was overheard in saying:

Dear woodcock, go free,
I charge you no fee.

The bird replying:

Dear Doctor, I am a bird
That ne'er fails in his word.

H.

TO TRAP PRAIRIE DOGS.—A mode practiced by the Indians and frontiersmen to catch prairie dogs is to take a horn of cow or buffalo, bore a hole in the side, fix a snare and bait the horn. When the snare is sprung, it will catch the dog around the neck, leaving him neither chance to cut the string or burrow through the horn, nor can he bite the trapper upon being released. Another mode is to haul water and drown them out of their holes, when they are stupified and easily caught. Antelopes seek the vicinity of prairie dog towns to sleep, trusting to the watchfulness of the sentinels to give the alarm on the approach of danger. He is an interesting little rodent, and investigation will develop many curious qualities—if not water.—C. D. P. (Nogales, Arizona, April 12).

NEW HAVEN NOTES.—While at the Boston show, I heard a gentleman make the boast that he had killed quail this spring, and he seemed to think that he had done something to be proud of. It seems that they are worse in Massachusetts than in Connecticut, as I have not heard of any one mean enough to kill birds around here as yet. There have been considerable snipe killed on our meadows, and this next week I expect there will be several large bags of these birds shot. Trout were quite plenty around this part of the State, two of our club catching twenty last Saturday, most of them being good sized, from one-half to three-quarters of a pound, but trout fishing takes too much patience for yours truly to tackle.—ROSECROFT (New Haven, Conn., April 13, 1885).

PHILADELPHIA NOTES.—The snipe have come all in a bunch, the pleasant weather of the past few days having drawn them. On the Salem Meadows, big bags were made yesterday and day before, and the professional gunners have sent many to Philadelphia market. The marshes on the Delaware State shores of our river are thronged with sprigtails, which are becoming very wild on account of the incessant banging they have had. All the fowl from these sections which are offered for sale in this city are in the best of order.—HOMO.

HOW TO BUILD A BATTERY.—*Editor Forest and Stream:* I have been much interested in the articles on battery-shooting, and I should be glad if "Sinkboat" or some other gentleman would send me a sketch or description, or a plan of how to construct a single battery or box. In this locality there are no points to shoot from, and in May the brant are in thousands on the flats, but there is no way to get at them, and I am desirous of trying the battery if I can get a plan or sketch to build one from. The geese are only beginning to come and no brant have arrived yet.—GLOBE SIGHT (New Glasgow, N. S., April 8).

THE NEW GAME LAW.—The boys are much amused over the mishap of the author of the game law. He was on Grand Prairie shooting snipe when a prairie chicken got up, and before thinking he killed it, for which he was promptly fined $3 and costs. He submitted very gracefully, and so far as I know this is the first case under the law, it being strictly enforced here, and I have not seen a piece of prohibited game in market since it took effect, while before that the market was always full. Fishing is not good here yet on account of the late season. J. M. R. (Little Rock, Ark., April 6).

SPRING QUAIL.—While in Boston attending the late show of the New England Kennel Club, your correspondent noticed in the window of a restaurant on one of the prominent streets of the city, a large number of quail exposed. The birds appeared to be Western ones that had been packed in ice and frozen. It seemed strange to me that while so many sportsmen were present in the city, such an exposé should be made if there had been a law to prevent it.—HOMO.

YPSILANTI ROD AND GUN CLUB.—At the regular meeting of the Ypsilanti Rod and Gun Club for the election of officers, the following persons were elected: President, C. M. Boss; Vice-President, J. German; Secretary, D. P. Shuler; Treasurer, P. C. Sherwood; Executive Committee, J. H. Shepard, Wm. Mallion, S. Hutchinson.

CAUGHT A WILD CAT.—Last Friday James Stevenson brought a wildcat into town which he had captured with his dogs in the timber, four or five miles northwest of this place. It was a fine specimen of its kind, and it was not dead when they found it, as the looks of the dogs clearly showed when they came home.—R. H. (Paolo, Kan., April 1).

NEW HAMPSHIRE.—A few quail have wintered over. Woodcock, geese and snipe have arrived, and the sweet note of the meadow lark can now be heard in the field.—WOODCOCK (Dover, N. H., April 14).

CANADA.—Ice is quite fast in the St. Lawrence here, and ducks this spring are plenty.—F. M. T. (Brockville, Ont., April 18).

A NEW SHELL CRIMPER.—We have recently examined a new crimper which has not yet been put on the market. It will close 100 shells in eight minutes. Samples free if ordered before May 1. Will be furnished from the makers on receipt of fifty cents to pay charges. Address Box B., Gainesville, Texas.—*Adv.*

Sea and River Fishing.

MR. WOOD'S TARPON.

Editor Forest and Stream:

To correct wrong impressions in reference to the dates, measurements and weights of tarpon recently caught by me, I have prepared the following table, noticing the fish in the order they were caught. Fish No. 1 was caught in Tarpon Bay on March 19, 1885, and was weighed the same day. Fish No. 2 was caught in Tarpon Bay on the 25th, but was not weighed. Fish Nos. 3 and 4 were caught near the mouth of the Caloosahatchie River on the 31st, and were not weighed; and fish No. 5 was the last one caught at the same place and on the same day, and weighed 111 pounds in New York seven and a half days after being caught. It had been drying out all that time. All the fish bled freely on account of their being gaffed through their gills.

No. 5 is therefore estimated to have weighed when caught 117 pounds. This will give six pounds to each inch of length between No. 1 and No. 5, and on that basis for difference of length the table would be as follows:

No.	Length.	Weight.	Time catching.
1	5ft. 9in.	93 pounds.	26½ minutes.
2	5ft. 7in.	81 pounds.	21½ minutes.
3	6ft. ..	111 pounds.	33 minutes.
4	5ft. 11in.	105 pounds.	5 minutes.
5	6ft. 1in.	117 pounds.	45 minutes.

This would make an average weight of over one hundred and one pounds.

The impression seems to be that some additional means of killing the fish was resorted to, but such was not the case. Only the rod and reel, with its line, hook and bait were used to catch and tire out the fish, and when the fish were so thoroughly exhausted as to partly turn on their sides, then the gaff was used by hooking it into the gills and in no other way; neither was any other means of killing used from first to last than that which is mentioned above.

I would mention that four of the fish were hooked in the throat or gullet, and one was hooked in the gills next the throat.

I suppose I saw some seventy-five tarpon during my eight days' fishing. W. H. W.

NEW YORK, April 20.

Editor Forest and Stream:

I must say that your report of the experience of Mr. W. H. Wood, of New York, in capturing a tarpon with rod and reel in Florida this spring, gave me no little satisfaction. I have believed for several years that the tarpon could be captured with the rod, forming my opinion from my experience there on the west or Gulf coast some years ago, and in consequence of my convictions have several times advocated the trial by anglers who should visit Florida, suggesting heavy striped bass tackle and a reel to carry 800 or 900 feet of line. I knew from experience that the tarpon was game enough to give a man all the excitement he could desire, and for this reason ought to become one of the fish sought after.

The statements made by Dr. Kenworthy and others that the tarpon could not be caught with rod and reel I dare say has induced many not to go prepared for them on visiting Florida. Business has prevented me visiting that State since 1879, thereby preventing any demonstration of the fact of their capture by myself. There are several rivers on the Gulf coast of Florida in which the tarpon can be found all through the winter, generally in some large spring hole at the head of the rivers, where they can be seen rising from the water at intervals, after the manner of porpoises, apparently at play. I have seen them in schools about my boat, sometimes coming as near as six feet of it.

Gentlemen with whom I am acquainted who have eaten of the tarpon consider it a fine table fish, and, to extend our knowledge, I trust those who partake of the one sent to Mr. Blackford will report on its edible qualities after its trip to New York.

Probably another winter will bring to light several tarpon anglers, and if they take proper tackle and keep a cool head, as Mr. Wood says, I believe there will be several successful ones. A. B. DODGE.

MANCHESTER, N. H., April 18.

[The first tarpon caught by Mr. Wood has been mounted and is now on exhibition at Conroy's, in Fulton street, where the rod, reel, line and snell used in its capture can also be seen.]

A NEW FISHING CLUB.

A NUMBER of enthusiastic lovers of the gentle art in this city have organized a fishing club this winter and have secured one of the finest locations to be found in this Province, and only about eighty miles from this place. These fishing grounds are situated among the Lancaster hills, about thirty miles north of the St. Lawrence River, and are very easy of access. They comprise a tract of country of over sixty square miles in extent, lying between the east and west branches of the Mastigouche River, and contain innumerable lakes, some of which are several miles in extent, and all teeming with the genuine *fontinalis*. The club is called the Mastigouche Fishing Club, the membership is limited to fifty, and there are already some thirty odd names on its roll. The initiation fee is $100, and the annual subscription $5.

The following is a list of the office bearers: George Sumner, President; F. H. Stearnes, Vice-President; Henry W. Atwater, Secretary; John S. McLachlan, Treasurer.

Mr. E. M. Copeland, the gentleman with whom the club have made their arrangements, and who has the lease from the Quebec government of this large tract of country, has just built a comfortable hotel or club house on one of the largest lakes, capable of accommodating from sixty to seventy-five guests. The members of the club expect to celebrate the completion of the building by a formal opening about the 24th of May, when with a number of invited guests they will have a grand house warming, after which the place (with the exception of a certain number of the lakes reserved for the exclusive use of the club) will be thrown open to the public, under the management of Mr. Copeland, who will run it as a sportsman's resort.

The writer had the pleasure of visiting these lakes in company with several New York gentlemen, early in September, 1883, and had a most enjoyable time, although having to rough it considerably. The largest trout caught on that occasion was caught by Sandford E. Gee, of New York, and weighed 3¼ pounds.

Should any of your numerous readers desire further information regarding these lakes, a line addressed to the secretary of the club will receive prompt attention. H. W. A.

MONTREAL, April 14, 1885.

FLY NOMENCLATURE.

Editor Forest and Stream:

Almost every angler has had some difficulty in duplicating his flies, arising from the misuse of names or careless tying, or other cause. Some complaints have recently been made through your columns, and a few additional words may not be inopportune now that the trouting season has fairly opened, and fly-books are being examined and replenished.

The evil alluded to is not of recent date; it has been growing with the ever increasing number of flies, until its extent can hardly be realized. Mr. Roosevelt, in his "Game Fish of the North," first issued in 1862, noticed its existence in the following language: "It is to be regretted that there is not more uniformity and pride in, or practical acquaintance with, the subject among the principal tackle makers. With the English makers it has always been an especial care that their flies should be dressed well and with uniformity." In 1879 Seth Green and Mr. Roosevelt produced their "Fish Hatching and Fish Catching," and the same complaint is voiced. "Old and well known varieties," say the writers, "are continually coming up under new names till no man can keep the run of them. What with the alterations of the names of flies and the improvements in the learned names of fish, it has got to such a pass that the poor angler no longer can honestly tell what he catches nor what he takes it with."

Seventeen years elapsed between the production of these two books, yet the evil had not been remedied, and it will not be pretended that it has disappeared since so late a date as 1879. In a few instances the tackle makers have taken steps in the right direction, but Mr. Roosevelt's words first quoted are as applicable to-day to the dealers as a whole, as when they were written. What are the causes of this condition of things? Mr. Holberton, in his communication to your columns of Feb. 5 last, thinks much is "due to a want of knowledge on the part of some of the dealers, and also to the vanity of both anglers and dealers who are constantly adding to the list of flies, changing slightly some old style of fly and giving it a new name."

If the expression "a new name" means a total change of name, I accept as operative the last cause assigned. Conceding that a change in form should be followed by a change in name, it does not follow that a new name is always desirable, especially when the fly is an imitation of a natural insect whose name it bears. In such cases a change in name by the addition to the former designation of some words indicating that the insect imitated is the same, but that there is a change in the dressing, is, I think, much more conductive to clearness and accuracy than the use of some entirely new name.

The other cause assigned is want of knowledge. Undoubtedly much is due to ignorance—to a lack of familiarity with the writings of well-known anglers and fly-tyers, and with the most generally received dressings, as well as to neglect to inquire into the colors, shapes and habits of the insects in their natural state. It is to be feared that few of the dealers who supply flies are acquainted with the publications which treat of this branch of their calling, and form in themselves, as Mr. Orvis has aptly remarked, a "charming literature." Still narrower is the circle of those who are informed of the shapes and colors of the insect world, if we are to judge from the wonderfully-made masses of feathers and silk exposed for sale. It may be said that this natural history knowledge is not absolutely necessary to enable the tyer to follow samples or printed directions. Even conceding this to be so, it will be of advantage in fitting him to work intelligently, and in giving him an insight into the purpose with which the various materials and shades of color are employed, while without it he cannot hope to originate new or more perfect imitations of nature.

Another cause is the carelessness of dealers, who do not appear content with the confusion naturally produced by each one following a standard of his own, differing in some particulars from those of his associates, but depart at times in the most unblushing manner from their own accustomed dressings. The alteration may be confined to the substitution of a lighter for a darker shade of the same color or the opposite, or it may extend to the use of an entirely different color, or even to the omission of a tail or some other part of the usual dressing.

The same carelessness may be noticed in flies tied from samples. I have recently seen two flies tied from a pattern by well-known dealers; the one produced a tolerably accurate copy with bright scarlet feathers and body; the other turned out a fly similar in shape and details, but dyed a deep, lusterless brick red. There was no excuse for this. The tyer not having the exact shade at hand took no trouble to procure it, but contented himself with the closest imitation in his own stock of materials.

Still another cause is the "improvement" by the dealers of well-known flies. By some occult means they discover that the addition to established forms of some golden pheasant or other feather, or of gold or silver tinsel or ribbing, makes them more attractive to the trout. Of course this is done in a spirit of kindly consideration for the angler, and with a desire to help him fill his creel; but I have observed that expensive feathers are most frequently used, and the "improvement" generally carries with it an increase in price. No doubt anglers are responsible for some of these changes, but only a small percentage of them can, I think, be fairly charged to the fly-fisher.

In the present state of lamentable confusion Mr. Holberton's plate of flies has been alluded to, and that gentleman has forcibly asserted its correctness in your columns and holds it out as the standard which most of your correspondents look for as a thing of the future. If his plate is of this high accuracy, anglers should rejoice that it has been put in the hands of "most of the leading fly-dressers in this country." If not— Well, Mr. Holberton should be credited with good intentions, and the fly-fisher must bear his disappointment in a patient spirit. With the exception of the stone fly, which Mr. Holberton states is made according to the directions of Mr. Ronalds, he does not seem to have followed any one writer or tyer. Had he done so, his accuracy could easily have been determined. As the matter stands, the only fair test seems to be to observe how closely Mr. Holberton's designs agree with the forms of dressing most commonly accepted by writers and tyers of acknowledged repute, and to note how far they reproduce the coloration and appearance of the insect imitated.

Before making any comparisons, reference may be made to the writers who will be named. It is not within the scope of this article to discuss the merits of the numerous English authors who have written of flies and fly-tying. Suffice it to say that the names of Bainbridge, Bowlker, Blacker, Jackson, Ronalds, Theakston, Francis and Foster are well known, occupy prominent positions, and are cited on disputed points. Of the number Alfred Ronalds has deservedly received very uniform praise, and his work is a close approach to a text book. To use the language of Messrs. Westwood and Satchell in the "Bibliotheca Piscatoria," "though in some respects inaccurate [it] displays a rare combination of entomological and piscatorial science." In our own country Mr. Brown, in his "American Angler's Guide," draws largely upon Hofland. Mr. Norris gives some dressings of his own, and takes others from the same English writer. Frank Forester, in the body of his work on "Fish and Fishing," first issued 1849-50, also follows Hofland. A supplement to this work, added afterward, contains more descriptions of flies from the pen of the same writer, and a very considerable essay on flies and fly-tying by "Dinks," Captain Peel. The latter follows Ronalds, giving a list of his flies changed by substituting the feathers of American birds for the English ones named in his dressings. Mr. Roosevelt speaks of this contribution of Captain Peel's as the "only work of any value" from an angler in American waters, at the time of his writing, 1862, and refers to its author as "a gentleman who is a thorough sportsman, and alongside of whom I have often had the pleasure of casting the fly." In the year last mentioned Mr. Roosevelt produced his "Game Fish of the North," and a few years later his "Superior Fishing." In the latter Mr. Ronalds's flies are given, with the substitution in the directions for dressing of feathers and materials more available to American tyers. There is also an interesting chapter on the natural history and characteristics of the insects most frequently imitated, which will repay perusal. Mr. Roosevelt bears tribute to Mr. Ronalds's worth, and states that he selected his work "because its descriptions are imitations of real flies and not of traditional or conventional nondescripts." Mr. Genio C. Scott can hardly be said to treat of flies in his "Fishing in American Waters." There are two or three short lists of dressings scattered about the volume, but the author does not attempt to enter to any great extent into the subject, but contents himself with descriptions of certain flies which he recommends. Let us now examine Mr. Holberton's plate, noting that the flies can be conveniently divided into two classes; one where the name of a natural insect sought to be imitated is used, the other where the flies bear no such name or are creations of fancy.

Green Drake.—There is a peculiarity of the natural insect overlooked by Mr. Holberton. Not only are the joints of its body marked in brown, but there are patches of the same color of considerable extent at the tail and shoulders. A glance at any well executed plate of this fly, especially if colored, will show these spots distinctly. Ronalds, Jackson, Hofland, Dinks, Blacker, and Francis, notice their presence and direct brown silk, or mohair, or peacock herl, to be tied at the tail, and the first four require the addition at both extremities of the body. Mr. Holberton has contented himself with a ribbing of brown silk which may be taken to represent the joints in the body of the insect, but his plate shows nothing to imitate the spots referred to and reproduced so carefully by the writers named. The difference in appearance between the fly, as shown by Mr. Holberton, with a yellow body lightly ribbed with brown silk, and a similarly colored body with a mass of brown silk or peacock herl or mohair at each extremity or at the tail alone, can readily be pictured.

Gray Drake.—The natural fly has similar dark spots at the lower extremity of the body to those noticed in the green drake. A glance at the writers referred to in connection with that fly shows that they all notice this peculiarity in their dressings. But Mr. Holberton does not. He gives a white silk body ribbed with silver tinsel.

March Brown.—The original of this fly may first be noticed. The color of the body of the male insect is given as light brown by Mr. Theakston, and that of the female is described as greenish brown by Mr. Ronalds and Mr. Roosevelt, and it is dressed by the former with an olive green wool body. Mr. Holberton has apparently had the female fly in mind. His plate shows the body divided in two nearly equal portions, the upper one extending from the shoulders to the middle of the body colored green, and the lower half is dark reddish brown. Here the two component colors in the insect are separated instead of being blended, and the idea conveyed is that the natural type is parti-colored, which is contrary to the fact. Mr. Theakston describes the wings of the insect as "a dun light brown ground, broken with strong dark lines." Mr. Ronalds used the same color wing for the female as for the male fly, and for the latter requires a quill feather of the hen pheasant's wing, as do Theakston, Jackson, Ephemera, Blacker and Francis. Dinks, Frank Forester, and Hofland use a partridge tail feather, and Roosevelt the mottled wing feather of a brown hen. All these writers employ feathers with a brown tinge of color, in imitation of the natural insect, while Mr. Holberton gives the wings of a pale gray or light lead color.

Ronalds's Stone Fly.—This is the name used by Mr. Holberton, and the test of accuracy is to compare his design with Ronalds's directions. The later gives the body as fur of hare's ear mixed with yellow worsted or camlet, and ribbed with yellow silk, leaving most of the yellow at the tail. Mr. Holberton depicts it of a pale gray or light lead color, ribbed with gold tinsel or yellow silk. Mr. Ronalds directs the tail to be two strands of a brown mottled partridge feather, the wings to be quill feathers of a hen pheasant's wing, and the hackle to be stained a greenish brown or natural grizzle. Mr. Holberton shows the tail, hackle and wings a pale gray or lead color. It would be hard to imagine a greater difference than is shown between the brown, yellow and greenish brown hues of the one fly and the light lead color of the other. Yet they are supposed to be counterparts.

Alder Fly.—Mr. Theakston describes this fly under the name of the light dun. He gives the colors as follows: "Top wings, near the shade of the outer skin of a dried onion, with faint mottles and crossings a shade darker; body, thighs and legs a light beeswax hue and transparency," and adds, "They are imitated with feathers from the land rail, brown owl, dotterel, brown hen, etc., with tawny, coppery-colored silks of lighter or darker hues." Ronalds, Jackson, Blacker, Francis, Dinks and Roosevelt agree in using for the wing the feather of a brown hen's wing, and Ronalds, as a secondary dressing, permits the pea hen's wing feather. Hofland uses the brown speckled feather from the mallard's back. It is plain that a brown-colored wing feather best represents the natural fly, and is generally adopted; but Mr. Holberton shows a dark gray or dark lead color feather, something very different.

Cow-Dung Fly.—Mr. Holberton depicts this with a light olive green body, ginger or red hackle, and plain pale gray or lead-color wing. Mr. Theakston gives the color of the insect's body as dusky orange, and the wings red brown, shading to orange at the shoulders. Ronalds adds that the female fly is a "greenish-brown." Evidently Mr. Holberton had the female fly in mind. His olive green body dressing and ginger hackle blend to produce the general color effect of the insect, but what do the lead-color wings represent? Bowlker, Francis, Foster, Theakston, Frank Forester, and Dinks give dressings using a land rail's wing feather which is brown. Norris recommends a brown mallard or brown hen feather. Roosevelt favors the feather of a brown thrush or rail. These writers, it is true, mainly dress the male fly, but Mr. Ronalds gives a buzz dressing for the female, and directs the wings and legs to be made "of a red cock's hackle changed to a brown color by putting it into a solution of copperas." Mr. Holberton has substituted wings for the buzz dressing, but he should have colored them after Mr. Ronalds's hackle, or have used some feather of brown hue to accord with the writers mentioned, and not shown a pale gray or lead color.

To trace the various fancy flies depicted by Mr. Holberton to their originals would occupy much time and space. I will only call attention to two of them, the professor and the grizzly king, both well-known and both attributed, as noted by Mr. Holberton in his letter of Feb. 5, to Professor Wilson, and described in his book "The Rod and the Gun." In his plate Mr. Holberton represents the body of the professor as ribbed with gold tinsel and supplied with a tail. Neither in the printed directions for tying given by Professor Wilson nor in the woodcut he gives of the artificial fly is there any authority to be found for these improvements. No gold tinsel nor tail is mentioned or shown. Mr. Holberton's grizzly king has the body ribbed with gold tinsel and the hackle is red or brown. Professor Wilson directs the use of a gray hackle, and does not represent in his cut nor mention in his directions any gold tinsel. Moreover, Mr. Holberton in his communication of Feb. 5, so often referred to, has given directions for tying this fly which accurately follow those of Professor Wilson, omit the tinsel, call for a gray hackle and show the inaccuracy of Mr. Holberton's plate.

In selecting these flies for notice, I have endeavored to choose a few which were well known. I do not wish to be understood as implying that all the flies shown by Mr. Holberton are inaccurate or open to sharp criticism. There are others open to comment and many more which accord with the best dressings. The point to which I invite attention is that no plate ought to be accepted as a standard which presents in well-known flies such instances of departure from the original of the fancy fly in the one case, and from the colors of the natural insect and the dressings given by well known and careful fly-tyers in the other. A word may be said of the technical execution of this plate. The flies called red hackle and brown hackle respectively, are shown by the same shade of color. The ginger hackle is perhaps lighter. Of course there is no difficulty in reproducing these flies as their names accurately indicate the color hackle to be used. But examine others. Take the cinnamon fly and the hackle is in the same shade of color as used on the red and brown hackles. It may be taken to represent either one or the other of these colors and certainly would not suggest a ginger hackle which no doubt is intended. Again look at the Cochy-bond-dhu, the hackle is light brown shading to a deep brown at the head, but hardly darker than would result from the thickness of the hackle at that point. I doubt if any one unacquainted with the fly would even imagine that a furnace hackle was intended. I admit there is some difficulty in accurately representing hackles in colors, but it is not insuperable, especially when done by hand. At all events it is possible to use different shades of color for the several hackles, so that the presence of a given shade shall at all times represent the same hackle. The criticism is of some significance in view of Mr. Holberton's statement that the leading fly-tyers have this plate, presumably to follow it.

Mr. Holberton's handiwork is dated 1882. A year later, Mr. Orvis and Mr. Cheney produced their "Fishing with the Fly," which contains numerous colored representations of trout flies as dressed by the former. These plates were not dubbed "standards" by their author, but they are so widely distributed and so well known as to have secured a public position for themselves, and they cannot be passed by in this connection simply because Mr. Orvis has not publicly offered them as candidates for the "standard" position. Let us look at the same flies in Mr. Orvis's book that have been noticed in Mr. Holberton's plate.

Green Drake.—Mr. Orvis gives the customary yellow body but omits the dark spots at the head and tail which exist in the insect. The wing is shown as a barred feather of a dark yellow or ochre color. Ronalds, Jackson, Blacker, Francis, Roosevelt, Dinks, Theakston, Hofland and Ephemera agree in staining a similar feather a greenish shade. Mr. Theakston says the wings of the insect are "of a light grass-green ground and dim transparency, veined and crossed with darker lines; two or three small blotches near the middle." It is true that Mr. Foster uses a gray mallard feather dyed yellow, and Ephemera gives the same as a secondary form of dressing, but with it he requires a yellow-green mohair body. Mr. Orvis's fly, with its yellow body, brown hackle and ochre-colored wings, has no trace of the green shade of the insect. It is more like some dressings of the little yellow May fly which precedes in its appearance the green drake.

Gray Drake.—Body white silk, but no attempt is made to reproduce the dark spots at the lower extremity, noted by other writers. The ribbing is apparently blue silk and gold tinsel. Ronalds and Jackson use silver tinsel, but Blacker, Francis, Ephemera, Theakston and Dinks do not mention it and I do not find any allusion to blue silk. Possibly this is a misprint as it does not appear in the same fly dressed as a lake fly.

March Brown.—Mr. Orvis uses a brown wing and his dressing very well represents the shading of the natural insect as given by Mr. Theakston, and agrees with the authorities named in considering Mr. Holberton's plate.

Stone Fly.—Body light gray, ribbed with white silk or silver tinsel; tail several fibres of the same color; hackle and wings darker gray color. This is very much the same dressing as used by Mr. Holberton and it has been shown not to accord at all with Mr. Ronalds. As Mr. Orvis does not say where he finds his authority, the insect itself and writers other than Mr. Ronalds may be examined. Mr. Theakston describes the insect as having a yellow body, each joint marked with brown; legs, light brown; top wings, brown grizzly hue, adding, "the foundation color is orange or yellow, darkened in the upper and prominent parts with brown." Blacker, Francis, Bowlker, Theakston, Foster, Roosevelt and Dinks, to answer these requirements, give a yellow brown body, differ somewhat as to the precise color of the hackle but agree on a wing of a brown shade, using hen pheasant, copper brown mallard, partridge, wild drake, or brown hen's feathers. Certainly Mr. Orvis's representation is too light in color.

Alder Fly.—The dressing closely follows Mr. Ronalds's directions. The wing as represented may be taken as a pea-hen's feather. This is the secondary form of dressing given by Mr. Ronalds, and as noted above is hardly as accurate a reproduction of the colors of the insect as a brown hen or brown mallow feather used by the writers cited when noticing Mr. Holberton's imitation.

Cow Dung Fly.—The female fly is shown dressed very closely after Mr. Ronalds's. The wings are brown and in accord with the precedents of Bowlker, Francis, Blacker and others named above.

Taking the same two fancy flies as before, it will be noticed that Mr. Orvis has departed from the dressing of the professor, as given in "The Rod and the Gun," by adding a red tail and by ribbing the body of the fly with gold tinsel. In the grizzly king the gray hackle is used, but the body is ribbed with gold tinsel, which is not mentioned by Professor Wilson.

Mr. Orvis gives a fern fly and a soldier fly. The former is dressed with a yellow body, yellow hackle and pale gray or starling wing. With the exception of the hackle and the use of a lighter color body, it is a reproduction of Mr. Ronalds's fern fly. The soldier fly has a scarlet body, red hackle, dark gray wing, and resembles Mr. Jackson's dressing of his fly of the same name. It is apparent from a reading of Mr. Ronalds's and Mr. Jackson's works that both sought to imitate the same insect. Both remark that the original is not a fly, but a beetle, of which there are two kinds, one with reddish-orange wing cases, the other with blue cases, commonly called "soldiers and sailors" respectively. It is very plain from Mr. Ronalds's dressing that he did not seek to imitate the sailor variety, for he has not used a particle of blue, employing orange floss silk, red hackle and the darkest part of a feather from the starling's wing. Mr. Walbran has noticed this difference of names but identity of insect in a note to the soldier beetle in Mr. Theakston's work. Under these circumstances it would seem more accurate and less likely to lead to confusion to describe the imitation as the fern fly or soldier fly, and if it was desired to retain both forms of dressing they could be distinguished by suitable language, as by adding the names Ronalds or Jackson, as the case might require.

In addition to the March brown Mr. Orvis gives a brown coflin. Ephemera gives "March brown, dun drake, cob fly and brown caughlin" as imitations of the same insect. Mr. Walbran, in his note to Theakston's brown drake, speaks of the March brown as called dun drake in Yorkshire and cob fly in Wales. Mr. Blacker, after describing the dun drake, adds, "the Irish name for the dun drake is 'caughlan,' made thus: the wings, gray partridge tail; the body, light brown bear's fur with bright yellow mohair, hare's fur from the face mixed altogether, forked with two strips of a dark mallard's feather and a partridge hackle." This dressing he credits to Mr. Taylor, who he says was very fond of Irish flies, and introduced many of them in Scotland, England and Wales. Mr. Francis speaks of the "marsh brown or cob fly of Wales; brown drake of Yorkshire." These quotations certainly point to the fact that these different names have been applied to the imitation of one and the same insect. In this aspect it would seem more correct to use the words March brown or brown coughlin, and to appropriately designate such different forms of dressing as are reproduced. Mr. Holberton gives his imitation of the insect under the name "brown coflin or March brown."

Taken as a whole, such of Mr. Orvis's flies as imitate insects under their names show some careful reading of well-known writers, and as between Mr. Holberton's plate and the designs of Mr. Orvis, I think the percentage of departures from generally-received authorities and from nature is in the latter's favor. I do not speak of the fancy flies, as I have not investigated or compared them all.

The retrospect is not pleasing, the future is hardly more attractive. There is no standard at present. Mr. Holberton is not sufficiently accurate to entitle his plate to the position. Mr. Orvis may have some claim, but there are some corrections to be made in his list. That it is desirable to have a standard which will secure uniformity in nomenclature and in dressings will not be questioned. The most interested persons are the sufferers from the present condition of things, the anglers, and they must take the initiative. If there were a fly-fishers club or association, it would be the proper body to act. I know of none, but possibly some representative body of anglers will notice the complaints in your colums and take appropriate action. The magnitude of the undertaking must not be overlooked. Some idea may be formed of it by considering the very large number of artificial flies, and the time necessarily to be spent in consulting angling books and fly-tyers, in searching for the origin and history of flies and forms of dressing, in examining the natural history of the insects imitated and in formulating the dressings in each instance.

But dealers must not wait for such action. They can at once do away with, or at least lessen some of the evils complained of. Uniformity in their own dressings and accuracy in following patterns will in a measure afford relief to the anglers. In the class of fancy flies, where the originator is alive and known, there is little or no excuse for diverse dressings. A line to the inventor, asking his directions for dressing or his approval of a form inclosed, or better yet, a pattern from his fly-book, will surely receive a ready response. It is not to be assumed that anglers of the present day are deficient in courtesy.

Let the fly-tyers seek to increase the standard of efficiency in their calling by investigating not only the literature mentioned heretofore, but the insect in its natural dress, for comparison of the artificial with the natural fly is the best test of excellence where imitation is desired. To attain the highest rank in the calling requires no mean accomplishments, not alone dexterity of hand and quickness of eye, but the experience of the angler and the learning of the naturalist. Lastly, whenever there is a failure to imitate the natural insect, or a departure from the original of a fancy fly, attention should be publicly called to the fact. Such a course cannot fail to have a most salutory effect.

W. W. Ladd, Jr.

New York, April, 1885.

What Ails the Carp?—About eighteen months ago, E. M. Fox, of this village, put thirty-six carp of nearly one pound each in a marshy pond of about twenty acres. The pond is supposed to be ten or twelve feet deep in the deepest place, has no outlet nor inlet. One hundred and twenty-six dead ones have been counted this spring, varying in size from four inches long to seven and a half pounds weight. Probably there are many more dead ones that have not been found. Can you give us any light as to what caused so many to die?—R. N. P. (Orland, Steuben county, Md.).

THE MOST KILLING FLY.

It is a debatable question. The letters have all been interesting and instructive, but we are no nearer the point than at first, yet something has been learned from each one. Many a time have I come from the woods, determined that another season should find me fishing the same streams with an assortment of yellow mays and professors. I took them, but also an assortment of other flies, for reason prevailed over the enthusiam of the past season, and I preferred not to be left with only two or three kinds of flies. At one time in a small stream the trout run on coachmen, in different form; put on coachmen, either lead wing, royal, red tip, or gilt, and I could insure killing some trout. In a stream within a quarter of a mile, inhabited by bright-colored trout, and whose home was among the shady alders and hazels, the fish would not look at a coachman, but put on a fire fly, or a small ibis, and you had plenty of fun on hand. A small red worm suited them better than either. We carried in our worms for the wife and boy's fishing, bringing them 250 miles, for no worms could be found there. In a cold, clear stream whose mouth was shallow, we tried in vain to find a fly to suit the captious denizens, though they were jumping by the dozen. We tried seventeen kinds of flies and could not hook one, though we turned over several. A minute fly was flitting on the surface of the water. I secured one and found I was without anything like it in my fly-book, but in the tent I had a few, sent me by R. B. Marston, Esq., of the London *Fishing Gazette*, resembling these flies, but so small I had been afraid to use them. This time I tried them, and I think I never crowded so much fun into an hour in all my fishiug experience. They were reversed winged white flies with hackles.

Another time I was at a stream whose trout were a firm, hard fish, fierce fighters, but I could not seduce them. Day after day, hours after hours I tried them. The only trout I killed was with an Orvis floating May fly, or "caddis fly" as it is termed in his book. Did ever an angler attempt honestly to secure fish? I did. This caddis was a big fly. I caught one fine fish, and in casting again got hung to a cedar bough lying across the creek, and snapped my fly close to the head and lost it in the creek. I would willingly have given a dollar each for a few of these flies. They are always prime favorites with me. My only regret is they cannot be made on small hooks.

While fishing the Superior Brule a party of gentlemen were using the fly. Some of them were having splendid luck, others could not get a rise. It was a peculiar fly these fish fancied, something similar to the Montreal, but had not the long red tail feathers. A more killing fly could not be found. One of this party always keeps a supply of these flies in his book, and is ready to swear by them every time when fishing Lake Superior waters. My opinion has been formed from fishing in many different waters, and I conclude that to kill trout one must study closely the ephemera produced by the waters in which these trout live. If caddis worms are found in the water you may rely on the trout being gamy, of fine color and very fat. On such a stream when the May fly is rising you may cast any other fly never so cunningly, from morn to dewy eve, and get no trout. Put on a floating May fly, handle it carefully, and you stand good chances of killing trout.

In streams running into Lake Superior the "Seth Green" and governor are standard flies, but you cannot be certain that the wily trout will look at them. Whip two strands unravelled from a piece of red flannel to a fair-sized hook, and the barbarians will jump for it at almost any time. This summer I hope to try the McNee pike-scale flies and the red tag, a new fly just coming into use. Norman.

Duluth, Minn., April, 1885.

Editor Forest and Stream:

To a beginner who is trying to stray from the beaten paths of bait-fishing, the articles that have appeared in Forest and Stream from time to time under the above heading are very interesting. While I put down the merits of each fly in my notebook under discussion, I fail to see any that are recommended for Kentucky waters. Is this because the fish in the waters of this State are not educated to take the fly, or because they are not caught in this way in this State? When I read the enthusiastic descriptions of fly-fishing, north, east, south and west, the many delightful and red-letter days enjoyed by its votaries and ever-increasing disciples, I feel as though we are losing one of the noblest pastimes given to man. Our streams may not contain trout nor the lordly salmon, yet the finny tribe is represented here in fair numbers. I would ask the anglers of Kentucky and the anglers who have fished its waters to give in their experiences the best flies to use, the seasons and days in which they take best. It will benefit all, even A. Beginner.

North Middletown, Ky.

Editor Forest and Stream:

I read Mr. Sparry's practical article on this subject and I am personally very much obliged to him, being a new comer and having also graduated in the waters which he knows so well, nameiy, the Itchen, of Hampshire, England.

As an angler who has devoted his life to fish and fishing I was rudely shocked to find that the trout of this great country were so ill-educated as to take only the large, gaudy, "fancy" flies. But I am reassured to find that the small gnat "professor and queen of the water," as Mr. S. eulogististically emphasizes it, is not unknown, but is evidently as much a favorite among a select few here as in the sparkling lucid waters of the beautiful Itchen. There is one fly which I do not see Mr. S. refer to, but it is possible he may not have tried it, and that is "Sparry's fancy," so named after that evergreen sportsman, my friend Edward Sparry, of Winchester, in other words, Mr. W.C. Sparry's brother, if I mistake not. This fly has brought me many a good brace of trout when all else failed, and is a simple badger hackle, black fur with white tip tied on a very small hook No. 14, I think.

I am open to correction, but it is my gospel that an imitation of the natural insect on which the trout feed is the true and rational method of fly-fishing. True it is in our much fished English waters here, that a fly evolved entirely out of the inner consciousness of the angler will sometimes kill well on occasions, and that for years. Take the Nickham's fancy for example. Here is a fancy fly formed simply of a furnace hackle and gold tinsel which will dig the trout out of the water on the Test and Itchen when other means have utterly failed. Many a time has it brought sport to me when nothing else would, and yet I can say that so far as I know, it is not an imitation of anything in the heavens above and the earth beneath, or the waters under the earth. So also it got sport when used by another Wintonian, Geo. Currell (also well known to Mr. S.) on the river Natashquhan (Labrador) when dressed large for salmon.

But give to me the ineffable charm of taking the tiny fairy-winged dun from the water's surface as it floats with mimic majesty erect, and there and then imitating it with silk fur and feather, thereafter urging this "counterfeit presentment" to where your three-pounder is with almost rhythmic rise and fall, lipping in the fly's abounding kin. Can one express, in even the poet's song, the exquisite transports of triumph which the fisher presently feels as the beautiful fish lies on the long lush meadow grass, glorious and radiant, panting out its life? Emphatically this is the poetry of all angling, and I rejoice to find that there are appreciations of it in this land of "many rivers of waters."

Trusting to again see Mr. Sparry's name in your columns I repeat that I thank him for the pleasure and profit his communication has given me. J. Harrington Keene.

THE NEW TROUT LAW.

We give below the full law as passed by the Legislature of New York and signed by the Governor about April 13. It is known as the Owens bill, and makes such radical changes in the old law that it should be carefully read. We comment on it in our editorial columns.

An act to amend chapter five hundred and thirty-four of the laws of eighteen hundred and seventy-nine, entitled "An act for the preservation of moose, wild deer, birds, fish and other game," as amended by chapter five hundred and thirty-one of the laws of eighteen hundred and eighty, and as amended by chapter five hundred and eighty-four of the laws of eighteen hundred and eighty.

Section 1. Section eighteen of said act is hereby amended so as to read as follows:

Sec. 18. No person shall at any time kill or catch, or attempt to kill or catch, any speckled trout, brook trout, salmon trout, or landlocked salmon, with any device save that of angling with line or rod held in the hand, except in Lake Ontario and the Niagara River and in waters which are wholly private, and in the latter only then by permission of the owner thereof: nor shall any person set or draw any net or seine, or use any set line or set pole in any lake, pond or stream inhabited by speckled trout, brook trout or salmon trout or landlocked salmon, except in the waters of Lake Ontario, but no net shall be set within one mile of the Oswego River, or have on the shores or waters thereof, except Lake Ontario, any net, seine, setline, or other unlawful device for the taking of fish except as above provided. And no person shall at any time or in any way catch or attempt to catch any speckled or brook trout, or salmon trout or landlocked salmon through the ice, except in Lake Ontario and the Niagara River and in waters wholly private. Any person who shall offend against any of the provisions of this section shall be deemed guilty of a misdemeanor, and in addition thereto shall be liable to a penalty of twenty-five dollars for any offenses against any of the provisions of this section, and ten dollars additional for each fish taken. All nets, seines and other devices forbidden by this section to be used are hereby declared to be nuisances and contraband, and any person finding the same in any place where they are forbidden to be used is authorized to destroy such contraband articles, and no action for damages shall lie against him for such destruction. The phrase "private waters" is hereby defined for purposes of this and the next section, only to mean ponds or streams fed wholly by artificial sources, or by springs existing upon the same farm or tract belonging to the owner or proprietor thereof, or waters brought by artificial pipes or channels other than natural, into artificial ponds or reservoirs of the owner or proprietor.

Sec. 2. Section nineteen of said act is hereby amended so as to read as follows:

Sec. 19. No person shall catch or attempt to catch, or kill or expose for sale, or have in possession, after the same has been caught or killed, any speckled trout, brook trout or landlocked salmon save only from the first day of May to the first day of September, in each year, except in the counties of Queens and Suffolk, where it shall be from the first day of April to the first day of September in each year. Any person who shall at any time catch or take any California trout, speckled trout, brook trout, or salmon trout, or landlocked salmon from any of the waters of this State, less than six inches in length, shall immediately place such trout back in the waters from which it was taken, and shall use due care not to kill or injure the same. Nor shall any person sell, or expose for sale, any of said fish less than six inches in length. No person shall at any time take or catch any speckled trout, brook trout, salmon trout, or California trout from any of the waters of this State for the purpose of stocking a private or public pond or stream, except in the waters of Lake Ontario. No person shall at any time willfully molest or disturb any of the fish mentioned in this section, while they are upon their natural spawning beds during the spawning season, except in the waters of Lake Ontario; nor shall any person take any of said fish, or any spawn or milt from any of said fish while upon their natural spawning beds, in any of the waters of this State (except such as are wholly private). Any person violating any of the provisions of this section shall be deemed guilty of a misdemeanor, and in addition thereto shall be liable to a penalty of ten dollars for an attempt, and ten dollars for each fish so caught, killed, exposed for sale, or had in possession during the prohibited season aforesaid; a penalty of ten dollars for each fish sold or exposed for sale of less than six inches long as aforesaid; and a penalty of fifty dollars for disturbing or molesting fish upon the spawning beds, or taking spawn or milt therefrom. The foregoing provisions are not to apply to the operations of State or public hatcheries, or to the artificial propagation of said fish by State or public authority; nor to the taking, transportation or possession of fish-fry thus artificially propagated or distributed for stocking of waters. Owners or proprietors of private hatcheries are also exempted therefrom, to the extent to enable them to take fish, spawn or milt in their own private waters for purposes of artificial propagation, inclusive of the sale, transportation and possession of fish-fry or spawn, thus obtained or propagated for purposes of stocking waters. In all other respects these provisions are to apply. No officer of the State, nor any person shall place or deposit in any of the waters of the Adirondack region of this State (so called) any fish or fish-fry, or any spawn or milt, except speckled trout, brook trout, salmon trout, California trout or landlocked salmon, unless the fish so deposited or placed in such waters are indigenous to the particular water where placed, except that non-preying or non-destructive fish, such as usually constitute food for the species above named, may be therein placed. Any person

offending against this provision shall be guilty of a misdemeanor, and in addition thereto shall forfeit a penalty of fifty dollars for each fish or spawn deposited in violation thereof.

Said act is further amended by adding thereto a new section, to be known as Section 41, as follows:

Sec. 41. One moiety of the penalties hereinbefore prescribed shall be given to the informant upon conviction of the offender or offenders and the collection thereof.

Sec. 4. This act shall take effect immediately.

LEASING TROUT STREAMS.

Editor Forest and Stream:

I read with alarm the article in your issue of April 9, on the claim made by certain parties that because the State has furnished trout for the purpose of restocking our streams, every citizen has now the right to fish in the waters in which these trout were deposited.

If this is so then our agricultural interests are in jeopardy, for the United States Government is constantly furnishing seeds to its citizens at the public expense, and if I accept the gift of a seed and plant it in my vegetable garden, and raise a vegetable from it, every citizen of the United States has the same right to that vegetable that I have, and may come upon my premises and take it away.

All that would be necessary to justify the trespass would be to identify the vegetable with that seed, and that could be done by compelling me to testify to that fact.

And so if I accept the gift of a trout from the State, and put it in a stream running through my place, which already abounds in trout, every citizen of this State would have the same right to that trout that I have, and could come upon my premises and take it away.

All that would be necessary to justify the trespass would be to identify the trout if caught, or prove that it was there if it was not caught! And that he could not do by me.

V. C.

Loops and Leaders.—Columbus, O.—*Editor Forest and Stream:* If "M." will tie his leaders in sections of three lengths of gut with a regular loop on each end, he will have the best arranged leader possible. For a long leader join two or three sections together by looping them together in the same manner that flies are looped on; in one of the loops at the junction is an excellent place to attach a fly. There are many advantages by having leaders prepared in this way. Broken leaders can be easily repaired by replacing broken and chafed parts by attaching a new piece. To attach a fly where the two sections are joined together, just pass the loop on the fly snood through the loop of the lower section where joined, then pass the whole of the upper part of the leader through the loop on the fly and draw tight. It makes the same hitch as in looping on the stretcher fly, except it draws toward the knot of the loop instead of the end. If but two flies are used, and two are quite enough, several different casts can be prepared with two flies attached to sections as described, and carried in the fly-book ready for service. To change your cast of flies all that is necessary is to remove the lower section and replace with a different cast already prepared in just one-fourth the time it takes in the old style. Leaders of three gut lengths are quite as convenient to carry as separate flies and leaders. They are short and will not tangle. To avoid the annoyance of a kinky leader and to save time it is best to carry your leaders folded up in a piece of damp cloth. Leaders and flies carried in this way are ready for instant use. Soaking a dry leader sometimes tries the patience of an anxious fisherman. —California.

Adirondack Trouting. — Saranac Lake, April 15.—*Editor Forest and Stream:* Winter still lingers in the Adirondacks, and the lakes will not be free of ice until May 1. The fishing promises to be better than it has been for many years before, especially in this locality. The old sportsmen who regularly fish these lakes say that they have noticed a perceptible improvement in the catch each year for the past three or four seasons. This was more apparent last year, when the lake seemed over-stocked with small trout. The improvement is attributed to several causes; the principal being the enforcement of the fish and game laws, and the 200,000 young trout from the State hatchery, which were put into the lower lake two or three years ago. The last mentioned no doubt accounts for the great increase in numbers last season, and those who enjoyed the sport then will return this spring expecting an increase in size. If we might venture upon a little advice, we would say to those who have an idea of trying their hooks in these waters, start early and you may arrive ahead of the mosquitoes and gnats, which commonly put in an appearance about the first of June.—Bony.

A Certain Cure for Snake Bites.—E. M. Hall, M.D., of Chicago, says if permanganate of potassa powder be immediately rubbed into the wound made by a poisonous snake, the cure is certain. The wounds made by a snake's fangs are apt to be small, and should be enlarged at once with a knife point. The powder is then to be rubbed deeply in. This powder can be carried in the pocket, and is always ready for use. Every one in a section where poisonous snakes may be encountered should carry a small vial, or better a common wooden pillbox, in which to keep a small quantity of the above powder.—Red Wing (Glencoe, Fla.). [See an article in Forest and Stream, Aug. 14, 1884, entitled, "Supposed Antidote for Snake Bite."]

Pennsylvania.—The season here as everywhere is very backward, and it is only a little more than a week since the ice left the Susquehanna River and its tributaries. Black bass (small-mouths) rewarded the fly-fishermen at this point last year in goodly numbers and of larger size on the average than in any former season, and we are looking for a return of another encouraging season. Although the ice gorged at some points, as a general thing the water was high enough to carry it off without endangering the fish. I am getting my tackle in order to have a cast at the trout in the streams in the Alleghany Mountains to the west of us as soon as they are in condition. No snipe yet.—A. F. C. (Sunbury, Pa., April 13).

Pennsylvania Trouting. — April 18. — Snow still lingers on the hills of interior Pennsylvania, but is fast melting. The streams consequently are high and murky, and it will be ten days before good trout fishing can be expected. We shall furthermore need warm weather continually to drive off the snow if we are to have fly-fishing by that time.—Homo.

New Hampshire.—A town meeting was held to-day in Stewartstown, and voted to allow fishing. This opens the Diamond Ponds to the public again, and many sportsmen will rejoice.—Ned Norton (Colebrook, N. H., April 7).

Maine Fish Laws.—The close time for black bass and white perch in Maine began April 1 and ends July 1. The trout close time expires April 30.

Fishculture.

THE CANADIAN MUDDLE.

The difficulty in the Canadian Department of Marine and Fisheries, which was supposed to be ended with the retirement of Mr. Whitcher, Commissioner of Fisheries, some years ago, has broken out afresh. Mr. Whitcher, it may be remembered, was retired on account of an article to Forest and Stream, in which he very justly criticised the methods of fishculture pursued in the Dominion, and for publishing an unauthorized preface to a report. This latter offense was overlooked, but the giving publicity to his views concerning the non-success of artificial fish breeding resulted in his suspension by Mr. McLean, Minister of Marine and Fisheries. Mr. Whitcher was entitled, by law, to a pension on his retirement, and for the letter written to Forest and Stream was mulcted in five years' service and three months' pay when the amount of his pension was determined.

A correspondent of the Montreal *Herald*, in an account of a Parliamentary debate, says:

"The superannuation of the Commission was evidently necessary. Whether goaded into a state of nervous irritation, as is alleged, or not, it became evident that the service would be benefited by acceding to Mr. Whitcher's request for superannuation, but it is equally clear that the act of mulcting him of three months' salary was an ungenerous one, and depriving him of the benefit of five years' service an unjust one. It is impossible to determine the exact condition of the Department of Marine and Fisheries, but everything tends to the belief that it is an Augean stable of intrigue and imcompetence that some legislative Hercules would do well to cleanse. And while that is the prevailing opinion concerning this department it is known throughout Canada that Mr. Whitcher was the most efficient fishery officer the Government have had in their employ. While Mr. McLelan was unknown to Canada, Mr. Whitcher, under Mr. Mitchell, the then Minister of Marine and Fisheries (and of whom, for obvious reasons, I do not like to speak in laudatory terms) was performing services for Canada, particularly those in connection with the Halifax Commission, that Mr. McLelan cannot even hope to emulate. Yet the benefits of these services are cancelled at the whim of the gentleman whom a little modesty would have taught to avoid the comparison his action must surely create. The Canadian people are not ungrateful for real work done in their service, and they are not slow to compare the Mitchell-with-Whitcher achievements with the present régime. Indeed, in view of the coming termination of the fisheries clauses of the Washington treaty and the chaos that is then possible in that branch of the service, even Opposition members express their regret that those who before carried us through difficulties to success are not at the helm again. In replying last night, Mr. McLelan, apparently contradicting himself, said that he had not suspended Mr. Whitcher for the honest expression of his opinion in a newspaper, but failed to give any other reason for having done so than that Mr. Whitcher was in a state of nervous excitement. Member after member pointed out that this was not a crime, that by the Minister's own showing there was no reason for this punishment, and although Sir John, as usual, tried to rescue his colleague, the attempt was not eminently successful. However, we shall hear more about it, and perhaps a more straightforward explanation than it seemed possible to wring from the Minister last night."

THE MINNESOTA COMMISSION.

The Fish Commissioners of Minnesota have undertaken the great task of restocking Lake Superior with whitefish, from their hatchery at Willow Brook, below St. Paul. In speaking of this work Mr. R. O. Sweeney, President of the Commission, lately said:

"It may not be known to the general public, but it is a well-known and much to be regretted fact to the fishermen, that the catch (at Superior) is yearly growing smaller and less profitable. As to the cause, there are several explanations given, any one of which seems both plausible as well as probable. Not many years ago, when but comparatively few men were engaged in fishing, and usually small boats and few hands to man them, the catches were large and profitable, and the supply seemed inexhaustible. This facility and sureness of large returns induced many to engage in the pursuit; indeed, so many that the competition invented all kinds of set and trap nets of endless variety. The old-style fisherman, with his few four-handed boats, had to give way to the tireless tug, which could, through all sorts of weather, visit one hundred nets in the time it would take him to lift three or four small ones. It is easy to understand that with such facilities nets may be and are placed around every reef, on every accessible feeding ground and spawning bed that has been discovered."

Concerning the work done last year and to be done this year in the smaller lakes Mr. Sweeney says that last spring about 5,000,000 whitefish were distributed at the head of Superior, and this spring 25,000,000 additional will be planted. During the past nineteen months 4,990,000 whitefish have been placed in inland waters, and that fully 30,000,000 fish will be planted this year in inland and Lake Superior waters, including 147,000 brook trout.

THE MAINE COMMISSION.—In addition to the two well known Fish Commissioners, Messrs. Stilwell and Stanley, the Governor has appointed as "commissioner of sea fisheries" Mr. B. W. Counce, of Thomaston. The latter has given orders to enforce the lobster law passed by the last legislature, which says: "No lobsters shall be taken or sold less than 10¼ inches long from Oct. 1 to Aug. 15. May be taken from April 1 to July 1 not less than 9 inches in length." There has been sent out from the Orland hatching house during this season, in round numbers, 1,094,000 salmon eggs. There were received at the hatchery in February 350,000 whitefish eggs, from Germany, and 10,000 trout eggs from Scotland. Both lots were somewhat damaged in transit. Three lots of eggs are yet to be hatched, and work will be continued until quite late in the season.

THE FISHCULTURAL ASSOCIATION.—Our readers should bear in mind that the annual meeting of the Association takes place in Washington on May 5, 6 and 7. It is hoped that there will be a good attendance and valuable papers. It is especially desired that those who have any papers to be read at the meeting, should send the titles to Mr. W. V. Cox, secretary of the local committee of arrangements, National Museum, Washington, D. C., with a statement of the time required in reading them.

A stage was upset in Applegate Creek, in Southern Oregon, the other day, by a rush of salmon. The horses were cut loose and the driver escaped on their backs. The salmon crowded the river from bank to bank, and the school was over a mile long.—*Butte (Montana) Inter-Mountain.*

The Kennel.

FIXTURES.

BENCH SHOWS.

April 21, 22 and 23.—Annual Dog Show of the St. Louis Gun Club. W. A. Albright, Secretary, St. Louis, Mo.

April 28, 29, 30 and May 1.—Ninth Annual Dog Show of the Westminster Kennel Club at Madison Square Garden. Entries close April 14. James Mortimer, Superintendent, 48 Broad street, New York.

May 5, 6, 7 and 8, 1885.—Second Annual Dog Show of the Cincinnati Sportsman's Club, Cincinnati, O. W. A. Coster, Superintendent.

May 13, 14 and 15.—Third Annual Dog Show of the Toronto Dog Show Association. W. S. Jackson, Secretary, Toronto, Ont.

May 19, 20, 21 and 22.—Show of the Philadelphia Kennel Club. F. A. Diffenderfer, Superintendent, Philadelphia, Pa.

June 2, 3, 4 and 5.—First Annual Dog Show of the Illinois Kennel Club. John H. Naylor, Secretary, 3,182 Archer avenue, Chicago, Ill.

FIELD TRIALS.

November.—Seventh Annual Field Trials of the Eastern Field Trials Club, High Point, N. C. Entries for Derby close May 1. W. A. Coster, Secretary, Flatbush, L. I.

Dec. 7.—Seventh Annual Field Trials of the National Field Trials Club, Grand Junction, Tenn. Entries for Derby close April 1. B. M. Stephenson, La Grange, Tenn., Secretary.

A. K. R.—SPECIAL NOTICE.

The American Kennel Register, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription $1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed **2312.**

THE PROPER SIZE OF BEAGLES.

Editor Forest and Stream:

Being much interested in the discussion of "Proper Size of Beagles" in your paper, I will say I am much pleased with what "Rusticus," Mr. Sloan and A. C. Krueger have to say in favor of the small ones. I was much aroused at what your correspondent "Sedge" says in your issue of March 5, when he says he had given the small ones up as being entirely unfit for hunting rabbits. Their first defect, he adds, is, they are not true runners, have too many checks. I believe he is all wrong about that. I have bred and owned both the large and small beagles, and can truthfully say that the small ones will run as true and not make as many checks as the larger ones do; they run slower, and therefore don't run over the trail as the larger ones do. Now if "Sedge" hunts rabbits in Delaware county, Pa., he will need small dogs above all others, as there are too many ground hog holes convenient for puss to run down when being pushed too hard, and the small dog running slower don't run them to hole as often as the larger. This I know from experience, having hunted both my large and small beagles in that county. Of course, if others prefer large dogs, all right; but don't say the small ones are useless when such is not the case. I have friends owners of setters, one prefers a large dog, the other small; I have seen both dogs work equally well. So because a dog of any breed is small, don't call him useless. Man is the better for having a little dog in him.

W. H. Ashburner.

Philadelphia, Pa.

ENGLISH AND NATIVE FOXHOUNDS.

It is very evident the time has arrived when a standard for judging our American foxhounds should be made. A glance at the imported dogs and the native animals at the late Boston show would convince that the two breeds—as such they surely are—can never justly compete in the same class if judged by Stonehenge. The English foxhound has proved a failure in this country where he has been introduced with the native packs, and has shown that his olfactory powers are inferior to that of ours. It can be said that the American dog would also be discarded if introduced into packs on the other side of the water, as far as work in the field is concerned. Foxhunting here and in England is totally dissimilar. In the United States reynard has to be followed by the pack through swamps, over hills and rocks and in and out of the thickest of woods, where the rider finds it impossible to always follow the pack and keep it in sight, while in England the fox, if he takes to a copse, is readily driven from it again to the open. It requires, therefore, in the United States, a very cold nosed dog to successfully trail reynard, and our hounds never have the aid of a whipper-in when the scent is lost as the English dogs do when at fault. Our chases are at times of long duration. In Great Britain a chase is seldom over three or four hours' duration, and most of the time at a break-neck speed.

Mr. Lort, when in this country last, attending one of the Westminster Kennel Club's shows, made the statement that the English dog was notably losing nose, and breeders would either have to go to the otter hound to gain better scenting powers, or import some of our hounds; in fact, he was anxious to take back to England some of the dogs exhibited at that time, which were splendid specimens of our native breed.

It will be impossible much longer to secure the entries of native foxhounds at bench shows when it is known that dogs must compete with the English hounds, judged by the standard now used. Can not the breeders of the native dog come together and form a standard? I am sure managers of shows would recognize their claims.

Homo.

THE SCOTCH COLLIE.

Editor Forest and Stream:

I have read with some interest the correspondence that has been going on for some time in your columns anent this, my favorite breed of dog. My name has occasionally cropped up as an authority on collies, so this must to some extent be my excuse for now rushing into print. With regard to what has transpired between Messrs. Harston and Watson, as I am not posted up in local allusions I can only speak generally, and at once say that I fully agree with the latter when he refuses to recognize so many types of collies. A Scotch collie, rough or smooth, is a Scotch collie all the world over, be he Highland, Lowland, Cumberland or South of England. In the same way the old English bobtail is the same whether you find him in the wilds of Scotland or in the downs in Sussex. Mr. Harston gets a bit abroad when he asks your witty contributor "Lillibulero" that question about a Suffolk Punch and a Clydesdale. Why, sir, there's no analogy between that and crossing so-called Highland and Lowland collies. You might as well talk of mating a mastiff and a pug, both dogs as much as the others are both horses, but of utterly distinct breeds. Over here, at all big shows, it has become the custom to divide sheepdog classes into three divisions, sheepdogs (by which we understand collies of the Scotch type wherever bred), rough-coated, ditto smooth-coated, and lastly the old English bobtail. As to other breeds I cannot say that I have come across a Norwegian sheepdog, but when at the Hanover dog show some years ago I saw a collection of so-called German sheepdogs, and a more mixed or mongrel lot of curs I never came across. I am with Mr. Harston when he finds fault with heavy, flat, settery ears, such being a serious blemish, and having no other choice I should prefer breeding from a prick-eared dog to using animals of that description. He is quite right too when he says that judges should not go for color or lay too much stress on one particular point, whether coat, head or ears. For myself I can say that color never weighed with me one atom when

judging, but I am very strong about build, legs and feet, for which points Mr. Shirley gives fifty points out of a hundred.

A "Roving Highlander" has been answered so fully that I shall leave him alone beyond thanking him for his remarks about myself and congratulating him on his knowledge of Glenlivet. "A Scotsman" I must notice, as he introduces us to some novelties in the points of a collie—an ear carried like a fox's and dew claws a sign of bad breeding! I do not think that any one with the slightest knowledge of the breed will dispute the fact that a collie should have a semi-erect ear, pure and simple. Collies are frequently born with dew claws, which I never yet found a disqualification on the show bench, and should dearly like to know the names of the judge and the show where "Scotsman's" exhibit was "put back" for possessing these excrescences. Breeders, as a rule, remove them, as they are rather unsightly, and those who work their animals take them off, as (especially on rough ground) they are apt to tear and cause lameness. I have written more than I intended at the start, and also hastily, as I am much occupied just now. With apologies for occupying your valuable space with so long a communication, for which my excuse is my love of the collie. W. W. THOMSON.

MITCHAM, England, March 16.

HE PROTESTS.

Editor Forest and Stream:

I wish to protest against the printed opinion of your reporter at the Boston show, when in his criticism of the deerhound classes, he says, "Mac and Perth are the best of the lot, but neither is first-class." I should be very pleased to know his idea of what a good deerhound should look like.

Mac was bred by Mr. Lindsay Walthers of England, and is by his Paddy out of his Lassie. He is own brother by a subsequent litter to champion Bevis I. (late the property of Mr. St. Stephens) whom your correspondent "Lillibulero" calls "a magnificent deerhound." Mr. Walthers in speaking of Mac, says, "He is the best dog I ever bred." This would go to show that he is a good specimen, better than Bevis I. in Mr. Walthers's eyes, whose opinion has some weight.

Messrs. Mortimer and Davidson thought him a fine specimen, and Dr. L. Van Hummell of Denver, Col., one of the oldest and most extensive breeders in the United States, pronounced him one of the best he had ever seen.

As for the bitch Perth, she was bred by Mr. Jollier, of England, who is well known in connection with deerhounds. She is by his Gillie out of his Lufra, and is only thirteen months old. Mr. Jollier considered her a remarkable puppy, and Mr. George Raper wrote me that a friend of his, the best judge of deerhounds in England, offered him double what he had paid for her for me, expressing his belief that she was the best deerhound bitch in Great Britain. I think that your reporter, in place of making such a sweeping assertion, might have confined himself to remarking that in his opinion, Mac and Perth were not first-rate specimens. Then those who knew his competency to criticise might draw their own conclusion as to the worth of his criticism, and the quality of the dogs.

As far as I can ascertain, your reporter has never owned or bred a deerhound. Nor, owing to the scarcity of the breed, do I think he could have had many opportunities of acquiring knowledge by observation. With all due respect the same remark applies to the judges of deerhounds at our shows, though with becoming modesty they have contented themselves by non-committal reports, when asked for an opinion.

I see that my Boston friend has such a strong belief in his superior knowledge of all breeds, that he cries out and derides those less-confident reporters who, in making their report for publication of the merits of breeds of which they are not conversant, have gone to the judges and taken their opinion. To be sure, should your reporter have grounds to consider the experience of the judge to have been so small as to render his opinion of little value, he would be justified in the event of not finding among the exhibitors or spectators present a good, unbiased judge, in giving his own opinion, but in such a manner as not to hurt the reputation of the animals by his ignorance. EDWARD KELLY, Clovernook Kennel.

[The owner of Mac and Perth has made the mistake of confounding a good dog with a first-class specimen. We have stated on several occasions that Mac is the best deerhound that we have seen in America, but he is by no means first-class. Mr. Kelly's opinion of our reporter requires no special notice. If the latter has our confidence that is quite sufficient.]

THE PITTSBURGH PIECE OF PAPER.

Editor Forest and Stream:

Mr. Mortimer's latest "version" of the Pittsburgh piece of paper is a worthy sequel of many of his much-vaunted awards, *i. e.*, not his own. The gentleman must have consulted his employers before arriving at the conclusion that it is "personal" to give a clear and truthful account of a man's conduct while discharging the duties of a public office. I know that at times the law is very elastic, but on this occasion it cannot be stretched to conceal the dissimulation of Mr. Mortimer's "version."

First let me say I did not sneer at Mr. Mortimer for being "kennel man" of the W. K. C. I am not capable of sneering at any man for such a reason. I am truly sorry to find that Mr. Mortimer is ashamed of his position, and I sincerely regret having wounded his sensitive feelings by alluding to it. Somehow or other I got hold of the idea that when John Read left the situation of "kennel man" his successor would be "kennel man" and not Lord Mayor of Babylon. When giving his first version, Mr. Mortimer said: "The whole affair was so trivial that he had forgotten it." If Mr. Mortimer had "forgotten it," why should any one believe him when he says my statement is "false and exaggerated." It is not the custom of gentlemen to accuse people of falsehood, and especially when they admit they don't know what they are talking about. Will Mr. Mortimer state over his own signature that "this self-asserted authority" has never coached him on other occasions? Does Mr. Mortimer remember the little show held in Chicago under the auspices of Messrs. Lincoln, Olcott and a Chicago editor?

Mr. Mortimer was joking when he wrote, "I scarcely believe he will have the effrontery to say he coached me in these classes" (collies and mastiffs). Far be it from any intention of mine to deprive Mr. James Mortimer of one grain of credit due him as the judge who gave first prize to Robin Adair, second prize to Sandy and vhc. to Guido. Rather than have the "effrontery" to say I coached him, I prefer to see him carry on his back half of the responsibility attached to those awards, and let Robin Adair carry the other half.

Mr. Mortimer has "carefully studied the English records," but failed to find where I have been a successful exhibitor with any dog which I have bred. Mr. Mortimer must have been mixing matters, and appears to have mistaken his own record for mine. To oblige him I will give both. If Mr. Mortimer will refer to the English stud books (they are not in the printer's (?) hands) he will find that I have owned, bred and exhibited winners at Birmingham and the Crystal Palace. If he will look into Dalziel's excellent book, "British Dogs," he will find my name given by Mr. Bartram, in his article on pointers, as owner of some of the best dogs in England. By turning to page 408 of Vero Shaw's splendid work, "The Book of the Dog," Mr. Mortimer can read: "Among older breeders the names of Mr. T. Statter, Mr. C. H. Mason, Lord Sefton, Lord Downe and Mr. Garth, Q. C., appear most prominently, and their blood is eagerly treasured by breeders."

Now for Mr. Mortimer's record. In England he never exhibited a dog, was never known to have bred one, and some people say never owned one. In America he never showed a better dog than Blister, an animal that I sold for $25. I have not had very much trouble in looking up a complete record of prizes won by Mr. Mortimer, and here it is. As a breeder of dogs he is unknown:

Breed of Dog.	Champion and first prizes.	Second Prizes.	No. of prizes won with each breed.
Bulldog	7		7
Bull-terrier	3	3	6
Fox-terrier	1	..	1
Pug	1	.	1
	12	3	15

A nice record truly.

Mr. Mortimer says I am so "bereft of all decency that I drag in the name of his dead friend." I "drag in" facts, and I drag them in with a view of getting rid of all that is calculated to mislead the public and retard progress. If I am "bereft of all decency" in "dragging in" solid facts, may it not be truthfully said that Mr. Mortimer is "bereft of all decency" in stepping into a ring to judge thirty or forty classes of dogs when (as the record proves) he is not qualified to judge one class.

If Mr. Mortimer will compare his complete record with mine for one year (May 1880 to May 1881), perhaps in the future he will be considerate enough to discuss "records" with somebody else.

Breed of Dog.	Champion and first prizes.	Second prizes.	Third prizes.	Fourth prizes.	No. of prizes won with each breed.

CHAS. H. MASON.

THE NEW YORK DOG SHOW.

THE entries for the ninth annual bench show of the Westminster Kennel Club number 942. This is 172 less than last year, and about 45 less than the average for the eight previous shows. The falling off in the pointer and setter classes is marked, the entries this year numbering 284 against 460 last year. We have not examined the list but are informed by the superintendent that the many well-known dogs entered gives reason to believe that the quality of the exhibit will be far above the average. Below we give our usual table, which has been revised and corrected, showing the comparative numbers of dogs entered in each class for the nine exhibitions of the Westminster Kennel Club:

COMPARATIVE TABLE.

Breeds.	1877	1878	1879	1880	1881	1882	1883	1884	1885
Mastiffs	25	18	20	28	24	36	48	40	42
St. Bernards	17	16	24	32	24	53	62	97	73
Berghunde	..	..	..	..	..	8	5	5	..
Newfoundlands	12	23	20	26	7	20	8	15	17

THE ST. LOUIS DOG SHOW.

[Special dispatch to Forest and Stream.]

THIS was a glorious day for the opening of the second annual dog show of the St. Louis Gun Club. The show is held in the Exposition Building, and the fine weather brought out a large and fashionable attendance. The finishing touches were put on last night; each dog was assigned his number and place, and Mr. B. F. Lewis was placed in charge. The hall has been very tastefully decorated, over a hundred fine steel engravings of famous dogs and dog scenes being placed in prominent positions, both on the posts and on easels in the aisles. Only a sportsman "who has been there" can fully appreciate many of these scenes. In the southeast corner of the hall, the Humane Society of St. Louis have placed a large case, giving a very realistic representation of a dog catching scene in St. Louis. Underneath this representation are the words: "The way dogs are caught in St. Louis. Help us stop it." Just inside the entrance of the hall a miniature of the Collier shot tower has been placed, and sporting materials generally have been tastefully arranged.

The judges selected are Mr. John H. Naylor of Chicago, for all non-sporting dogs, Major J. M. Taylor for all setters, pointers and hounds, and Mr. J. H. Whitman of Chicago, for spaniels.

Three judge's rings were used, and the judging was finished the first day.

The dogs are exhibited on open benches, an entirely new and novel exhibition in this city. There are over 250 entries, including such celebrated dogs as champion Faust, Lady Croxteth, Bravo, Daisy Bravo, Robert Le Diable, Duke, Jip, Drake, Monarch, Modesty and Nellie in pointers. Paul Gladstone, champion Dick Laverack, Bessie A., Gladstone's Boy, Roderigo, Count Glickstone, David Garrick, Dash and Drake, in setters. The well-known Gordons, Sancho Panza, Malcolm, Silk and Don, are also here. In the Irish setter classes are the champions Brush, Irish Kork, Irish Faith and Effie. The celebrated Winlawn kennel of English mastiffs is also here, with Homer, Hector, Hildebert, Liberty, Hebe, Minerva and Scipio. In the St. Bernard classes are the champions Tell, Girola and Hector. The Irish water spaniels, cocker spaniels, greyhounds, deerhounds, foxhounds, beagles, collies, terriers of all kinds, and pugs are also well represented. Judging from the first day the show will be a grand success, and our city is to be congratulated on giving such a fine exhibition.

THE PHILADELPHIA DOG SHOW.

THE judges so far selected for the May show of the Philadelphia Kennel Club are as follows: Major Taylor—English and Irish setters. Samuel Bergin, Esq., Camden, N. J.—Gordon setters. Geo. N. Appold, Esq., Baltimore—Pointers. Ed. Dudley, Esq., Camden, N. J.—Mastiffs, St. Bernards and Newfoundlands. James Stovell, Esq., Philadelphia—Foxhounds, dachshunde and Bassetts. Jas. Mortimer, Esq., New York—Deerhounds, greyhounds, pugs, poodles and miscellaneous classes. John Davidson, Esq., Monroe, Mich., has been invited to judge collies and spaniels; he is yet to be heard from. Mr. Barlow has accepted the bulldogs, bull-terriers, Yorkshire, fox-terrier, black and tan, Bedlington, Dandie Dinmont and other toy classes. Mr. Sloan, of Philadelphia, will take the beagles.

In the premium list, already issued, Class 76 should read Basset hounds, dogs and bitches, instead of Basset puppies. Class 37, for pointer puppies, has been omitted; an error. Entries for these classes should be made under 38a for dog puppies and 38b for bitch puppies. In greyhound class, champion dogs and bitches have been divided, and a champion medal will be given in each class. The class for Chesapeake Bay dogs was made conditionally that we should receive five entries. If five entries are made we will make the class and give two premiums; if seven, three premiums. A class has also been made for Mexican hairless, with $10 to first, and silver medal to second.

A draft just made of the interior of Industrial Art Hall shows that there will be ample room for eight or nine hundred dogs, and no crowding need be resorted to. The benching will be roomy, and a lot adjoining the hall has been secured for exercising the dogs. HOMO.

NEW HAVEN NOTES.—*Editor Forest and Stream:* Our boys have returned from the Boston dog show, highly elated over their success, as every one of them that had dogs entered brought home a prize of some kind. E. S. Porter won first with his bull-terrier President, who is now in the champion class, and (with the exception of the Newfoundland Sam) is the only dog that I know of that is eligible under the strict ruling of Rule 8, A.K.C., viz., three firsts in the open class. Since the New Haven show the club members have purchased quite a number of dogs of different breeds, but are keeping them dark as yet. The probabilities are that the Western members of the A.K.C. will have it all their own way at the meeting to take place next month in Cincinnati, as I know of none of the Eastern clubs' representatives who are going, as the distance is too far for most of them, as they can hardly spare the time. I am informed by one of the executive committee that the proxies held by Major Taylor were too many for those present who wanted the meeting held in Philadelphia as being the most central for all, and some were uncharitable enough to claim that the Western members do not expect any of the Eastern members there and propose to locate all of the offices West and run it to suit themselves, which if done would result in all of the Eastern clubs forming an Eastern circuit, and leaving the Association. I sincerely hope that this is not the case and that the A.K.C. will be run in the interest of all clubs and exhibitors alike, and I can answer for the N.H.K.C. doing all in their power to further that object. —ROSECROFT (New Haven, April 13, 1885).

THE TORONTO DOG SHOW.—Entries are beginning to flow in, and intending exhibitors are earnestly requested not to delay to the last moment, as the space in the pavilion of the Horticultural Garden is limited, and over sixty late applications were refused last year. Room was made in the passages last time for about forty late entries, and a good deal of dissatisfaction ensued among punctual exhibitors whose dogs were benched in dark and draughty positions through the fault of the dilatory ones. The committee have determined that no such cause of complaint shall exist this year, and all entries will be refused after the proper space is filled up. The entries will positively close on May 6. All the Canadian railways running into Toronto will grant fares of one and one-third usual return rates to exhibitors, attendants, etc., and all will carry dogs in boxes free when accompanied by an attendant, except the Northern R. R., which will only return them free after paying full fare to Toronto. American exhibitors, who wish to avail themselves of these reduced fares, are advised to take fresh tickets at the point of crossing the border. American, Canadian, Dominion and Vickers Express Companies will return all dogs in boxes free, on which the full fare has been paid to Toronto. A list of specials to date will soon be printed. About forty have so far been donated, chiefly in the setter, spaniel, foxhound, fox-terrier and Bedlington classes.

THE ROCKINGHAM—FOREMAN MATCH.—*Editor Forest and Stream:* In breaking away from the conditions of the challenge, Mr. Tallman leaves your readers under the impression that he is unable to find a judge of English setters who is willing to risk his reputation by saying Foreman can beat Rockingham. The challenge calls for judges, not judges of Irish setters or Irish terriers, but judges of English setters, and it is my intention to bind Mr. Tallman to conditions which were made by himself. If he cannot find a judge of English setters who is willing to act for him, I shall most certainly decline to raffle off the stakes. I am not unnecessarily particular about the stake-holder, but I shall insist that my money be deposited with a reputable journal. When Mr. Tallman conforms to the terms of the challenge, and names a judge, I shall deposit my forfeit money with the *Turf, Field and Farm* or *Sporting Life*.—FRANK WINDHOLZ (New York, April 21).

NOTES.—Mr. Hugh Dalziel, who is to judge the majority of the non-sporting classes at the New York show, sailed on the Baltic from Liverpool on April 14....Capt. W. W. Mackie the Scotch fancier, has decided not to send his dogs to the New York dog show, there being no class for "die-hards," of which he intended to send a team. The Captain, however, sends out by the Circassian a pair of black poodles and a pair of fox-terriers (all prize winners) to Mr. William Clark, of Newark, N. J. These dogs are for breeding purposes and have been entered for the show....Mr. James Gordon Bennett before sailing from here last week presented Mr. John G. Heckscher with a collie from his collie kennels in Paris.

GREYHOUND CHALLENGE.—In your last issue Mr. H. W. Smith comes at me with a new proposition instead of accepting mine. I originally offered to show my bitch Twilight against his Mother Demdike. This I am ready to do for any amount of money. But I am not willing to show her against a whole kennel of dogs. She is now nursing eight large, strong puppies, whelped March 5, 1885, and I don't think Mr. Smith asks what is fair when he proposes to show males against a nursing bitch. Stick to the text and I'll be with you, Mr. Smith. Mr. Hugh Dalziel is entirely acceptable to me as judge.—Q. VAN HUMMELL, M.D. (Denver, Col., April 17).

THE FOX-TERRIER CLUB.—The first annual meeting of the Fox-Terrier Club will be held at Madison Square Garden, on Thursday, April 30, at 8 P. M.

THE CINCINNATI DOG SHOW.—Exhibitors should bear in mind that the entries for the Cincinnati dog show close on Friday the 24th. Entries mailed on that day will be received. The American Express Company will return dogs free over their lines that have paid one way. Power Hall, where the show is to be held, is roomy, well lighted, and well ventilated. The dogs will be fed on a mixture of well cooked corn meal, wheat and fresh beef. The superintendent writes that the prospects are flattering for a good show. Applications for space in the extra baggage car that leaves Jersey City at 8:25 P. M., next Saturday, should be made to H. W. Lacy, Demarest, N. J.

CHALLENGE.—*Editor Forest and Stream:* There having been some controversy as to the relative merits of Mr. Geo. T. Leach's Brock and my Diana II. in a six days' race, I hereby challenge Mr. Geo. T. Leach to run his Irish setter dog Brock for six days against my English setter Diana II. for $500 or $1,000 a side. The present published rules of the Eastern Field Trials Club to govern so far as they are applicable to a six days' race. The race to be run between Nov. 23 and 28 inclusive.—CHAS. HEATH (Newark, N. J.).

BLACK AND TAN SETTERS.—Fort Washington, New York city, April 17.—*Editor Forest and Stream:* As there seems at present to be a great diversity of opinion in regard to what constitutes black and tan and Gordon setters, would it not be advisable for those interested in the breeding or exhibiting of these breeds, to form at the approaching New York show, a black and tan setter club to decide on the standard of points, hereafter to be used for the judging of these handsome breeds of dogs?—CHAS. S. FITCH.

AMERICAN KENNEL CLUB MEETING.—*Editor Forest and Stream:* The meeting of the American Kennel Club will be held at Cincinnati on May 7 instead of the 8th, as announced.—E. S. PORTER, Sec'y (New Haven, Conn., April 20).

STOP IT.—*Editor Forest and Stream:* For heaven's sake do say in your next issue that my dog is sold and I have the money, but do not wish to spend it all in postage stamps answering letters.—GEO. GRIER (Goshen, N. Y.).

CLIPPER.—Can any one give us the pedigree of the pointer dog Clipper owned by Mr. Curtis, New York?

KENNEL NOTES.

NOTICE TO CORRESPONDENTS.

Kennel notes are inserted in this column free of charge. To insure publication of notes, correspondents MUST GIVE the following particulars of *each animal:*

1. Color.
2. Breed.
3. Sex.
4. Age, or
5. Date of birth, or breeding or of death

KENNEL MANAGEMENT.

☞ **No Notice Taken of Anonymous Correspondents.**

P. P., Burlington, Vt.—I have used the treatment prescribed for my pointer's eyes in your issue of March 12 for some three weeks steadily and find no improvement. The discharge from the eyes is more profuse, and in a few hours closes the eye so that the dog cannot see at all. I am sure that it is not distemper, for the dog has none of the other symptoms of that disease, and is in splendid condition with the exception of his eyes. Can you recommend another course of treatment? Your prescription for the cocker has worked admirably, and he now appears to be all right. Ans. Try the following for a few days: Sugar of lead, ten grains; Sydenham's laudanum, one drachm; water, two ounces. If a sediment forms, filter. Drop into eyes twice daily. You had better stop the cocker's medicine.

POINTER, Thomaston,—I have a pointer pup seven months old which has been ailing for nearly three weeks. The first I noticed his appetite failed, and as nothing passed him for a couple of days, and he seemed to be distressed, I gave him an injection which brought away in one movement a half pint or more of worms from one to five inches in length. I gave him some areca nut followed by oil, but have failed to discover any worms since. He appears brighter than he did, but is nervous and has no appetite except for fresh meat, and more especially for salt meat or pork, which he will steal from the table or anywhere, contrary to his training. His nose is dry at times and his eyes fill up badly. His breath is also very offensive at times. Please prescribe. Ans. Keep the pup's bowels in good condition and watch for more worms. If they appear again, you may have some powders made up of wormseed and sugar, each powder containing ten grains of the wormseed and ten or twenty grains of sugar. One powder twice daily for two or three days should be enough. The powders should be preceded and followed by a brisk purge of castor or olive oil. The dog needs a tonic now and the following is very useful: Tincture of nux vomica and tincture of the chloride of iron, of each a half ounce. Simple syrup one ounce, and enough water to make a four-ounce mixture; of this give a teaspoonful two or three times daily. Feed on unstimulating diet, soups, milk, mush and so on. Avoid giving raw meat.

Rifle and Trap Shooting.

RANGE AND GALLERY.

LAWRENCE, Mass., April 18.—The weekly shoot of the Lawrence Rifle Club was well attended to-day. The weather conditions were all that could be desired, and some excellent scores were the result, the best being appended:

Creedmoor Prize Match.

W Fisher	5455555545—48	W Arthur	4544544444—42
S M Decker	4545454444—44	P H Howe	4444544444—41
W F Watson	4544445444—42	D A Ellis	4545354343—40

Creedmoor Practice Match.

O M Jewell	5544455555—47	M W Paulton (mil.)	4544454444—41
E F Richardson	4515455454—45	O W Webster	4444444444—40
S M Decker	4455544445—44	C E Clark (mil.)	4434333335—35
R E Francis	5455444544—44		

Decimal Match.

O M Jewell	10 9 5 10 10 9 10 5 7 9—84
J Merrill	9 10 9 4 7 8 9 10 6 8—80
M J Otis	9 8 4 6 7 9 9 8 9 10—79
E F Richardson	7 9 7 10 7 10 8 5 8 6—78
R E Francis	9 7 8 8 4 4 6 8 7 7—72

SPRINGFIELD, Mass., April 18.—The Springfield Schuetzenverein held a shoot at Belden's range, West Springfield, to-day, in practice for their telegraphic match with the Minneapolis (Minn.) and Pittsburg (Pa.) rifle clubs. The German target at 200yds. was used. A match of 10 shots between J. D. Marks and W. M. Farrow was taken by Marks. The score:

J D Marks	12 10 12 12 12 12 12 11 11 10 11—113
W M Farrow	11 12 10 8 11 8 11 12 11 12—107

The score for the team match, 15 shots:

F M Bull	9 10 12 12 12 9 12 12 11 12 11 9 6 10 9—156
Z C Talbot	11 10 8 12 11 9 10 11 11 11 11 10 10 10 10—156
J D Marks	11 10 10 12 8 11 9 11 10 11 9 10 11 10 9—152
J Allen	11 10 12 8 10 8 10 9 12 10 10 10 11 11 9—151
W M Farrow	9 11 9 11 10 11 12 11 11 10 10 5 8 10 12—151
T B Wilson	10 5 12 11 9 11 9 11 10 8 11 8 10 7 10—142

On the Creedmoor target these scores would be: Bull 67, Talbot 68, Marks 66, Allen 65, Farrow 66, Wilson 64.

The Rod and Gun Rifle Club held their weekly shoot to-day at their Lake Lookout range, and though the day was perfect for rifle shooting made no large scores. The attendance was good, considering that the Schuetzen Verein held at the same time their practice shoot for their match with the Minneapolis (Minn.) Rifle Club, taking away several members of this club who belong to both clubs. The first string was contested by four members with this score:

L H Mayott	10 11 10 6 11 7 11 11 10 10—97
E S Field	8 10 12 11 11 10 8 7 8 9—94
T Cartwright	11 5 7 8 11 8 9 10 11 10—90
S K Hindley	9 10 7 8 4 10 5 11 5 7—76

Then followed a second match with this score:

L H Mayott	10 10 12 10 10 10 9 10 11 8—100
C Merrick	11 10 7 10 7 10 10 11 10 10—96
E T Stephens	9 10 9 11 8 10 7 11 9 10—94
T Cartwright	9 7 12 10 11 10 9 11 7 7—93
L Fergueson	10 10 10 10 12 10 9 7 9 6—93
E S Field	11 10 7 10 8 10 8 10 8 10 7 10—91
S K Hindley	9 5 6 11 12 6 8 10 9 7—83
J S Harris	11 9 7 8 9 8 7 5 7 6—77
H E Ferry	6 6 10 5 12 8 0 7 7 8—69

Then followed a sweepstakes in which five or six joined with this score:

E C Knox	9 12 10 12 10 12 9 9 11 7—101
T Cartwright	9 9 10 10 11 9 9 9 8 11—93
E S Field	10 8 9 6 7 9 8 10 9 10—86
C E Knowles	9 9 8 11 9 9 9 7 7 5—82

BOSTON, April 18.—There was a fine attendance of shooters at Walnut Hill to-day, and they were favored with a fine day. The members indulged in a team match, which was won by Capt. Berry's team. The following are the scores:

Practice Match.

J Halsey	4545454545—45	C E Trip	445553444—43
C W Hodgdon	4544544544—43	A Keach	4543414444—40

Creedmoor Match.

MANCHESTER, N. H., April 18.—At the annual meeting of the Manchester Rifle Association, the following officers were elected for the ensuing year: John L. Nivens, President; Edwin C. Paul, Vice-President; E. J. Knowlton, Secretary and Treasurer; Henry C. Merrill, Auditor. Executive Committee—John L. Nivens, E. C. Paul, A. B. Dodge, Lyman W. Colby, Geo. A. Leighton. As a new departure in rifle shooting, avoiding the dissatisfaction of handicapping in continuous matches and still give the new beginners an equal chance for a prize, we have arranged the following class shooting for our regular practice or shooting days during the summer season. All members who have shot in any previous matches 100 out of a possible 105 Creedmoor target, to shoot in the first class for a gold medal valued at $25. All who have shot 95 out of a possible 105, to shoot in the second class, gold medal, $20. All who have shot 90 out of a possible 105, to shoot in the third class, for gold medal valued at $20. Those who have not shot as good as 90 out of a possible 105, to shoot in fourth class, for gold medal valued at $15. The one making the highest score in his class at the end of each calendar month, to be declared the winner for that month, and the one winning in his class the greater number of times during the season to be declared the final winners and owners of the medals. Provided, however, that any member rated in the lower classes may enter if he so choose in the higher classes, but cannot be the final winner of but one medal. As we have two shooting days in each week, this gives at least eight shooting days to each calendar month, giving plenty of time for competition.—RIFLE.

WORCESTER, Mass., April 16.—At the regular meet to-day of the Worcester Rifle Association at Pine Grove Range, the Massachusetts target was used. Out of a possible 120, the following is the score:

Stedman Clark	11 11 11 10 10 11 11 12 9 11—107
A C Brown	10 11 11 12 10 10 11 10 10 11—106
Thomas Leighton	12 11 10 12 11 10 11 8 10 10—105
A L Rice	11 10 11 9 11 11 11 11 9 10—104
A Williams	9 9 10 7 8 10 10 10 9 12—94
A Mills	11 7 9 10 7 9 10 9 10 8—90

BULLSHEAD CLUB, N. Y.—At the regular weekly shooting of the Bullshead Rifle Club, 352 Third avenue, April 17, 12-ring target, possible 120: G. Zimmermann 119, A. Loeber 119, M. Doreler 118, C. Rein 117, A. Stolzenberger 114, H. Gunther 112, J. Schneider 111, B. Wragge 110, H. Sindlinger 107, C. E. Gensch 107, J. Wetzje 105, B. Walter 105, J. Jordon 103, H. Wasmuth 102, L. Bradfish 98.

SAN FRANCISCO, April 12.—There was a large attendance at the Shell Mound Shooting Range to-day, and a great deal of shooting was done. From a multitude of scores some are selected and given herewith. The match arranged between H. J. Mangels and L. R. Townsend came off, with the following result, distance 200yds.:

Mangels....42 41 45 42 45 45—260 Townsend...42 42 41 37 41 44—247

Lieutenant Mangels gave his opponent five points, but was still the victor by eight.

In a match of fifty shots each at 200yds., between Messrs. Hovey and Haight, the former obtained a grand total of 216 and the latter 201. In an impromptu match between Mangles and Thierbach both did excellently, as the figures will show:

	200	500
Lieut H J Mangles	4454454455—45	4555555435—46—91
Sergt C Thierbach	5515555544—47	5553444515—44—91

The military men were out in force and did much fine work.

GARDNER, Mass., April 16.—The members of the Gardner Rifle Club, at their last regular meet at Hackmatack Range, used the American decimal target, the shooting was off-hand, 200yds., possible 100. The totals of the two strings shot were as follows:

A Mathews	86 89—175	M Atherton	85 86—171
G F Ellsworth	86 87—173	C Shumway	74 70—144
G Fordyce	86 87—173	A Williams	73 70—143

The club have elected the following officers for the ensuing year: President, F. E. Nichols; Secretary and Treasurer, G. C. Goodale; Executive Committee, G. F. Ellsworth and A. Mathews.

THE TRAP.

Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

NATIONAL GUN ASSOCIATION.

MR. F. C. BISHOP, the Secretary of the Association, is very busy answering the many inquiries which come in from every quarter on this and that point, seeming to require explanation. A few of these letters and responses which seem to have a general bearing we give below:

"* * * Our club now numbers twenty-four members, but they are not all shooters. How many of our members will you demand in order that we may join the Nation Gun Association, as a body, and get the benfit of $2 per man? Also, is the $3 fee payable in instalments? There is much interest here now in regard to shooting matters, and I think our club is destined to make a large and useful addition to the N. G. A.—Clifford A. Hall, (Attleboro, Mass., April 9, 1885).

Answer.—"* * * * * * It is held that, in order to obtain the benefits of the reduced initiation fee, class 4, above mentioned, those members of the club must join who regularly and habitually take part in its meetings for shooting purposes, or in other words, all its active shooting members. The application for membership must be accompanied by the first installment of the initiation fee, and a certificate from the secretary of the club that the list includes all the active shooters of the club. As soon as the stock subscription is paid in full stock certificates will be issued, but the holders cannot be entitled to the privileges of annual members until the annual dues are paid. Upon the payment of annual dues membership certificates will be issued, so that by paying the annual dues one becomes entitled to the privileges of members even before all of the stock subscription is paid in, * * * * * *."

There having been numerous inquiries respecting the conditions under which organized clubs might join the Association, taking advantage of the reduced initiation fee. The management have established the following rules to govern all applications under Class 4, viz.:

Application must be made by at least ten members in good and regular standing of an organized club, to be accompanied by one or more installments of the initiation fee of each applicant, and a certificate from the secretary of the club stating that all the applicants are members as above set forth.

Until the entire capital stock of the Association shall be subscribed, certificates of stock will be issued to subscribers under Class 4, Sec. 1 of Article 9, when so desired, to the amount of the total initiation fee of said applicants. These certificates may be issued to the club, to the applicant collectively, or to any one or more individuals, provided that no stock certificates shall be issued until the total initiation fee shall be paid in full; provided further that no certificate shall represent any fractional part of one entire share.

Nothing in the foregoing rule shall be construed to admit any others than the applicants themselves to the privileges of members.

It will be seen that this rule modifies to some extent the proposition set forth in the secretary's letter quoted above.

Extract from letter. J. E. M. Lordly, Esq., secretary Algonquin Gun Club, N. Y., April 15, 1885: "Some fifteen members (about one-third) of the Algonquin Gun Club are interested in clay-pigeon shooting, the other members contented for the present with glass balls. We wish to know if the fifteen can be admitted to the National Gun Association, as the club, in class 4, by paying the initiation fee, $3 per member."

Extract from secretary's reply, April 16, 1885: "* * * * With reference to glass balls vs. clay-pigeons as targets, we wish to impress upon you that no matter what target a sportsman uses, whether glass balls or anything else, or even if he never engages in trap shooting, he is still eligible for membership. There seems to be some misapprehension on this subject, and to do away with it the management wish it to be distinctly understood that it is no part of the objects of the Association to encourage one style of gun ammunition or target, or one class of shooting at the expense of another, that is a matter which must rest with the shooters themselves. The Association membership is open to all respectable citizens, and its Constitution and By-Laws are intended to render it as independent of outside influence as possible. * * *"

The Board of Directors have adopted the following resolutions upon motion of W. A. Coster, seconded by F. C. Bishop:

Resolved, That each member be requested to transmit his vote to the secretary as to which target and trap should be adopted until the next annual meeting.

Resolved, That at the Springfield May meeting, a committee be appointed, who shall thoroughly test all targets and traps, for the benefit and guidance of the Association."

CHARLESTON, S. C.—The fourth annual tournament of the Sportsmen's Association of the Carolinas will be held here on May 13, 14 and 15, 1885. All matches open to the world, except team matches for medals.

The match list includes Wednesday, May 13—Match No. 1.—Team match for the championship, and the gold badge, teams of 5 men, rotary trap, 18yds. rise, 50 balls to each team.

Match No. 2—Sweepstakes.—Entrance $2.50, purse $50, 6 balls 18yds. rise, 2 balls to the right, 2 off and 2 left, purse divided 50, 30 and 20 per cent, ties to be shot at 21yds. 1 shot each angle.

Match No. 3—Sweepstakes.—Entrance $2.50, purse $50, 6 Peoria blackbirds 18yds. rise, 2 right, 2 off and 2 left, ties as in Match No. 2, purse divided, 50, 30 and 20 per cent.

Match No. 4—Team Match.—Entrance $5, purse $75, this match to consist of 2 men to each team, and each man to shoot at 8 birds at the following angles: 1 right, 1 left, 1 off, 1 right off, 1 left off, 1 in, 1 right in and 1 left in, ties to be shot off, miss and out, straightaway, purse to be divided 50, 30 and 20 per cent.

Thursday, May 14—Match No 5.—Team match for the championship, and handsome badge, presented by the Ligowsky Clay-Pigeon Company, teams of 5 men, 50 clay-birds each team, 18yds. rise, trap set at 5 angles.

Match No. 6—Team Match.—Entrance $2.50, purse $50, 5 double birds, 18yds. rise, straightaway.

Match No. 7—Sweepstakes.—Entrance $2.50, purse $50, 5 clay birds, 21yds. rise, ties as above, purse divided, 50, 30 and 20 per cent.

Match No. 8—Sweepstakes.—Entrance $2.50, purse $50, 5 balls, straightaway, from far-throwing trap, 18yds. rise, purse divided 50 30 and 20 per cent.

Friday May 15—Match No. 9.—Entrance $5, $25 added, 5 live birds, 21yds. rise, ground traps, use of 1 barrel, purse divided 50, 30 and 20 per cent., less cost of birds, ties miss and out, 25 and 30yds. rise.

Match No. 10.—Entrance $5, $15 added, 6 live birds, 30yds. rise, use of both barrels, purse divided same as above.

Match No. 11—Sweepstakes.—Entrance $2.50, $25 added, 4 clay birds, 18yds. rise, right and left.

Match No. 12.—Entrance $2, $15 added, open to shooters only who have not won first, second or third in any previous regular match, 5 clay birds, 18yds. rise, 1 off, 1 right, 1 left, 1 right off, 1 left off.

Twelve-bore guns allowed 2yds., 16-bore guns allowed 3yds. Rules of the National Gun Association will govern the shooting, load of shot limited to 1¼ ounces.

NEW DORP, S. I.—April 17.—The Jeannette Gun Club shot to-day for a medal which went to H. Maesell. The leading scores stood:

H Maesell	11111101—7	H Otten	01011110—5
C N Brunil	11111110—7	F Baar	10110110—5
H Vetter	11111101—7	D Stein	01111001—5
J H Fisken	11101110—6	E A Wunderlich	00111110—5
J Rottman	11110011—6	H Holms	01101110—5
H W Condts	11100111—6	J Vagts	10101011—5
C Kastenbein	11110101—6	M Berlz	11001011—5
C Myer	11110110—6		

PHILADELPHIA GUN CLUB.—Philadelphia, April 17.—The members of the Philadelphia Gun Club brought their two-day spring meeting to a close to day. On both days the weather was all that could be desired, and there was a large attendance of members and visitors both from this city and New York. The programme called for three events, the first a shoot at 10 single birds at 30yds. rise, with 23 entries; the second at 10 double birds, 25yds., with 19 entries, and a shoot for teams of four each at 20 birds 30yds. rise. The singles and doubles were shot on the first day, when the New Yorkers carried off the honors. The prizes for singles were: For the first a silver pitcher, which was won by Mr. Pierre Lorillard, Jr.; for the second a silver mug, won by Mr. Elliott, and the third, a silver-mounted hair brush, won by Mr. Bispham. For the doubles Mr. Redmond won the first prize, a silver coffee pot; the second prize, a silver-handled combination umbrella and cane, was won by Mr. Handy.

The team shoot took place to-day and proved somewhat of a disappointment owing to the absence of a team that the Westminster Kennel Club promised to send over, but as the members selected to shoot backed out at the last moment New York was only represented by a "scratch" team that entered out of courtesy, in return for kindnesses they had received at the hands of the Philadelphians. The other teams were one from the Philadelphia Gun Club and two from the Riverton Gun Club, one of which was known as the "regulars" and the other as the "reserves." The "reserves," however, proved that of all the gun clubs in the vicinity of New York and Philadelphia the Riverton is the strongest, for it not only furnished the winning team, but the second and third teams. The four gentlemen who shot as the Philadelphia team were also members of the Rivertons. The result is as follows. The prize was an elegant silver loving cup, highly ornamented, which is to be duly inscribed with the names of the winners, and is to be the personal property of Mr. Sterling:

Riverton Reserves—Sterling 18, Sartoris 17, Downing 16, Brown 15—66.
Riverton Regulars—Dando 18, Davis 15, Eckert 15, Howard 13—61.
Philadelphia Gun Club—McAllister 18, Handy 15, Meredith 15, Bispham 11—59.
New York, Scratch—Redmond 15, Colt 14, Pierce 12, Langton 8—49.
Referees—Dr. Kinney and A. Van Rensselaer.

The shooting on the whole was very good, the birds were strong and very quick, and as the wind was somewhat fresh and carried them away to the right, to kill with the second barrel was somewhat difficult. Several very clever kills were, however, scored with the second barrel by a majority of the contestants. After the principal event a number of sweepstakes were shot, there being two sets of traps in use part of the time.

SAN FRANCISCO, April 12.—A lovely day, a good muster of both members and spectators, a sprinkling of the fair sex, just large enough to leaven the lump with their refining influence, exceptionally good birds and exceptionally good shooting, and what more could a lover of pigeon shooting wish for. All these concomitants of success were to be observed at San Bruno to-day, and the result was highly satisfactory. The first event was the second competition for the California Wing Club's medals. Besides the members the following guests shot by invitation: Messrs. Tucker and Liddle and Miss Lillian Smith. Tucker tied Robinson for first place and Miss Smith tied Kerrigan and Jewlett for second honors. Hurlingham rules, with 80yds. boundary and 30yds. rise, governed the meeting. Miss Smith was allowed to shoot at 21yds. Mr. Eyre was selected judge and referee and gave universal satisfaction. Kerrigan used a 12-bore gun. Walsh's second bird fell dead outside the boundary, Golcher made some good shooting; his second, seventh and eighth shots being particularly worthy of notice. Liddle shot very well at first, his second barrel doing execution at very long distances. Kerrigan's sixth bird was challenged and when about to alight was interfered with by a spectator and a new bird claimed, which the judged allowed. Kerrigan's eleventh bird and Golcher's twelfth fell dead outside. Tucker and Robinson shot in their usually good form. Following is the score:

C Robinson	111111111111—12	W Golcher	111011110110— 9
J Kerrigan	111111111101—11	R Liddle	111111111000— 9
S A Tucker	111111111111—12	E Fay	111110010111— 9
Mr Jellett	111111110111—11	Miss Lillian Smith	011111111111—11
Dr Slade	101111011111—10	T Pearson	001110110010— 6
P Walsh	100110111001— 8		

The next shoot was between Walsh and Jellett, as they did not shoot the last time the club met, and though Walsh was using other cartridges than his own, he succeeded in winning by one bird, killing his eleven in fine style. Following is the score:

Jellett ..... 111110011111—10 Walsh ..... 011111111111—11

Messrs. Liddle and Roach shot off a match at six birds for $5 a side, Liddle winning. The score stood:

Roach ..... 001100—2 Liddle ..... 111110—5

Then followed another match between Liddle and Martin at five birds, for $5 each, Martin winning with 4 to 3, the score standing:

Liddle ..... 01011—3 Martin ..... 11011—4

BOSTON GUN CLUB.—Delegations from the Massachusetts Rifle Association, Brockton, Exeter, Mansfield, Lynn Central, Malden, Worcester, Scituate and Boston Gun clubs attended the pigeon shoot at Wellington, April 15. The result of their efforts are appended: 1. G. H. Gerrish first. 2. Clark and Cooper first. 3. Cooper first. 4. Eager and Cooper first. 5. Eager first. 6. Eager and Clark first. 7. Cooper first. 8. Eager first. 9. Snow first. 10. Eager and Howard first. 11. Allen first. 12. Gerrish first. 13. Gerrish first. One of the principal contests initiated by this club is that of awarding average prizes for a series of the contests throughout the day, and judging from the interest taken in such a scheme, they seem likely to become an entirely new feature in all future clay-pigeon shoots. The prizes were taken as follows: First best average, C. H. Gerrish; second, H. W. Eager; third, Snow, Allen and Howard; fourth. Clark, Francis and Kirkwood. The summing up of these prizes concluded one of the most enjoyable shoots yet held by this club, darkness preventing further competition.

GENEVA, N. Y., April 18.—The return match between the Ithaca and Lakeside teams took place to-day. The attendance was good, but the shooting not up to the average:

Lakeside Gun Club,—Parshall 19, Stacey 17, Dixon 21, Whitney 24, total 81.

Ithaca.—H. White 20, McCormick 18, Morton 22, A. White 16, total 76.

A CHEAP GUN.—The Ithaca Gun Company is meeting with great success in placing its cheap $35 gun in the market. The careful tests for pattern and penetration made with each barrel before shipment guarantees satisfaction to purchasers, while the boring and choking is such as to make excellent pattern either with fine or coarse shot. Mr. L. H. Smith of the company will soon start out on an extended Western trip.

TOPSHAM, Me., April 20.—At the annual meeting of the Riverside Club to-day the following officers were elected for the ensuing year: President, M. C. Hall; Secretary, Chas. Goud; Treasurer, A. Q. Goud; Assistant Treasurer, A. S. Alexander. Executive Committee—M. C. Hall, Chas. Goud, A. Q. Goud, A. S. Alexander, G. E. Keene.

KNOXVILLE, Tenn.—The following is the score made at the last regular monthly shoot for the blackbird gold medal. Mr. J. C. Duncan having won the medal at the two previous meetings, had the effect of bringing out a large attendance to keep him from winning the third time, but "Old Joe" was equal to the occasion, and won the most exciting match ever shot by the club, and the medal is now his personal property:

J C Duncan	111101111111110—13	W Jenkins	101110011010000— 7
F Armstroug	111111000111111—12	J M Ross	101100111000010— 7
A H Hebbard	111110111100101—11	C Woodbury	011010010100000— 5
J W Slocum	101110100111111—11	F Seymour	010000101100000— 4
C C Hebbard	011011101111000— 9	S Townsend	010000010001100— 4
R Jacques	010011111110100— 9	J B Kelly	000000010000111— 4
T C Eldridge	101111011000101— 9	J Brown	001011000010000— 4
C Deaderick	111110101000010— 9	Ed Misser	000000000000000— 0

PACIFIC CLUB.—The opening match of the Pacific Clay-Pigeon Club was held at Bay View, April 12, at 15 birds each, 21yds. rise, for the three club medals; two gold and one silver. E. Dunshee won the first prize by breaking 14 birds in fine style, missing only his sixth bird. W. Franks took second prize with thirteen, and Ed. Funcke third with twelve. Following is the score:

E Dunshee	111110111111111—14	J Fanning	011001110110101— 9
W Franks	111100111111111—13	A Wilson	101000111011110— 9
Ed Funcke	001111111111011—12	S Taylor	100110011011000— 8
J Taylor	101111010111100—11	H Rice	000110000011111— 7
B Ronan	011001101110111—10	J O'Brien	000010010110100— 5
W Dunshee	111000111110010— 9	A Pohlmeyer	000010010101000— 5
D Cronan	110110111000110— 9	T R Rajas	100100100000000— 3

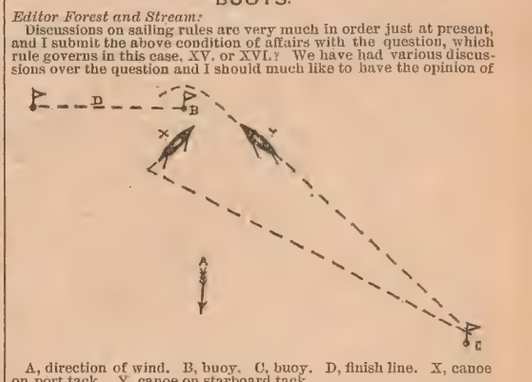
LINCOLN GUN CLUB.—An exciting match was held at Colma, California, between several of the members of the Lincoln Gun Club, shooting under the international rules. The first match was a shot between F. Drinkhouse and C. Ford, for a purse of $50, 25 birds, 18yds. rise, Ford winning the match with 15 breaks, Drinkhouse falling behind his average, only breaking 9. The second contest was a match, under the same rules, for a purse of $10, between H. Northrup and H. Fusch, which both men tied with 13 birds. After shooting the tie, with three pair of double birds, Northrup carried off the honors, breaking 4 out of 6, and Fusch 3 out of 6. The third was on the same terms as the previous one, and was between H. Venker and G. Edler. This was the closest contested and most exciting match of all, each of the men tieing on his first ten birds, after Edler taking the lead until his twenty-first round, then falling back, missing his four last birds, and Venker tieing him with sixteen. The ties were shot off with three pairs double birds, 18yds. rise, both tieing, five out of six. The second tie was shot off with three more pairs of birds, 21yds. rise, of which Edler was declared the winner, breaking 4 out of 6, Venker breaking 3 out of 6, missing his last pair of birds. The Lincoln Gun Club has elected the following officers for the ensuing term: President, C. Campbell; Vice-President, B. Warshauer; Secretary, H. Northrup; Treasurer, S. J. Cohn.

The National Gun Association.—All who would foster "The Gun" as a healthy outdoor sport are invited to join the National Gun Association, organized New Orleans, Feb. 10, 1885. Incorporated Covington, Ky., March 4, 1885. Membership fee $5. Annual dues $1. Life membership $25. A series of Inter-State and International tournaments, open to members only, will be announced shortly, the first at Springfield, Ohio, prizes $2,000 guaranteed, May 5 to 9. Handbook with full details, constitution, trap shooting rules, etc., price 10 cents. Dr. L. E. Russell, President, Springfield, Ohio; Fred. C. Bishop, Secretary, Box 1,292, Cincinnati, Ohio; J. E. Bloom, General Manager and Treasurer, Cincinnati, Ohio.—*Adv.*

Canoeing.

FIXTURES.

May 30, 31—Hudson River Meet.
May 30 to June 1—Connecticut River Meet.
July 18, 28—Western Meet, Ballast Island, Lake Erie.
July 24 to Aug. 8—A. C. A. Meet, Grindstone Island.



AMERICAN CANOE ASSOCIATION.

SECRETARY—C. A. Neidé, New Orleans, La. Candidates for membership must forward their names, with $2 for initiation fee and first year's dues, to the secretary, who will present the names to the executive committee. Money should be sent by *registered letter* or money order.

PORT AND STARBOARD TACKS AT TURNING BUOYS.

Editor Forest and Stream:

Discussions on sailing rules are very much in order just at present, and I submit the above condition of affairs with the question, which rule governs in this case, XV. or XVI.? We have had various discussions over the question and I should much like to have the opinion of

A, direction of wind. B, buoy. C, buoy. D, finish line. X, canoe on port tack. Y, canoe on starboard tack.

experts—canoeists and yachtsmen. X and Y, the two canoes, are racing, and are close to B, the last buoy which is to be left to port, and D, the finish crossed to win the race. X, not being able to sail as close as Y, has had to tack between B and C, and was well ahead of Y, but both canoes are close to B. What are the rights and duties in the case?

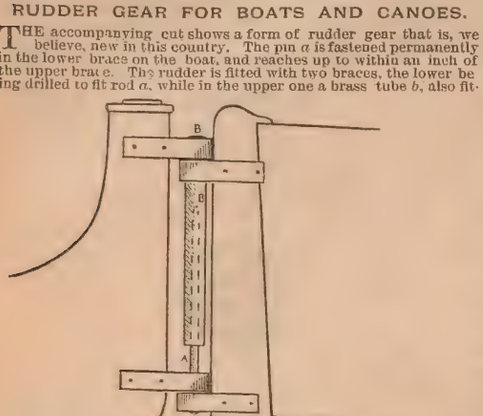
Port.

[Unless X were far enough ahead of Y to tack clear of her, she must obey the rule of port tack giving way, however close she may be to the buoy. If X is so far in advance that she endeavors to tack and collision ensues, she will be disqualified, if Y has continued on her course without putting her helm up, but if a collision ensued through Y putting her helm up which would not have ensued had she continued her course, Y would be to blame. Again, if X, by attempting to tack, compels Y to luff to avoid collision, X would be disqualified. To sum up, it rests with X, as the canoe on port tack, to decide whether to bear away, or to attempt to tack, and should she adopt the latter course she must stand all risk except in the case that Y puts her helm up and causes a collision.]

A CANOE TRIP ON THE BRULE.

HOW it rained that night; it came straight down, eagerly, swiftly, dense and very wet, and the night was so black you could feel the darkness. We stood by the side of the railroad enjoying it. The accommodating conductor and hands of a mining train on a branch of the C. & N. W. R. R. had dumped us, our canoes and dunnage on the banks of the Brule, about forty miles beyond Florence in Northern Michigan, that June night, 1884. The conductor said it was the point we bargained to be dumped at, and we took his word for it. The Brule was there, we could hear its murmurs above the clatter of the down-pouring flood. As the noise of the departing train died out the captain's voice was heard growling something about its being showery, and suggesting camp and cover. Half an hour after, with the aid of a lantern which seemed a spark in that pitchy darkness, we had our four canoes (three of the C. C. C.'s and a birch for the guide Charlie) in position under some trees, and a hissing, struggling fire fighting the rain. The Captain, Ed and the guide had turned in under cover in their canoes, but the Old Man was yet struggling with a patent wire, front and back action, crinoline-looking, canvas-covered tent, which should have covered the well of his canoe, and words strong and savory flew about. The Captain's shout of "Wind her up on the other side, Old Man," or Ed's, "There was a sound of revelry by night," didn't have a tendency to sooth the Old Man either. Finally he too was quiet, but got his work in the next morning by routing the camp out an hour before daybreak. By the time breakfast was over and all was ready for a launch, the growing light of a clear, beautiful morning was opening to our view the course of the Brule winding its way through the pine woods. Just at this point, the river was shallow with many boulders showing above the surface, and with a current running at about seven miles an hour.

We were soon afloat and under way, and for the first time the burgee of the C. C. C. waved on the Brule. The Captain was ahead in his fifty-pound canvas canoe Qui Vive; next came Ed in his canvas, a counterpart of the Qui Vive; then came the Old Man in his Racine Birdie Kane, and bringing up the rear came Charlie in the birch with the dunnage. It was a magnificent canoe ride that day, and the next and the next, the current varying from three miles an hour to the racehorse speed of a rapid; now drifting quietly side by side on the silent but swift river, sometimes so narrow that the outside man on either side could touch the banks with outstretched paddles; feasting our city-sated eyes on the constantly changing scenery, breathing the refreshing, appetite-giving air of the piny woods; then separating for an exhilarating, intoxicating rush through a rapid, with apron well pulled up to shed the combers, and fighting with rapid backward strokes, first one side then the other, with the double blade to shun the half-hidden boulders over which the greenish waters surged with an ominous rush; then, as the river became deeper and quieter, lazily coming together again with talk and song and jest, laying up here to the wooded bank for a quiet quarter of an hour and cigar, or there to give the Captain a chance to catch with camera and plate some charming bit of river view, and again at some likely pool for a mess of fish; then on again over the now silent, now boisterous, always rapid little river, its ever-winding course constantly revealing new scenic pleasures; never a farm or a clearing, never a human being but ourselves, now a tangled swampy shore, oftener a wooded stony bank, but always the dense silent woods on either side.



An onward push of the paddle was seldom necessary; you floated past the varying scenes with the same water by your side till you felt your canoe and it were bosom friends. Noon and night came far too soon, but with them were buoyant spirits and splendid appetites. Tired at evening? No. It was satisfying, refreshing rest; it was a canoeing poem. Those four were red-letter days. The glorious Brule, the acme of river canoeing.

Toward the close of the third day we left the river and portaged three of the canoes and some light camp equipage over to the Boot

Lakes, three little gems set in the woods about a mile from the river, and camped there two nights. As the lakes are seldom if ever visited, except by lumbermen, the bass fishing is very fine. We caught all we wanted for the sport of catching, and threw them back alive, as we could not use them. On the river and at the lakes we saw a number of deer. On one of the lakes we visited a beaver house and dam. They were not at home, so we left our cards and marveled at the ingenuity and human-like handiwork displayed by these wonderful builders. After leaving the lakes we had one more day of the river, then home, stored our canoes in the boat house, and bidding these faithful comrades a short good bye, went to work again. Pat.

RUDDER GEAR FOR BOATS AND CANOES.

THE accompanying cut shows a form of rudder gear that is, we believe, new in this country. The pin *a* is fastened permanently in the lower brace on the boat, and reaches up to within an inch of the upper brace. The rudder is fitted with two braces, the lower being drilled to fit rod *a*, while in the upper one a brass tube *b*, also fitting over *a* is fastened. To ship the rudder, the lower brace on rudder is entered on the rod, the tube sliding down a hole in upper brace on boat, and at the same time over the rod *a*. The rudder will rise freely, may be quickly hung or removed, and the rod can never be bent. We are indebted for the device to Mr. Geo. F. Holmes, Hull England, who has used it for several seasons on his canoe yawl Cassy.

AN ENGLISH CANOE ASSOCIATION.

ENGLISH canoeists are feeling more and more the necessity for a revival or reconstruction of canoeing, and the formation of an association similar to the A. C. A. The average record has lately been adopted by them, and judging from the results here, it will remedy to a great extent the evils that afflict canoeing, but an association of some kind is necessary as well, to insure success. Mr. Baden-Powell, in a late issue of the *Field*, has a letter in favor of the average record and also of an association, that should waken canoeists to the importance of doing something ere they fall entirely to the rear. It is but a few years ago that canoes, canoeing books, ideas, sails, all that a canoeist required, came from England; but now, thanks to the Association, and also to some of the individual members who helped to form it, we have models, rigs, ideas, and a canoe literature of our own, and far superior to that of England. The advantages five years since was all on their side, an established sport, a nation of sporting people, a small field of labor, compared with which we were at a great disadvantage. A strong prejudice against canoes prevailed here among all classes, the originators of the scheme were personally unknown to each other, and the men whom it was proposed to enlist were scattered over an area of millions of square miles, and but few of them had been in a canoe.

In spite of these and other obstacles the American Canoe Association, through the energy, enterprise, and perseverance of its founders and later members, has become an assured success, while at the same time canoeing abroad has declined. A similar work in England should place canoeing on the same basis which it rests upon here as an established and recognized sport, and now seems to be the time for such a work. There are many canoeists but the clubs do not seem to be in a prosperous condition, and racing has declined to the lowest ebb. What is needed is organization, union, and a common set of rules. The record racing will do some good, but alone it is not likely to effect any great and permanent improvement, but an English association similar to the American, is what is imperatively needed if canoeing is to hold its place among outdoor sports.

THE CANOE AURORA.

THE many canoeists who, anxious to get afloat once more, have been kept ashore by the late season, need wait no longer for the ice to melt and rivers to open, but can start at once with out fear of weather on a cruise "From the Adirondacks to the Gulf" with the pleasantest of fellow cruisers and thorough canoeist, the skipper of the Aurora and secretary of the American Canoe Association. Not only the many friends of Dr. Neidé in the Association, but all who are devoted to camping and cruising will take pleasure in accompanying him on his long journey through the means of the "Log of the Aurora," just issued by the Forest and Stream Publishing Company. The book is a condensation of the essence of cruising, varied, amusing, bright; taking one into the open air and the out-door world, away from cities, smoke and business, until the reader is ready to believe that there were three instead of two in the party, and he himself is side by side with the Doctor and Barnacle on the oily waters of Pennsylvania, amid the ice of the Ohio, or tumbling on the waves of the Gulf of Mexico.

Dr. Neidé is a careful observer, and has grasped the interesting features of everything he has seen, and shows them, not as so many dry facts backed by dryer statistics, but as he would point them out to a companion. Wherever he goes he takes the reader with him and shows him all he sees himself. While a mere itinerary of such a long and varied cruise would be of interest to canoeists, it would be tedious reading to others; but the "Log of the Aurora" appeals to the general reader as well as to the cruiser, and a man need be neither a canoeist nor sportsman to enjoy fully the varied narrative. The book is neatly and tastily made, and forms a valuable addition to the Forest and Stream Publishing Company's series of handbooks on camping and canoeing, of which the first two, "Woodcraft" and "Canoe Building," have already appeared, and the fourth, "Canoe Handling," is now in press.

BROOKLYN CANOE AND SAILING CLUB.—The Brooklyn Canoe and Sailing Club gave a reception to the boating men of Brooklyn on Tuesday, April 13, at their rooms on Fulton street. Nearly sixty gentlemen were present, many being canoeists, while a number were sailors and rowing men who came to learn what the new sport was like. A canoe with sails set served to ornament the dining room, while the main room was decorated with large club flags of the New York, Knickerbocker and Brooklyn clubs, and many private signals and trophies. Mr. Hull, President of the club, introduced Prof. Fowler, of the Knickerbocker C. C., who read a very able and interesting paper on the subject. "Why We Prefer the Canoe." Speaking first of the tendencies of the present time to hurry and overwork and their consequences, he showed the necessity of relaxation and exercise, and reviewed the popular sports and amusements of the day, with their characteristics and results, contrasting them with canoeing. The canoe and its uses were fully described, also the dress of the canoeists and the many charms of cruising, illustrated with anecdotes and incidents from the speaker's log book. The guests present could have had no more fitting exposition of the sport, and even old canoeists present felt they had not yet realized all the possibilities which the paddle opens to them. After the lecture a supper was served, the meeting breaking up at 11 P. M. The club have taken active steps to procure a house, and will soon be ready for boating from their own float. Members are coming in, and the club has every prospect of success before it.

THE CHILDS CENTERBOARD.—Mr. Childs has retired from the firm of Wm. Childs & Co., and the board formerly known by his name will in future be called the Radix board. The demand for boards this season has been very large, but the company expect to make them more rapidly than before, and to be able to fill orders more promptly.

CANOE UNIFORMS.—Canoe clubs who are providing themselves with uniforms for the coming season will find a strong, reliable article in the shirts made by the Brokaw Manufacturing Company, of Newburg, N. Y. They make a specialty of shirts for yachtsmen and canoeists.

PITTSBURGH C. C.—The new burgee is 12×18in., white ground, narrow border of blue, and letter P in blue also. The club have also adopted a sailing signal, a red crescent with profile face. If any club has already chosen similar designs the P. C. C. would like to know it. The new uniform of the club is of gray flannel, with brown stockings. R. W. Bailey was appointed measurer. The club will hold a camp from Friday to Monday, May 29 to June 1, on the Monongahela River, with races. The design for the prize cup to be presented by Messrs. Howe and Nimick has a canoe under sail, with crew on deck, engraved on one side, with two crossed paddles and the A. C. A. and club burgees over them.

WHITEHALL C. C.—*Editor Forest and Stream:* The annual meeting of the Whitehall C. C. was held on April 16. The following officers were elected: Commodore, E. P. Newcomb; Vice-Commodore, W. C. Blodgett; Secretary and Treasurer, W. W. Cooke; Measurer, E. R. Bascom; Cook, Frank C. Cooke. Two new members were admitted to the club. Some of the members have been out in their boats, and notwithstanding the coolness of the weather have enjoyed it immensely. The club will turn out for inspection some time this month, and no doubt will have a race to warm the boys up.—Will W. Cooke, Secretary.

A CANOE CLUB AT OSWEGO.—Oswego, N. Y., April 10.—*Editor Forest and Stream:* It is with pleasure that I report the organization on the 8th inst. of the Oswego C. C. with a membership of ten. Our officers are: J. B. McMurrich, Captain; G. N. Burt, Mate; W. G. Thrall, Purser; M. C. Worts, Measurer. Our club signal is of the regulation size, a 10×15 burgee with blue field, containing the letters O. C. C. in white. We have four canoes, and others are being negotiated for. The Oswego River presents unsurpassed cruising grounds, and we are waiting for the time to come when we shall make our first cruise.—Juno.

LAKE MISTASSINI.—Col. Rhodes, of the Quebec Geographical Society, was in New York last week and called on us. He is interested in the canoe expedition mentioned a short time since, to explore Lake Mistassini in Upper Canada. The expedition is now preparing to leave Quebec in June. The address of the New York agents is Walter Watson and Alex. Lang, 59 Wall street, from whom all information can be obtained.

THE CANOE LALOO.—*Editor Forest and Stream:* I see in a late issue that a canoe on the model of the Laloo is being built in Michigan. I am also building one of canvas from the same lines for one of the club, and intend to build one for myself at once, of cedar.—Senorita.

THE A. C. A. BADGES.—Dr. Neidé writes us that he has received but forty-six orders for badges. Members will please send their orders at once, so that the makers will begin work on the dies. Forty-five new members have been proposed since October.

N. Y. C. C.—Com. Munroe has purchased the sloop Venture from Mr. E. C. Neal of Boston, and is now cruising in her in Florida waters. She will be his home next season.

Yachting.

WOODEN OR IRON MAST HOOPS.

Editor Forest and Stream:

The question before us is whether iron rings for small boats, 16ft. and under, are better than wooden rings or not. With iron rings one has nearly always to keep the mast greased, for if not kept so, the rings stick in hauling up the sail, and after a time make ugly black mark on the mast. And sometimes, after a few days' of rain, if the rings are not well galvanized, they rust, leaving spots on the sail, and rotting the marlin wherewith the sail is lashed to the rings.

But on the other hand, with wooden rings and the mast well greased none of these things happen, as the wooden rings are fastened with copper fastenings, and in way of marks on the mast, of course wood rubbing against wood will make no mark.

Then another important question: as boats as small as the above mentioned generally carry comparatively small masts, whether the iron rings will hold with more sureness in a heavy wind than wooden rings. Of course iron rings are never used on boats over 20ft., and wooden rings are able to be made for masts of these boats strong enough, but when it comes to have wooden rings for masts some 4 or 4½in. in diameter, will they hold as well as iron ones?

A great many of the fishermen on Long Island Sound use "fike-boats" for fishing and iron rings for their sails. Again a great number use spritsails. But on the whole, for small pleasure boats of the above length, and tenders of yachts and other craft, I ask again which is the better?

E. C. Hammond.

New London, Conn.

[The wooden rings are better for the reasons stated above, and also because they can be placed on the mast at any time and riveted there. Perhaps the friends of the iron rings may have something to say in their favor.

A FOLDING DINGEY.

THE question of a tender or dingey for a small yacht, say from 30ft. downward, is always a difficult one. A boat on deck, however small it may be, is always a serious nuisance, and when towing it is hardly less so, beside it is often necessary to have the boat aboard. A small lightly built bateau, somewhat after the fashion of a dory, is as compact and easily handled as any; but even if so small as to be really of little use, it is greatly in the way when on deck. It is of course necessary to have some means of getting ashore from any yacht, and this necessity, coupled with the difficulty mentioned above, has led to the construction of many varieties of folding boat. Abroad the Berthon boat, invented by an English clergyman, has been largely used for yachts, though having some serious disadvantages, and lately we have tried a boat on a similar principle, but differing in details, the invention of Dr. C. M. Douglas, well-known to canoeists as a cruiser and boating man of large experience. This boat consists of a frame of bent wood, the stem, stern and keel being in one, with the gunwales hinged at the ends to the stem and stern, and folding down flat against the keel. This frame is covered with stout canvas, made thoroughly waterproof. Four sets of ribs running fore and aft, are fastened to the canvas on each side of the keel, each rib being in two halves, inside and outside of the canvas and riveted through. These ribs protect the outside of boat when drawn up. The boat, when opened, is kept in shape by two bent frames or ribs, their ends slipped under the gunwales and their middles resting on the keel. On these two floor boards are laid, holding them in place, and a thwart is also fastened to one of them. When in shape the boat is very stiff and strong, while the lines are remarkably good for a folding boat, having a flat floor with round bilge and straight sides. The weight of the smallest size, 9×3ft., is but 40 pounds, and the boat will easily carry two persons. The next size, 9×3ft. 6in., will carry three persons. When folded the boat makes a package about 6in. thick, and of such shape as to be readily stowed on deck or passed down below, while it can be unpacked and launched in two or three minutes. The boats row easily and steadily, and may also be propelled by paddles, while from their model, being stiff and buoyant, they make excellent tenders for yachts. They are made by the Ontario Canoe Company. One may be seen at Mr. Stephens's shop, at West New Brighton, S. I.

WINTER CRUISES.

THOUGH schooner racing has certainly fallen off greatly in the past two years, the two stickers are by no means idle, but are coming forward more and more each year as cruisers. Two large vessels, the Brunhilde at Nyack, and Mr. Bush's schooner at Poillon's are now building expressly for cruising, and during the past winter several large schooners have made cruises to the West Indies. The Wanderer, Mr. G. W. Weld, Gitana, Mr. W. F. Weld, and Mohican, Mr. H. D. Burnham, have all returned lately to New York after extended cruises. The latter yacht left Boston on Dec. 29 with her owner and Messrs. Nathaniel Curtis, Herbert C. Leeds, Prescott Lawrence and John Lindsey on board, under command of Capt. A. S. Whittemore. On the third day out she lost her jibboom. New Year and the following days were stormy. On Jan. 5 she arrived at Bermuda. Anchoring in Hamilton Harbor, she was visited by the Governor and staff and a number of residents. After fitting a new jibboom, the Mohican sailed on Jan. 13, but lost the jibboom in leaving the harbor. She put in to St. Georges and replaced it for the second and last time, as the third stick is still in her. Sailing on Jan. 14 for St. Thomas, her course was subsequently changed for St. Kitts, where she arrived on the 20th. A tour of the island was made, and on the 22d she sailed for Pointe a Pitre, Guadeloupe, arriving the next day and remaining for two days, which were spent by the party on shore, and then she sailed for St. Pierre, Martinique. Leaving here on Jan. 29, she reached Kingston, Ja., on Feb. 6, and on the 10th continued to Cienfuegos, where she arrived on the 12th. Here her owner and two of the party left her, going to Havana by rail, while the yacht reached the same port on Feb. 20. Here her owner rejoined her, but two of his guests went on to New York by steamer.

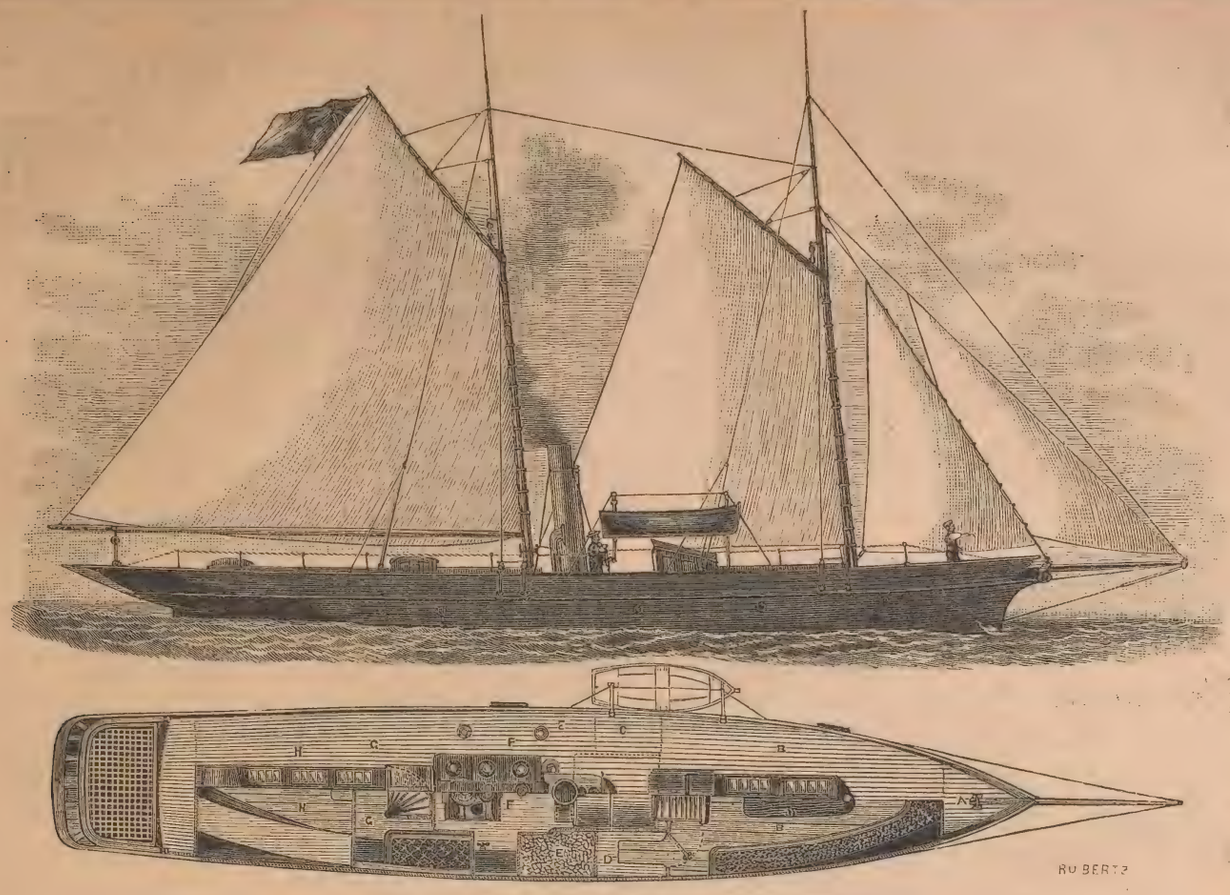
On Feb. 26 the Mohican sailed for New Orleans, arriving on March 4, and after a stay of two weeks she continued to Fernandina, reaching there on March 23. The Gitana was also at anchor here, and both left together on the 28th for Charleston. On April 1 Mohican and Gitana left in company for a race to Cape Henry, 375 miles, the prize being a gold cup, Mohican allowing Gitana 1hr. 2m. At 9 A. M. on April 1 they left the sea buoy of Charleston bar, and the Mohican was off Cape Henry at 7:12 A. M. of April 4, Gitana arriving at 7:30 P. M. On the 11th the Mohican sailed from Hampton Roads for New York and Boston, where she will overhaul for the summer. The Wanderer's cruise in the same direction was shorter, as she left Newport about the middle of March, running down to Bermuda, thence to St. Thomas, Santa Cruz, and across to Fernandina and home.

When, if ever, our schooner fleet will regain its old-time celebrity, due to its racers, is very doubtful; but there is still a large and pleasant field open to the owners of large yachts in such cruises as these to the South in winter and to Canada and Labrador in summer, besides the Mediterranean and longer voyages, and their boats may become as well known abroad as cruisers as they once were as racers.

LOG OF THE NINETTA.

AT the close of a few months' sojourn in Los Angeles during the winter just closed, I determined not to leave the semi-tropics of the State without paying a long-threatened visit to Catalina Island, situated about twenty miles off the coast here, and famed in these parts for boldness of coast-line, crystal sea water, mildness of air and general healthfulness.

Accordingly, securing the company of my old friend Kit, who had years ago some acquaintance with Catalina waters, I packed my blankets and boarded the S. P. R. R. train for San Pedro at 10 A. M., Monday, Feb. 2, 1885. Arriving there a little before noon, we began to cast around for some sort of a "hooker" for the proposed cruise. Presently I met my friend Gen. B., Collector of the Port here, who kindly volunteered the use of his "packet," a smart-looking yawl swinging to her cable in the stream. She had just been launched, after having been hauled out and painted, and with the help of old-time friends, Charlie K., Billy M. and Charlie D., her iron ballast was put aboard and sails bent that night. Deferring further preparations until next morning, we unrolled our blankets and turned in on the seats of a passenger car, obligingly tendered by the railroad agent.



Tuesday, Feb. 3.—We were up in good season, Kit producing a blue woollen shirt and woollen stockings for my benefit, the stockings from the untiring fingers of his dear old mother, way back in Mount Desert, Me. (Kit spent last year there.) Commissary stores engrossed our first attention, and we obtained them at a store in the little town. Towing our ship into the steps, we proceeded to pass in cargo, and by noon we were ready to throw our tow line to Capt. C., of the tugboat, he having offered that good service if we would take our chances with the bar, which was, and had been for several days, unprecedentedly rough. At 12:30 P. M. we started, the tug ahead, towing a large lighter, while we brought up the rear. As we neared the bar, about half a mile out, and about opposite Dead Man's Island, we began to experience the effect of the long and heavy southwest swell, which was breaking on the spit to the west of the bar in fierce and ugly-looking combers. We kept our weather eye open, however, and met her yawing with the helm, though at times we sulked until our tow line tautened like a harp string, and, with the momentum thus acquired, were forced to luff past the ponderous rudder of the lighter to avoid a collision. At length we were over and dry as a bone, and the tug dropped us to transfer Los Angeles passengers to the steamer Santa Rosa, lying at anchorage, and bound for San Francisco. We got mainsail, jib and mizzen on her in the order named, and after a short leg on the starboard tack, with a S. W. wind, we 'bout ship, and with port tacks aboard stood up for Point Firmin. On this tack we went athwart hawse of the tug, and swung good-by to them with elevated hats. Getting in close to the kelp, we again came in stays, and close-hauled on the starboard tack could point up only to within about two points east of the easterly end of Catalina. This was not satisfactory, for our destination was the isthmus, opposite Catalina harbor, near the west end.

Now, while the breeze is light, Kit getting dinner, and yours truly at the helm, let me describe our ship more particularly. She is 22ft. waterline, 7ft. beam, and 3ft. draft, with good freeboard and round stern. She is decked forward and aft, with a 5ft.×10ft. cockpit amidships, with a coaming around it and decked from coaming to gunwale on each side. There is a small steering hatch in the after deck, with mizzenmast stepped forward of the hatch. The cockpit has a 10-in. wide seat on each side running the whole length, the covers of which being raised discloses lockers below. Her rig is main, jib and mizzen. She steered with a light weather helm, and in a light breeze slipped along like oil. Charley K. had extemporized a memorable stove for us which worked admirably. Taking a coal oil can, he made a 2in.×4in. aperture in one side about 4in. from the bottom, leaving the piece cut out fast by the lower edge and projecting for a miniature hearth. Then the can was filled with dry sand even with the bottom of said aperture. This arrangement produced draught and a cool bottom that the stove could stand on without injury to its supports. Two pieces of hoop iron were bent down and hooked across the top to support kettles, cans, etc., and completed the instrument. The chowders, boiled potatoes, coffee, etc., turned out by this apparatus under Kit's practiced hand, were its best recommendation. We trolled for baracouta across the channel, this being the season for them, but did not find their schools. We caught some Spanish mackerel, however, which we added to our stores. As we drew out into the channel the wind hauled more westerly, and we bore up for two peaks near the center of the island. At 3 P. M. I requested Kit to turn in, which he did promptly, making his bunk on the floor of the cockpit, sheltering his head under the fore deck, while I kept the fire going at his feet. Our breeze soon left us with but steerage way, but kept drawing northward, and although we made the land and heard the hoarse welcome of surf by 9 P. M., we did not know our ground well enough to attempt an anchorage at night. So I kept her looking at the wind and edged along the north shore toward our destination, the isthmus. Kit's watch from 12 to 4 A. M. was passed in almost a calm, and morning showed but little headway.

Wednesday, Feb. 4.—An easterly wind soon helped us close in shore, and lazily dawdling over beautiful groves of kelp waving in the watery breeze, sending their bright red, russet, and pale sea green foliage up through fathom upon fathom of transparent water, to the very top, we crept to the westward. Then Kit, a fisherman of varied experience, from Bay of Chaleur to Grand Banks, got out his lines, and inveigled red fish and white fish into our boat, to show up in curiously wrought and toothsome chowder later on. Anon we floated over long reaches of hard sand bottom, and saw piles of jetsam, etc., lying peacefully in their long bed, unruffled by any far away surface commotion. "How deep do you suppose that is?" says Kit. "Oh, about 20ft., I guess." "Yes, it looks about that." But the lead tells a different story, 8 fathoms. Such is the deception of this diaphanous Catalina water. What with our loafing and lying to, and fishing, we fetched the Isthmus only about 5 P. M. Sailing into within 50yds. of the beach, against an off-shore wind, we dropped anchor and got supper. On rising from our repast we found we had drifted out at least 100yds. The few beaches around the island are very steep, and furnish poor holding ground, with their generally smooth, hard bottom, especially when an off-shore wind gets a down-hill pull on your anchor. So we hoisted jib and slipped down a mile or so to Fisherman's Harbor, just east of the Isthmus. We had seen a skiff moored there when passing up, and as we had no tender, she proved a "bonanza." It is a pretty little cove, the best harbor on the North Side, and is sheltered from all but N. W. winds. We found a strong mooring that the skiff was fast to, and made use of it rather than risk our anchor among the huge boulders on the bottom. Bailing out the skiff, which was waterlogged, we made a landing on the gravelly beach, replenished our stock of wood, which was low, from driftwood and roots, and also discovered a "tank" of water in a natural depression of the rock, in the little canyon. Returning on board I turned in very tired and sleepy, not having rested well in my new surroundings since leaving home. Kit stood the racket better, but he can sleep almost any way or where. I made my bed on the floor boards of the cockpit, with a tarpaulin thrown over the main boom, suspended between the two masts, for a shelter, while Kit preferred the more airy location of the after deck. Turned in at 7 P. M. and slept until 7 A. M.

Feb. 5.—Kit got breakfast while I filled the demijohns from the "tank" discovered the night before. These "tanks," so-called, are the "springs of gladness" in the arid regions of Arizona, and, strange to say, always contain good water. After breakfast we landed and struck out over the mountain side and through deep gulches for the isthmus. The sun was hot, and when we reached the harbor, the head of which runs within a quarter of a mile of the north shore of the island, we were glad to refresh ourselves with a sea bath in the sparkling, clear water. Frank W., superintendent of the island (which belongs to the estate of James Lick), was putting a new forefoot on his schooner, the Keywee, which he had beached, and he kindly lent us his skiff to take a look around the harbor. He was living in the old barrack buildings at the isthmus, built for the regular army some twenty years ago. Spending a couple of hours there, and on the north side beach, prospecting shells and pebbles, we retraced our steps for Fisherman's Harbor, eating of the bright red pigeon berries hanging in heavy clusters from a low shrub on the hillsides. From these high cliffs we noticed the color of the sea bottom, which gave its own hue to the over-lying glassy water. We looked almost vertically down on the decks of our little ship as we fetched the harbor, and soon scaled the heights; and, boarding her, made sail for the East End. Baffling winds and calms used up the day and most of the night, until 4 A. M., when, in the moonlight of my watch, I made bold to beat into a beautiful cove which I felt sure must be Timms', against a brisk little breeze coming directly out of the cove from the southward. When within seventy-five yards of the beach I sung out to Kit and asked him to turn out, get over the anchor and tell me how he liked the looks of the country. He didn't exactly recognize it, but we both turned in for two hours, and on rising at 6 A. M., Kit knew his ground, and remembered the old building some distance back, and the rolling benches of the romantic and beautiful little valley stretching south, and pronounced it Timms' Cove.

Friday, Feb. 6.—As my plan included sailing for San Pedro to-day,

THE CRUISING STEAM YACHT "CHEMCHECK."

and as we saw no stir among the shanties on the beach which would promise a chance to land, we took advantage of an off shore wind and steered for Point Firmin, as near as we could lay our course by compass, it being foggy. We ran into a calm about five or six miles out, and then got a slight air from the N. W. The sea here presented a novel sight. We were surrounded by a low-lying fog, which seemed to stand like a wall a quarter of a mile away on all sides, while the glassy sea came gliding into and out of our amphitheater in a long and heavy ground swell, the whole surface shimmering and easily lending itself to the illusion that we were slipping with lightning speed through the water. Lying on the deck and sky-gazing, I could see the clouds scurrying to the S. E., whereupon I immediately prophesied that the brisk N. W. wind in that elevated region would eventually get down on the surface and give us the homeward lift we were wishing for. Sure enough, about 2 P. M., the fog having almost wholly lifted, and all landmarks standing out clear, the sea began to take on a little frown, and a freshening breeze soon filled our sails and sent us gaily threshing through the seas homeward bound. For three and a half hours our breeze came out of the N. W., augmenting in force until the little hooker was planksheer to, and further she refused to heel. This was her first chance to show her mettle, and she evinced her power, holding her eager bowsprit over the meeting seas like a wand of conquest. We dashed into San Pedro anchorage at sunset, but just before reaching the bar our breeze died out. Determined not to lie out another night without exhausting our wits in trying to get in, we got out the sweeps and walked her up to the bar to see how it looked. On fetching it our usual good luck brought us an N. E. air, fresh enough to take us in on a taut bowline against a strong ebb tide, and at 6 P. M. we put her nose against the steps where we had embarked four days before. Kit got our traps on the wharf, while I confiscated a dinghy, fitted her with rowlocks from one boat and sculls from another, and sweeping the Ninetta out into the stream clear of the fairway, we dropped our hook, and giving her plenty of scope and making her all snug, we went ashore and took up our quarters in a box car for the night, prepared for the 7:15 train next morning for Los Angeles. R. L. E.

Los Angeles, Cal.

INTERIOR FITTINGS IN SMALL YACHTS.

THE question how to fit up the interior of a small yacht has brought out another suggestion in the *Field*, in addition to those which we quoted lately. A correspondent, "R. W.," writes as follows:

"If 'W.' has not yet commenced to build the boat under discussion, it is worth his while to consider whether it would not be advisable slightly to increase her dimensions. The accommodation on board a boat of less than 7ft. beam can rarely fail to be intolerably cramped, nor should there be less than 6ft. head room in the center of the main cabin. In a boat of 30ft. length on the waterline, of 7½ft. beam and 5½ft. draft of water, with the mast placed about 12ft. from the stem, he might get a forecastle 10ft. long, a main cabin 8ft., and a sail room 6ft. long, which might be arranged as follows: The forecastle to have its bulkhead about 4ft. abaft the mast, and to extend about 2½ft. under the main skylight. It might contain on the starboard side a fold-up bed-place 6ft. long, and forward of that there would be room for a 9ft. Berthon boat, which, with its oars, would reach right into the bows. On the port side there would be room for two fold-up bed-places, and forward of them for a small shelf to hold the side lights and lamps. The galley might be placed before the mast, and the fore hatchway not in the middle line of the deck, but rather on the starboard side, and about 7ft. from the stem. Owing to the forecastle extending 4ft. abaft the mast, and under the main skylight, it would be unusually roomy and airy, while the bed-places would be dry and well removed from the fore hatch. In the main cabin, on the starboard side, must be placed a pantry locker and *vis a vis* a closet, both being covered with cushions when not in use, and aft of them, on either side, a sofa or bed-place 6ft. long, with lockers underneath. In this way tolerably comfortable berths could be provided for five persons. The skylight should be 3ft. wide, and the coaming 9in. high. The booby hatch should be made to slide back about 3ft., and the sofas on either side of the main cabin be protected for at least that distance by waterproof curtains. The double doors from the main cabin to the forecastle and sail room should open, the former outward, the latter inward. Under the platform of the sail room should be a large water tank, which might also extend about 1ft. into the main cabin. There should be no well for the steersman, but he should stand in the sail room hatchway, with his feet on the platform or on a slightly raised grating. With a waterproof apron round his body, and extending over the hatchway coaming, he will be fairly comfortable in bad weather. Access to the sail room can still be obtained through the double doors into the main cabin. The rest of the crew will find plenty of room for themselves on other parts of the deck or down below. The best matresses are, I think, those of granulated cork, and cost about 7s. apiece; air pillows and sack bedding are also very comfortable and convenient. All tables should be made to fold up or unship. Bookcases and nets to hold charts, glasses, and other miscellaneous articles, will be found very useful. In a sail room, from which nothing has been taken to form a well, in the lockers and under the platform of the forecastle, enough stowage room for a short cruise will be found. Nor, if the little yacht be properly furnished with a windlass, pump, binnacle, and other necessaries for a long cruise round our coasts, will a crew of only three hands find it beyond their strength to work her."

SMALL CRUISING STEAM YACHTS.

ALTHOUGH the development of the steam yacht has not received the same study and attention here that it has in England, and our fleet is much smaller, in some particulars we are still in advance. In the matter of high speed the American launches are at the head of the record, and on the other hand in the matter of size, and elegance of appointment some of the later boats from the Delaware will compare with any of foreign built. Both of these classes, however, possess but little interest to the average yachtsman, the high speed launch is a convenient vehicle for water transit, an easy method of going from place to place, or a useful auxiliary for hunting or fishing, but the essential elements of yachting are conspicuously absent. The larger boats also have a use of their own as adjuncts to life at seaside resorts in summer and for short runs to the West Indies in winter, but their cost limits them to a few. Steam will never supplant sails in the estimation of the majority of real yachtsmen who follow the sport from love of a life on the water, for the cutter, sloop or schooner offer pleasures to the sailor unknown to the passenger (whether owner or guest) on a steam yacht, but in the present busy age time is always a foremost consideration, a leisurely enjoyment of life is something that few Americans of the present day can spare time for, and even our amusements must be partaken of at high pressure. Go where he will, the modern business man or capitalist is bound fast to the "market" or the "street" by a fine wire that may draw him back at any moment, and that makes speed an important factor in his pleasure trips. Under such circumstances steam is too valuable an auxiliary to be overlooked or slighted and the problem of the yachtsman is to utilize it in such a way as to preserve as far as possible the great charm that attaches to cruises under sail. To do this a class of yacht is required that as yet is little known with us, though quite common abroad, the auxiliary steam cruising yacht. The larger boats of this class are tolerably well known here either from the published logs of their cruises or from having visited some of our ports, the Sunbeam, Lancashire Witch, Marchesa and some smaller craft having world wide reputations, while last season a other yacht, the Nubienne, visited Canada and the United States. The cost of building and maintaining such vessels, however, places them beyond the reach of the majority who are obliged to put up with a less expensive craft. With us the idea of cruising ability in a steam yacht is always coupled with the idea of size and consequently cost, but the two are not necessarily associated, and it is quite possible, by a proper care in design, to obtain many of the advantages of steam at a moderate cost.

The yacht illustrated above is one of a type of small cruisers that has come into use abroad not merely for such coasting work as our yachts do here in the Sound, but for extended cruising. The Chemchek (or Lightning) as she is named, was built for Hilmi Pasha by Messrs. Miller, Tupp & Rouse, of Hammersmith, London, for use on the Mediterranean, her headquarters being on the Bosphorus. Her extreme length is but 65ft. with a beam of 12ft., while the draft of 5ft. is very moderate. Her construction is such as to fit her for sea work and hard service, the frame being of English oak and American elm well fastened. The planking is of teak coppered, and she is finished throughout—bulwarks, rail, deck houses, skylights and cabins—with the same wood. Her general appearance is that of the ordinary English schooner yacht, the same bow, with round bright bowsprit, high bulwarks (15in.), and a long counter, while her general proportions, above and below water, are designed to give her sea-going power with good speed under sail alone. The rig, as shown, is that of a two-masted schooner with spars and sails of such size as to be of real service, and little like the ridiculous pipe-stems too often seen that are only fitted to fly bunting and not canvas from. Of course in so small a boat the bunker space is limited, and coal for long trips cannot be carried, but this disadvantage, attendant on all types of steam yachts of similar size, disappears when the ability to get somewhere under sail is taken into account. Her four beams of length give good proportions for sailing, and under the rig she is provided with she is a handy and efficient little vessel under canvas alone. The power provided is a pair of compound engines, surface condensing, with inverted cylinders 9½ and 17in. by 9½in. stroke. They are fitted with a valve reversing gear patented by the builders. The air and circulating pumps are driven by an independent engine, a donkey pump is fitted to the boiler, and also a bilge injector. The screw is of 48in. diameter and 6ft. pitch, fitted to a 3in. iron shaft. Steam is provided by a return tubular boiler 60in. diameter and 7ft. long with forty-two 2¼in. tubes. The boiler is tested to 150 pounds, the working pressure being 60 pounds.

The accommodations, a most important feature on a cruising craft, are well shown in the plan. Forward is a chain locker A, and storeroom. The main saloon B B, is fitted with berths, while by day it serves as cabin and dining room. From it opens a toilet room and w. c. C, and also a pantry D. Amidships is the engine room F, fitted like the rest in teak, and at the sides the coal bunkers E E. The ladies' cabin G, is directly abaft the engine room. It is fitted up with two berths and a skylight. The after portion of the yacht H H, is fitted up as a galley and quarters for the crew. The actual space in a yacht of this size, after deducting engine, boiler and bunker room, is small, but all there is has been utilized to the fullest extent and with the best results. The elegance and luxury of larger craft are lacking, but the essentials, a stauuch little hull, full equipment and cosy quarters, are found in an excellent combination. A still smaller yacht of similar design is the Iris, built in 1883 by the same firm, and also stationed in the Mediterranean. Her length over all is but 60ft., beam 11ft., draft 5ft., depth of hull 6ft. 6in. She is built of teak, coppered, and is schooner rigged, being much like the Chemcheck. Her engines are 9 and 16in.×9in., boiler 57in. diameter and 6ft. long, screw 48in. diameter. Her average speed is 10½ knots. She made the voyage through the Bay of Biscay to the Mediterranean and is now stationed at Messina. The cost of the latter boat complete was $9,200 in England. The Chemcheck would cost, if built with pitch pine planking, about $9,000 without rig, or if built of teak or mahogany, or with entire hull of iron or steel, and completely rigged and fitted out, including ground tackle, lights and yawl, about $12,000. These prices are for the boats delivered in England, and would, of course, be about one-third higher here on account of the duty.

THE CUP RACES.

THE Boston sloop is partly planked, with deck frames in, and the iron sloop is as far advanced. The sails for the latter are being made by Wilson & Griffin, of New York, and will be ready before they are needed. Captain Gibson, of the Vixen, will probably command the New York sloop. The New York Y. C. have received from Mr. Beavor Webb an answer to their last letter, the contents of which have not yet been made public. Rumors of other new boats to be built are still floating about, but none have yet been commenced, neither have the proposed changes been made in any of the schooners.

MACHINE FOR CLEANING VESSELS' BOTTOMS.

CAPTAIN CHARLES GEORGE CROSS of the British ship Mylomene, has solved a problem which has been agitating the minds of shipowners and shipmasters since the inauguration of iron shipbuilding. He has invented a machine by which the bottom of a vessel can be cleaned at sea of the growth of weeds and barnacles which have hitherto resisted the action of various chemical compositions invented for their especial destruction. Through the courtesy of Captain Cross we were enabled to personally to inspect the operation of the machine, which he has lately patented in Great Britain and America, and to test in a most critical manner its peculiar qualifications. Working it aft from the forecastle to the break of the poop, the machine did its work expeditiously and effectually, cleaning the vessel from the waterline to the keel, and sending to the surface grass and weeds in sufficient quantity to remind one of a passage through the Saragossa Sea. The brushes, when brought on board, were literally alive with small marine animals of the shrimp species, which had been finding a home and sustenance on the vessel's side. The machine in itself is simple in design, and the theory of its construction and application is discernible at the first glance to an intelligent eye. On the upper and lower sides of a strong wooden frame measuring 3ft. 8in. by 2½ft. wide, are affixed stiff brushes encased on the outer edges with steel plates riveted to the frames in sections, with leather hinges to permit a freedom of play in rising or sinking. A pair of lateral iron fins on pivots controlled on deck, regulate the upward or downward motion of the machine, and the requisite pressure to the hull is assured by a wooden turtle back, which rises from the forward portion of the frame at an angle of 45deg. The method of working is as simple as the construction. A small-sized wire rope is passed under the forefoot, having a bullseye on the side which it is desired to clean. A guyrope leading through the bullseye is attached to the scrubber, and regulates its passage fore and aft. The fins are worked from the deck by a couple of hands, who elevate or depress them at either end as an upward or downward motion is desired. Three men can attend to the work and go around the ship inside of four hours. The greater the speed of the ship, the more effectually the machine does its work, the heavier the pressure on the turtle-back naturally producing a closer application of the brushes.

Captain Cross it to be congratulated upon his invention. It will prove a boon to the shipping community at large. Owners of vessels will save by its adoption hundreds of pounds annually in the matter of drydock expense alone, not to speak of the profits on quicker passages. Commanders of vessels also will be slow to recognize its merits and hail in it a deliverer from the vexatious delay of a smart clipper by the hitherto unavoidable mishap of a foul bottom.—*San Francisco Newsletter.*

YACHTING NOTES.—The new high speed yacht built by Herreshoff Bros. (No. 118) has been named Stiletto. Her speed on first trial was 22 15-100 miles....Aida, steam yacht, Vice Com. Douglas, N. Y. Y. C., is being overhauled at Bristol....Com. Bennett has sailed for Europe in the Namouna....A new boat, the Tot, has been added to Boston's Mosquito fleet. She was built by Captain Matthew Martin and is 13ft. 10½in. over all, 4ft. 11in. beam, 16in. draft, mast 23ft. 6in. heel to truck, boom 19ft.... Daisy, cutter, has been launched at Munm's yard....Mr. E. L. Bateman of New York, has chartered the Skylark, steam yacht, for the season....Mary Anderson's steamer Galatea is advertised for sale, also the schooner Fleetwing. Montauk is being put in thorough condition for her sale next month....Violet, sloop, lately sold by M. J. Kiley to Henry J. McKee, was built by the Herreshoffs in 1866. She has since been altered to cutter rig....Dauntless, schooner, is fitting out at Newport....Hildegarde, sloop, is fitting out at Nyack....Huron and Thetis were launched at Smith's yard last week. Adrienne, schooner, was launched at Lawley's and will also go into commission at once....The Menta, steam yacht, has been sold by F. L. Felton to J. W. Avery of Boston. The Mabel H., sloop, has also been sold to L. C. Baily by R. Brymer....Dream,

This new steam yacht, built at Glenwood, L. I., for Mr. F. P. Dudgeon, is 67ft. long, 15ft. beam, and 6ft. depth of hold, with a 12x12 engine, and screw of 57in.... Electra, steam yacht, is now at Manning's Basin again, where she will fit out when the alterations in her engines are completed.... Mumm's new railway on the north side of the Atlantic Basin is now in working order. The first yacht hauled out on it was the Haze, schooner, now overhauling.... The steamers Viking, Nourmahal, Utowana, Corsair, and Stranger are all fitting out. The latter has a new four-bladed wheel 9ft. diameter, and 2ft. 6in. pitch, in place of her old one 8ft. 6in. diameter and 13ft. pitch.... Athlon, sloop, has her mad stem fined down, and a sharp stemband added.

THE OLD WANDERER.—The following interesting account of a once famous yacht we copy from the New York *Herald*. Perhaps some of our readers can give some additional facts concerning her: The model of the once famous schooner Wanderer (not the modern Wanderer), which was built in 1857 at Port Jefferson, L. I., by J. Rowland, after the design of Mr Thomas B. Hawkins, was presented to the New York Y. C. yesterday. Fabulous stories concerning this old craft's speed were circulated by the newspapers just before the war broke out, and when she was seized for running slaves into Savannah, Ga. She was originally built for Mr. John C. Johnson, and sold afterward to Colonel W. C. Curry, of Savannah, Ga., who was elected a member of the New York Y. C. in May, 1858, being proposed by John T. Stagg and seconded by Mr. Langley Bruce. As soon as it was found that the Colonel was importing slaves under the flag of the New York Y. C., he was promptly expelled from its membership, which event is recorded in the club's annals of Feb. 5, 1859. After being condemned by the United States Government, the Wanderer was used as a despatch boat in the Gulf with headquarters at Key West. A Boston firm got her when she was sold, and she was put in the fruit trade, but was wrecked near Cape Henry. Her model is quite flat amidships, with its ends well balanced and having very little drag line, but its bow is quite full on the luff, having short hollow lines ending against a "flare-over" stem. The run is all that could be desired in a yacht, and there is no doubt that the old time slaver was a powerful craft, by reason, mainly, of her dimensions; but the geometry of her model is crude when viewed in comparison with American clipper design. She was 114ft. long on deck, 24ft. wide, 10½ft. deep in the hold and 10ft. 9in. draft, and her model is indeed a valuable addition to the club's collection of historical clipper craft.

HURON.—The new dimensions and elements of Mr. Gray's cutter are as follows: Length over all 73.4ft.; length load waterline, 63ft.; beam load waterline, 15.2ft.; beam extreme, 15.9ft.; draft, 9½ft.; freeboard, lowest point, 2.9ft.; area load waterline plane, 617 sq. ft.; area midship section, 65ft.; center of gravity, load waterline plane 35 6ft. abaft stem; center of buoyancy, 35.15ft. abaft stem; center of lateral resistance, 36.29ft. abaft stem; center of effort, three lower sails, 33.73ft. abaft stem; center of buoyancy, below waterline, 2.59ft.; center of lateral resistance, load waterline, 4.22ft.; center of effort, three lower sails, above waterline, 28.66ft.; metacenter, above center of buoyancy, 3.67ft.; area of longitudinal section, 529.15sq. ft.; area of three lower sails, 3,524.65sq. ft. of canvas; total area of wetted surface, 1,328sq. ft.; proportion of canvas to immersed surface, 2.66. The length of the mast from deck to hounds will be 46ft.; boom, 59ft.; gaff, 37ft.; bowsprit, 26½ft. outboard;. Her lead keel weighs 25 tons, and she has also 5 tons inside.

TORONTO SAILING SKIFF CLUB.—This new club, the organization of which we noticed a short time since, is now firmly established and will soon be well housed. The membership has grown to sixty-five in less than two months. The new building, to be completed by May 1, is situated on York street near the R. C. Y. C. wharf, is 54ft. long by 23ft. wide, with eight boathouses below and a meeting room above, with a balcony on the west and south sides. Between the yacht clubs, the Toronto C. C. and the new sailing club, water sports should prosper well in Toronto.

VIDA.—There was launched lately from the yard of Mr. S. M. Dinsmore, Cambridge, Mass., this small, single-hand cruiser, built for Mr. E. A. Abbott, of that city. She resembles somewhat the Mamie, described some weeks ago. She is 23ft. 6in. on deck, 6ft. 4in. beam, 5ft. depth and 4ft. draft, and on account of having all the ballast inside will only have 3ft. 10in. head room. The house is 7ft. long, standing room 5ft. long, leaving 8ft. of deck forward of the mast and 3ft. 3in. aft of the standing room. In the cabin transoms run fore and aft on both sides, making room for two to sleep with the greatest ease, and room for four very comfortably. She is cutter rigged with double headsail, but with standing bowsprit and topmast; mainsail hoist 12ft., boom 19ft., gaff 12ft., staysail foot 11ft., jib foot, 16ft., bowsprit outboard 10ft., topmast 10ft. The lines and a complete description will be published after the boat has been tried.

CLEVELAND Y. R. A.—*Editor Forest and Stream:* At the annual meeting of the Cleveland Y. A., held at the club rooms April 4, the following officers were elected for the ensuing year: Commodore, Geo. W. Gardner; Vice-Commodore, R. R. Rhodes; Rear-Commodore, Percy W. Rice; Secretary, J. G. Downie; Treasurer, W. P. Francis; Measurer, H. Gerlach; Surveyors, C. C. Geodwin and Frank W. Brewster; Executive Committee, R. E. Mix, chairman, C. C. Goodwin, H. C. Rettyer, W. S. Robinson, J. S. Williams. The Association is in good condition and pushing the preparations for the summer meet at Ballast Island rapidly. From correspondence already in, it bids fair to be the largest meet ever held on fresh waters.—J. G. Downie, Secretary.

A NEW STEAM YACHT.—Messrs. Cramp & Sons of Philadelphia, builders of the Corsair, Stranger and Atalanta, are now building a steam yacht in stock. Her length over all is 160ft., beam 22ft., depth of hold 12ft. 6in., draft over 8ft. The hull will be of iron, schooner rigged, and her engines will be on the triple expansion principle and the boilers will be of steel carrying 160 pounds per inch. It is expected to realize a high rate of speed.

QUINCY Y. C. ELECTION OF OFFICERS.—At the annual meeting of the Quincy Y. C., the following officers were elected: Commodore, C. F. Adams; Vice-Commodore, H. H. Sheen; Secretary and Treasurer, H. M. Faxon; Fleet Captain, George A. Ordway; Measurer, A. B. Lelois; Regatta Committee, H. A. Keith, J. H. Slade, C. H. Porter and A. D. Perry.

SLOOP FOR SALE.—We call the attention of our readers to the light draft sloop advertised for sale in another column. She has been fitted and used for cruising, and is a handy little boat for a party of four in shoal water, as her draft is but 2½ft. She is comfortably fitted below with cabin furniture and cooking outfit and can soon be put in commission.

NEW CRUISING CUTTER.—A little cutter is now building at Millerton, New Brunswick, of the following dimensions: Length on deck, 27ft.; waterline, 32ft.; beam, extreme 7ft., at waterline 6ft. 8in.; least freeboard, 2ft.; draft, 4ft. 6in.; ballast on keel, 4,300 pounds of lead; displacement, 11,000 pounds. She will be cutter rigged with pole mast.

HUBBE'S YACHT AGENCY.—We have received a neat pamphlet containing a list of vessels and yachts for sale at Hubbe's Agency, 164 Maiden lane, New York. The opening pages contain an account of the America's race in England, with the later races sailed for the Cup, which is of course of special interest at the present time.

MADGE.—Mr. Sheldon, the new owner of Madge, has removed the cockpit and laid a new flush deck. The interior has been torn out and will be rebuilt so as to give a stateroom 8ft. long abaft the cabin. The yacht will be thoroughly overhauled and put in commission.

OCEANICA Y. C.—Commodore Lynch and two other members of the club are now building a boat 16ft. beam and 3ft. draft, with a deep rocker keel. She will be ready next month.

ANSWERS TO CORRESPONDENTS.

HUGH, JR., Painesville, O.—We know of no reliable map.

G. J., Bethlehem, Pa.—Any of our advertisers we think are reliable. Try Conroy, Mills, Chubb, or others.

J. T. M., New York.—Would you please inform me if there is any trout-fishing stream within an hour's ride of New York city. Ans. None that are public or free.

E. M. J., Manchester, N. H.—The back of rudder may be less than 1-16in. thick. You could have the piece for rudder cut to your pattern by Joyner, of Glens Falls, who makes drop rudders.

P. E. B., Brooklyn, N. Y.—1. Where can I find out the points of a bull-terrier? 2. Can you tell a thoroughbred dog by the markings in his mouth? Ans. 1. We can send you "Points for Judging Dogs," price 50 cents. 2. No.

R. S. J., Kansas.—Can you tell me something to put on the bait to make the fish bite? I have tried two oils; one oil of rhodium, but find it does no good. Ans. All such recipes are of no use. The best thing to put on your hook is good bait.

E. V., Keokuk, Ia.—White cedar is watertight without preparation or varnish, but should be varnished or painted to keep it clean. For copper nails write to A. Nelson, 295 Pearl street, New York. The weight of mast tubes depends on diameter and thickness.

HAMMERLESS, Chambersburg, Pa.—1. When can black bass be caught legally in the State of West Virginia? 2. Same as above in State of Maryland? 3. Is the —— hammerless gun considered a first-class sporting weapon, and how does it compare with those made by —— or ——? Ans. 1. June 15. 2. We do not find any law relating to black bass in Maryland. 3. A good gun which will compare favorably, in our opinion, with those of most makers.

C. F., N. Y. City.—1. I have a Remington .32-cal. rifle chambered to shoot the long cartridges, will it hurt the shooting qualities of the rifle to shoot .32 short cartridges? 2. How far will such a rifle shoot .32 short cartridges with force and accuracy? 3. How far will it shoot .32 long cartridges with accuracy? 4. Are the central fire cartridges much better than the rim fire? Ans. 1. It is liable to give inaccurate shooting. 2 and 3. Up to 200yds. good shooting has been done. 4. Yes, generally so regarded.

J. W. P., N. Y.—1. Where and for what price can I buy gray squirrels? 2. Would they breed and thrive in a wild state upon the Island of Mount Desert, Maine? 3. If so, would any particular measure be required to induce them to nest and remain in one locality? 4. Under favorable circumstances how rapidly would they multiply? Ans. 1. We do not know. Try Reiche Bros., Chatham street, City. 2. We presume so, though it is a little north of their usual range on the Atlantic coast. 3. No. They would require only to be fed. 4. Very rapidly.

SETTER, Baltimore.—Will you please decide the following: A young setter was being exercised, had never seen game in field, when he came upon a woodcock; and though he detected the scent, he hunted it right up to the bird and flushed it, the bird flying only five or six yards. When he flushed he was told to "to-ho", which he did, making a staunch point around to the left where the bird went down, though he could not smell him, as the wind was from him to bird. After a short time he was told to hold up, which he did. The question is, should not the bird have been flushed while he held his point? or should he have been told to hold up, as he was not pointing by scent, or sight, as the bird went down a bank. If the above is wrong will it tend to injure the dog? Ans. Many dogs will not point their first woodcock, seemingly having no liking for the scent; this is especially the case at this season of the year. We should advise that your dog be kept away from game until the proper season. Should he then refuse to point woodcock, perhaps one or two killed over him will show him that they are proper game, and he will come out all right. If he flushes his bird did him "to-ho" and talk to him about the offense, then take him round and give him the wind of the bird, and as soon as he shows that he has the scent, order him to "to-ho," and perhaps this will be sufficient.

THE MILD POWER CURES.

FISHER'S ISLAND.

Important to Club Men and Investors!

The Eastern end of this Island, comprising about two thousand acres, is offered for sale (to close a trust). Its location is peculiarly adapted for club purposes—having good covers, fertile soil, and a chain of fresh water lakes and ponds extending through the Island, affording opportunities for stocking with Game, Fish, etc. Its situation and climate being cool in the summer months makes it very desirable as a summer resort. Being surrounded by salt water, and several miles from the main land—with the Atlantic Ocean on the South and the waters of Fisher's Island Sound on the North, with fine beaches for both surf and still water bathing, good roads, etc. A large section of the west end is surveyed and mapped for cottage purposes. A number of fine cottages have been erected. Steam communication from New London, Conn. For maps and full particulars address,

J. H. LYLES, Trustee. 104 John Street, N. Y.

A SPECIALTY.

Special designs furnished on application free of charge.

Reads like a romance from beginning to end.—SPRINGFIELD REPUBLICAN.

Old Saint Augustine.

BY CHARLES B. REYNOLDS (FOREST AND STREAM).

THE famous Florida town's three centuries have been crowded with romantic incidents; and a story of wonderful interest is this, with its Huguenots and Spaniards, Franciscan Fathers, English Sea Kings, Boucaniers, Minorcans, Liberty Boys, and Seminoles. It is told vividly, in the briefest possible compass, with strict historical accuracy, and with an enthusiasm that is manifest from the very first page to the last. Among the illustrations are copies of some of the very rare drawings by Jacques Le Moyne, the French artist, who so narrowly escaped massacre by the Spaniards in Florida, three hundred years ago. Another very rare engraving is the plan of the city in British times. The *artotypes* (or photographs in permanent ink) are among the most beautiful book illustrations of the day. They are made from negatives taken expressly for "Old St. Augustine," and are: Fort Marion (four views), the Matanzas Fort, the City Gateway, the Cathedral, the old Palm-tree, Garden Overlooking Plaza, and two very characteristic St. Augustine Houses. Cloth, pp. 144, 8vo. Price, $1.50. **Forest and Stream Publishing Co.**

"FOREST AND STREAM SERIES."

DEER HUNTING.

BY JUDGE JOHN DEAN CATON.

BY and by it will be time to hunt antelope and deer. It is always time to read about them. Judge Caton's book on the antelope, elk, deer, moose and caribou of America discusses in a readable way the life history of these animals and the methods of their capture. It is the work of an enthusiastic sportsman who has had a wide experience and has devoted the leisure of years to studying these interesting game animals. The volume is very fully illustrated, and is a perfect storehouse of information and entertainment. The first edition was sold by the Boston publishers at $4. Price $2.50.

WOODCRAFT.

BY "NESSMUK."

A COMPACT pocket handbook of condensed, boiled-down, concise, clear, comprehensive, sensible, practical camp gumption. "Nessmuk" has been "in the woods" in Michigan, New York, Pennsylvania, and South America, and this is a book for outers, wherever they kindle their camp-fire. The author believes in "smoothing it." He has learned how; now he tells others. It is much easier to learn from "Nessmuk" than from Dame Experience. We should not be surprised if "Woodcraft" completely revolutionized the methods of camping out. If you are going to the woods, read "Woodcraft" before you go. It may add to your trip a hundred fold. Price $1.00.

DOG TRAINING.

BY S. T. HAMMOND.

HE was a promisig puppy, and when you turned him over to the breaker to be educated, you thought he was bound to make "the best dog in the world." And you'll not soon forget how disappointed and disgusted you were when the dog, the breaker and the big bill—all three turned up together, and you saw that the animal's spirit was broken and it would take a steam calliope to make him mind. Now, this could not have happened if you had been wise enough to buy a copy of Hammond's book, and in your odd leisure moments *train* the dog yourself instead of having him *broken* by some one else. We are selling edition after edition of this book, and it is revolutionizing the system of preparing dogs for work in the field. Price $1.00.

SHORE BIRDS.

A PAMPHLET for those who "gun" along the shore. Tells of: I. Haunts and Habits—Where the bay birds live and what they do at home. II. Range and Migration—Where they go to breed and where to spend the winter. III. A Morning Without the Birds—An episode of shore shooting. IV. Nomenclature—A list of our American species of *Limicolæ*, with a description of each specie. V. Localities—Where to go to shoot them. VI. Blinds and Decoys—How to shoot them after you have reached the grounds. 45 pp., paper. Price 15 cents.

ANGLING TALKS.

BY GEORGE DAWSON.

AS a political writer of conceded power, Mr. Dawson wielded a trenchant pen; when he terned from the conflict of parties to the praise of the favorite pastime of "simple wise men," his essays, limpid as the crystal streams, are aglow with the soft summer sunlight and melodious with the songs of birds. When angling was the theme, he wrote from a full heart and in closest sympathy with the scenes and pursuits described. These "Talks" are brimful of manly, wholesome sentiment; there is in them all not a particle of cant. Their sincerity and overflowing spirit at once win the reader, and he perforce shares the author's enthusiasm. The effect is magical, like that of the mimic players in Xenophon's *Memorabilia:* he who reads, if he be an angler, must go a-fishing; and if he be not, straightway then must he become one.—*Extract from Publishers' Preface.* Cloth, price 50 cents.

CANOE "AURORA."

BY DR. C. A. NEIDÉ.

A CHARMINGLY written and always entertaining accoun of a canoe cruise from Lake George, New York, down the Ohio and Mississippi Rivers to the Gulf of Mexico, by the Secretary of the American Canoe Association. To read the cruise of the "Aurora" is the next best thing to having made it; and the reading is decidedly more pleasant than would have been participation in some of the misadventures related. 216 pp., cloth. Price $1.00.

Publications.

CANOE

THE FOREST AND STREAM began a year ago the publication of a series of papers on canoe construction, by Mr. W. P. Stephens, of the New York C. C., widely known as an expert on canoe design and building. These papers, having appeared through the year in our columns, have since been rewritten, and with numerous additions are now published in a handsome volume under the title of "Canoe and Boat Building for Amateurs." Mr. Stephens is peculiarly fitted for the preparation of such a work, beginning as an amateur, and having after a long experience of the difficulties attending a learner, taken a prominent place among canoe builders, due both to the model and workmanship of his canoes. Realizing fully the difficulty of explaining to a novice an art in itself far from easy,

AND

and with which he is entirely unfamiliar, the book begins with a description of the various classes of canoes in general use, with their main features and dimensions, and definitions of the terms used in connection with them. Numerous examples of canoes are given, and in connection with them, such plain instructions in designing as will enable the beginner to select intelligently the proper craft for his pur-

BOAT

pose, and to plan her dimensions, details and fittings. To this end designs of all classes of canoes are given, with full dimensions and details. The object has been not merely to enable the tyro to build one boat as described, but to teach him the principles of designing and building in such a way that he may construct such a craft as he desires, following the chapters on designing, the construction of a canoe is taken up in detail, the tools and appliances being first clearly described, as well as the various materials, after which follows the actual work of building. Every operation is taken up in order, from the selection of the keel to the varnishing of the finished boat, and illustrated with numerous diagrams.

A chapter on sails describes all the varieties in use by canoeists, down to the new Mohican settee, with directions for making, rigging and measuring them, while the method of proportioning the sails to the boat is clearly explained, all the calculations

BUILDING

being worked out in detail. The many minor points of a canoe, paddles, steering gears, rudders, aprons, and camp outfit are also described at length, while a chapter is devoted to canvas canoes.

The subject of boat building is fully treated, a rowboat of the usual construction being taken as an example, and described in all its parts in such a manner as to make clear the principles involved, and their application to any form of boat, either lapstreak or carvel build. Each of the numerous technical terms belonging to the subject is defined clearly when it first occurs, and as the index is full and complete, the book is in itself a glossary.

In addition to the numerous diagrams in the body of the work, twenty-four large plates are printed on bond paper, containing the working drawings of canoes for paddling, sailing, cruising

FOR

and racing, with their sail plans, rowing sailing boats, large canoe yawls, and various boats for special purposes, such as gunning boats, yacht boats, and the widely known sneakbox.

The canoe yawl, a boat between a canoe and a yacht, is illustrated by examples of various craft from 17 to 20ft. long, and suitable for a crew of two or three on a cruise. This class of boat, while little known among us as yet, is admirably fitted for cruising, and will meet the wants of many who object to a canoe as being too small, and yet desire a boat with the same excellent qualities. The boats and canoes illustrated are in all cases among the best of their class, the list of canoes including English, Scotch and American craft, and are all drawn

AMATEURS.

to scale, so as to be available as working drawings. The plates, for convenience in using, are placed loose in a tough manilla envelope and accompany the book.

Pp. 168, with 24 plates of working drawings. Price $1.50. Address,

STUD FOX-TERRIER

Champion Raby Tyrant,

(K.C.S.B. 11,179.)

Tupped October, 1880. Weight 16½ pounds.

Raby Tyrant is a white dog, with an even marked rich black and tan head. He is a thoroughly game and stylish terrier, possessing a beautifully shaped long punishing head, with perfect drop ears, small eye, rare neck and shoulders, deep chest, well ribbed and muscular quarters, short, straight legs, excellent feet, great bone and substance, with an exceptionally hard and dense coat.

Raby Tyrant is without doubt one of the most successful terriers of the present day. He has been exhibited 67 times, 33 different judges having adjudicated upon him, and has won 47. First 10 cups and specials; 12 second and 3 third prizes. His breeding is undeniable, combining as he does the choicest and most valuable blood that can be obtained. At the stud Raby Tyrant is proving himself eminently successful.

Fee, $15.00.

JOHN E. THAYER, Hillside Kennels, Lancaster, Mass.

Stud Dogs Proper.

ANSWERS TO CORRESPONDENTS.
PUBLISHERS' DEPARTMENT.

THE DEER-HOUNDING BILL PASSED.

IF those readers of the FOREST ANE STREAM who preserve a file of the paper will turn back to the issue of November 6 of last year, they will find in the editorial columns these sentences:

"What is Adirondack deer-hounding?* * * Is hounding a legitimate way to kill deer in the Adirondacks? * * * Is it sportsman-like and ennobling, or is it brutal and brutalizing? Ought it to be abolished? Can it be abolished? Will it be abolished? These are timely questions. They ought to be answered, and answered now. We propose to throw some light on them."

The intention then expressed of agitating this subject was carried out. The colums of the FOREST AND STREAM were thrown open to a discussion of the merits of deer hounding. Circular petitions for a non-hounding amendment were printed and sent out to all parts of the State for signatures. The responses on all hands were most gratifying. The petitions came back filled with names and were forwarded to Albany. The bill introduced into the Assembly by Gen. N. M. Curtis was adopted as the one meriting support, and how the campaign against the deer butchers was carried out is known to all readers of this paper. The light promised was given, and last Friday the Curtis bill against hounding deer in the Adirondacks passed the Senate and is now in the hands of the Governor, whose signature will be beyond all doubt given to it.

It has been a protracted labor, but the bill has passed and the end sought has been attained, so far as it is possible to attain it by legislation.

This bit of intelligence will be most unwelcome to hundreds of self-styled sportsmen who have annually resorted to the Adirondack region to butcher exhausted deer in the water; but all right-thinking men, to whom Adirondack deer-hounding methods have been an abomination, will rejoice to see the practice put under the ban of the law.

It was full time that the deer-hounding should be stopped. Visitors and residents were agreed as to the destructive effects of the hounder's methods, and most sportsmen were agreed as to the brutality and disgrace of water-killing deer. The more intelligent guides were and are, as we have said before, anxious to see the dogs driven out from the woods.

The most strenuous opposition to the bill came from some of the short-sighted landlords, who believed that with the prohibition of hounding, a portion of their patronage would be lost; from a class of city sportsmen, who have been in the habit of organizing annual deer-hounding campaigns on a large scale, and from the residents in towns near the Adirondacks, who were accustomed each year to hound deer for the market. The efforts of these three classes to defeat the Curtis bill have been persistent from the beginning, and the final passage of the measure is due to the wide-awake, energetic and faithful labors of Gen. N. M. Curtis in its behalf. Too much credit cannot be given to that gentleman for the manner in which he has watched the interests of the bill. From his experience as a breeder of fine stock, Gen. Curtis was quick to see the pernicious effects of hounding, especially when practiced in the breeding season of the deer, and he was the first to call attention to physiological principles which must hereafter always receive consideration in a discussion of this topic.

The bill declaring deer hounding unlawful has been passed, but it should not for a moment be thought that all deer killing abuses in the Adirondacks will be done away with by this measure. Deer will still be killed out of season, shot in pure wantonness and their carcasses left to rot, or killed for market and sold in the close time. This new law will be only one great step ahead, other advances are yet to be attained.

THE PINE BROOK MEADOWS.

THERE is no place in this vicinity so well known to the snipe-shooting fraternity as the drowned lands of Morris and Essex counties, N. J. Indeed, from early in the century the Pine Brook district has been recognized as a natural breeding spot and harbor for woodcock, quail and ruffed grouse, and a ground where in the spring and autumn wildfowl resorted in large numbers in the time of the inundations. Besides the local celebrity which the Pine Brook meadow has attained, it has been made world famous through the graceful writings of Frank Forester. It is really marvelous, considering the number of sportsmen and pot-hunters who are daily beating the coverts and log patches, that a single game bird is left. But in spite of continued shooting in and out of season, there are days every year when large bags of both snipe and woodcock are made on these grounds.

It will be interesting to those whose wont it is to pursue their birds there, to know that an attempt is being made by the officials of New Jersey to reclaim these wild lands by means of systematic drainage. This can only be accomplished by blasting the reef at Little Falls, and removing the many obstructions in the tributaries of the Passaic River above the great natural dam. Drainage of these lands has frequently been projected, and some fifteen years ago, the river where it flows through Ford's Island was straightened for over two miles. This was done by cutting a new channel. The expense proved very great. The farmers were assessed, in many instances the levy was greater than the swamp land was actually worth, and the poorer landowners were ruined. In spite of the remonstrances of the manufacturing interests who depend upon the water power of the Passaic Dam at Little Falls, there is reason to believe that the work of draining the Troy Meadows, Scow Meadows, Pine Brook Flats and the Big and Little Piece, will, within a short time, be recommenced.

A SHAD WAR.

THERE has been trouble between the fishermen of the States of Delaware and New Jersey concerning the shad fisheries of the Delaware River, which at one time seriously threatened bloodshed. The cause was the passage of a recent act by the Legislature of Delaware, making it unlawful for a non-resident of the State to take fish in Delaware Bay or River without a license. Delaware claims jurisdiction over all the river and bay lying below Pennsylvania. This aroused the New Jersey fishermen, as it did when Delaware made the same claim in 1871, when a number of men were killed in conflicts between the fishermen of the different States.

Governor Abbett, of New Jersey, was appealed to, and the legality of Delaware's claim was referred to Attorney-General Stockton; but meanwhile the more impulsive ones armed themselves for resistance and the protection of what appeared to them to be their rights. During the troubles referred to in 1871, Joel Parker, then Governor of New Jersey, issued a proclamation asserting New Jersey's jurisdiction over the Delaware to the center of its channel through its whole length below Port Jervis, and the present Governor seems inclined to sustain this claim. Later the Senate of Delaware passed a bill suspending the operations of the Fishery License act of 1871 until the question of jurisdiction is passed upon by the Supreme Court of the United States, but in the House the bill was laid on the table. Meantime the Attorney-General of New Jersey has given an opinion that his State has control of the waters in the river and bay to the center, so long as an injunction which was issued by the United States Supreme Court, restraining Delaware from enforcing its fishing laws, lasts.

It is a very pretty fight as it stands, and one which will be watched with interest. The settlement appears to turn wholly on the question of jurisdiction of the State of Delaware. If this jurisdiction be admitted, there can be no doubt as to her right to pass laws prohibiting residents of other States from fishing in her waters. This has been done by a number of States of which New Jersey is one.

The question of fact then as to the position of the boundary line between Delaware and New Jersey remains to be determined, and when this is settled the whole question is decided.

THE PARK SUPERINTENDENT.

TO THOSE individuals who regard the General Government as a legitimate prey, the action of Superintendent Carpenter in laying claim to a part of the Yellowstone Park will not seem very dreadful. There are many people of most correct life and somewhat elevated thought, who do not regard the cheating of the Government as a crime. People who would feel themselves most grossly outraged if it were hinted that they would appropriate a pin belonging to another, see no wrong in defrauding the customs of many dollars' worth of duty on articles brought into the country with them from abroad. This is a curious kind of moral obliquity which, while very common, is not easy to understand. It is possible to imagine a person willing to cheat his fellow man, or the Government, but that a good person should be willing to cheat and not be able to see that the cheating is wrong, is something that we have never understood.

In the same way it is quite possible that Carpenter may have seen nothing wrong in attemping to secure for his own private benefit, a portion of the territory which he was appointed to look after, and which he was bound at every hazard to guard. Such inability to distinguish between right and wrong, such entire failure to appreciate the requirements of his position, would furnish another very strong reason for his prompt removal. It appears to be the fact that Carpenter looks upon his position of Superintendent not as a public trust, which he is desirous of administering as well as possible, but rather as a temporary berth, out of which, for the little time he may hold it, he is anxious to make as much as he can. He has felt that at any time he may be turned out, and so he has, to use the cant phrase, "worked the place for all it was worth," and leagued himself with all sorts of gangs, who are not slow to seize the opportunity to make what they can out of the Government. Such appears to have been Carpenter's course. Let him go back to Iowa.

WISCONSIN GAME LEGISLATION.—Among the game bills passed by the Wisconsin Legislature this year was one forbidding the exportation of certain game from the State and the possession or sale of game in the close season. This bill, after passing both houses, was vetoed by Governor Rusk, on the ground that its provisions were unconstitutional. So far as we are informed, this veto is not based on tenable grounds, there being abundant precedent for such a law. The non-export provision obtains in a number of States, where it is annually enforced without question of its constitutionality. The provision forbidding the sale and possession of game in the close season is a part of the law of almost every State that has any game law at all; in fact, such a clause has been proven to be the only effective check on wholesale game destruction in the close season. Its constitutionality has been affirmed by the highest courts of the States. The men who would contest it if they could, namely, the large game dealers, do not attempt to do so. We have not at hand the full text of the Wisconsin bill and Governor Rusk's veto, but if the printed summary sent to us is correct, the veto was an error. We shall refer to the subject at greater length when we are advised more fully as to the exact wording of the bill. The non-export law is a most important measure for Wisconsin, and for every other State whence game is shipped to the great markets; indeed, it is absolutely essential to any adequate scheme of game preservation.

THROUGH TWO-OCEAN PASS.

XV.—LAST DAYS.

THE numerous delays, due to snow and rain, had made the eastward extension of our trip impracticable, for it was now so late in the season that heavy snowstorms, which would render the mountain passes difficult, might be expected at any time. It was therefore determined that we should follow up the shore of the lake, cross the Yellowstone River at the first good ford, and so return to the main camp. The east shore of the lake is interesting on many accounts. The views to be had from the various points are perhaps even more beautiful than those from the opposite shore, and there are a number of hot spring deposits which are well worth a visit. Of these, the more important are the Brimstone Basin, the Lake Butte Springs, and those at Steamboat Point.

Our camp was, as we supposed, quite near the first of these, and after the train had started the next morning, Mr. Hague and I rode into the timber to find it. The Basin is a large one, and we expected to have no difficulty in discovering it. We rode back through the timber for a couple of miles, crossing one large creek, which we thought might perhaps flow from the Basin, but which was quite cold, and had no taste except of iron. After going so far that we were sure that we must have passed it, we turned north again, and riding further up the mountain side, soon came to the borders of the deposit. As we were passing through a little park just before reaching the Basin, an old and large bull elk walked out from the timber on one side of it, and crossed the open just in front of us. He was really a ponderous fellow with massive, high, branching horns, whose weight made him nod at each step, and a great mane that hung down from his thick neck. Although only about one hundred yards distant and in plain sight, he paid no attention to us, but walked steadily along until he had passed out of view beneath the trees.

The Brimstone Basin, so-called, consists of a number of bare ridges running out from the foot of the mountains. They are really its lowest foothills, and are composed wholly of decomposed lava, over the top of which are strewn a few blocks and fragments of the rock which have not been exposed to the action of the steam and hot water, which so speedily break down the hardest rock. The hot springs are now all extinct, though there are many old sulphur vents, and a few springs which flow a little yellow sulphur water. Fragments of this mineral are abundantly scattered about on the surface of the ground, and here and there little vents are seen, which give forth the unmistakable odor of sulphuretted hydrogen. Through the midst of the Basin flows a large stream made up of the many small ones that pour out from all the little ravines. The waters of this creek taste very strongly of alum, and though here on its upper course abundant, they sink a mile or two further down, and the creek bed for a short distance is dry. The basin is a mile and a half long, and about a mile broad, and lies well up on the mountain, directly at the foot of Mounts Stevenson and Doane. The gully, or small cañon, through which the large creek flows, is narrow, bare of vegetation and strewn with boulders of lava. It reminds one strongly of the gulches in California in which hydraulic minings have been carried on.

Elk are very plenty here, and as may be imagined from what has been said, quite tame. While we were examining the Basin we heard them on all the hilltops about us whistling. Though there is a great variety in their notes, he who has heard it once can never mistake the bugle call of the elk, if near at hand, for any other sound of the forest. It is the most stirring music of the mountains, and thrills the soul of the listener, whether he recognizes it or is ignorant of its origin. Distance lends it an added charm, softening the harsher notes and making its tones sound flute-like, clear and mellow. Heard close at hand it is like the braying of a trumpet, the fierce challenge of the angry stag, but further off it resembles more the sweet, soft notes of the clarinet. The cry is heard usually only during the month of September, and at that time, where elk are numerous and tame, it may be heard almost constantly. Where they are shy from being much hunted, the call is sounded only about sunrise and sunset, and at night. It is best heard during moonlight nights. It rises shrill and clear in a succession of wild notes, ringing along the hillside, quavering over the valleys and being tossed about from rock to peak, until its final notes echo faintly back like the last soft breathing of an Æolian harp.

Here on the borders of the Brimstone Basin the elk were whistling in numbers on all sides of us. One of them on the hilltop to the south had a most musical voice, his notes sounding like an octave of the musical scale from C upward, played very rapidly. Another, very near us, sounded his challenge at frequent intervals, and when he whistled, another far off to the north replied, and the faint vibrating tones sounded almost like an echo.

Leaving the Basin we retraced our steps, and soon passing the camp, took the trail already marked by the mules' hoofs.

All day long we journeyed along the borders of the lake, sometimes trotting briskly along the pebbly beach, at others turning back into the forest to make a short cut across some point, or to get around some great cliff which rose precipitously from the water a hundred feet or more.

Park Point, which we passed during the day, is a beautiful grassy spot, behind which rise towering trees, and commands a wide and superb outlook. Almost the whole lake is to be seen from it; the snow-clad mountains of the Upper Yellowstone, Promontory Point—an imposing mass by reason of its nearness—Flat Mountain, Mt. Hancock, far away in the blue distance the tops of the highest Tetons—The Three and Moran—and then, over the pine-clad Elephant's Back, the snowy summit of Mt. Washburne. Here and there, along the very edge of the water, grew curious ancient gnarled pines, scarred by a century's battles with wind and wave. Sometimes not more than twenty-five or thirty feet in height, they were two feet in diameter, and presented every evidence of great age, their tops and the ends of their branches being stunted and short. Under such a tree we ate our luncheon, and after lounging for a while in the pleasant sunshine, remounted and rode on. Several times when we had turned away from the beach, we encountered some very bad down timber, through which we picked our way slowly and laboriously. An hour or two before sunset we rode out along the beach of the beautiful curving bay to the south of Steamboat Point. This was formerly called Mary's Bay, but the name now appears to have been transferred to a larger indentation in the lake's shore to the north of this Point. Just back from the shore of this Bay is a small group of hot springs, and still further back, perhaps half a mile from the water, is another larger group, with a number of beautiful and curious "paint pots."

After the train had got in and been unpacked, Sadlemeyer had walked over to those springs, and after looking at them for a while seated himself under a bush on the edge of their basin to smoke. While thus engaged a band of eighteen or twenty elk filed down by him, and proceeded to inspect the springs, looking into them one after another with every appearance of curiosity. Sadlemeyer said that he followed them about for half an hour, and that at length they walked quietly away into the hills without having paid the slightest attention to him.

Elk and deer seem to have a fondness for these hot springs, which I think can only be accounted for on the supposition that they eat some of the minerals deposited by the hot water. Incrustations of almost pure alum are very abundant in many of these hot spring basins, and now and then the water has a slightly saline taste. Deposits of salt are, however, rare, I think. At all events it is certain that elk and deer frequent these basins during the summer, for their fresh tracks were seen in every one which we visited. There are also many winter sign to be noticed.

Our camp was on Steamboat Point, so called from one of the principal springs, down at the foot of the cliff near the water's edge, which gives off steam continuously with a loud hissing noise like the escape from a steamboat boiler. It is a lovely spot, giving a different, but not less beautiful, view of all the glories of the lake already so many times mentioned.

From a point of the cliff we could see far off over the water, and down close to it, a little flickering light, which now burned up brightly and then altogether disappeared, and which we recognized as the fire at the main camp. After dinner we built on this point a huge signal fire eight or ten feet high, and after it had got fairly going we fancied that the distant light grew brighter, as if in answer to our signal, and one of us thought he heard three shots, but the distance was so great that we could not be sure about the reply.

The next morning we spent a few pleasant hours about the Lake Butte and Steamboat Point springs, and then rode on, leaving the lake shore and taking to the timber. We crossed Pelican Creek, and when next we emerged from the timber, the water on our left was no longer the lake but the river. Down this we followed for several miles. At one point we tried to cross, but the water was deep, and old Prickly, who carried Sadlemeyer in to try the ford, had to swim before he got back to the shore. A mile or two further down, we tried again at the head of a wide rapid, and here the crossing was made without difficulty. Even Nell did not wet her saddle blanket.

We reached the other shore just above the Mud Geyser, and here, leaving the train to follow more slowly, Mr. Hague and I rode on to camp. An hour later we were shaking hands with all our friends there.

I was very sad next morning when the time came for taking leave of the party and riding off alone on my homeward journey. Every one had been so kind and hospitable that it did seem hard to leave them. But my presence was required elsewhere and I was obliged to go. Some pack animals were to be sent across by the Shoshone Lake trail to a camp on the Upper Geyser Basin, where three of the party were established, and with them my baggage was to go, while I rode around by the Lower Basin to meet the mail carrier. About 10:30 o'clock I set off, reaching Marshall's about 3:30, and then rode on to the Upper Basin. I reached the camp at 6 o'clock, and found it deserted, but shortly afterward the members of the party came in, and a little later the pack train arrived. We spent a very jolly evening together, though it snowed furiously for an hour or two after dinner.

Next morning Sadlemeyer called me at 2:20 under the impression that it wes 3:20, and after building the fire and smoking a pipe, we started out to catch the stock. The moon was just setting, and if it had not been for the snow on the ground, we would never have got the animals in time to catch the stage at Marshall's. As it was we were able to trail them, and easily found and caught my horse on which I had left a rope. Prickly, however, we had to chase until we fairly tired him out. He could not go very well with his hobbles on, but managed to lead us a wretched dance over mud holes, hot springs, and across little creeks. A mule was easily caught, and putting my things on the pack we rode away through the Geyser Basin toward the hotel. It was a cold ride but not an uninteresting one. For curious sounds rose from the bowels of the earth, and the white wreaths of steam that curled up from the geysers and hot springs, took strange fantastic shapes in the frosty air. Then there were tracks in the snow where, during the night, one or two elk had crossed the road, and for a long distance I watched the footprints of a coyote that had trotted along ahead of us. When we had passed beyond Hell's Half Acre, the eastern sky began to pale, and then to grow rose-colored, and by 6 o'clock, when we reached Marshall's, the sun was peeping over the crests of the hills.

My summer's vacation was at an end, and stage and steam in a little more than a week brought me within sound of the salt water. The drive to Beaver was partly through the snow, and its most exciting incident was the attempt of a black-tail deer to dispute our progress. A few miles from Marshall's, while driving through the pine timber, a dog, which accompanied the stage, started a yearling deer some distance in advance, and it came bounding back along the road toward us, not observing the stage until it was within ten feet of the horses' heads, when it turned and disappeared in the forest.

When we passed through the Madison Basin a number of fresh moose hides were hanging up by the hay cabin there, and just beyond the Tyhee Pass, a few lodges of Indians were seen. They were Snakes or Bannocks, who had come up from Fort Hall on a hunting trip, and that they had had some success was shown by the drying stages standing near the lodges, which were festooned with strips of crimson meat.

Having endeavored to give briefly some idea of the character of the country to the south of the Park, a few words of advice to those intending to visit the region may be of assistance.

It is possible to go to the reservation and to see in ten days or two weeks some of its more striking and beautiful features without being exhausted by constant travel, but it is much better to proceed in more deliberate fashion. A party having one or more stages to themselves can travel over the usual roads and visit at their leisure, the more important geyser basins, the falls, the cañon and the lake. Giving plenty of time to the trip these can be examined with great pleasure and profit. It is important, however, not to attempt to do the Park on time. The railway companies' tickets, which limit one to five days in the Park, should be avoided. If your time is limited go to Cinnabar and there make a bargain with the stage proprietors, by which you shall be at liberty to travel as deliberately as you choose. It may cost a few dollars more to travel in this way but the enhanced pleasure of the journey will be worth a great deal more than the added expense. Far better not to go at all than to be hurried along at such a rate that all the enjoyment of the excursion is lost.

A far better way than this, if the party has time, is to procure a couple of heavy wagons and the necessary saddle animals and go through the Park independently. Wood, water and grass can be found anywhere, and you can go as fast or as slowly as you please, and be your own masters. This perfect independence has for most people a great charm. The outfit for such an excursion can be either hired or bought. In the latter case it will, of course, have to be sold at a discount. Which ever method be chosen, the expense will not be very great.

If one desires to go off from the traveled roads to climb the mountains, and penetrate the virgin forest, by all means let him hire a few animals and a good packer who knows the country, and then branch out for himself. All the streams abound in trout, and there is game in the mountains without the Park. A man named Hofer makes a business of taking out parties in this way and has the name of a very reliable and worthy person.

NEW JERSEY SONG BIRDS.—The bill introduced into the New Jersey Legislature by Senator Griggs, forbidding the killing of any nighthawk, whippoorwill, sparrow, thrush, meadow lark, skylark, finch, martin, swallow, woodpecker, robin, oriole, red or cardinal bird, cedar bird, wren, tanager, catbird, bluebird, snowbird, tern, gull or any insectivorous or song bird, not generally known as a game bird, has become a law, having received the Governor's signature last Tuesday. The successful carrying through of this measure is an example of what can be accomplished by energetic and persevering labor. The gentlemen who a few months ago started the movement and have worked for it so faithfully ever since, are deserving of the highest praise. Now let other States pass similar laws. The small bird destruction is a curse in every part of the land from Maine to Florida.

MAINE TROUT FISHING will begin in earnest, according to the legal season limits, to-morrow. Our latest advices are to the effect that many of the fishing waters are so full of rotten ice that angling is at present quite out of the question.

The Sportsman Tourist.

THE BUCKTAIL IN FLORIDA.

IV.

THERE is no more liberal, open-handed man than the average American outer. He seldom objects to paying a dollar for twenty-five cents' worth of recreation and fun. But, having paid his dollar, he is a trifle apt to insist on the fun. He is used to overcharge and extortions, which he accepts philosophically as a necessary evil connected in some mysterious way with nearly every phase of what is nowadays called outing; but he likes to feel when his vacation is ended that it has not been all in vain. He is easily interested, diverted, or amused; and, if he has a penchant for field sports—as he mostly has—can be kept in a state of daily contentment by a rather thin show of fishing and shooting, with some rowing, bathing and sailing thrown in.

Nearly every popular resort that I have known has had some special point of attraction to which the attention of the guests was mainly drawn. It might be a fine bit of mountain scenery, a very fine walk or drive, good fishing on a lake or river, or fine shooting. Whatever it might be, it usually overslaughed all other points of interest in its immediate neighborhood, though they might be quite as deserving of attention.

At Tarpon Springs it is Lake Butler that takes the lead, and not without reason. Lake Butler is a crystal gem in an emerald setting of pine and palm. In length it is six and a half miles from north to south, with a slight curve from north by west to west-southwest, and has a general width of two miles, varied by bays, points and indentations usual to fresh-water lakes. The bays are favorite resorts of the heron family and also of cormorants, there being an extensive "roost," or breeding ground, of the latter on the east side of the lake.

The bass fishing is excellent, both big-mouths and speckled bass, or goggle-eyes, as they are called here, being abundant. The other fish in the lake are sunfish and catties, the latter large, solid-fleshed and good. The lake has a shore line of twenty miles of more, and there is not a settler on its banks. As the west side of the lake is flanked by beautiful rolling land, on which many fine sites for building may be found, and as the land and situation are both favorable for orange growing one is surprised that it should have been left in a state of nature through all the long years since Florida was first settled; for, be it remembered, Florida was the first settled State in the Union.

Now, in the Northern Wilderness, and in most places of resort that I have known, such a place as Lake Butler would have at least one good open camp, where visitors could enjoy a night of outing and be on hand with rod and gun before sunrise, also as a place of shelter in case of a storm, and a pleasant place withal for a picnic dinner.

Lake Butler had no such place. But, when I mentioned it to a gentleman interested in the Tarpon House, he thought the idea a good one, and when I offered to build a hunter's shanty if he would find the material he closed with the offer at once. He soon had boards, nails, etc., on the ground, and for three days I went over to the lake and worked leisurely at camp building for a few hours each day. Though it was the sort of work I like, it was not altogether a labor of love. I foresaw that I was very likely to want a camp there myself, and it seemed somehow in line with Camp Tarpon on Oak Point. It was only an eighty-rod carry from that camp to Upper Salt Lake, a mile of fine paddling, and a carry of sixty-five rods over to Lake Butler. So I made the camp in full faith that I was as likely to want it as any body, and I was right.

On March 17 I carried over to Upper Salt Lake and thence over to the camp on Lake Butler, where "Tarpon" was to join me next morning for a cruise up the lake and also up the inlet at the south end of the lake. For the inlet seemed to be little known about the spring and was reputed to be exceedingly tropical in character, full of fish, with a fair stock of water-moccasins, and a favorite resort of birds with handsome plumage.

"Tarpon" was true to appointment; and side by side we cruised up the lake, stopping to examine every point of more than usual interest, and taking the entire forenoon to paddle a little more than six miles. We had one rod and one gun between us. "Tarpon" manned the breech end of the latter and I handled the rod. His desire was for specimens; my duty was to catch as many bass as the camp could use. We both kept fairly in line. He got as many birds as he cared to skin and I did the handsome thing by the bass. I quit when I had a fair supply for present use, and turned my attention to a cormorant which he had just shot. I wanted to know how the cormorant ranked as an edible bird, and so I parboiled and fried the breast of this one in my best manner. Many of my readers will recollect the decision of Charles XII. of Sweden on testing the black bread which his soldiers kicked against. The grim old warrior sate in his saddle and choked down a half loaf of the bread without wine or water, then gave his memorable verdict: "It is not good but it may be eaten." He might have said the same of the cormorant. The meat was very dry, rather sweet and tough. But the bird was an old one. A young one might be passable eating. "Tarpon" had said to me, "I'm pretty handy around camp if you let me do just what I've a mind to." So I, knowing him to be a man wise in woodcraft, let him do it.

What he had a mind to do was to select a camping ground under the shelter of trees near the shore, build a rousing fire, put up the frame for a lean-to camp, cover it with broad palmetto fans, dress the fish, and then set in to bring a supply of night wood. And I let him. Then he got out that multifarious camp-chest of his, skirmished up a coffee-pot and fry-pan, and began to get supper. And I let him do it. Only as his fry pan was small, and I was sensible of being uncommonly hungry, I got out my own, with a slice of fat bacon, and prepared to brown the half of a bass, just to make sure of enough.

The motion was well taken. When we had finished eating there was nothing left of the supper but fish bones and coffee grounds. Then we whittled a while on plug tobacco, filled the pipes and smoked them out; refilled and smoked them out again, the while our old-time friends the owls were serenading us just as they do in summer time at the North. And I remember thinking that "chuck-wills-widow" was an excellent substitute for my favorite whippoorwill.

As the evening wore on, "Tarpon" coaxed the fire to a conflagration, and then swung his grass hammock between two trees, while I spread my blanket on a foundation of saw-palmetto fans, and lay with my feet to the fire, after my usual fashion, while the man in the hammock spun me sea yarns. And most interesting to me are tales of the sea, when told by one who has gone in at the hawse holes and slowly worked his way aft to the weather quarter. I lost him just as he was dispersing a gang of rowdies in Callao with an Allen pepper-box loaded only with powder and wad.

Once during the night I was awakened by a crash, and was dimly conscious of "Tarpon" throwing logs on the fire; but just as I was meditating a midnight smoke I lost it all again, and when I once more opened my eyes it was daylight, and my industrious partner was busy frying fish and brewing coffee. I let him do just as he had a mind to, as before.

NESSMUK.

MOOSE HUNTING IN MAINE.

IN the early part of the month of October, in the year 18—, I was on my annual hunting trip in the wilds of Northern Maine. It had been arranged, as the day was pleasant and gave promise of a calm evening, that two of my Indian guides should accompany me on a trip up a small stream some five or six miles to a large bog known to be frequented by moose, and see what success we would have in endeavoring to obtain one. The stream being very low and rapid, promised considerable hard work before we should arrive at the desired point, therefore supplying the canoe with an axe, and the necessary provisions and camping equipage, as we expected to remain up stream till the next day, we started at about noon on our journey. Twenty minutes' paddling brought us to quick water, at which point I put on hip rubber boots and stepped into the water to wade. The guides jumped overboard, and one at the bow and one at the stern, dragged and pushed the canoe up the tortuous course of the channel, where there was sufficient water to float it, carrying it bodily with its contents where the water was too shallow or the sharp rocks too numerous. Two and a half hours of this work brought us to the foot of the deadwater well warmed up with our exertions. I had noticed some old tracks of moose on the muddy margin of the stream on the way and felt very hopeful of finding fresher ones higher up.

We now embarked again, and with a caution from the Indians to make no noise and to "have you gun ready," we paddled slowly and quietly up the winding stream. Its banks at this point and for a half mile beyond were rather high and dry, supporting a growth of spruce, fir, birch, etc., with alders at the water's edge. Nothing of interest was observed for some time, but as we neared the commencement of the bog the canoe was stopped and worked over to one side, a few words exchanged between the Indians, and I soon saw the cause to be fresh tracks of a large moose, made evidently the previous night. After a careful inspection we resumed our progress, and more signs were pointed out to me, of lily-pads eaten off and more tracks. There was a light wind which blew up stream, and therefore, to prevent the animals getting our scent, we decided to go to the head of the bog to camp. Signs were fresh and quite numerous, and my hunters said, "We get one sure to-night."

Finding a suitable spot, the tent was pitched, fir boughs gathered for the bed, wood cut and brought in, a fire started, supper cooked and eaten, and then after an hour's rest, during which the birch-bark horn had been prepared for calling, we started down stream again to a point where it widened out, making quite a bay, with a wide margin of grass round the edges. An old lumbering road, long disused and grown up with bushes, crossed the stream here and made a favorite trail for moose, caribou and deer to come out to water. The canoe was drawn up to the side so as to be partially concealed by the grass, and then after a space of some twenty minutes spent in listening, the Indian commenced to call, imitating the lowing of the cow moose. This most lugubrious sound was repeated at intervals of some fifteen or twenty minutes, and this was kept up for perhaps an hour.

Suddenly the other Indian whispers, "I hear him," and soon I also heard a rather indistinct grunt repeated at short intervals. It gradually became more distinct as the animal approached us, until it became quite loud, and we could then hear the cracking of dry branches as the huge animal forced his way through the dense undergrowth. When within a distance seemingly of one thousand feet, judging from the noise, the animal stopped and stood for nearly half an hour without making any movement that we could hear, or any response to our call. Then he started off down the wind with loud grunts at nearly every step, and making a loud crashing through the brush. His course was parallel to the stream, but as it was now comparatively dark, it was impossible to see any distance on account of the shadows. As the animal was going away from us and seemed disinclined to approach, we carefully paddled the canoe down stream for a half mile or so, and then stopped and resumed calling. At this time he was so far away that we could hear him only indistinctly, but after the second or third call, it became evident that he had turned and was making for the stream, and within twenty minutes we could hear him enter the water and walk in it. The paddles were now used with vigor, but with very little noise.

The excitement I had been laboring under for an hour and a half now culminated in an attack of what I suppose was "buck fever." I shook as though I had a chill, and in spite of all I could do I could not overcome it. My teeth all but chattered in my head, and I felt that in such a condition the moose was perfectly safe. We soon rounded a turn, and about five hundred feet ahead of us walking down stream close in to shore, we saw an immense dark form, the light-colored hocks glistening with the reflected light from the water. The canoe was forced rapidly ahead, the animal, meanwhile, having stopped to listen, and when within about fifty feet the Indian whispered, "shoot, shoot!"

At first sight of the animal my nervousness had entirely disappeared, and I was as cool and collected as on any ordinary occasion. I carefully drew the rifle to my shoulder, and glanced along the shining barrel, took deliberate aim at a point about six inches above those glistening hocks and pulled the trigger. The loud report was followed by a splash in the water. The smoke hung and spread between me and the animal, so that I could see nothing, but the next instant I felt the canoe jump and then I saw an immense set of antlers attached to a head going down stream at a wonderful rate of speed, the canoe followed as fast as two powerful men could paddle, and we were soon within twenty feet. I fired again and again, but what with the motion of the canoe and the excitement I was under, I was utterly unable to see the sights, and the shots were thrown away. After swimming down perhaps one hundred and fifty feet and across the stream, the moose went out of the water, and into the alders with a rush that swept down everything before him, and for a minute or two afterward we could hear the dead trees snap and fall as he struck them. Then all was still.

It was too dark to see anything, so breaking a bush to mark the spot where he left the water, we started for camp. Arriving there after a brisk paddle of half an hour, the fire was renewed, a cup of fresh hot tea drank, and we turned in. I got but little sleep. I was so excited I could only lie and wonder if I had made a successful shot. The night was cold, and as I could not sleep, I occupied myself in keeping the fire going, till every stick I could get hold of was burned. At last the dull gray of morning began to show in the east, and as soon as it was fairly light, I roused the Indians, for I was anxious to know the results of our last evening's adventure. Short work was made of breakfast, the tent taken down, and with our other effects bundled into the canoe and we were off down stream. Arriving at the spot marked by the broken bush, the first exclamation of the Indian was "blood;" and picking a leaf from an alder bush, he held it up for my inspection

Pulling the canoe into the brush, we took up the trail of blood that was spattered here on the mossy ground, and there on the leaves and twigs of the underbrush, and followed it, winding now one way, now another, for fully a mile through the sparse growth of spruces in the bog. Suddenly the head Indian stopped and listened and then spoke to the other, who put his hands to his mouth and give a low deep-toned blat, and repeated it once. From the woods a short distance ahead there came an answer. Cautiously we approached and saw that the moose was down and unable to rise, in fact was nearly dead. To put him out of misery I raised the rifle and put a bullet into a vital part, and then I had the unbounded delight of examining my first moose. The bullet had entered the rump about six inches below and to the left of the tail, passed clean through and into and through the lungs, lodging in the breast.

He would weigh standing alive at the lowest calculation, 900 pounds. From the tip of the hoof on the hind leg to the bend at the hock outside it measured two feet six inches, and the same measurement from the hock to the point of the hip. The antlers had ten points on each branch and are very uniform; weight with small piece of skull attached, thirty-four and a half pounds; spread at widest part, three feet eleven inches. They hang over the mantle in my sitting-room, and perhaps you can imagine how proud of them I am.

Perhaps I may write at some future time an account of the moose I did not get, and how surprised I was that I did not.

TOM-HEGAN.

Natural History.

THE BIRDS OF MICHIGAN.

BY DR. MORRIS GIBBS.

(Continued.)

29. *Cistothorus stellaris* (Licht.) Caban.—Short-billed marsh wren.

This interesting but little-known species, like the last, is not evenly distributed, and in many parts of the State is entirely unknown. Like the longbill it is gregarious, and frequents marshy localities, but does not haunt the submerged grounds, rather preferring low meadows, or more particularly, sections that are overflowed during early spring, but which are later provided with a rank growth of coarse grass.

I do not find that the bird is well known to collectors, and it is only recorded in three lists out of the dozen or more before me on Michigan birds. It is first embraced by A. H. Boies in his list of the birds of Southern Michigan, 1875. It has not been captured to the north of 43°, to my knowledge. I first became acquainted with this species in July, 1878, when an old one and some young were secured by Mr. Benjamin Syke. After that date we became more intimately acquainted with it. In 1882 I was so fortunate as to secure a nest and two eggs on June 2, at Gunn Lake swamp, Barry county. We found the birds there in hundreds, and a great many nests were observed, but the one containing two eggs was the only one which was of value to us, the rest being empty.

The nests are built in large numbers, as in the case of the longbill, regardless of time and trouble, and are grouped together in the tall grass and often in small bushes, principally of the wild rose and a stunted species of willow.

The nests are similar in form to those of the last named species, but are about one-third smaller, much more compact in makeup and are lined in a very comfortable manner with soft substances, principally from the blossoms of the willows. The birds are exceedingly shy, and are only procured by considerable effort. The species has the same fluttering, nervous flight as is seen in the longbill, but often flies to a considerable distance. It is very timorous and quickly retreats on one's approach.

The eggs are pure white and very small, and of course strikingly dissimilar to the eggs of the house or longbill wrens. In the year 1883, following the season when we found the birds so plentiful, we again visited the same locality hoping to secure more eggs, but we were compelled to leave without so much as hearing a single bird. The date was June 1, only one day earlier than the previous, but for some unaccountable reason the birds had failed to appear. In 1884 a single specimen was secured by a friend in quite another quarter. The shortbill appears to be an irregular migrant and is not to be relied on. I know nothing of its dates of arrivals or departures.

The song, if the odd notes may be termed such, is simple and composed of few notes. It may be represented by the syllables *chet-chet-chet, dee-dee-dee,* or *chea-chea, dee-dee-dee.* The notes are frequently uttered almost incessantly for a long time, and heard from the throats of many birds in the marsh are not disagreeable. The call notes are simple chirps.

The wrens occupy no inconsiderable place in the great army of insect destroyers, and all of the members of the family are of service in ridding us of the myriads of injurious insects. The food of the Carolina and Bewick's wrens I have had no opportunity of examining, but in the case of the other species, so far as my observations have extended, I am satisfied that the diet of the little fellows is almost entirely of an insect nature, and feel safe in saying that they are of inestimable value to the agriculturist, and therefore to us all.

The house wren feeds upon a greater variety of insects, I believe, than any other bird of my acquaintance. Insects of every order are devoured, to my knowledge, not excepting the wasp, which the wren adroitly captures and eats with relish. The winter wren feeds in summer largely upon the

smaller species of beetles, more especially upon members of the family *Staphylinidæ*, of the smaller kinds of which I have found the crop stuffed full. Larvæ of dipterous insects are also fed upon, and insects of other orders. In spring, before the insects have emerged in any numbers, seeds found on the ground are eaten by this species. Spiders form no inconsiderable part of the winter wren's fare, as in fact is the case with all of the wrens which I have studied. The house and winter wren both feed largely on small caterpillars, principally of the family *Geometridæ*.

The longbilled and shortbilled wrens feed on flying insects, which they catch with great perseverance and cunning; but their food also consists of larvæ of insects of the various orders. The longbill gives great preference to the small larvæ and nymphæ of the order *Neuroptera*, and procures them by dipping his bill just beneath the water, when they are coming to the surface to emerge or are swimming in the murky pools.

The following dimensions are taken from specimens of Michigan wrens in my collection:

Name.	Average length.	Average wing.	Average extent.	Average tail.	Average tarsus.	Average commissure.	Longest specimen.	Longest wing.	Greatest extent.	Shortest specimen.	Shortest wing.	Least extent.
Troglodytes aëdon	4.77	2.19	6.69	1.83	....	....	5 02	2.40	....	4.52	1.98	....
Anorthura troglod. hyemalis	3.91	1.97	5.89	1.30	....	..	....	...	...	....	....	....
Telmatodytes palustris	4.33	....	6 44	....	...	....	....	....	....	...	...	....
Cisto.horus stellaris	4.89	1.72	6.18	1.80	.69	.61	4 57	1.73	6.36	4.21	1 71	5.99

30. *Anthus ludovicianus* (Gm.) Licht.—American titlark. A common spring and fall migrant; rather irregular in its appearance both spring and autumn. The birds always appear in flocks, generally of from twenty to thirty. A small flock of five to ten is occasionally seen, and I have seen hundreds in a flock. The species usually appears in late April and remains with us for a week or more. About the middle of September the flocks reappear, and a great many are seen within the next four weeks. I have observed them in numbers as late as Oct. 23. The birds, although gregarious, keep well apart both in flying and when feeding, and it is a difficult matter to secure more than one at a shot, according to my experience.

The species is recorded from the northern peninsula, and is known throughout the State by collectors generally. It was known here in 1839, and is embraced in all catalogues of any importance. The titlark with us has no song, and a single chirp is the only call note I have heard. It is occasionally repeated, so that it sounds somewhat like a short chatter, but does not approach to a song. The birds are quite similar in many respects to the horned lark (*E. alpestris*), both in manner of flight, peculiarity of perching on fences, and feeding in the highways.

J. B. Steere, in a catalogue entitled "Migration of Michigan Birds," 1880, embraces this species as a summer resident, and says it breeds. He, however, places an interrogation point after the "breeds," showing the uncertainty of the information on which he founded the note. The species may remain in the extreme northern part of the State during summer, but it is to be doubted.

Those specimens examined by me contained seeds only in their crops, but during the summer months I have no doubt but that the species feeds largely on insects. As will be observed in the sketch of this bird, as with others, I have only given a short history, from the fact that the bird does not nest with us, while in cases of our summer residents I have devoted more space.

THE WOODCOCK'S SONG.

JUST at twilight one evening last week, while passing through Briggs avenue, on my way from the station at Williamsbridge to my home at East Chester, a clear sharp sound broke upon the evening air, resembling, as nearly as I can describe it, the word "pake." It brought me to a halt on the instant. More than forty years ago I first heard this sound, and my grandfather, a keen old sportsman, taught me its meaning; it was the love call of the male woodcock. Several times the call was repeated, and then came that swift whistling of wings, which has so often in the cover sent my gun flying to my shoulder. A dark object, outlined for an instant against the fading light still lingering in the western sky, disappeared in the deepening gloom. Then high up in the air began the song of the bird, soft low notes at first, gradually increasing in volume as he rose in the air apparently in circles, until with a louder, wilder burst of melody the song abruptly ceased and he darted silently to the ground very near the spot from which he arose and then rang out the sharp "pake" described above.

I had been told when a boy that this cry, which can be heard a quarter of a mile or more under favorable circumstances, was always preceded by a low, guttural sound resembling the words "coo, ah," which could be heard but a few feet. Wishing to assure myself of the fact—if fact it was—I waited until he rose again, which he did after an interval of two or three minutes, when I gained a position nearer the spot from which he arose; then keeping perfectly quiet a moment after the song had ceased in the air, I saw him come to the ground swiftly but silently. I was still twenty-five or thirty yards from him and unable to hear the sound for which I was listening. Keeping my position until he had uttered the louder cry several times, he again went up in the air, when I moved forward, and lying at full length upon the ground awaited his return. I knew he would re-alight within a second after the song ceased in the air, but he came down behind me, and so silently, that the first intimation I had of his presence was hearing the guttural sound I have mentioned, fifteen or twenty feet from me. After this had been repeated several times the louder cry was heard. Listening until the two sounds had been repeated several times, I made a slight movement and he flew away at once and I heard him no more.

Gifted writers have immortalized both in prose and verse the songs of the nightingale, the skylark and many other feathered songsters, but to me the love song of the woodcock surpasses them all. It brings to mind with pleasure thoughts of those with whom I have for years as the opening seasons came round, hunted this most splendid of all game birds, and with whom, God willing, I trust to have many pleasant seasons again. It brings to mind with sadness thoughts of other friends who have "joined the great majority" and will never again press the trigger or traverse with me the covers. It assures me, too, that although the early extinction of this noble bird has been of late often prophesied, that here almost within the shadow of the great metropolis, when the proper season arrives, my favorite covers on which I first commenced to shoot, more than thirty years ago, and which have never failed me, will not be entirely deserted.

To such of the New York city sportsmen as only know the woodcock as an eagerly sought and much-prized addition to his bag in the field, and who may perhaps never have heard them in the breeding season, I would say: Take a train at Forty-second street for Williamsbridge, arriving there about sundown. Stroll leisurely across the Bronx and by Jerome post-office into Briggs avenue. A little over half a mile will take him to a spot formerly known to lovers of woodcock shooting as the "Fishhawk." Here let him sit down, and when the stars begin to come out he will hear on any pleasant evening during the breeding season all I have described. He can return to the city in time to hear some fashionable footlight favorite trill her sweetest lay, but if he is a true devoted follower of Nimrod he will hear nothing that will please him as well as the love song of that russet denizen of the bosky dell, *Philohela minor*.

J. H. D.

EAST CHESTER, N. Y.

ZOOLOGICAL NOMENCLATURE.

THE committee of the American Ornithologists' Union which has charge of the classification and nomenclature of North American birds has practically completed its labors, and handed in its final report to the Council, by whose authority they are empowered to print the results of their work at the earliest time possible. The report includes the completed new code of nomenclature, with special reference to ornithology, but equally applicable to zoology at large. This is believed to be a positive advance upon previous codes, such as that of the British Association of 1865. The report includes also the new check list of North American birds, embodying the views of the committee, reached after most patient and painstaking investigation, carried on ever since the founding of the Union. This work has been eagerly looked for, and will prove a boon to all who are interested in American ornithology, if it shall succeed in fixing at last the names of all our birds, which have been of late years so unsettled.

It is hoped and believed that the volume will be ready before the meeting of the Union next autumn.

THE CRANE'S BACK.

AN interesting circumstance occurred near this place last season, corroborating the belief noted some time ago by Dr. J. C. Merrill in FOREST AND STREAM that the sandhill crane (*Grus canadensis*) carries birds upon its back during their migrations.

On Fraser River, at a place called Port Hammond, a station on the Canadian Pacific Railway, cranes have been in the habit of resorting to the railroad track to obtain a supply of gravel during the period of incubation. In this part of the world these birds make their nests in boggy or low lands, and a marsh of this description opposite and across the river from Port Hammond affords numbers of cranes an opportunity for their breeding necessities. Their nests are made upon the ground, while those of the heron tribe (often improperly called cranes) are built in high trees, and the latter, at this particular season of the year, live in communities improperly called "craneries."

One morning, a gentleman living at that place surprised a party of three cranes picking up the gravel on the railway grade. There were two old and one young one. The old ones immediately took wing and flew away. The young one, being unable to fly, was soon captured and placed in a box. It was so young that it had developed no feathers, was wholly covered with down, and was in height about that of a common hen. The parent birds returned in a short time, and by their cries showed their distress, as is usual in like cases of other birds. The young one fed greedily upon berries which were furnished it, nor was it deserted by the old ones, who lingered about the place until its death, which took place in a few days, whether from an improper diet or pining away, could not be determined.

Fraser River at this point is over half a mile wide, and the proof of their nest being upon the other side was this, that in coming to Port Hammond, or going therefrom, they always crossed the river presumably to visit the remaining young one that may fairly be supposed to have been at home on the morning spoken of.

The fact of the young bird not being able to fly, coupled with the fact that it could not walk across the river, may, I think, be taken as conclusive of its having been carried across by one of its parents.

J. C. HUGHES.

NEW WESTMINSTER, British Columbia, April 6, 1885.

DRUMMING OF THE RUFFED GROUSE.—A good deal has been written on this subject, and many opinions expressed as to how the noise is made. Three cock birds were brought to me to skin this spring, by parties who had shot them almost in the act of drumming. On removing the skin, I noticed a thin membrane extending from the under jaw to the end of the breast bone. This was partly filled with air, and is evidently capable of being distended like a bladder. Now I think the bird fills this bag with air and strikes it with the ends of his wings, forcing the air through his open mouth, there by producing the drumming noise. This may be a well-known fact to many, but perhaps it is new to some. Who else has noticed it?—SAUGWILLAH (Horse Cove, N. C., April 21).

A SEAL IN LAKE MICHIGAN WATERS.—On April 23, Mr. John Quimby killed a large seal about one-fourth of a mile from Poplar Point in Green Bay. Mr. Quimby was engaged in fishing with gill nets through the ice, when he saw the seal come up out of a hole in the ice. He stunned it by a blow on the head with a club, dragged it out on the ice with a gaff hook and killed it. Green Bay is adjacent to Lake Michigan, and it seems queer that a seal should be found here, so far from salt water. The only outlet to salt water is by way of Lake Michigan, Huron, St. Clair River, Lake St. Clair, Detroit River, Lake Erie, Welland Canal (or Niagara River) into Lake Ontario, thence River St. Lawrence to the Gulf. Perhaps some of your readers can throw light upon the matter, but all must admit that the seal was a long way from his native element.—S. E. B. (Menominee, Mich., April 28.

Game Bag and Gun.

A RAINY DAY.

ONE day while Jim and Frank and I were out shooting partridges and were having royal sport, one of my servants came to us bringing a telegram for Jim calling him home on important business.

On the following morning, therefore, very much to our sorrow, we parted with this most companionable friend, who took the early train for his distant home, carrying with him four dozen birds, which, let us hope, did not in any wise detract from the joy his loved ones experienced on his return to his home. Frank and I did not do much shooting that day, but we planned a hunt for the one following, between Deep and Woody creeks, in a section where there had not been any shooting for nearly twelve months, and where I knew partridges could be found in great abundance.

Next morning, although the sky was overcast with dark, watery-looking clouds, we determined to make the venture. I had two horses saddled, one for Frank and one for myself, and tying a game bag behind my saddle, we called Frank's Laverack and my two Irish reds, and after a brisk ride of four miles reached our destination. But alas! our cup of joy seemed about to be dashed to earth, for just as we entered the first field, the rain began to descend with a steady patter, patter, which plainly told us we might expect a rainy day. But we had crossed the Rubicon, and after holding a council of war, we determined that "we had come fur to shoot, and were gwine fur to do it." The dogs, shivering with cold and wet, were growing very impatient, and at the given signal they went off like a rocket, Frank's to the left and my two to the right. The dogs had nearly crossed the first field, and were turning down a small stream, when both Irish reds made game, and by the time I had called Frank's attention to them, both were on point, one with head and tail erect and eyes glaring, the other with head slightly lowered, tail slightly elevated and one forefoot up. The Laverack came up with a quick gallop, and perceiving the other dogs on a point, or catching scent of the game, he too pointed, planting himself firmly, with his body parallel with the others, his head turned to the right side, his whole body stiff and staunch, more as if he had grown up out of the earth than as if he was standing upon it. What a picture that was. Surely such an one as only a true sportsman and lover of nature can rightly appreciate.

Frank and I dismounted, and having secured our horses commenced to advance; but greatly to our annoyance, that bevy of birds, about forty, as nearly as we could estimate, flushed so wild that neither of us got a shot on the rise. Why they should have flushed so wild is yet a mystery to me, for it was still raining steadily, and it is a fact well known to sportsmen that on rainy days Bob White is usually tamer than at any other time. This bevy made a long flight over and across some good cover, and we marked them down in some pine timber. We followed quickly after them, and on entering the timber one of the Irish reds made a beautiful point. I called to Frank that he might have an opportunity of drawing the first blood; but when the bird was flushed, it proved to be but a single one, and that one went up over the tops of such a thicket of young pines that Frank did not, perhaps could not, shoot. The dogs then hunted the ground closely for two or three acres without finding any more birds. Finally we came to a deep dry ravine, running through the timber, and Frank went up on one side and I on the other. Suddenly, without any warning, a hen bird flushed from right under my feet, and as she was crossing an opening in the pines I fired, and as I saw a great cloud of feathers floating down, I sent the dogs to retrieve it, which one of them did. We had proceeded but a few rods higher up the ravine, when Frank's Laverack went down to the bottom of it, and as he turned up the ravine, he suddenly pointed on a scent so strong that he seemed to tremble in every nerve and fiber of his body, while his eyes fairly glistened with excitement.

Frank and I chose the best positions we could, on our respective sides, and then Frank made his Laverack flush. Three birds arose, two going out on Frank's side, one of which he killed, and wounded the other. The third one came out on my side, and for aught I know to the contrary, still lives. The reports of our guns caused the rest of the bevy to get up, and for a few seconds the whirr of their wings made such a noise that birds seemed to be flying to the right of us, to the left of us, before us, behind us, everywhere. We marked them down as best we could, and having seen six or eight go out of the timber into some sedge grass and short brush, we followed this course.

We had proceeded perhaps a couple of hundred yards, when one of the Irish reds pointed, and having called Frank to me, I put the bird up intending to give him the shot, but contrary to our expectations, it wheeled to the right, on my side, so that Frank called to me to shoot it, which I did. A little further on the dogs again made game, but for some time were unable to locate it; finally one of the Irish reds turned back some twenty yards, and came to a point in a gully, or washout, overgrown with tall sedge grass and some low thin brush. Frank chose the right side and I took the left, and when we made the dogs flush, five got up. Frank killed one, his other shell missing fire. I brought down one with each barrel, and when the dogs retrieved mine, I noticed, even before I took it into my hand, that one of them was very much larger than our Virginia partridges are ordinarily. This caused me to examine it more critically, and I found what I had never seen before, veritably a red partridge, not a cardinal red like our cardinal grosbeak, commonly called red bird, but of a color on the back more nearly resembling the rich bronze of the wild turkey, with black throat and neck, and the breast, instead of being speckled with black and white—as the male bird of this species is usually—the color was that which might be produced by a mixture of red clay and pokeberries, with feet and legs as black as a blackbirds, and small warts or corns on both feet and I think on every toe. This bird was evidently an old patriarch, but whether he was the same that Noah had in the Ark to preserve the species this deponent saith not.

Frank and I had some splendid sport after this bevy, bagging ten or eleven of them. We then returned to our horses, and started off again, but had not proceeded far when all three dogs came to a point. We dismounted again, and when we advanced the birds began to rise, but this time within range. Frank brought down two, one with each barrel, as handsomely as any man could have done, and I made what you may call a pot shot, or anything else you please, but I fired only one barrel, and that where the birds seemed thickest, and killed three. I am certain that was the

largest covey of partridges I have ever seen, and that there were at least fifty in the bevy. Of course we followed them up, and shot until Frank's gun and shells got so wet that the shells would miss fire and stick fast in his gun. Some we pulled out with the shell extractor, some we pulled out by cutting into sections with our pocket knives, and some we peeled part of the paper off and in this way made smaller.

It was raining all this time, and we had gotten so wet from the rain that fell upon us, and from wading through the tall grass, that we finally sought shelter under a large bending pine, and having gathered some pine-knots we kindled a big fire, dried ourselves as best we could, ate such portions of our lunch as had not been spoiled by the rain, and returned home. Thus ended our hunt on the rainy day. The next day Frank left for his home, taking with him forty-nine partridges, among the rest the old patriarch, which, as he afterward wrote me, he exhibited to many admiring friends. He also wrote me that he had invited a number of friends to a quail (partridge) supper, at which they had eaten the old patriarch, feet, corns and all. T. E. Epes.

Nottoway, Va., April 10, 1885.

BATTERY-SHOOTING.

Editor Forest and Stream:

I have been much interested in the various articles on battery-shooting, the pros and cons of which have been so ably set forth by different correspondents. Without hoping to throw much light upon the subject, I should like to put in my oar, and relate a little of my experience. I have hunted and shot more or less every season for the past fifteen years, and most of my life having been spent on the water, have killed numbers of wildfowl. My experience of battery-shooting on the Chesapeake and its tributaries, from Havre de Grace to Eastern Bay, has convinced me that far less injury is done to the ducks from batteries than from points.

Ducks coming to batteries are usually killed instantly very few cripples being made, for the simple reason that they mostly decoy singly or in small bunches, say from four to eight, and coming close to the shooter are instantly killed, very few cripples being made, and for the same reason these are generally secured. Now, in point-shooting, for every duck killed it is safe to say there are more or less injured, and fly on to suffer agony for days unless mercifully put out of pain by the ever-present "poacher," or the darkey and his musket.

Decoy-shooting from the shores of the wide waters is played out, and was for a number of years before batteries were introduced. The geese and ducks have gotten too wise to come within range of the shore, except in narrow waters, and there geese very seldom venture; so the first departure from shore-shooting was in building bush blinds on the bars. Sometimes good shooting can be had from them, but they are open to the same objections that limit the use of the sinkbox, viz., they can only be used when the wind is from the right quarter, and not much of it.

I believe that ducks are as plenty to-day on the waters of the Chesapeake as they were twenty years ago; but of course no two years bring the same number of ducks. When there is an abundance of celery the ducks are bound to be there, when feed is scarce they go elsewhere.

There is no fear of battery-shooting being overdone, as it is more or less controlled by the elements. You may have three or four days' shooting in one week, and perhaps not fire a gun again for three weeks, your boat being frozen up solid or a northwest gale blowing. It may often happen that if one gets two days' shooting a week he is doing well.

In the shoal waters of the bay and the rivers running into it, the ducks often feed so far from shore that it's difficult to see them with a glass. Now how long will a battery live, think you, let alone give you shooting, if even an ordinary winter's breeze be blowing?

And besides, very few men, unless professional shooters, care to take the immense labor and exposure attendant on battery-shooting. Few city men can stand the exposure, few can get the "hang" of how to put out or take up an extensive layout, especially in the teeth of a nor'wester. Unless a man has the love of shooting naturally in him, and in him deep, no graft business, he had better let box-shooting alone. If it were a question of comfort between shore or box shooting, we would all decide in favor of the former, barring a "soft marsh." But as the real thing to decide is, whether battery-shooting drives away ducks, I say, gentlemen, I think not. Saugwillah.

Horse Cove, N. C., April 21.

DUCK NETTING.

Editor Forest and Stream:

Your correspondent who signs himself "Wollat," and whose communication is published in the Forest and Stream of this date, betrays a lack of entire familiarity with the subject when he says that "the matter of floats will make no difference with ducks." Did he ever observe a flock of ducks, and witness their solicitude to keep far away from a fish net "having floats?" If so, I am sure he saw the ducks themselves contradict his assertion.

He next gravely informs us that "the angle at which nets are placed for catching ducks will not be interfered with by attaching floats to the nets," etc.

No such claim has been made that I am aware of. The "angle" at which a net is set is of no consequence so long as the ducks are unaware of its existence, but floats over the same say "danger below," in language perfectly intelligible to them.

The bill referred to was drawn carefully, and although the first draft did not except any part of the year from its operation, the drafter, when informed that the restriction might work injury to fishermen unless the summer months were excepted, immediately took steps to have the bill amended in that respect, and at his request it was amended by excepting the months of May, June, July, August and September.

"Wollat's" anxiety lest the game warden should be hampered in the performance of his duty in case the bill becomes a law, is unfounded. Granting that the amendment may prove to be unable to meet all cases, and that under it all its violators may not meet their deserts, it certainly would not, as your correspondent seems to suppose, legalize duck netting carried on with nets with floats, or otherwise invalidate the statute as it already exists.

If a person sets nets with floats, but with intent (to be proven as best may) to kill or capture waterfowl by such means, a plea that he had corks or floats attached to his net would not constitute a defense, but would merely shift the "burden of proof" as to intent upon prosecution, and if proof of such intent could be otherwise obtained, "corks and floats" would not release the netter from the meshes of the law.

All that your correspondent "Wollat" suggests could be done as well under the amended law as at present, but the amendment would place in the game warden's hands a test capable of being instantly applied to any given case.

Your correspondent also says that "there exists an item of proof that nets taken up by a warden were set with intent 'to capture or kill any of such birds,' provided there were no floats attached."

To this I reply, that if the law declares a net set without floats during certain months to be a violation of the law, every such net found by the game warden so set, may lawfully be removed, and the duty of the warden would be in such case, without further proof than the evidences of his own senses, to take up such net or nets and prosecute the owner or owners, upon whom would rest the burden of clearing themselves.

"Wollat's" suggestion that it be made the duty of the game constable to destroy every net found to contain ducks, I fear would be found to work great injustice to honest fishermen in many cases, which I, for one, have no desire to see done.

Without doubt ducks may, and occasionally do get caught in fish-nets set without the slightest intention existing in the minds of the fishermen to catch ducks therein, but it would be hard upon the fisherman, guiltless of wrong intent, to render him liable to have his net confiscated or destroyed merely because a duck by chance became entangled therein. Let us be just to all, and also let the game warden no longer be able to plead the defects in the law as his excuse for not enforcing it. A. H. A.

New York, April 23, 1885.

DEER HUNTING IN VIRGINIA.

Last Thanksgiving night found us on the train at Elizabeth, New Jersey, bound for Walter Wyche's plantation in Greenville county, Virginia, which we reached the following Friday afternoon. Our host gave up his work and took his dogs and team and introduced us to the best hunters and people of the country, and in fact made us feel as though we were among friends. We had been on hunting vacations every year for the past ten years in different parts of the United States and Canada, but never before had we known anything to equal the boundlessness of Southern hospitality. We found that the feeling of enmity of the South toward the North, which we as Northerners had heard so much about, is now, if it ever existed, forgotten, and the wish of her sons now was to be and live as one union, one family government and one flag forever.

The first two weeks of our vacation we spent around Mr. Wyche's. We made several short deer drives, hunted quail a little, and took a genuine old-fashioned Virginia fox chase, which our host and his friend, Ben Owens, got up for our special enjoyment. Some day I may give you an account of it. It is too long to tell now, but it was certainly a ride never to be forgotten. Our drives were always successful, so far as starting deer was concerned, but the saying of the old hunters, that "the deer was an awful lucky animal," was proven only too true to us, for each day the deer would avoid his usual run, and we on the favored stands were unfavored by his appearance. He would run across an open field before two men who sat on their horses with guns loaded with buckshot, and let one and on one occasion three deer run by them within twenty-five yards, without ever thinking that they were deer-hunting or that they even carried a gun. Or the deer would run out into an old road and stop still for ten minutes before one of our party. He was afraid of scaring the deer if he took his gun from his shoulder.

Our main hunt we had put off for the last week of our stay, so that we could have something to take home to show our friends that we were sometimes, if not always, successful.

On one of these last days the probabilities of getting two or three shots were very flattering. We were to take our stands near the Melierrin River, and had four men to drive different sections of the country toward our stands. Mr. Smith Green, with his three first-class deerhounds, drove one section; the nimrod of the country, Mr. Jim Powell, with his dogs Rattler, Blackman and Judge, drove another; Mr. Walter Wyche and Mr. Newsen with Florence, Brown and three other hounds drove another, while Mr. Ed. Ogburn with his pack, drove still another section. Mr. Miller and myself were given the choice of stands at the river where the deer had a favorite crossing, and were "dead sure" to come.

We waited and watched patiently and faithfully, and not until near noon did anything occur to disturb the stillness of the day, when all at once I heard the report of Miller's rifle about one hundred and fifty yards above me, and quick bang again. I kept a sharp lookout across the cornfield and back over the river. About a minute after Miller's shot I spied a buck swimming the river for the other side. A moment's sight over my rifle sent a .44 Winchester bullet back of his ear, breaking his neck and killing him instantly. As there was a boat near by, I pulled out for the deer and secured him by one of his horns to a tree in the river, after having been carried by the swift current a quarter of a mile down stream. By the time I got on the bank Mr. Ogburn came along and helped me get the buck out on land. The deer weighed 160 pounds, and to get him out of the tree top and up a steep muddy bank was too much for me alone. When we got him on shore I saw the effect of one of Miller's shots, for the bullet had broken the right hind leg low down in the ham. Although I did the unsportsmanlike thing of killing the deer in the water, the trophy, by hunter's law, and rightly too, belonged to Miller, for he struck him first with a .44 Winchester, and as I afterward learned, at a distance of seventy-five yards, and the deer on a run for dear life besides. The sport we had, however, was a chance one for both of us, for the buck had been run across from the opposite side of the river by a little cur dog that was taking a quiet hunt for his own special amusement, for I saw the cur come to the bank of the river just after I had shot.

By 2 o'clock that afternoon the drivers had all come up to our stands. Each party had started deer, and some two or three, but for some cause, perhaps for the reason that the deer "is a lucky animal," they had taken the water about half a mile lower down the river. The next day we took the same stands, but the deer, as the day before, went down the river, and as we followed down a ways we saw the tracks where five had gone in the day before. It seemed to be our luck that those men could not drive us a deer. They had tried several times, had acted honestly toward us, but not a deer could they persuade to run by us. The deer might have had a premonition that a rifle bullet would do more than stick in the hide like a buckshot, and the deer we killed would bear out that theory, for there were two harmless buckshot loose under his skin.

We made other drives and one day stood on the Dry Bread road at the famous "Willow oak" stand, where "A. F. R." stood, as "A. F. R." mentioned in one of his letters, but the deer ran for us as they did for him, to the uncertain stand, where Capt. Briggs of his party stood and killed two big bucks two years ago, and it was at the Captain's same stand, where one of our party stood, when the big buck that I referred to before came out of the pine woods and stood square in the road watching our man, Capt. Hunt, and saw how manly and commanding he looked with his body erect and gun on his shoulder. Perhaps the buck thought the Captain on picket duty, but he finally passed his line without any pass word, and failed to come back or stop when the Captain fired one load of buckshot in the direction of his tail.

We did not make our trip to pot-hunt or slaughter game, and although only one deer fell to our rifles, we felt perfectly satisfied with our hunt.

We enjoyed the society of the people we met and were well pleased with the country, and can recommend any of our sportsmen friends who want a short, agreeable and pleasant little hunt that they can find no more friendly and honest, whole-souled and good-hearted men than it was our fortune to meet. And now, Mr. Editor, let me thank you that it was through your columns of the Forest and Stream that we were led to that enjoyment of our lives that we shall always remember. N. C. J.

Springfield, N. J., Jan 12.

SOME REMARKABLE SHOTS.

Editor Forest and Stream:

While woodcock shooting a few years ago on Lyon's Creek, in the county of Welland, Ont., I got into a dense thicket of tall wild rose bushes and low willows. My dog came to a point; a woodcock sprang up, with that peculiar whistle which is such sweet music in the ears of a sportsman, and just as he got to the tops of the bushes I covered him and cut loose—a few feathers floating in the air told me I had "got there." Crushing my way through the tangle of thorns and vines, with the assistance of my faithful dog I gathered him in. As I was about to turn away, the impression grew upon me that at the instant I pulled the trigger I had seen something—a glimpse, a shadow—beyond and in line with the bird at which I was aiming. Going back to the place where I stood when I fired, and getting the direction, I worked my way through the bushes, and after going a few yards further my dog came to a point, and a few inches from his nose I picked up another fine woodcock which had flown into the shot. I had "killed two birds with one stone."

G. B.

Niagara Falls, N. Y.

Editor Forest and Stream:

I was riding along the line of a new railroad route in Western Louisana one evening about sunset and saw a hare, commonly called a "rabbit," sitting on the side of the bridle path. Thinking to have some pistol practice, I dismounted and crept up in easy range. Then leveling a .38 Colts, I took careful aim and fired. The hare jumped three yards and stopped. I thought he must be wounded, and I would make sure of his carcass by another bullet. So I aimed carefully and fired again. He jumped three yards again and stopped. I looked at the hare and then at my pistol and felt perplexed. I crept closer, and taking very good aim I fired the third time. The hare again jumped three yards and stopped. I felt so much exasperated at the conduct of the hare that I reversed the pistol, taking hold of the barrel and throwing it, I struck the hare on the back of the head and killed it outright. Picking it up, I examined for bullet holes, but found none. I found, however, imbedded in the skin of its back and shoulders several large "wolves" in the chrysalis state, which made the animal poor and spiritless. With this same pistol I had killed squirrels, hares, partridges, frogs and alligators, by the direct method I mean, not the reversed. Coahoma.

Memphis, Tenn., April 25.

"THE DEAD SURE."

During the summer of 1871 I experimented with a number of different makes of firearms, both shotguns and rifles, for the purpose of ascertaining the most effective kind. After burning a great deal of powder, with no especial result, a sporting man told me that a man by the name of Egerton, Cyrus B. Egerton, of Syracuse, had just perfected a shotgun that he called "the Dead Sure." I obtained one.

Briefly, the principle of the gun (a double-barreled breech-loader) was this: In sighting for game, the gun was never pointed at the object, but always fifteen degrees to the right or left of it. To accomplish this accurately a small compass was inserted in the butt, just back of the hammers. At the muzzles were small pieces of mechanism called afflectors, connecting with a pointer which moved in a graduated circle, engraved on the stock plate just above the trigger guard. These afflectors could be moved at will by means of the pointer, around the inner circumference of the barrels, and were so constructed as to present a slightly beveled face to the charge leaving the gun. The chambers were smaller than the barrels, the latter resembling reduced blunderbusses. The weapon was guaranteed to "fetch something" every time.

I had no chance to try the gun that year, but during the next one I went up into Lewis county and took it along. Going out with it one day, after a walk of several miles, I caught sight of several young partridges quite a distance ahead, who were acting in the most peculiar manner. At regular intervals of half a minute or so they would leap from the ground, flutter their wings, and then subside. My curiosity was such that I watched them for a while, but, finally, the instincts of a sportsman asserted themselves, and I crept warily within shooting distance. Reaching it, I hastily sighted to the right of the game by means of the compass, adjusted the afflectors through the medium of the pointer, and pulled the triggers. Remember, this was the first time I had tried the gun and I might have been excited. At all events, when the smoke cleared away I looked in the direction of the birds, and saw that they were hopping away more vigorously than before.

Marveling that they did not lie down and die, or at least fly away, I tried again and again, but all to the same effect. Finally I grew disgusted and broke cover, walking straight toward them. As I approached them they made no other movement than the jumping one I have spoken of, and when I reached them I saw to my surprise that they were each fastened to a peg in the ground by a string. I was lost in

amazement for some time, but recovered sufficiently, at last, to look about for some trace of my bombardment. Seeing no signs of it in the shrubberry about, I made wider and wider ranges, until about sixty feet from the birds, and at my right as I fired, I found the corpses of two men yet warm, but riddled with shot. The truth flashed over me; in my agitation I had moved the afflectors to the wrong side of the muzzles, and instead of sending the shot to the left, among the birds, I had fired to the right and brought down the men, who had evidently just snared the partridges. I was immensely disgusted of course, and as soon as I could get to Syracuse I went to Mr. Egerton and demanded my money back, at the same time tendering him the gun and telling him my reasons for so doing.

But he refused to recognize any reason in my statements on the ground that the gun had acted up to its guaranty, and had "fetched something" the only time that I had used it. However, I shall get even, for I have brought an action against him in tort, in the names of the representatives of the two dead men. BEAVER.

ALBANY, N. Y., April 18.

SPRING AT MONTREAL.—Owing to eccentricities of this very peculiar climate the weather prophets thrive and flourish, for the reason I suppose that any horrible weather prognosticated by them is sure to come, but since Vennor's death we cannot place so much reliance on their predictions, as the following will show. On March 16 last I sent you spring notes; that was a mistake, as I should have said winter notes, for during the first week of April we had the heaviest fall of snow of the year (about two feet), which blocked all our railways for days, and generally demoralized affairs throughout the country. The fun of it was, none of our prophets had foreseen this, but afterward all claimed it as their own particular storm. We have had a few bright warm days lately, and the snow is going rapidly, but the St. Lawrence is still bridged with ice almost strong enough to carry a locomotive and train of cars. Perhaps some of our Southern friends can form an idea of the pleasures of living here when I tell them that on April 17, 1880, a locomotive and train of loaded freight cars crossed the St. Lawrence where it is two miles wide, on rails laid on the ice, and which had been in use for months before. A large flock of geese was seen near the Lachine rapids this morning, and quite a number of ducks have arrived, and all seem surprised to see that we have not yet thawed out. The ducks all know a man and a gun, and shy off whenever they see a few cakes of ice piled together in the shape of a blind. Some one further south has been instructing them. Our close season for wildfowl commences April 1, and if the ice holds a little longer our market hunters will have a poor spring harvest. —C. (Montreal, Can., April 21).

PLENTY OF GAME.—*Editor Forest and Stream:* "Where is Burrton?" It is situated in what is known as the Great Arkansas Valley, on the main line of the A., T. & S. F. R. R., 218 miles west of Kansas City. Here we never hear the cry of "nothing to shoot." The nimrods in this vicinity have been having fine shooting this spring. It opened in March with the advent of the gray goose; then came the white geese, together with the mallard ducks, and now our sportsmen have their choice of teal and spoonbill ducks or the plovers and snipe. The latter are here in great numbers. It is no uncommon thing for three good shots to bag from eight to twelve dozen per day. Our manner of hunting here is as follows: A trusty team is procured, one man drives, the others man the guns and do the shooting from the wagon. The birds are easily approached with a team, and with the pot and wing-shots the slaughter is fearful. The plovers are in flocks numbering from ten into the hundreds. We have a lively market on the east, Kansas City and to the west, Colorado. The quails and prairie chickens wintered well, and we feel sure of splendid shooting in the fall. Our game laws, although we live "way out West," are pretty generally observed.—M. T. (Burrton, Kansas, April 21).

ALEXANDER WADS.—*Editor Forest and Stream:* In your issue of the 9th inst. "Backwoods" condemns the use of mucilage-edge wads upon the ground that they are apt to gum the barrels. So far as this applies to the Alexander wad, I will say that in order to avoid this very objection the inventor adopted a frilled disk which is reversed in firing, and renders it impossible for the gum to touch the barrels. These wads do not come within the term "mucilage-edge" wads, as there is no mucilage on the wad. I first called the attention of your readers to this invention and claimed for it a good deal of merit, and you may be sure I did so only after a personal test. My experiments fully bore out the theory of the reversible disk, and I never discovered any signs of gumming in the barrels after using his wad. The only fault with the first wads made was that the disk was not securely fastened, but this defect has been entirely remedied, I believe.—SYCAMORE.

BOUNTIES IN WISCONSIN.—I send you herewith a statement taken from the books of our county clerk, showing the number of foxes, wildcats, and wolves killed in this (Dunn) county during this and last winter. As the animals, on account of their fondness for prairie chickens and other game, are great enemies of sportsmen, the following figures will be interesting to many: During the winter of 1883 and 1884, there were killed in this county 53 foxes, 63 wildcats and 30 wolves, the bounties paid for the same amounting to $731. This year, 1885, the county clerk has paid bounties on 4 foxes, 3 wildcats and 1 wolf.—B. A. E. (Menomonie, Wis.).

PHILADELPHIA NOTES.—Brant still linger in Barnegat and Tuckerton Bays in great numbers, but to get a shot at them is next to an impossibility. Thousands and thousands keep on the flats and appear perfectly contented and safe. Friends who returned from these waters last week had the best of shooting, but only at shelldrakes. The Delaware River meadows and marshes are still the abode of numerous flocks of sprigtails, but they have become very cunning and few now are being killed. Snipe are on in goodly numbers, and the warm weather has made them fat and lazy.—HOMO.

A ROYAL SLAUGHTERER.—An industrious statistician has gathered into a statement the hunting record of Emperor Francis Joseph, of Austria. The score runs back over thirty-six years, and foots up to 43,138 head, including 14,175 pheasants, 8,270 partridges, 6,456 hares, 1,570 chamois, 1,279 wild boars, 197 foxes, 1 bear and 1,287 rapacious birds, etc.

SALIDA GUN CLUB.—At the first meeting of the Salida Rod and Gun Club, held last evening, the following officers were elected: E. H. Wheeler, President; A. C. Ridgeway, Vice-President; E. S. Bach, Secretary and Treasurer; W. B. Bates, captain of rifle team; A. C. Ridgeway, captain of shotgun team; E. S. Bach, captain of rodsters; H. Knight, chairman of committee on constitution and by-laws; W. B. Bates, chairman of committee on range. The club is limited to fifteen members, fourteen of whom were present at the meeting.—(Salida, Col., April 15).

GIRARD MANOR GUN CLUB.—We have just organized a gun club here to be known as the Girard Manor Gun Club. The following are now members: S. B. Torbert, A. Lorah, M. M. MacMillan, James Lorah, Chance Clark, M. Lorah, Geo. Lorah. Our first shoot takes place May 2, and will be clay-pigeons.—M. M. M. (Girard Manor, Pa., April 18).

YOUNG MEN'S SPORTING CLUB.—There has recently been organized in this city a Young Men's Sporting Club, whose officers for the ensuing year are as follows: C. H. Johnson, President; O. Steffens, Vice-President; W. C. Reinig, Secretary; T. W. Laughlin, Treasurer and Corresponding Secretary.—T. W. L. (Fond du Lac, Wis., April 17).

HUNTING CLUB RULES.—Will some of your readers kindly furnish us with a copy of constitution and by-laws for a club of successful deer hunters, as well as rules and instructions for the hunt and camp.—MICHIGAN.

Camp Fire Flickerings.

"That reminds me."

150.

ON the 5th of November last, Captain Moore and myself went on our last fishing excursion to Timber Lake, about fifteen miles above Burlington, which is celebrated for fine bass. We arrived at the camping ground at 4 o'clock, put up our tent and fixed our beds for the night's rest, to be prepared for the fun in the morning.

At daylight we were up and got our breakfast. Captain Moore took one of the buckets of minnows and went up the lake to a well-known hole. I took the boat, pushed out to the middle of the lake and made fast to a snag. The lake at this point was about twenty yards wide. On the north side there was a steep bank and quite a drift pile. I fished out quite a large minnow, hooked it on, and made a cast as near the drift pile as possible. I cast my hook a little too far and it lit on the edge of the drift. In trying to recover, I found my sinker had caught and I could not get loose. The minnow kept flapping around at a great rate. I found I could not get loose without going with my boat. Just at that moment a large wolf came trotting down the shore. I sat as still as I could; he had his head down and did not see me. He came to the drift pile and went out on it, and spied my minnow and made a lunge for it. The drift pile gave way under him and he went into the lake over head and ears. At that instant I pulled my line taut, and found to my astonishment I had him hooked. The hook had caught in his throat at the root of the tongue. When he found he was fast he made frantic struggles to get loose. He would plunge his head under water and come up half strangled, and made a horrid noise. I held a taut line on him and found I could keep him off from the drift pile.

When the wolf found that he could not get back to the shore, he made a drive for the boat. At first I thought it would be my turn to take the water and leave him master of the situation, but by a dexterous move of the rod, I found I could keep him off from the boat. I reeled up my line so as to give less play. His tremendous struggles and the frequent immersions of his head had now nearly drowned him. I saw he was getting weak swimming around in a circle, and tried to drown him by sinking the point of the rod and pulling his head under water. At first I only partially succeeded. He would get his head above water, making a great noise. By persevering I finally kept his head under water until his struggles ceased and the blubbers came up. I kept him down for some time and then ventured to pull him up and take him into the boat.

It was quite a large wolf, weighed 38½ pounds. I cut the line off, leaving about a foot of line with the hook and sinker in his mouth. Knowing Captain Moore would not believe the story of his capture without the evidence, I took him to the camp, hung him up, and waited patiently for the Captain. He came to the camp at noon having a fine string of bass, six of them averaging three pounds each, and five that averaged two and a half pounds, and one mink. He would not tell how he caught the latter. He was astonished when he saw the wolf, and could hardly believe me, but there was the evidence—with the hook in his throat.

S. D. C.

BURLINGTON, Ia., Dec. 30.

151.

Some months ago, a party of riflemen were being driven from the excellent range at Walnut Hill, Mass., to the railroad station. One of them (a comparative stranger) espying a dark object on a little hill in the distance, remarked: "See that woodchuck?" All looked, and the creature being a little indistinct, one ventured to say: "Is it a woodchuck?" "Of course it is," replied the first speaker, "I know it is; it is remarkable how far I can see a woodchuck." Nothing more was said, and all gazed upon the object until, as we approached quite near to it, it gave a flop, rising a few feet from the ground and showing itself to be a crow with a broken wing. Silence fell on the party until one more venturesome than the rest looked quietly up to the stranger and said: "Doctor, it *is* remarkable how far you can see a woodchuck." CURTIS.

HARTFORD, Conn.

LIST OF PATENTS

Bearing Date April 25, 1885. Reported expressly for this paper by Louis Bagger & Co., Mechanical Experts and Solicitors of Patents, Washington, D. C.

314,565. Rotary Fish Plate.—B. W. Clark, Herndon, Va.
314,659. Rowlock.—O. B. Fenner, Oakland, Cal.
314,745. Flying Target.—C. F. Stock, deceased, N. G. Moore, Peoria, Ill.
315,297. Duck-Shooting Blind.—B. F. Kenly, Baltimore, Md.
315,354. Hammock Support.—J. H. TenEyck, Auburn, N. Y.
315,967. Combination Fish Hook.—C. L. Spencer, Geneva, N. Y.
316,416. Fire-Arm Sight Plumb.—S. W. Taylor, Newport, R. I.
316,419. Hammock Support.—V. P. Travers, New York, N. Y.

Sea and River Fishing.

BONITO.

IN all the warmer waters of the world,
The skip jacks' swarming shoals are seen,
Where the Sardinian Islands rest
In Mediterranean tides serene,
And where the tumbling billows pour,
Along America's southern shore;
While dense by rocky northern coast,
Wanders the countless host.

Their form symmetric, their sharp fins,
Proclaim their wondrous, matchless speed;
While their white row of vicious teeth,
Are terrors wheresoe'er they feed.
Like birds of passage, they pursue
O'er thousand leagues of sea their way,
Revisiting each well-known shore
Where their great schools were wont to play.
What power directs them thro' the seas,
Impels their myriad hosts to roam,
Prompts to forsake for years a shore,
Then leads them to their ancient home?
We ask the question all in vain,
For skill'd philosophy may not explain.

In August season, when the seas
Are brightened by the finny host,
When the menhaden shoals abound
And weakfish haunt the coast,
Then come the leaping bluefish schools,
The Spanish mackerel, keen for food,
The porpoise, the bonito swift,
Relentless robbers of the flood.

The ocean-angler in his yacht,
Hovers about like bird of prey,
Guides the true helm and trims the sail,
And thro' them ploughs a foamy way;
Then casts his glittering trolling bait,
And lures bonito to his fate.

Up thy vast stretch, Long Island Sound,
Bonitos flash in sportive play;
They cluster in the sunken reef,
They gather in the salty bay,
They seize menhaden as they fly,
They persecute all lesser fry,
And in their turn fall helpless prize,
To the black shark a sacrifice.

—ISAAC MCLELLAN.

CAMPING ON THE JAMES.

IT is very seldom we hear of fishing or hunting down here in Southwestern Missouri. Although we are not blessed with speckled trout, we still have a great deal of sport in our creeks. The nearest to our city is the James Fork of the White River, which can be reached about seven miles south, and about the same distance further south we come to the Finley, which joins the James about twenty-two miles southwest of here. In these streams we have black bass, striped bass, and what they call jack salmon—they resemble the sand pike of Lake Erie—also channel cat, goggle-eye or rock bass, and eels.

Ten years ago fishing was good anywhere along the James, but now the introduction of giant powder compels us to go quite a distance for fair fishing. Four or five of us generally take a trip or two each year. We put our boats in the water about twelve miles from here, at the lower dam, and float down as far as the junction of Finley and James. We usually spend three days on the water, although by land it is only eight miles. We get black bass weighing two and three pounds, big-mouths up to seven, and cat up to ten. One of our late trips was made with one good round-bottom boat and a canvas boat. The large boat carried provisions for five days.

The river was pretty flush and abounds in rapids. We got started, and on striking the first rapids the canvas boat took the left chute and the large boat the right. We were going at a 2:40 gait, and all our attention was required to manage the ship; but as soon as we struck smooth water we of course looked to see how the others had fared. All we could see was an occasional article of clothing floating around, and Joe and Doc, who had been the crew of the canvas boat, holding on to a bush, with their bodies stretched out at full length with the current. After picking up what was floating around, we went ashore and to their assistance. They had run on a log, where there was a heavy undertow, and down went the canvas ship. It was no joke getting her from beneath the log, but we finally succeeded, and made camp for the night right there. The next morning we went on, trolling and casting ahead as we floated.

Everything went well until noon of the second day, when we reached a place at the lower end of a long hole, where there is a sharp bend and a very heavy fall for quite a distance. It is usually fun to shoot the rapid, and with care there is no danger. Our boat got well ahead, but on turning the bend what was our consternation to see right across the channel a large sycamore tree. It was too late to stop; the current was too much for us. So we struck her, bow on, and soon brought up broadside to the current. Spite of all we could do the water would break over the weather rail; but after half an hour's careful use of an axe, we shot through that tree-top as if from a gun, arriving safely in smooth water none the worse for our scare. Doc espied us in time to land and make a carry, or they would have gone under sure.

We got along nicely, getting enough fish for meals, of course. On our last day's floating is an island; before reaching it we differed in regard to which channel to take, and ended by Doc taking the left and our boat the right. Either side is rough and rapid and about 100 yards long. We got to the lower end and turned around to look for the others. They were still half way up, Doc paddling for dear life and Joe down on his knees, and their boat filling rapidly. We reached them just as they struck shore, when down they went. They had struck a snag, and torn a large hole in the canvas. With the aid of some shoemaker's wax and a piece of shirt and fire, we succeeded in repairing her so that she did not leak any.

At length we reached the mouth of Finley, our destination, where we had splendid luck. The James was quite muddy and the Finley clear as crystal, and where the waters meet is where we yanked them out with plenty of good live minnows.

I have narrated accidents enough for so short a trip, but I

must record one more. We were ready to start home, and had everything into the wagon; Joe had caught a four and a half-pounder to take home, and to keep it alive as long as possible had put it on a string. We left the teamster to watch everything while we went to bathe and change our clothes, and after half an hour's absence, we returned in time to see a big sow finishing Joe's fish. Ever since then Joe has been down on pork. And many a one bears his brand since then; he uses a .22 Stevens, and never misses cutting off their tails. R.

Springfield, Mo.

FLY NOMENCLATURE.

Editor Forest and Stream:

In regard to Mr. Ladd's article on trout flies, I would say that I think he is great on theories, and that his criticism goes "too much into trifles," to quote our mutual friend, Mr. M. M. Bachus.

The flies, as represented in my old plate mentioned in his article, are the standard American patterns, as tied by the majority of dealers, and used by the leading anglers in this country, and are the flies that many years of experience have demonstrated to be "the most killing." What we need most are flies to please the trout, and not flies to please the theorists. I would also say that it is impossible to give the fine distinctions in the shades of hackles, etc., on a lithographed plate, even when colored by hand.

If Mr. Ladd will call at Messrs. Abbey & Imbrie, I will show him the new and corrected plates.

On the authority of Mr. M. M. Bachus, I would add that the "Rod and Gun" was not written by Prof. Wilson, but by the distinguished naturalist, James Wilson, who invented the "professor." Prof. John Wilson invented the "grizzly king" and the "queen of the water."

There is one great difficulty in the way of keeping flies close to pattern, and that is the different ideas that people have of color. It seems easy to be understood, when you tell a person to tie a fly with a gray wing, a red hackle and a brown body, but if you will let a dozen people tie such a fly, the chances are a hundred to one that any two of them will be alike. Another great trouble fly-tyers meet with is the difficulty of finding proper feathers; good hackles are almost unobtainable, and in dressing flies by the thousand gross the feathers will vary considerably. The flies tied after Mr. Ladd's description would not answer for our waters, even were it possible to obtain the feathers to tie them. W. Holberton.

DEEP-SEA FISHING IN ALASKA.

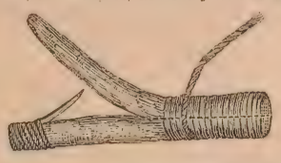
Editor Forest and Stream:

When I first started on my cruise to Alaska, I, as well as almost every one on board, was inclined to bemoan my fate in being sent to such an out-of-the-way place, where the only means of hearing from home, and what was going on in the world, was by mail steamer once a month.

Certainly the first part of the trip from San Francisco to the Straits of Juan de Fuca is anything but a pleasant initiation. Usually the wind is from the north and northwest, almost dead ahead, and with a long, heavy head sea, a combination which is not productive of much solid comfort on board ship. Cape Foulweather is very rightly named I think. I have passed it four times, and I remember distinctly that the weather on those occasions was anything but clear. After rounding Cape Flattery and entering the straits the scene changes, and from thence for a distance of twelve hundred miles the journey is made through inland passages and straits, with an occasional glimpse of old ocean in the distance.

The country is mountainous, and very heavily wooded with a growth of spruce and hemlocks. Most of your readers no doubt have taken the trip through Long Island Sound, and the trip to Alaska is not unlike it in many respects, although much longer drawn out, and the scenery is certainly wild, grand and decidedly novel. One is impressed with the almost solemn stillness that pervades these solitudes, broken only by the sharp cry of an occasional eagle overhead. For hundreds of miles there is not a sign of civilization nor a human being to be seen, save perhaps a few migratory Indians their dug-out canoes. One of the finest reaches is Grenville in Channel, a passage fifty miles long and from one to two miles in width. The mountains rise almost from the water's edge on each side, and are thickly covered with magnificent trees and foliage. The scenery is almost tropical in appearance, everything is so green and grows so luxuriantly. This is due to the large amount of rainfall. I may say roughly that it rains about seven-tenths of the time, but notwithstanding that, it is a singular fact that when it has been raining hard I have seen the wet and dry bulb thermometers indicate a difference of four or five degrees. I cannot account for this dry atmosphere under these conditions, and it was a common expression among us that "water was not wet in Alaska."

Contrary to the ideas that most people have on the subject, the climate of Southeastern Alaska is mild and humid, caused by the presence of the warm Japanese stream which strikes the coast near the Aleutian Islands and follows the general contour of the land to the southward. The average yearly temperature at Sitka is about 40° Farenheit, ranging in summer as high as 80°, and the lowest point reached by the mercury during my winter there was 10° above zero.



On our first arrival at Wrangle, your humble servant and two other congenial spirits concluded to take a "drop" on the denizens of the waters of the harbor. Taking the dingey we pulled across to the opposite side of the bay and anchored. We had very good luck. Our catch was composed mostly of flounders, and let me say that the flounders to be found at Wrangle are the sweetest I have ever eaten, and in my estimation fully up to the sole. Many times afterward during my several months' stay at this place, and when the trout were not in season, did I indulge in the capture of numbers of this edible fish.

When we reached Kilisnoo, which is a fishing station of the Northwest Trading Co., we learned from the superintendent that we could get some halibut fishing about two miles from there, and as the ship was to remain a few days, several of us arranged to go the next day and try the "heavy weights." Taking one of the cutters and providing ourselves with an outfit of heavy tackle, we started for the fishing ground. We had no difficulty in locating the spot, as we had been furnished with the bearings before we left Kilisnoo. We anchored on the last of the ebb tide, and in twenty fathoms of water with a rocky bottom.

Hardly had my line touched the bottom when it became apparent to me that something had made fast to it, and I proceeded to shorten the distance between us. Great Scott! what a tug it was to start that fellow from the bottom; but after he was fairly turned over on his side I can assure you he made it lively and interesting for me, and also for some of the other lines. The flight of the Patagonian's boomerang is not more erratic than the course pursued by that fish, and when, after a long pull and a hard pull, I got him to the surface, hit him on the head with a boat stretcher and "hoisted him aboard," I found that he had mixed those lines up "in a way I despise."

We fished for about an hour, when the tide turned flood, and presto! the fish disappeared as if by magic, and we concluded we had sufficiently developed our biceps to fit us for a round or two in the prize ring if necessary.

I did not keep a record of the catch, but, as I remember, we had twenty-five, averaging forty pounds each. I was told afterward, in Sitka, that one had been caught off that place, in thirty fathoms, which weighed 700 pounds. When the Indians get a large one hooked it is impossible to get him into the narrow, cranky canoe, and they take him in tow to the shore. The Indian halibut hook is not very graceful in appearance, but answers the purpose very well. It is made of two pieces of wood lashed together, and with a sharp iron point for a barb, in this wise, as nearly as I remember.

That was my maiden experience with the halibut in his native element, and I think I can content myself hereafter in toying with his smaller relations. Reel-Plate.

Washington, D. C., April 9.

LEASING TROUT STREAMS.

THIS question, which is now agitating the minds of certain people in Sullivan and Ulster counties, N. Y., and which has brought out some abusive communications from an excited individual to whom we have alluded, does not seem to be perfectly understood. That a man owning a stream or pond has the right to forbid fishing in it, or to allow only certain persons to fish in it, would seem as plain as that he had the right to forbid trespass in his orchard. It is always the case that when a stream has been free to the public for some time and is then closed by the owner, there are some persons who feel aggrieved at his action. The question whether trout fry were received from the State or not has nothing to do with it. The State has given fry for private waters, but the fact does not make them public ones, as was shown in our last issue by "V. C." The following letter on this subject was written by a resident of the region to the Kingston *Freeman:*

In compliance with the request of friends of mine who are members of the Neversink Club, I wish to put the public in possession of the exact state of facts with regard to the affairs of the club so far as they are connected with Ulster county, and I know no better way than to publish a brief statement, drawn up from information furnished me by those fully acquainted with the facts, in the columns of your paper.

First—A number of gentlemen, for the most part residents of New York and Brooklyn, had been for many years past in the habit of visiting the west branch of the Neversink for trout fishing, when a rapid decrease in the number and size of the fish created alarm, not only among the sportsmen but among the owners of the streams. On investigation it was discovered that the evil was due to the custom of persons, coming from various localities lying within a radius of thirty miles, catching and taking away the trout regardless of size and true sportsmanship. The farmers in the vicinity were anxious to stop this indiscriminate fishing of strangers, but were afraid to incur their possible enmity. At this crisis these gentlemen, having associated themselves together as the Neversink Club, with the cordial good will of the owners of the land and the farmers of the neighborhood, leased three miles and a half of the stream from its owners and stocked it with large trout bought of James Annin, Jr., of Caledonia. The rules of the club limit each member to a maximum catch per day of twenty-five fish, no fish to be taken under eight inches in length, and all fish to be caught with the artificial fly.

The results of this arrangement, so far, have been very satisfactory to the club and to the farmers of the vicinity, checking the decrease in the number and size of the trout, and being generally beneficial to the whole stream, upon which there are twenty-five miles of open fishing outside of the territory of the club.

In fact no resident of the neighborhood has expressed any dissatisfaction. The only persons whose clamor has been of sufficient volume to attract attention have been strangers from cities and towns as far off as Kingston, who are disposed to believe that there can be no such thing as property in a running stream. These strangers have no social connection whatever in the neighborhood, have no abiding place near it, come and go by the day, do not even hail from any summer boarding house none of which is within many miles, and having no more interest in this particular river than in any other fishable stream within their reach, are by no means careful in their sport, and, as has been intimated, were the chief cause of that impoverishment of the Neversink which the operations of the club have done so much to check.

Second—One word in regard to the law applicable to this matter. It has been well settled for centuries that non-navigable streams (that is, streams where the tide does not ebb and flow, or streams which are not and cannot be highways of commerce) are owned by the owner or owners of the land over which they run, who have the exclusive right of fishing therein. If a man own both banks he is *prima facie* owner of the stream. If the banks are owned by different persons, each *prima facie* owns to the middle of the stream. The sole difference in the ownership of such streams and of a private pond consists in the fact that in the case of the stream the water runs, and thus makes itself the object to which the rights of owners of other lands over which it may run attach. Therefore as between the owners of the upland along the same river or stream—the different riparian owners—but as between themselves and no one else—each has but a usufruct in the running water.

As far as the general public is concerned, no man has any more right to fish in a non-navigable stream without the consent of its owner, than to fish in a man's well or his aquarium, or out of his back parlor window, regardless of his protest.

Fishes in a stream are, with respect to the qualified nature of the property which man can acquire in them, like birds in a wood. If you catch them they are yours. But as the owner of the land on which the trees stand owns the woods, so the owner of the land over which the water runs owns the stream. And as you can have no right to shoot birds in the one, so you can have no right to catch fish in the other, in defiance of the owner.

Now, the Neversink Club has bought from the owners of that portion of the river it occupies, not merely an exclusive privilege of fishing, not a mere license, but the bed of the stream for a distance of three miles and a half. For that distance, whatever rights the owners had, the Neversink Club has purchased and now has—no more and no less. That club claims to do no more than the owners of the stream have had the right to do from time immemorial.

If they had the right to exclude strangers from their stream, to withhold from them the privilege of fishing in the owner's own waters, then the club, so far as the territory included in its lease goes, has the same right, and purposes to exercise it.

If the question were put to me, as a legal adviser, what to do with a lone fisherman who, in frantic defiance of the owner or his lessees, persisted in standing up to his knees in the middle of the stream, or rooted upon its banks, with his fishing tackle obstinately bent over that particular point and no other in the whole course of the river—I should answer, without the slightest hesitation, remove him, peacefully if you can, forcibly if you must, but at all events remove him. You have the right, even though he be clothed in the Stars and Stripes. Yours truly, D. M. DeWitt.

Kingston, April 21, 1885.

A contrary opinion is expressed in the following letter from Pennsylvania by a writer who does not seem to be aware that the Bloomiug Grove Park Association owns miles of trout streams in Pike county, Pa., in which none but members or guests may fish, and thousands of acres over which they control the shooting. The club is organized under the laws of the State. The privilege of passing to and fro over the streams does not necessarily carry with it any right to shoot or fish on these waters. Our correspondent says:

Editor Forest and Stream:

In your issue of April 23 a correspondent, under the head of "Leasing Trout Streams," attempts in a very feeble way to substantiate his argument by illustrating the planting of seeds procured from the Agricultural Department. A horse of a different color, my dear sir. Those seeds are planted in land deeded to you in all its rights. Not so with the water courses or tributaries to our rivers in Pennsylvania. The original land grants of this State (Pennsylvania) reserve the right of way to the public, consequently I hold that no organization has the right to usurp the right to exclude the public from fishing in those streams that nature has stocked with trout. I hold that it is all wrong for any organization to have the individual right to say to those along our open mountain streams that the man born along those mountain ways, that has always had the right to fish from early boyhood days, "Thou shalt not fish here now." I think it right and just that organizations shall have full right to fish or say who shall fish in private ponds stocked by their own money; but I say it is all wrong that they shall try to control our mountain streams that are stocked in nature's way, and it is unlawful, at least in Pennsylvania, and the law will bear me out. We don't want fish monopolies; we have a plenty or rather too many now existing for this free America. Let our mountain streams be free. Fair Play.

SOME REMARKABLE CATCHES.

Editor Forest and Stream:

A year ago last June a friend, whom I will call Charlie, and myself started out for some trout fishing in the Adirondacks, arriving at our camping ground at about 4 o'clock in the afternoon. After we had gotten our camp pretty well settled, I told Charlie to go to the brook, which flowed right past our door, and get some fish for supper, while I made up a fire. As he had little or no practice in fly-fishing, he took some worms and sallied forth. He had not been gone more than fifteen minutes when he called me to see how well the fish were biting. I looked up just as he was making a cast, and saw a fish take his hook. He was a little excited, and jerked so hard on the line that the hook was torn from the fish's mouth, and the trout went whizzing almost straight up in the air to a height of about ten feet, and then fell back right through the opening in the cover of his fish basket, which had swung around in front of his body. Charlie says to this day that the Adirondack trout are the most accommodating fish he ever knew of. Uncle Jack.

Tivoli, N. Y.

How it Seems to a Tyro.—I had never taken a trout until last week, when I went with two others to a friend's farm in New Jersey. At 7:30 A. M. we started from the house for the stream, three miles distant. Arrived there, our host told me my rod would be useless; so he cut for me, as well as my friends, sticks about four feet long, and starting with us up the stream dropped us off one at a time, first showing us how to bait the hooks with the worms, and then going still further up the stream, which at no point is too wide to be jumped across, began himself to fish. In less than two hours I came up with Ambrose, who had taken six nice trout, and I, who only had taken two, suggested that we should go to the wagon and lunch. This we did, and were soon followed by Frank, who had taken seven, and together we exchanged our views on trout fishing, it being the first attempt by either of us. We all agreed that we had had an ample sufficiency of the sport, so after a smoke we curled up on the cushions and took a nap. On waking we went and found Adon, who by his art, with a common shank hook and line and an ash stick, had taken fifteen trout, besides small ones returned to the stream. Let those who delight in trouting indulge in it if they please. As for me, casting over brush and branches, and continually getting your three feet of line hung in a tree, does not please me one half so much as fishing from a boat for catfish with a dipsy or sinker, where a clean strike can be made, and one has a chance of getting his fish. This stream or rather run is within twelve miles of Philadelphia State House.—A. W. B. (Philadelphia, Pa., April 22).

A New Price List.—We have received an illustrated retail price list from Mr. Thomas J. Conroy, dealer in fishing tackle. It numbers 130 pages, and contains everything needed by the angler, with a few hints on fishing, selecting tackle, flies, camping, etc., with an index. It is nicely printed and well worth preserving.

Connecticut Lake.—Colebrook, N. H., April 24.—In your issue of the 16th the printer made an addition of one to the miles to Connecticut Lake from this village. As the drive is a very fine one, and interesting to the tourist, I think it best to cut it off; twenty-five miles will do. The weather is the warmest ever known in this month in this valley. Snow has gone, and the season for fishing will be earlier than usual.—Ned Norton.

Philadelphia Notes.—April 25.—Our trout streams are now approaching to a good condition for fly-fishing, and before the next issue of Forest and Stream many of our anglers will have started on their first trip. The snow is fast melting on the hills, and as soon as the waters subside somewhat we shall have good reports from the interior of the State.—Homo.

Fishing in Georgia.—Mr. Charles H. Andariese, of New York, has just returned from fishing at Cumberland Island, opposite Fernandina, Ga. He reports most excellent fishing there, and took great numbers of sheepshead, channel bass, sea trout (weakfish) and drum. Some of the latter weighed sixty pounds.

Arkansas.—Owing to the late spring, the high water and the heavy rains, there has been little fishing as yet.—J. M. R. (Little Rock, Ark., April 20).

Fishculture.

PHILADELPHIA FISH NOTES.

At a meeting of the Fish Commission of Pennsylvania, held at Harrisburg, April 21, it was agreed to make appointments of fish wardens in the State and to instruct them to enforce the laws, provided there is an appropriation made sufficient to carry out the project. The U. S. Fish Commission will be requested to permit a large supply of shad fry for planting in the Susquehanna and Delaware rivers. The report of the Pennsylvania Fish Commission will discuss the subject of fish ways, stocking of streams, etc. The Commission is now engaged in sending fish all over our State, and the brook trout fry furnished is the finest that has ever been distributed from the Pennsylvania hatcheries. About 300,000 have been sent out. On Thursday next over 2,000 carp will be distributed. Next month 200,000 California trout will be given out. Already there are 200 applications for them.

Commissioner Porter, of Erie, Pa., at this meeting showed two fine California trout, eight inches long, which he procured from a boy at Corry, Pa. These trout were planted in the Erie county streams eighteen months ago, when they were only one inch in length.

Senator Nichols, of Cumberland county, N. J., and Prosecutor Stape, of Salem, had an interview with Gov. Abbett, of New Jersey, a few days since, in relation to the fishery trouble. They informed the Governor that the Jersey fishermen were afraid to begin sturgeon and shad fishing on account of threats of arrest by the Delawarians. Gov. Abbett provided each of his callers with a copy of the U. S. Court's injunction, and advised that all fishermen should begin operations at once, and gave assurances that the whole power of the State should be used to protect the Jerseymen in the right given by this injunction to fish in any part of the river and bay, even up to the Delaware shore. Any interference of the rights granted by this injunction will be considered as contempt of the United States Court. Home.

LOBSTERS ABUNDANT.

The receipts of lobsters at this port for the past few days have been remarkably large. During the past two weeks not less than 250,000 have come to hand. Ten or twelve lobster smacks have arrived with from 8,000 to 10,000 lobsters each. They came from the eastern Maine, New Brunswick and Nova Scotia shores. Besides these smacks, the Nova Scotia steamers on three or four of their last trips have had 500 or 600 cases, each with 140 pounds or say 70 lobsters to the case. The trade say that the reason for the unusual receipts is that the lobsters were so very scarce and high-priced before the catch begun, rather more than a week ago. "Everybody is lobster fishing." But the price has broken seriously. Three or four weeks ago live lobsters were worth ten or twelve cents per pound: yesterday they were offered from the Nova Scotia steamer as low as $3.50 per case of 140 pounds.

These lobsters are all presumed to be alive, and they are kept in cages by the dealers sunk in the dock, till wanted for boiling. They are fished out of the big cages with nets and put into smaller cages, their bright eyes glistening, and grappling each other with their claws. The smaller cage is set into a tight wooden vat, a few pounds of salt is sprinkled over the doomed lobsters, the cover of the vat is fastened down, and a jet of scalding steam is turned into the vat. In a few minutes the vat is opened, and there is a beautiful cage full of boiled lobsters, which have turned from a dark olive green to a bright red color. They are then ready for the market, and when cool, are packed in ice and shipped as far west as Chicago, and even to Omaha.

But a great many of the steamer lobsters are dead when they arrive, being too long out of water. More than two tons go to "the dump" to-day. It is whispered that some of the dealers have a way of boiling these dead lobsters as soon as possible and selling them. The remedy for the consumer is: Buy of dealers who would not be guilty of such a trick as of breaking the ten-inch law; and there are such. Special.

Boston, April 28.

FROG CULTURE.

About once a year an item goes the rounds of the press setting forth that some person is about to engage in the culture of frogs for market, and giving a glowing account of his facilities for the enterprise and his prospective profits. Any person who knows the habits of frogs knows that they are carnivorous, and that a big bullfrog will devour one of half its size in preference to almost any other food. Also that the tadpoles and young frogs are eaten by birds of all sizes, from the crow-blackbird to the blue heron, and that it is impossible to feed frogs in great numbers. Such an item recently appeared in the daily papers concerning a proposed frog farm somewhere in the center of Long Island, and a reporter sallied forth to interview those who might know something of the business. Here is what he wrote about it:

"What do I think of the establishment of frog farms in the United States to supply the demand in Europe? It is a fine idea in theory," remarked a State Fish Commissioner to a representative of the New York *Mail and Express*.

"Why do you say in theory only?"

"Because it has already been tried. Experiment in frog farming have proved futile and the man who attempts it gets some experience and no recompense for his trouble. Several frog farms have been started, always with the same result. The reason they do not succeed is simply this: It is very difficult to provide proper and sufficient food for them during their infantile period. The birds eat the tadpoles and the aoult frogs live upon insects, leaving their watery, swampy habitation and skirmishing around on the land for them. In a 'farm' they cannot well forage for insects, there are so many confined to a limited area. It is utterly impossible to catch enough insects to satisfy and gourmandize the farm. They prey upon each other. The baby frog is greedily devoured by the large bullfrog, who floats along in a stagnant pool with his mouth open, snapping them up with avidity. It is a survival of the fittest. The fittest in this case are not enough to pay for those that perished. The embryo jelly that floats along covered over with green ooze from weeds, from whose pores a million frogs may germinate, in the war of the hungry and strong over the weak does not escape. A farm started several seasons ago near Caledonia, in Livingston county, this State, proved an egregious failure and dead expense for the reason I have mentioned. If it could be done successfully there would be millions in it. It is a Utopian dream, the fulfillment of which, I think, will be many years from the present."

"Are many frogs consumed daily in New York?"

"Yes. During the summer months from one to two thousand pounds are eaten daily. They are shipped fresh to this market from Canada principally, in large half barrels. The love for frog meat is on the increase. Epicures and men of extreme wealth give exorbitant prices for them. The large green bullfrog is the chief kind sold in market. In Chicago they are called water chickens, because their flesh is as white as that of a chicken when dressed properly."

The import and export partner of a large wholesale grocery establishment said that no canned frogs were exported to Europe. "The fact is, there are no canned frogs for sale worth mentioning. In the eastern part of the British provinces and Canada a few were put up in cans. It did not pay, and they stopped. Then a little while ago the industry was started on Prince Edward's Island, but the facility for shipping live frogs killed it, and to-day canned frogs are a rarity. Thousands upon thousands of frogs are shipped to Europe each summer and fall alive. They are placed in large baskets between layers of damp moss and leaves. When they arrive at their destination they are sound and free from fever. The stock of frogs in Europe is limited. I lived in France twenty-seven years and never tasted one during that period. Although the French are called a nation of frog eaters, yet they do not consume one-tenth as many as the people of the United States. The frogs there are few and of a very inferior size, the largest not being two and a half inches long. They are stunted in growth and do not seem to multiply as fast as here. It has long been the dream of certain French caterers of renown to introduce the American green bullfrog into France for the purpose of propagation. The old stock of dwarfs, he argues, would soon fall victims to the vigorous American breed and disappear. They have no frog farms in France, even of these dwarfed specimens. I do not suppose to-day, if an offer of $100 was made in Paris for a can of frogs, that one could be found there. About fifty cans of snails are imported to America yearly from France. Terrapin, too, is rarely ever canned. If frog farms can be established and furnish enough to do a large canned business, my impression is it would spread and in the course of ten years from now frog farms would be quite numerous. There are men who will try the experiment next summer and raise frogs for the educated palates of Parisians and New Yorkers. If they succeed they will even grow immensely wealthy."

The Kennel.

FIXTURES.

BENCH SHOWS.

April 28, 29, 30 and May 1.—Ninth Annual Dog Show of the Westminster Kennel Club at Madison Square Garden. Entries close April 14. James Mortimer, Superintendent, 48 Broad street, New York.

May 5, 6, 7 and 8, 1885.—Second Annual Dog Show of the Cincinnati Sportsman's Club, Cincinnati, O. W. A. Coster, Superintendent.

May 13, 14 and 15.—Third Annual Dog Show of the Toronto Dog Show Association. W. S. Jackson, Secretary, Toronto, Ont.

May 19, 20, 21 and 22.—Show of the Philadelphia Kennel Club. F. A. Diffenderfer, Superintendent, Philadelphia, Pa.

June 2, 3, 4 and 5.—First Annual Dog Show of the Illinois Kennel Club. John H. Naylor, Secretary, 3,182 Archer avenue, Chicago, Ill.

FIELD TRIALS.

Nov. 16, 1885.—Seventh Annual Field Trials of the Eastern Field Trials Club, High Point, N. C. Entries for Derby close May 1. W. A. Coster, Secretary, Flatbush, L. I.

Dec. 7.—Seventh Annual Field Trials of the National Field Trials Club, Grand Junction, Tenn. Entries for Derby close April 1. B. M. Stephenson, La Grange, Tenn., Secretary.

A. K. R.—SPECIAL NOTICE.

The American Kennel Register, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription $1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed **2312.**

A BLACK AND TAN SETTER CLUB.

There will be a meeting of gentlemen interested in the black and tan setter at Madison Square Garden on Thursday evening, April 30, at 8 o clock, for the purpose of forming a club for the improvement of the breed.

A MASTIFF CLUB.

The following call has been published: Camden, N. J., April 25, 1885. We, the undersigned, breeders of the mastiff, do hereby invite you, or any of your friends, to meet us at the Fifth Avenue Hotel, New York, on Thursday, April 30, at 2 P. M., to consider the advisability of forming a mastiff club.—W. P. Stevenson, Chas. E. Shaw, Herbert Mead, J. Frank Perry, W. Wade, Edward Dudley.

THE NATIONAL DERBY.

Editor Forest and Stream:

Since your issue of April 2 the following have been added to the list of entries to the Derby of the National Field Trials Club:

Meteor's Maid (E. F. Stoddard)—White and liver pointer bitch, April 1 (Meteor—Trinket).

Trinket II. (E. F. Stoddard)—White and liver pointer bitch, April 1 (Meteor—Trinket).

Cleo (H. D. Nicholl)—Black, white and tan English setter bitch, April 26 (Gladstone—Lavalette).

Gath's Hope (R. M. Dudley)—Lemon and white English setter dog, May 23 (Gath—Gem).

Flirt (J. H. B. House)—Black, white and tan English setter bitch, July 24 (American Dan—Countess House).

Trez H. (Z. T. Hogan)—Black, white and tan English setter bitch, July 24 (American Dan—Countess House).

Alamo II. (T. W. House)—Black, white and tan English setter dog, July 24 (American Dan—Countess House).

Count Solo (T. S. Landrane)—Blue belton English setter dog, March (Count Noble—Countess Mollie).

Daisy (G. R. Stevens)—Black, white and tan English setter bitch, May 23 (Gath—Gem).

Noble C. (W. J. Cannon)—Black, white and tan English setter dog, April 22 (Count Rapier—Belle of Hatchie).

Maud D. (V. D. Davis)—White and black English setter bitch, Jan. 1 (Lightning—Dora Royal).

Cyclone (J. W. Renfroe)—Blue belton English setter dog, Jan. 1 (Lightning—Dora Royal).

Renfroe (Paul Jones)—White, black and tan English setter dog, August 21 (Gladstone's Boy—Dora Royal).

Bendemir (E. A. Wood)—Black and white English setter dog, August (Count Noble—Lassie).

Sachem (S. S. Brown)—Black and white English setter dog, August (Count Noble—Lassie).

Grouse III. (W. T. Mitchels)—Red dog, Feb. 27 (Grouse II. —Colleen Rhue).

Pendennis (Charles Heath)—Black and white English setter dog, Jan. 1 (Blue Drake—Diana II.).

Diana III. (Charles Heath)—Black and white English setter bitch, Jan. 1 (Blue Drake—Diana II.).

Bob Gates (B. M. Stephenson)—White, black and tan English setter dog, April 22 (Count Rapier—Belle of Hatchie).

In the first list of entries, the dog entered by S. S. McCuen as Lemon Gladstone (Gladstone ex Lavalette) should have been Sam Sterrett. The mistake was of the handler, who sent me the wrong name. Please make the correction.—B. M. Stephenson.

MODERN JOURNALISM.

Editor Forest and Stream:

Nothing has done more to degrade dog shows than untrustworthy reports. The beginner is misled by them, and when he learns the truth his vanity is pricked and his feelings wounded. Reports originated with shows and were supposed to be written for the edification of the public and the guidance of exhibitors. A man was not supposed to be eligible for the position of reporter unless he was a good "all-round" judge, and what was of even more importance than knowledge of the dogs was a good character. A man whose opinions could be influenced by pecuniary gain, or one who would take advantage of his position to write dogs down which were owned by his enemies, and laud to the skies those owned by his friends, was never fitted for such a post and never could retain it long. The employers of such obstacles to progress have always been taught that the public will not tolerate that which tends to degrade it in the eyes of its neighbors, and there is no perceptible reason why the rule should be violated now. There are times when exhibitors, breeders and owners of dogs feel disposed to be lenient, and at such times they are willing to overlook much that is distasteful to them. But silence is one thing, approval is another. Without wishing to hurt the feelings of any one, I would suggest that where a paper is laboring under pecuniar difficulties a prize list be printed without comment. A prize list is far more instructive and much less misleading than an ignorant report, pregnant with falsehood and petty malice. Why then should the latter accompany the former? Right before me lies a letter from a very prominent American sportsman and breeder of dogs. He informs me that a certain reporter never misses the opportunity to take advantage of his position to attack men he hates. In my reply I asked him if he thought that a paper of character would allow its columns to be prostituted to so vile a purpose, and he replied that the editor of the paper believed the reporter to be the deity and nothing short of it.

After what has transpired during the last few years I am prompted to ask what is a sportsman's journal? Is it a weekly sheet devoted to a settlement of the editor's personal affairs? or is it utilized for that purpose one week and handed over to the office boy for a similar purpose next week? I have always been given to understand that editors of decent papers are gentlemen, independent sort of fellows of broad and generous views. Men who would empty an office of all that is calculated to lower and degrade sportsmanship. Men who would sooner think of committing suicide than of taking cowardly advantage of the editorial chair. Such at least has been my idea of the editor of a sportsman's journal. But alas, "whither are we drifting?" Only the other day a gentleman told me he had received a letter from the editor of a would-be sportsman's paper, who implored him to tell something about certain gentlemen in order that the editor might "open on them" in his editorial columns. We all have seen how dogs owned by those who refused to advertise in a certain paper are written down, and how persons who are willing to encourage such business are supplied every week with an amount of "taffy" of which there is always a superabundance on hand. We have seen gentlemen charged with unsportsmanlike conduct, and even accused of trying to influence judges' decisions, and when the charges have been shown to be false we have watched the editor saddle the responsibility on his office boy, and sneak behind the statement that he will investigate the matter when the office boy comes home, which, of course, he never does. In such a case action for libel is out of the question. Mushrooms may grow on a dung heap, but gold is not to be found there.

Dog show reports are my text, and so I find myself compelled to hark back to Chicago from whence all funny things do spring. The Aaron business was a mere nothing, but in trying to "creep out" the reporter seems likely to leave some of his skin in the trap. He now says that Erin II. was a good puppy, but "she has not fulfilled her early promise." This is making bad worse. In the first place, the reporter admits that it has taken him nearly three years to find out that Erin II. is a bitch, and, in the second, proves by his own evidence that he cannot judge of the merits of an Irish terrier until it is almost three years old. Erin II. was first exhibited at the little show given by Messrs. Lincoln, Olcott and the Chicago w.seacre, and in its report of the show the indepen dent (?) journal said (June 23, 1883), "He (Erin) is a splendid puppy." Ever since that time "he" has been a very good specimen, but now it dawns on the great "authority" that "he" is a "she," and accordingly "she" is described as follows: "One long-legged, weak Irish terrier, Aaron, was shown and received first prize." The fact is, that the Western reporter in attempting to "kill Mason" was in too great a hurry, and was so blinded by prejudice that he could not tell dogs from bitches, or *vice versa*. Neither could he distinguish between the old champion and the supposed Aaron. Ignorance or prejudice it must have been, and the "young man from Chicago" may perch on either horn of the dilemma he likes best.

A few more words about that New Haven report. When Mr. Porter told the "petty canine czar" to go to the deuce he incurred his majesty's displeasure, but the old warrior is like a dog without teeth, the bark is worse than the bite, and as usual he came out second best. Turn to the sportsman's independent journal of March 28, and you will find the following in the report on the New Haven show: "There were less than six really first-class setters shown." Plantaganet was first in the champion class. In the open class it was Rockingham, Foreman and Mack B. In the bitch class, Princess Phœbus, Forest Dora, Lady May. Now turn to the Boston report in the same paper (April 18) and you can read: "The English setter classes were very good." Plantaganet won in the champion class. In the open class it was Rockingham, Foreman and Mack B. In the bitch class Forest Dora was first; Phœbus not entered. The quality was not so good as at New Haven. The reports were written by the same person, and I ask is that honest journalism? Is it the sort of business that dog owners intend to tolerate?

Read the following in the New Haven report: "The crack St. Bernards of Mr. Hearn's kennel and a number of mastiffs and other St. Bernards which might be [but were not] named, are alone worth all the dogs that were on exhibition." The winners in the mastiff classes were Hero II., Lorna Doone, Ilford Cromwell, Homer, Rosalind, Prussian Princess and Hilda V. Turn to the Boston report and you find "A better show of mastiffs was probably never seen. The classes were well filled and some fine specimens were shown. The remarkable improvement in this breed was freely commented on." The win-

ners were Hero II., Dolly Varden, Prince Waldemar, Ilford Cromwell and Bal Gal. Second prize in the bitch class withheld for want of merit. It is easy to see the mastiffs were better at New Haven than at Boston. Where is the man of honor who is willing to support such unprincipled work as that? The malice and prejudice to be found in the New Haven report was equaled only by the reporter's supreme ignorance and the inconsistency of his statements. By your courtesy I will give examples of each, for surely it is in the interest of our dogs to purge the canine world of such thorough rot.

New Haven Report.

March 28, 1885.—Gordon bitch class: "There were no very good ones among the lot, and the judge placed them according to their merit in giving first to Heather Lass."

SPANIELS.

"First went to a good all round liver and tan dog." [This was a bitch, Newton Abbot Lady].

"In the class for dogs and bitches other than liver or black, Spot, a little high on the legs, but otherwise good, won."

"In the bitch class, Belle, a very pretty bitch, a trifle leggy, received first."

FOX-TERRIERS.

"In the fox terrier classes the good ones were conspicuously absent." Raby Tyrant, Richmond Olive, Scarsdale, Lancelot, Tyra, Clover Belle, Nannie, etc., were shown.

"He was given to Gay Lad, a puppy with a light body and badly-carried ears. He did not deserve any mention."

BULLDOGS.

"The club might have had the crack bulldog Britomartis on their bench * * * He (Mr. Livingston) would not exhibit under the judges selected by the club."

BULL-TERRIERS.

"Americans are not up in a great many things, and faking is one of them."

PUGS.

"Young Toby was decidedly the best and deserved his award."

Boston Report.

April 18, 1885.—Gordon bitch class: "The winner, Heather Lass, is in all respects a good bitch."

SPANIELS.

"The winner, Newton Abbot Lady, would be improved if she was cleaner in neck and better in muzzle."

"In the cocker spaniel class for other than blacks, first in the dogs was given to Sport, a black and white cocker of the old style, rather high on the legs and bad in coat."

"First in the bitch class went to Belle, plain looking with a very weak head."

FOX-TERRIERS.

"Raby Tyrant and Richmond Olive had no competitors in the champion classes. It would take almost perfect ones to beat them."

"There was little to admire in Gay Lad, given second. If he had been given he, he would have got all he deserved."

BULLDOGS.

"Britomartis, the crack English bitch, purchased by the Messrs. Livingston, was expected to have reached this country some time ago, but has not yet arrived." (Neither has the apology to the New Haven Club.)

BULL TERRIERS.

"If Victoria had better trimmed ears she would be difficult to beat."

PUGS.

"Punch and Young Toby each got who. The latter is badly undershot and did not deserve his award."

The savory gentleman who penned the above for the edification of the people, wishing to still further enlighten the world, gave the readers of the independent (?) journal a rare example of his marvellous ability to judge and criticise dogs. In the Boston report he says, "He (Count Waldemar) is very much like his sire, Crown Prince, but not quite so large." The individual never saw Crown Prince in his life, and couldn't pick him out of a class of smooth-coated St. Bernards. He proceeds, "His (Prince Waldemar's) head is almost perfection; if it has any fault, his ears are a trifle too small." Perhaps Crown Prince came over to Boston through the Mackay-Bennett cable and returned to London in time for his supper. Dogs do travel like that sometimes. He's a great dog that Crown Prince. I wonder if his ears are too small. Mr. Wynn, you are respectfully requested not to laugh. "His tail is a trifle short." How is that? Hero's tail was too long a few days ago. Exhibitors are requested to take their hats off before reading the following: "Although Ilford Caution has a great many strong points he was entitled to his place." The inference to be drawn from this is that, from a Chicago point of view, a dog to win prizes should not have many strong points. Of course the reporter may have intended to say that, although the owner of Ilford Caution is not a member of any little "ring" or "clique," his dog has a sufficient number of good points to carry him through on his merits. Messrs. Hanbury and Wynn will please unbutton their vests, and Mr. Nichols (who is rather stout) his shirt collar, before I make known to them that the Chicago reporter does not advise people to breed bitches to Ilford Caution on account of his short face. That statement crumbles into dust before this very intelligible criticism. Ilford Caution "was entitled to his place. * * * His faults are objectionable to look at or breed to. * * * He should have been placed behind Bosco."

Newfoundland men are not forgotten, and poor Sam gets the following report: "Third is about the position the winner is entitled to, for a good big dog is better than a good little one." Poor Sam, a good little dog at Boston, but what was he at New Haven, when the reporter was instructed to "kill Watson"? He was "coarse in chest, weak in back and straight behind." Will Mr. Farquharson or some other authority kindly define a "coarse chest"; and will the Chicago reporter please explain how a dog can be "coarse in chest, weak in back and straight behind," and at the same time be a "good little one"? The pointer report, too, was brilliant, very brilliant. Here is a description of Bang Bang: "The latter is, to be critical, a little straight behind and rather coarse in tail." Very critical, isn't it? Go back to the same little man's report of the Cleveland show (April 5, 1884), and you will find: "Bang Bang is not perfect in the quarters either; on the contrary, therein lies his greatest fault. He is like King, light in the stifle; but the bend is better. We would like Bang Bang better if he were straight on the back and hips." What is the public to make of such clap-trap? When the reporter is "critical" Bang Bang has a good back and straight stifles, whereas when the reporter is not critical the dog has well-bent stifles and faulty back and hips.

At Boston, Raby Tyrant and Richmond Olive were wonderful specimens. "It would take almost perfect ones to beat them." The same paper's report of the New York show (May 17, 1884) contains this: "Third went to Raby Tyrant, a recent importation, whose prestige from abroad was not equal to the quality he met in this class." Almost perfect, and yet was not equal to beating Belgrave Primrose and Scarsdale. Mr. George Raper will please not go off in hysterics when he hears that our judges (?) are indorsed when they commit such outrageous blunders. Mr. Foster of Bradford and other exhibitors and breeders of pugs will kindly note that wide-chested dogs are of no use in this country. The little man from Chicago said in his Boston report that one of the pugs exhibited there was "wide in front." Would it not pay the Chicago editor to keep his little man at home for the express purpose of writing anonymous letters? I was forgetting the spaniel men, and it would not be considerate to deprive them of anything that is instructive and which is calculated to improve our field spaniels. "She [Newton Abbott Lady] is not a model, but she is good enough to beat one so good as Cutie. * * * Cutie won first at New York, Lowell and Taunton. It should take a good bitch to make such a record as that." This is another Aaron case. Cutie is a misprint for Critic, and although the little man has criticised the latter half a dozen times he didn't know the bitch when entered as Cutie. Any more would, as the alderman's wife remarked, be "superfluffus."

CHARLES H. MASON.

NEW YORK, April 27, 1885.

ENGLISH KENNEL NOTES.

XXIX.

THE secretarial excitement is quite allayed, and I hear that things are again going smoothly with the Kennel Club. The chairman has returned to Ireland, and Mr. Percy Reid has gone "to Africa to shoot," as we are officially informed. This gentleman—we call everybody a gentleman here—Ah! that reminds me of the incident that put that thought in my head. The last time I was in London I went to the Globe Theater, which is not situated in a very choice quarter of the city. On leaving the theater I walked a little way down the street, and saw a common-looking fellow deliberately charge an old man and an accomplice rush up and grab the old boy's watch. "Stop thief!" I shouted, as the rascals fled in opposite directions. They were both caught, and on being led before the inspector, one of the captors, a policeman, said he recognized the bumping ruffian, and had observed him hanging about the theater doors the previous night. "Why that's a lie," quoth No. 1 thief, "cos I wasn't in London at all last night; ask that gentleman there," and he pointed to his pal, No. 2, who didn't look a bit flattered by the description. This is why I shall often in these columns refer to any highly respectable person as a man. I am getting sick of the gentleman.

Well, let's return to our lost sheep, Mr. Reid, who is missed because he used to edit that pompous little periodical, *The Fox-Terrier Chronicle*. The magnitude of this branch of the dog fancy can be appreciated when one knows that in point of numbers their club almost equals the Kennel Club, to which they are, however, quite content to play second fiddle, or rather tambourine. Their paper is hardly ever seen outside their own circle, so I should imagine that it shows no profit, and yet Messrs. Astley and Gibbon have agreed to pay the club an annual rent of £10 (!) for the privilege of publishing it. Perhaps, though, it is not the only paper that is kept going by the sympathetic support of the great advertising firms, Spratt's Patent, Benbow's mixture and Hudson's soap.

Another paper that puzzles me is the *Scottish Fancier*, I suppose it pays its way or it would not be continued. It only appears monthly it is true, but it gives good value for the price, four pence.

The dog talk is chatty and not too local. They publish this month an article by Hugh Dalziel on training dogs. I am sure they don't get that copy for nothing. Somebody who calls himself "Cumbrae" gossips about Scotch terriers and their reports on Scotch shows are quite the best of their kind. I don't know who is the author of a very jaundiced paper on special prizes, one "Blackhall." I agree with his condemnation of such trumpery additions to the prize lists as "silver-mounted meerchaum pipes, new hats, handsome oil paintings, etc.," but how is it he makes no reference to the equally frivolous "one year's subscription to our paper" prize, the value of which would hardly purchase one of the above shop window articles.

"Blackhall" then proceeds to attack the specialists clubs. He charges their promoters with being actuated by personal and selfish ends, and can allow them no credit whatever for the time and trouble they devote to their hobby breeds. He appears to believe that the members only subscribe so much a year, to afterward distribute these funds in prizes that may like chickens come back home to roost. As, however, many of the prizes presented by the specialists clubs are given for open competition some of the funds must find their way into the pockets of those who have not subscribed to them. "Blackhall" errs grossly in attempting to weaken the position of those bodies that have done so much for their breeds, and which are likely, later on, to form the breeders bulwark against the domineering Kennel Club and its humble followers. The channels for doing good are limited. Extra prizes undoubtedly call up more numerous competition, the clubs by their official codes of points fix the type of their dogs; they can, if they don't, bring their influence to bear upon committees to select suitable judges, and I repeat what everybody knows, that the officers and committees of specialist clubs are in their characters above envious suspicion, and that they freely give up time from their work or amusement to their hobby as only animal-loving members of the Anglo-Saxon race will do.

I must admit that too often specialist clubs have not sufficient consciousness of their own power and influence. They generally remain satisfied to be placidly milked for extra prizes by the zealous honorary secretaries. There is a latent force in these bodies that only requires occasion to show itself.

The Irish Terrier Club's coattails have been trodden upon by the Dublin Dog Show which, while coolly accepting the club's special prizes, has ignored their request for one of their own judges, and has even gone so far as to insult the breed and the club by appointing Mr. F. Gresham, who with unparalleled impudence, accepted the post that he knows he is unable to fulfill.

"Fate never wounds more deep the generous heart
Than when a blockhead's insult points the dart."

Mr. Geo. Krehl, the Irish Terrier Club's secretary, has quickly sprung forward to shield his club from the degrading blow. By his spirited and scathing letter to the *Shooting Times*, he has covered Mr. Gresham with obloquy, and constituted himself one of the champions of the specialist clubs. It seems that the Dublin show firmly declined to appoint one of the club's judges, and in spite of the general discontent, Mr. Gresham insolently refuses to resign. A resolution was therefore put to the Irish Terrier Committee to withdraw their prizes, and I have no doubt that it will pass. Mr. Krehl has made it the opportunity to attack the whole system of all-round judging, and in stirring language that is certain to excite approval and support, falls foul of the men whom he happily terms "bagman" judges, "who career about the country palming off on the easy-going or uninitiated committees their damaged stock of mental wares."

In holding Mr. Gresham up to public opprobrium as the most conspicuous block to the progress of dog-show morality, he has made known the evil and the cause of it. Now that they have got the "lead" over, it will be their own fault if the exhibitors do not follow in a body. They have grumbled long enough, they have now been shown how to act. Their eyes are now thoroughly opened to the fact that we have among us men who for the sake of notoriety will undertake to do that which they have no capacity for, heedless of the harm they do to those breeds by their misleading awards, and possessing no concern for the ensuing confusion in breeders' minds. Is this not veritably dishonest, and is not the offender as guilty of a fraud upon the public as a five-shilling-a-week super who would attempt a leading role? Where is the difference in the deception? The similarity continues to the extra pay for the hungry super, and the eleemosynary remuneration to the judge—"and expenses," which Mr. Gresham, like the rest of his class, may look upon as the best paying part of the job. The exhibitors would even profit by subscribing among themselves the "fiver" that blinds Mr. Gresham's principles, and which he would otherwise lose when they succeed in ousting him from the judging. I hope that the alarm which has been sounded will not abate until the judging rings have been cleared of those unscrupulous interlopers who have taken for their guidance the maxim of the perjured guardians satirized by Juvenal:

"Wouldst thou to honor and preferment climb,
Be bold in mischief."

"Look here, upon that picture and on this." Both judges—Mr. Hugh Dalziel and Mr. Gresham—but of what a different kidney. The one assuming knowledge that brings down ridicule and contempt upon his head, the other born with the "eye for an animal." No man among us all knows so many breeds and so much of each of them as the man you have honored yourselves by inviting to judge at American shows. Mr. Hugh Dalziel's connection with the kennel world is a long and honorable one. The only *faux pas* that can be laid to his charge are those of a hasty, rugged temperament, unable to restrain from expression the angry thoughts born of real wrongs. He swings the flail all day long in the barn of the kennel world. He beats the corn out, unmindful of the discomfort to the husks. Sometimes the flail hits a friend on the head, but the bump goes down and the accident is forgotten. It is not remembered by some of my young friends that he was once kennel editor of the *Field*. How he came to give way to his successor, Mr. Louis Clement (who in his turn was succeeded by Mr. Vero Shaw), I don't know, but confidently guess that it was due to his calamitous habit of "speaking his mind." He next appeared at the helm of the *Country*, but that little craft carried too many big guns for its structure, and one day it went down with all hands. Mr. Dalziel now replies to correspondents in the *Bazaar*, and edits that most beautiful little sheet, *The Kennel Chronicle*. His general books and medical works on the canine race are the best of their kind, though he has been consistently unfortunate with the artistic part of his books. The illustrations in "British Dogs" are very poor.

I hear that Mr. Dalziel sails for your shores on the 14th instant, and that his friends hope the trip will benefit his health. I indorse that wish in bidding him "God speed." Take care of him, my American friends; he is one of the old-fashioned, straightforward sort, that we so highly prize for its present rarity. I don't know whether he will take his hat with him. It would be safer to deposit it at home with his bankers, for the ship might sink and the hat be picked up days after, by the seamen of a wonder-stricken crew, and so find its way into a foreign museum. Well, if he should venture and arrive safely, be careful with this relic. If you do take its owner to look "upon the wine when it is red,"—and be sure he is too good a judge to wait till it turns to vinegar—bid Delmonico's janitor guard the sacred tile from the machinations of the practical jokist, the friendly "bash" and the guilty covetousness of the virtuoso. Let us have it back again, and the guid honest body it covers. We cannot spare for long that genuine and robust character which has so often supplied the thunder to clear the atmosphere of the doggy world.

I have been thinking of a plan to place in Mr. Dalziel's hands a packet for America. It is not easy though, to do this without being found out, still I must scheme to get it to Clapham somehow. The parcel is an old engraving of a couple of beagles, which I desire to offer to the American English Beagle Club, and with it to express the great interest I take in the club's object. The members of the club have my most cordial good wishes in their efforts to preserve an old English breed that by the fatal neglect of my countrymen threatens to become in a few years a stranger in its own home. The picture was given to me by a doggy crony like myself, who knows my weakness for the unaffected sport afforded by the little beagles. He has many a time and oft steamed out of the murky town, leaving his parchments to join me in an off day with my modest though merry "cry." He soon forgot the duty he left behind for the pleasure he found when Cowslip owned to the quest directly after the first cast off, and the rest of the busy little beggars crowded up to answer "with dwelling deep-toned melody." *Eheu! fugaces*, those were tranquil times. We never counted the pleasure of the sport by the number of kills, but rather by the varying incidents of the run and the staunchness of our pack. It mattered little to us if, when we returned home to "change" and dine, that we were in the position of those "Three Jovial Huntsman," who

"——, hunted, and they hollo'd, till the setting of the sun,
An' they'd nought to bring away at last, when the huntin' day was done.
Look ye there!"

But, dear me, I was going to tell you about the picture. Well, my friend found it in one of his rambles through old London. He is fond of rummaging in tubsful of second-hand books and looking over the trays of old prints, and now and then he gets a "kill." He learned from the print seller himself, a snuffy little gentleman, clad in a threadbare dressing gown and wearing a greasy smoking cap, and who seemed quite offended at the intrusion of a customer, that this picture is one of a series printed by a man well known in the trade years ago, one Robert Jenning, in the year 1835. It was Jenning's intention to publish a book on the dog, for which this plate and several others were engraved as illustrations; but the plates cost so much money—£50 apiece—that Jenning became uneasy about the expense, and never completed them nor published any letter-press. Some years after Jenning's stock in trade was sold under the hammer and the prints went anywhere and everywhere.

I have received positive confirmation of the news I have been the only one to mention. It is a fact that Mr. Bissell has raised the stud fee of his collie Charlemagne from ten to twenty guineas! Dog breeding has quite risen to a level with the breeding of other thoroughbred stock, but we still wait for the candid man who will publish a year's balance sheet of a large kennel. There is a strange reluctance on the part of doggy men to admit that their hobby pays them, and in many cases very handsomely. If any of my English readers will, for public information, oblige with a copy of his accounts, he can rely upon their being printed discreetly and his identity being as carefully preserved as that of

LILLIBULERO.

APRIL 8, 1885.

NOTICE.—*Letters for "Lillibulero" from American correspondents can be directed to the New York office, letters from English correspondents should be directed to "'Lillibulero,' of* FOREST AND STREAM," *care of Messrs. Davies & Co., 1 Finch Lane, Cornhill, London.*

THE ST. LOUIS DOG SHOW.

THE St. Louis Dog Show opened last Tuesday and closed on the following Friday night. It was nominally the second which has been held under the auspices of the St. Louis Gun Club and the fourth genuine affair of the kind which has taken place in the city. The word nominally is used advisedly, as the only connection between the Gun Club and the dog show, as far, at least, as the outer world can gather, is that Mr. W. A. Albright, the very popular secretary of the Gun Club, has allowed entries to be received at his gun store as a down town office of the show. The predecessors of the show have been held: In 1878, at the skating rink; in 1880, at the Fair Grounds, and last year at the Natatorium. The one under notice took place at the new Exposition Building, in quarters which could not be surpassed for the purpose. For some reason or another last year's show left a bitter taste behind it in the mouths of a majority of local dog men, and the effect of the feeling was very perceptible this year when the count of the canine rank and file was taken. There were plenty of be-ribboned and previously decorated top sawyers on the benches, but the stuffing which it had been expected would be furnished by local owners was sadly wanting. Under such circumstances it is impossible to expect a great financial success anywhere, and it is very doubtful if expenses were made at the show.

St. Louis is a very funny city when it comes down to weigh and calculate on the figures it should put upon its amusements. It has one great artery, Page avenue, for its driving community, every one who wishes to take the air of a summer evening being forced by the east and west arrangement of the streets to patronize this boulevard if he goes out driving. The river cuts him off on the east, and neither north nor south nor other thoroughfares of the west allow him to make any use of his stepper. Hence, Page avenue is a necessity to him. Necessary as it is, however, to the driving community, its wives and other feminine affinities, it remains a fact that until this

present date of writing, the avenue has been left innocent of water, except such as came to it from cloudland, but a wonderful start has been made this year and a most tempting programme is hung out by the Driving Club for an early matinee in benefit of a sprinkling fund. Three big races will be given and will certainly occupy more than half a day, Col. Lew Clarke, the secretary, having already received promises of more than twenty-five entries for the 2:40 class alone. For an entertainment of this quality the ridiculously low admission fee of twenty-five cents is charged. The mere fact that so much fun can be had for so little money tends to keep down patronage of any amusement in such a hand-to-mouth city as St. Louis, and the kick at a half dollar entrance to the bench show has been very decided. The rate was reduced by half on the last day of the show and the receipts quite justified the policy of the change.

As an exhibition of quality the St. Louis show of this season may be pointed to as the best seen in the West, and if it is possible to redeem paucity of numbers by individual excellence, St. Louis has come out ahead. She has produced at least one dog this year which, should he live, can not but be the sensation of the pointer world. The dog in question is Robert le Diable. He is grandly bred, being by Croxteth and out of Spinaway. The dog is white and liver ticked, with not an over-abundance of marking about him. His head is remarkably good, though his forehead might perhaps have been a shade broader with advantage; his legs, loin, feet, barrel, shoulders and stern are all perfect. He has plenty of power without any suspicion of coarseness about him, carries not an ounce of lumber and is all quality from nose to stern. He took the special, a hunting suit, for the best pointer in the show, as well as the blue ribbon in the pointer class.

There were but two pointers shown in the champion class. These were Bravo, owned by Mr. G. N. Appold, of Baltimore, and old Faust. The latter was in very poor order, and covered with sores, but Bravo even under these circumstances ought scarcely to have beaten him. Mr. Appold took the champion pointer bitch premium with Daisy Bravo, a neat enough bitch and a great improvement on her sire in the matter of looks. There were, however, among the talent, many dissentents from the award, and Lady Croxteth had perhaps the public verdict. The heavy pointers were a very moderate lot, but the 50 pound pointer bitch class produced a really good one in Belle Faust. She was in wretched order, yet despite that drawback she won very readily, although she had a smart one to beat in Lulu Faust; she will be very hard to beat when got into show order. Neither of the pointer dogs under 55 pounds nor the bitches under 50 call for remark, and no first was awarded to either. A very likely dog, Beau Faust, won in the pointer puppy class. The Beau will grow into a high class animal and does as much credit to old Faust as anything that has been seen out yet.

As Dick Laverack was not competing, Paul Gladstone had a walk-over for the champion setter dogs, and Bessie A. then ran a similar bye for the bitch championship. A good lot of setter dogs contested the next class, and the premiums were awarded to Gladstone's Boy, Count Glickstone and Roderigo, in that order. In the opinion of many others besides the writer, Major Taylor steered a little wide in this judgment. The Boy has not the quality of Count Glickstone, and has a stern on him that resembles a sickle. Count Glickstone, who was in about the best condition of any dog at the show, ran right away from the winner in the matter of quality, and though he falls off a bit behind, is a remarkably nice dog. Roderigo was in very poor order or he might have appeared the best in his class. Juno A., a nice bitch, took first in the setter bitch competition and subsequently downed Gladstone's Boy in a special for the best setter in the show. Medora, the second in the regular class, is also a very good style of animal. The puppies that scored in the next competition were a fair class.

The Gordon setter classes were small, but the quality exhibited was singularly good. Mr. Chas. R. Taylor took the dog prize with Gem, a very fine three-year old, which, however, looks over-worn for that age, and the bitch blue ribbon with Rhoda, a remarkably nice one. There was present on exhibition a bitch (Grouse) which, if the judging were by the Malcolm standard, would score against anything in the country. Her four puppies, by Othello, took a blue and red ribbon—a vhc. and an hc.

The red Irish setter Brush is a powerful though clumsy dog, is richly colored, splendidly coated, and shows a feather eleven inches long. The waning popularity of this beautiful breed of setters is quite inexplicable. It is but a few years since it was quite at the top of the tree of favor, but at present sportsmen working for field excellence or for winners in field trials scarcely travel outside the English setter or the pointer. The facts would seem to be that breeders of red Irish setters have of late themselves so fallen in love with the good looks of these dogs that they have been breeding for beauty alone, and the only chance of restoring the Irishman again to general favor will be by a very careful resort to the strains showing the best field qualities. No dog living possesses more intelligence than does the Irish setter, and its lithe, panther-like gallop is not only the poetry of field motion, but also makes the dog about the fastest worker known to any of us. Breeders of this variety should move heaven and earth to try and catch the awards of judges of field trials. Let but one Irishman get there, and "the king will have his ain again." Mr. Sprague also showed a very sweet bitch indeed in Megora, an own sister to Brush.

The mastiff exhibit of Mr. W. P. Stevenson was one of the great attractions of the show. Nothing like it has ever been seen in the West. The kennel is so well known everywhere and so thoroughly understood in New York that to give it a lengthy description in FOREST AND STREAM would be like carrying coals to Newcastle, it is enough to say that St. Louis people thought it perfect. If the sowing of grape seed can reward an owner, Mr. Stevenson should be satisfied, as his exhibit was intensely studied and admired from the opening till the close of each day. It must in justice to the West be said, however, that champion Homer was the one of all others best appreciated. His head possesses that absolute perfection scarcely hoped for outside of a Landseer canvas, and the splendid wrinkled forehead, stop, jet black mask and well dropped loose lips were quite revelations to many visitors who had thought that the pictures they had seen of mastiffs were simply visions of the unattainable. Mr. Stevenson took every ribbon that was offered for the breed. Homer can bear the additional feather in his cap that he is the first American bred mastiff which dares hang out a flag of defiance to anything born on the other side.

There was quite a large exhibit of St. Bernards. Tell took the first prize for the rough-coated dogs. Tell is one of a family of prize winners on both sides of the water. If he could only be always looked at from the front when lying down or squatted on his haunches he would be perfect, but as he really is, as a whole dog, it is doubtful whether he ought not to be ruled out of count wherever he appears. His hind legs are exactly like those of an elephant, not a sign of hock being apparent when he is at rest. When the leg is flexed it can be seen that Tell does possess what has seemed to be a missing joint, and it then appears that the trouble is in his stifle, a joint in which a singular number of St. Bernards fail. Rector II. scored a very meritorious victory in the smooth-coated class, but the pearl of the exhibit was to be found in the eleven-months-old puppy Switzer. This dog was brought direct to St. Louis from Switzerland a few weeks ago, and gave so much satisfaction that a mate for him has been sent for. If Switzer fulfills his present promise he will be the grandest dog of his breed in America.

Mr. S. S. McCuen's New Orleans Newfoundland Miro was way above his competitors, although his coat is of an almost suspicious silkiness. The Irish water spaniel exhibit was one of the features of the show. King Slash is a well shaped dog all round and possesses a good coat. Erin is also a remarkably fine specimen, with somewhat more substance than the King, weighing seventy pounds.

The battle of the cocker standard was to a certain extent compromised at this show, two classifications being allowed, the one of 28 and the other of under 23 pounds. The American cocker man is so dead in love with all blacks or livers that he looks askant at mixtures; but Dr. E. C. Franklin's liver and white Lady Mac might convert the most bigoted. There was no better animal in the show than tais, and one look at her led the cocker man of England to, in his mind's eye, once more see the little beauties feathering through gorse after puss or bunny, or crashing from under a holly tree through a bit of brake on flushing the first woodcock of the season.

The Chesapeakes were most moderate in quality. Greyhounds were a marked advance on last year, and the brace of deerhounds, Dick and Maida, would have scored at Birmingham or the Crystal Palace. Though the foxhounds were moderate, the beagles were excellent, especially those owned by Mr. Wilson Hunt. Mr. J. A. Long of St. Louis has, for a long time past, imported collies so liberally that it was no surprise when his exhibit showed up as well as anything on the benches. His champion, Rob Roy, is the peer of any collie living, and his imported bitches are all cake-takers. There is no doubt that, as far as actual service to man is concerned, the collie exhibit was the most useful of the show, and the sheep men of the West and South will no doubt benefit enormously by Mr. Long's enterprise.

The fox-terriers were a remarkably good lot, but were almost singular among the terriers in this regard. D. W. McMillan of St. Louis showed a very sweet Yorkshire, which might take a blue ribbon in most places if in coat or show condition, which Jack certainly was not on this occasion. Mrs. George Hill, of Madeira, Ohio, was again to the front with her champion pug Joe, and Miss Fanny Baker of St. Louis scored again with the pug Lady Dufferin, one that might be heard of elsewhere were she shown. There were but very few toys, and the nine Italian greyhounds (a bit too much inbred) were all owned by one individual.

But one Great Dane appeared, and by far the best of the miscellaneous classes were the English retriever Nuit and her sons and daughtess. Nuit is of imported stock, very handsome, and this strain is fast growing into favor in the West. The judging was performed most impartially by Major Taylor of Louisville for the sporting classes, and Messrs. Whitman and Naylor of Chicago. All of the arrangements of the show were perfect.

Following is a full list of the

AWARDS.

POINTERS (exhibited by the St. Louis Kennel Club).—1st, E. C. Sterling's Robert le Diable (Croxteth—Spinaway).

POINTERS.—CHAMPION—*Dogs:* 1st, G. N. Apold's Bravo (Bragg—Kate). *Bitches:* 1st, G. N. Apold's Daisy Bravo (Bravo—Lillie II.).—OPEN—OVER 55LBS.—*Dogs:* Com., F. Fink's Jip (Faust—Musette).—OVER 50LBS.—*Bitches:* 1st, Missouri Kennels' Belle Faust (Faust—Countess Vista); 2d, B. F. Seitner's Zulu Faust (Faust—Ruby Croxteth.—UNDER 55LBS.—*Dogs:* 2d, B. F. Seitner's Rap (Croxteth—Lass).—UNDER 50LBS.—*Bitches:* 2d, B. F. Seitner's Lass (Sleaford—Dawn). *Puppies:* 1st, C. J. Bremer's Beau Faust (Faust—Musette); 2d, B. F. Seitner's Lillie Bang (Bang Bang—Lass).

ENGLISH SETTERS.—CHAMPION—*Bitches:* 1st, Memphis Kennels and J. M. Avent's Bessie A. (Dashing Lion—Armida).—OPEN—*Dogs:* 1st, G. G. Ware's Gladstone's Boy (Gladstone—Sue); 2d, J. A. McDonough's Count Glickstone (Royal Blue—Modjeska); 3d, Memphis Kennels and J. M. Avent's Roderigo (Count Noble—Twin Maude). *Bitches:* 1st, Memphis Kennels and J. M. Avent's Juno A. (Druid—Ruby); 2d, P. M. Rector's Clip (Brackett—Lucy); 3d, Missouri Kennels' Medora (Roscoe—Pocahontas). *Puppies:* 1st, Dr. W. G. Moore's Pelham (Pembroke—Menekaune); 2d, Dr. W. G. Moore's Fannie Aldridge (Brant—Meg's Girl).

GORDON SETTERS.—*Dogs:* 1st, C. A. Taylor's Gem (A.K.R. 959). *Bitches:* 1st, C. R. Taylor's Rhoda (Flash—Doane's Chloe); 2d, A. Kammerzell's Nora (Grouse—Dream). *Puppies:* 1st, F. Hayden's Sancho Panza (Malcolm—Grouse); 2d, J. W. Umberhine's Silk (Malcolm—Grousel. Very high com., Dr. J. Whitaker's Don (Othello—Grouse). High com., J. W. Umberbine's Malcolm (Malcolm—Grouse).

IRISH SETTERS.—CHAMPION — *Dogs:* 1st, J. A. Sprague's Brush (Elcho Rose). *Bitches:* 1st, J. A. Sullivan's Effie (Tolstone—Ruby F.).—OPEN—*Dogs:* 2d, T. Kublage's Elcho (Erin II.—Shuffle). *Bitches:* 1st, J. A. Sprague's Megora (Elcho—Rose); 3d, P. J. McGuire's Flora.

MASTIFFS.—CHAMPION—*Dogs:* 1st, W. P. Stevenson's Homer (Cato—Queen II.).—OPEN—*Dogs:* 1st, W. P. Stevenson's Hilderbert (Little Hero—Hilda V.); 2d, W. P. Stevenson's Hector (Nevison—Venus). *Bitches:* W. P. Stevenson's Liberty (Crown Prince—Ilford Baroness); 2d, W. P. Stevenson's Hebe (Cato—Queen II.). *Puppies:* 1st and 2d, W. P. Stevenson's Minerva and Scipio (Homer—Queen II.).

ST. BERNARDS.—ROUGH-COATED—*Dogs:* 1st, E. M. Hull's Tell (Chancellor—Portia); 2d, E. D. Kargau's Puck) (Marco—Ninika). *Puppies:* 1st, R. Henry's Switzer.—SMOOTH COATED—*Dogs:* 1st, H. Garth's Rector II. (Rector I.—Alma II.). *Puppies:* 1st, H. J. Clapham's Girola (Cæsar—Daphne II.).

NEWFOUNDLANDS.—1st, S. S. McCuen's Miro; 2d, C. Neiberding's Leo.

IRISH WATER SPANIELS.—*Dogs:* 1st and 2d, C. B. Rodes's King Flash and Erin (Pat—Tide). *Bitches:* 2d, C. B. Rodes's High Tide (Pat—Tide). *Puppies:* 1st, C. B. Rodes's unnamed (King Flash—High Tide).

FIELD SPANIELS.—1st, G. W. Schenck's Bonanza (A.K.R. 64).

COCKER SPANIELS.—UNDER 28LBS.—*Dogs:* 1st, W. D. Todd's Jet (Tippoo—Woodstock Queen). UNDER 23LBS.—*Dogs:* 1st, J. Cummings's Flip (Bozique—Tago); 2d, Dr. E. C. Franklin's Marmaduke (Bozique—Daisy Queen). *Bitches:* 1st, Dr. E. C. Franklin's Lady Mac (Col. Stubbs—Pet).

CHESAPEAKE BAY DOGS.—2d, Missouri Kennels' Mermaid (Hunt's Joe—Newby's Nellie).

GREYHOUNDS.—1st, Missouri Kennels' Don (Prince—Nellie); 2d, A. G. Hain's Sport. Very high com., T. Hunt's Flash. *Puppies:* 1st, F. Meyers's Tuck (Fly—Lydia).

DEERHOUNDS.—CHAMPION—1st, Wilson P. Hunt's Dick.—OPEN—1st, Wilson P. Hunt's Maida.

FOXHOUNDS.—*Dogs:* 2d, W. Kaiser's Driver. *Bitches:* H. Marjenau's Nellie (Blue—Annie).

BEAGLES.—*Dogs:* 1st, Fritz Thome's Driver (imported Warrior—Fannie). *Bitches:* 1st, Wilson P. Hunt's Fannie (imported Warrior—Fannie); 2d and very high com., Wilson P. Hunt's Faithful and Fidele (Jehu—Maid).

DACHSHUNDE.—1st, B. F. Seitner's Prince (Waldman K.—Fraulein Waldeck). Very high com., Fred Sigmund's Crown Prince (Loeffler's Waldman II.—Gretchen).

COLLIES.—CHAMPION—*Dogs:* 1st, J. A. Long's Rob Roy (imported).—OPEN—*Dogs:* 1st, Geo. P. Strong's Duke (Glen—Fanrie). *Bitches:* 1st, J. A. Long's Flyaway (champion Rex—imported Flora); 2d, J. A. Long's Madge Wildfire (imported); 3d, J. A. Long's Kate (imported).

FOX-TERRIERS.—1st, T. McHugh's Punch (Rattler—Lou); 2d Emporia Kennels' Sam-Sam (Buster—Nell); 3d, Mrs. S. A. Kaye's Sting II. (Sting—Flirt). *Puppies:* 2d, D. W. McMillan's Cleveland.

BULL-TERRIERS.—1st, C. J. Voorhis's Nellie (Napper—Roscoe); 2d, J. Busby's Pete (Billy Hottis's bitch).

BLACK AND TAN TERRIERS.—OVER 7LBS.—1st, J. D. Phillips's Clip.

SKYES.—No awards.

YORKSHIRE TERRIERS.—2d, D. W. McMillan's Jack.

SCOTCH TERRIERS.—No awards.

DANDIE DINMONTS.—1st, Master Voerster's Roger (imported Roger).

PUGS.—CHAMPION—1st, Mrs. G. H. Hill's Joe (champion Comedy—Clytie).—OPEN—*Dogs:* 2d, G. Lane's Whistler. *Bitches:* 1st, Fannie W. Baker's Lady Dufferin.

TOY TERRIERS.—OTHER THAN YORKSHIRE.—1st, C. E. Michel's Rap (Jefferson—Tom Allen's English bitch); 2d, Mrs. S. A. Gaylord's Sara Bernhardt (Oscar Wilde—Mrs. Langtry).

ITALIAN GREYHOUNDS.—1st, Mrs. E. P. Roberts's Lilly (Pet—Blanche); 2d, Mrs. E. P. Roberts's Little Pet (Beauty—Blanche); 3d, Mrs. E. P. Roberts's Topsy (Bennie—Blanche).

MISCELLANEOUS.—Equal 1st, Peter Zimmer's Jumbo (Dane); W. Bascome's Rover (English retriever); T. Hunt's Nuit (English retriever).

SPECIAL PRIZES.

Best pointer dog or bitch, E. C. Sterling's Robert le Diable.
Best English setter dog or bitch, in the open class, Memphis Kennels' Juno.
Best Irish setter dog or bitch—J. A. Sprague's Brush.
Best Gordon setter dog, C. H. Taylor's Gem.
Best Newfoundland dog owned in St. Louis, Chas. Neiberding's Leo.
Best Newfoundland dog or bitch, S. S. McCuen's Miro.
Best collie, J. A. Long's Rob Roy.
Best Chesapeake dog or bitch, Missouri Kennels' Mermaid.
Best Yorkshire terrier, D. W. McMillan's Jack.
Best Dandy Dinmont terrier, Master Voerster's Roger.
Best pointer dog or bitch, E. C. Sterling's Robert le Diable.
Best Irish setter dog or bitch, J. A. Sprague's Brush.
Best fox-terrier, Thomas McHugh's Punch.
Best black and tan terrier, J. D. Phillips's Clip.
Collar for best mastiff, Newfoundland, pointer, setter, collie and pug, E. C. Sterling's Robert le Diable, W. P. Stevenson's Homer, Miss Lilly Munson's Prince Albert, J. A. Long's Rob Roy, Geo. H. Hill's Joe, W. B. Gates's Paul Gladstone.
Kennel man having the best collection of dogs in the best show condition under his care, B. F. Lewis; Philadelphia.
Best dog of any breed entered by a lady, Mrs. Geo. H. Hill's Joe.

NEW YORK DOG SHOW.

CHARMING weather and a very good early morning attendance ushered in the ninth annual New York Bench Show, on Tuesday, April 28, at Madison Square Garden, this city. Like all its predecessors it is being held under the auspices of the Westminster Kennel Club. These shows have been so often described that it is almost superfluous to remark that they are the most notable events of the New York dog world, and are the means of collecting together not only a large number of sportsmen, but also a select, fashionable assemblage.

The arrangements, as heretofore, are excellent. The Garden is encircled as usual with low benches and pens on which the larger non-sporting classes are displayed. Four long rows of pens and wire cages, the latter for the toy dogs, run the entire length of the Garden, two rows being on each side of the large railed inclosure in which the judging of the various classes was conducted simultaneously. The inclosure, which also extends almost the entire length of the Garden, is divided into five compartments, four of them being separated by a single rail, and the one at the Fourth avenue end by a picketed fence. In this the small dogs are judged. The sanitary condition of the Garden is well looked after by a number of uniformed attendants. Dr. John H. Dancer, of Orange, N. J., is the veterinary surgeon in charge, and says the condition of the dogs is excellent.

The judging began promptly at the hour announced, 10 o'clock, and has continued between the hours of 10 A. M. and 5 P. M. up to the time we go to press. Considering the large entry, there were not an unusual number of absentees.

All of the judges were present. Mr. Hugh Dalziel, of London, Eng., judges mastiffs, St. Bernards, Newfoundlands, greyhounds, deerhounds, English retrievers, spaniels (all classes), Basset hounds, dachshunde, bulldogs, bull-terriers (and all terriers except fox-terriers), pugs, Italian greyhounds and miscellaneous classes. Mr. J. M. Tracy, of Greenwich, Conn., pointers and Irish setters; Mr. John C. Higgins, of Delaware City, Del., English setters; Mr. H. Clay Glover, of New York city, black and tan setters; Mr. Isaac Townsend, of New York city, Chesapeake Bay dogs; Mr. A. Belmont Purdy, of Hempstead, L. I., foxhounds; Dr. J. W. Downey, of Newmarket, Md., collies and beagles; Mr. Lewis M. Rutherfurd, of New York city, fox-terriers; Mr. John G. Heckscher, of New York city, poodles.

There was one great improvement of the arrangements over previous shows, and that was that the judging was not spun out, but was pushed vigorously from the start. Another improvement could be made, and that is that the judges should be provided with judges' books such as are used in England, which are vastly superior to the little books now in use. The English book resembles the style of an ordinary check book. The judge duplicating his award list on the stump, and retains the book in his possession until the end of the judging. This method is an absolute check on the slips torn off, which are handled by attendants.

On the afternoon of Tuesday it rained, and on Wednesday the weather proved to be cold and stormy in the forenoon, but cleared in the afternoon.

A protest has been lodged against the St. Bernard dog St. Elmo, entered by Dan Foster, on account of wrong description. As the protest, which is given below, sets forth, this dog has had a very strange career, and his age has been as fickle as the present spring weather.

To the Managers of the Westminster Kennel Club Show:

I beg to enter a protest against the St. Bernard dog St. Elmo, catalogue No. 63, as not being entered in accordance with rules Nos. 2 and 3, which are as follows:

"2. All dogs entered for competition or exhibition only shall be entered in the name of *bona fide* owner. Such entries must be identified by name of dog, its age, and, if known, the names of its sire and dam; if the name of a dog which has won a first prize has been changed, its name at the time of winning any and every such prize, and the place thereof, as well as its present name, must be given. If the names of its sire and dam are not known, it may be entered 'pedigree unknown.'

"3. If a dog be entered without being identified, as directed in Rule 2, it shall be disqualified from competition."

This dog was shown at Boston as Snip in May, 1882, and entered as 1 year and 9 months old. His pedigree was given as —— out of Fanny. His present owner then bought him and entered him as follows: Washington, February, 1883, by champion Turco—Lady Snowdrift. The dog was there identified by Dr. Sawtelle of Boston. At New York the same year he was entered (75) St. Elmo, formerly Snip, 21 months, by Bruno—Fan. At New York, 1884, he was entered (73) 4 years, "full pedigree." At New Haven this year he was entered as 3 years, by champion Turco—Fanny Snowdrift, and he is now entered as 4 years 2 months, "full pedigree."

AWARDS.

MASTIFFS.—CHAMPION—*Dogs:* Prize, Ashmont Kennels' Hero II. (Salisbury—Venus). *Bitches:* Prize, Ashmont Kennels' Lorna Doone (Crown Prince—Ilford Baroness).—OPEN—*Dogs:* 1st, Winlawn Kennels' Moses (The Emperor—Evans's Linda); 2d, Winlawn Kennels' Homer (A.K.R. 1030); 3d, W. O. West's Lion (Salisbury—Tigress). Very high com., Dr. W. Francis's imported Ben (Naylor's Ben—Dutchess). High com., R. C. Watson's Jumbo (imported stock). Com., Wilson S. Phraner's Court (Harold—Dido, Jr.) and William D. Brereton's Noble (Zoedone—Gyp). *Bitches:* 1st, Winlawn Kennels' Prussian Princess (Crown Prince—Nina); 2d, Chas. H. Morgan's Lady Gladys (Crown Prince—The Lady Rowena); 3d, Winlawn Kennels' Queen II. (The Emperor—Queen). Com., A. Grant's Regina (Young King—Raunce) and R. B. Holmes's Nora. *Puppies:* 1st, Ad. Lalonguim's Leo (Rob—Gild); 2d, R. H. Derby's Pharaoh (Homer—Queen II.); 3d, Eben H. P. Squire's Duke (Joe—Madge); Very high com., D. P. Foster's Countess (full pedigree); Herbert Mead's Odin and Olaf (Leo—Leonice). High com., J. L. Winchell's Boss (Zulu—Monmouth Meg); Charles C. Marshall's Count Robert (Don—Countess); C. D. Arthur's Vulcan (Prince—Queen); J. C. Smieton's Kaffir (Zulu—Monmouth Meg); J. H. McMannus's Grim (Fraleigh's Grim—Gunther's Sallie); C. B. Gunther's Paris (Fraleigh's Grim—owner's Sallie). Com., James S. Cattanach's Sir William Wallace (Rover—Jip); Anton Miller's Harry (Harry—Flora); Anton Miller's Jim (Harry—Flora) and Winlawn Kennels' Donald (Homer, A.K.R. 1030—Queen II., A.K.R. 158).

ST. BERNARDS.—ROUGH-COATED—CHAMPION—*Dogs:* Prize, E. R. Hearn's Duke of Leeds (A.K.R. 1535). *Bitches:* Absent.—OPEN—*Dogs:* 1st, D. P. Foster's St. Elmo (full pedigree); 2d, Wm. Graham's First Choice (Boniface—Bessie II.); 3d, Alpine Kennels' Rollo (A.K.R. 92). Very high com., Alpine Kennels' Schoonhoven (A.K.R. 795); Alpine Kennels' Carlo (A.K.R. 89); H. E. Newell's Duke (Bonivard—Regie); John P. Barnard, Jr.'s Prince (Alp II.—Flora); Miss Edna Ward's Og (Boniface—Bessie II.). High com., J. W. Burgess' Rene (A.K.R. 410); Leonard F. Beckwith's Dare (Bonivard—Madona's Elsa); R. H. T.

Adams's Jackson (Brave—Alp), Com., S. F. Emmons's imported Cæsar; Arthur C. James's Alp (full pedigree); Koefler & Ritter's Romeo (Rover—Beauty). *Bitches:* 1st, E. R. Hearn's Rhona (A.K.R. 1159); 2d, Fred W. Rothera's Lady Abess (Hero—Lottie). *Puppies:* 1st, Mill Brook Kennels' Königin (Hermit—Theon); 2d, E. R. Hearn's Abbot (Bonivard—Gertie). Very high com., Mortimer Smith's imported Roi (Dan—Alice); Neversink Lodge Kennels' Mountain Maid (Carlisle—Beauty). High com., Y. B. Sweeney's Romeo (Dan—Theckla); Chas. S. Fitch's Alpine Maid (A.K.R. 1940).

ST. BERNARDS.—SMOOTH COATED.—CHAMPION—*Dogs:* Prize, E. R Hearn's Don II. (The Shah—Dewdrop). *Bitches:* Prize, Fred W. Rothera's Daphne (Rex—Alma).—OPEN—*Dogs:* 1st, Mill Brook Kennels' Verone (Rex—Alma I.); 2d, Herbert C. Whitney's Essex (A.K.R. 931); 3d, H. H. Chittenden's Ernst (Rex—Alma). High com., Walter S. Murphy's Chic (Lohengrin—champion Jura); and Mill Brook Kennels' imported Zeno (Harold—Judy). *Bitches:* 1st, Mill Brook Kennels' Wanda (A.K.R. 1941); 2d and 3d, withheld. *Puppies:* 1st, Mill Brook Kennels' Kobold (champion Hermit—Alma); 2d, E. R. Hearn's Valentine, Jr. (champion Valentine—champion Leila). Very high com., Mill Brook Kennels' Keeper (Mentor—Brunhild); Mill Brook Kennels' Kara (Mentor—Brunhild). High com., Mrs. Pre-ton Stevenson's Grover (Bruno—Bertha). Com., K. E. Hopf's imported Belline II. (Barry—Belline I.).

NEWFOUNDLANDS.—OPEN.—*Dogs:* 1st, S. S. McCuen's Miro: 2d H. Burmann's Pride (Hero—Lady of the Lake). Very high com., C. F. Strauss's Tasso (Pontoon—Fannie). High com., Hon. D. Barnes's Bruno, and Geo. H. Gibson's Brigus (Captain—Fan).

GREYHOUNDS.—CHAMPION—*Dogs:* Prize, H. W. Smith's Friday Night (Master Sam—Polly). *Bitches:* No entries.—OPEN—*Dogs:* 1st, H. W. Smith's Solomon (Caliph—Polly); 2d, H. W. Smith's Ben (Cremorne—Lioness). Very high com., Madame F. Restless's imported Washington (Washburne—Lady Barnard); Dr. Mary J. McCleery's Victor (Roi—Maud McGrath). Com., Miss L. De Vivo's King Lear (full pedigree) and Dr. Brandreth Symonds's Master Donald (Ben—Fan). *Bitches:* 1st, H. W. Smith's Mother Demdike (Pensive Laddie—Playmate); 2d, H. W. The entry to all specials will be free, and they will be awarded to the best animal in each instance, without allowing option. A dozen more have been promised, the particulars of which have not yet been received, and it is expected that a large number will be donated before the opening of the show. The intention of offering challenge classes instead of championships has been to throw the championships of Canada open only to those dogs that have qualified by winning a first in a challenge class, for future shows. But to meet the wishes of owners of dogs that already stand at the head of the list in their respective breeds, dogs that have won three or more first prizes at the shows mentioned in the regulations printed in the prize schedules, may on payment of $3 entry fee at option compete for medals representing the championship of Canada in the following breeds: Setters, pointers, field spaniels, cocker spaniels, greyhounds, fox-terriers, collies and bulldogs. Others will be provided for in such cases as the entries may warrant. The dates of the show are May 13, 14, 15. In Regulation No. 10 for Wednesday read Friday.

MR. HUGH DALZIEL, who arrived in this city on Friday morning, had a delightful voyage across on the Baltic. He was accompanied by young Mr. Bevan, who has come here to make this country his home, and seek employment as a dog breaker. Mr. Dalziel was met on landing at the Barge Office by Messrs. Terry and Smith of the Westminster Kennel Club, Mr. J. P. Keene, Mr. John Wills and Mr. Satterthwaite of the New York *Herald*. The famous English judge was looking well. He brought to Mr. Grinnell, of this paper, a picture of beagles from the mysterious "Lillibulero." Mr. Dalziel has been asked to judge the non-sporting classes at Chicago.

MINSTREL WHELPS. — Bernardsville, N. J.— *Editor Forest and Stream:* I notice in FOREST AND STREAM of April 23 an advertisement of Thos. Allen, 2039 North Twelfth street, Philadelphia, offering for sale a black, white and tan beagle dog, by imported Minstrel, etc., whelped Jan. 18, 1884. I would respectfully ask Mr. Thos. Allen how this can be, as Minstrel, Foreman and Deborah arrived in America on Feb. 27, 1884. Comment being made on these dogs by "Rusticus" in FOREST AND STREAM of March 6, 1884, page 110. Will Mr. Allen kindly explain?—F. C. PHEBUS.

THE MASTIFF MOSES.—Mr. Stevenson, for the Winlawn Kennels, has purchased through Mr. Thornton the mastiff Moses. The price paid was 200 guineas, and the order was given by cable. Moses is an excellent dog, and will, no doubt, do much for the breed in America. His record on the bench in England is a creditable one; and he has just taken first at New York.

KENNEL NOTES.

NOTICE TO CORRESPONDENTS.

Kennel notes are inserted in this column free of charge. To insure publication of notes, correspondents MUST GIVE the following particulars of *each animal:*

1. Color.
2. Breed.
3. Sex.
4. Age, or
5. Date of birth, of breeding or of death
6. Name and residence of owner, buyer or seller.
7. Sire, with his sire and dam.
8. Owner of sire.
9. Dam, with her sire and dam.
10. Owner of dam.

All names must be *plainly* written. Communication on one side of paper only, and signed with writer's name.

NAMES CLAIMED.

☞ *See instructions at head of this column.*

Zara. By James W. Bullock, Cincinnati, O., for brindle mastiff bitch, whelped Oct. 23, 1884, by Ilford Cromwell out of Ashmont Lady.

Gambler. By J. W. Murnan, Keeling, Tenn., for black, white and tan English setter dog, whelped March 18, 1885, by Sportsman (Gladstone—Sue) out of Gem (Gladstone—Gazelle).

Paris IV. and Victress II. By Alex. G. Habbick, Galt, Ont., for blue belton English setters, dog and bitch, whelped Dec. 26, 1884, by Paris III. (Paris II.—Lady Princess) out of Forest Ida (Dick Laverack—Forest Fly).

Nym. Mastiff bitch, age not given (Turk II.—Madge), owned by Burr Hollis, Wellsville, N. Y., from hemorrhage of the bowels.

KENNEL MANAGEMENT.

☞ **No Notice Taken of Anonymous Correspondents.**

W. M. C., Hartford, Conn.—Give nourishing food and plenty of exercise.

E. V. L., New York.—Let her have her own way, do not encourage or restrain her.

M. N. F., Foxburgh, Pa.—The breeding of the dam is good, we know nothing of the sire. We do not know the gentleman you mention.

S. W. E., Weldon, N. C.—My setter puppy has good appetite, good coat, but his eyes are quite red, and the lids are very much swollen at the corners. I have tried several eye washes, but with no good result. Ans. Try the following: Acetate of lead, five or ten grains; laudanum, one drachm; rose water, two ounces. Drop two or three drops in the eyes twice daily. Satisfy yourself that the general condition of the puppy is good.

W. K. P., Athens, Pa.—What shall I do for a wart on the tongue of an eight-months-old pup? The wart is white, and seems to be growing. Ans. Get a stick of nitrate of silver and apply freely over the surface of the wart every day. Pure nitric acid is quicker. It should be applied by means of a pine stick, match or toothpick. In using the acid care should be taken not to allow any drops to fall on tongue or throat, as it is very corrosive.

J. F. I.—My setter dog, three years old, was taken last summer with some kind of skin disease, which I thought was the mange. I tried Glenn's sulph r soap and Glover's mange cure; neither of them did any good. He has commenced to dig and bite himself this spring just the same. What shall I do? Ans. Wash the affected parts carefully with carbolic soap, and after drying apply with your hands the oxide of zinc ointment, rubbing it gently into the skin. Give the dog five drops of Fowler's solution of arsenic morning and evening in his food.

W. C. W., Titusville, Pa.—A cocker pup, 5 months old, is troubled with lameness in front for nearly a month past I cannot locate it exactly, for it does not seem always in same leg. He has no external sore, and he does not flinch on examination. It is better at times, and sometimes wholly disappears. Pup sleeps in dry shavings in dry cellar, has been kept indoors a great deal—quite a house pet. What is the best work on general management and training of dogs? Ans. Your puppy has rheumatism in all probability. Give him ten drops of the iodide of iron, morning and evening. Keep his bowels easy, and feed nutritiously, but not too stimulating diet. Hammond's "Training vs. Breaking" is the best book on that subject. Hill's "Diseases and Management of the Dog" is a good book.

BEAUTY, Newark, N. J.—My dog is an Italian greyhound, the hair on her back is very short and thin, has been so for a year or so. I took her to a dog fancier and he said it has not the mange, but gave me a preparation to rub her with; it has not done her any good. There is growing on her back, about a finger's length from the tail, a lump, it looks like a tumor. It is almost the size of a hazel nut, and disfigures her very much. Ans. To keep the skin in good condition a certain amount of grooming is necessary. Fowler's solution of arsenic in five or ten drop doses in the food is an excellent internal skin medicine. Extreme applications of the most service are carbolic salve or soap, or the ointments of zinc oxide or lead. The swelling is, of course, a tumor. If freely movable on the parts below it is probably fatty and could easily be removed with no disfigurement. It can probably be removed in any event and leave no scar behind.

S. V. S., Troy, N. Y.—An Irish setter bitch, nine months old, always been perfectly well and full of life, fed mainly on meal. Five weeks ago she did not eat as heartily as usual, and whimpered a little when she opened her jaws. This continued for two or three weeks. Two weeks ago we noticed a bunch on her face about as large as a medium-sized egg just where the jaws hinge together. She still whines when she opens her mouth, and refuses anything but soft food. The bunch is hard, like bone, and is not at all sensitive to the touch, but the bitch will not permit her mouth to be opened. She never opens her mouth more than three-quarters of an inch. Her general health is perfectly good, and she is always in high spirits except when eating. Ans. It seems as though your dog had either broken her jaw close to the articulation, or what is more probable, she has a synovitis or inflammation of the joint on that side. You had better cut or shave the hair from a space an inch to an inch and a half square. To this apply a coating of cantharides and collodion. After the blister has formed apply a hot flaxseed poultice. You can keep it on by a muzzle. It will be three or four hours before a blister forms.

Rifle and Trap Shooting.

RANGE AND GALLERY.

LITTLE BULLETS AND BIG SHOTS.—In looking over the columns of FOREST AND STREAM for a small cartridge with penetrating power and accuracy, and I found the very article in the shape of the conical bullet caps, which for target practice cannot be excelled, even at a 75ft. range they are the article to be used, as I have now several bullets taken from a 2in. pine board at 75ft., and they settled 1½in. below the surface of the board, and took quite a time to get out, and with the exception of a little flattening they almost retain their natural form. Another cartridge worthy of notice is the .22-caliber long rifle cartridge, and as I have used a good many cartridges of every variety and of different makes, I ought to know whereof I write, and having given the above named cartridges a most thorough and rigid test, I recommend them to all who use bullet caps or cartridges either for target or for the field. I have made several remarkable shots, one at long range and the other was not quite so far. The first shot was this: I caught one day a large rat in a wire trap, and not knowing in what way to dispose of the rodent, when my friend Steve C. suggested that we shoot it. I got the rifle and loaded it with a .22 long rifle cartridge, took aim and fired the bullet, passing through the rodent's body and 1in. below the surface of a 1½in. plank at 50ft., the plank being 2½ft. away from the rat. This was not such a remarkable shot, but it showed the penetrating power of the bullet. Another one which might be termed a remarkable shot is this: There being a number of large rats about our stable, it being over a creek, I saw two rats on the stone wall each presenting a fine target about 6in. apart, but on a direct line opposite each other. I aimed at the one nearest me and fired, when to my surprise both tumbled in the water with a splash, and on investigation it showed that the bullet passed through the neck of the first, glanced along the stone and hit the other in the body.—KULL (Pottsville, Pa., April 18).

BRIDGEPORT vs. CANTON.—The return match was shot at Collinsville, Conn., April 25, on the well-appointed range of the Canton Rifle Club. Score:

Bridgeport Club.															
Marsh	9	11	11	11	12	11	8	12	12	10	9	11	11	11	—160

After the match some scrub shooting was indulged in until 3 o'clock, when all repaired to a sumptuous banquet.

BOSTON, Mass., April 25.—There was a very good attendance of riflemen at Walnut Hill to-day, but the conditions were not so good as could be desired. During the early hours of the day the wind was from the northwest, but later it shifted to the east. The light was quite trying, but after 5 o'clock the condition improved, and some very good scores, as given below, were made:

Creedmoor Match.

O M Jewell	5545545555—47	N F Tufts	5454454554—45
A Landers	5545545445—46

At our annual tournament the last week of May, cash prizes aggregating $247.25 will be given. The list will be supplemented by many valuable articles of use.—FRED. A. PERKINS.

SPRINGFIELD, Mass.—The Rod and Gun Rifle Club held their regular weekly practice shoot April 25. There were but four members present and four marksmen from Amherst. It was a good day for rifle shooting. The following scores were made, 10 shots each, 200yds., off-hand, Massachusetts target:

J D Marks	10	12	11	12	10	10	9	12	11	10—107
E Stephens	12	10	11	12	12	11	11	11	9	10—109
C E Knox	10	10	9	11	10	12	12	10	11	12—106
E S Field	10	8	11	9	8	9	10	10	11	11—96
T Johnson	7	8	7	10	6	10	12	8	10	9—87
J O Jones	8	8	6	7	7	10	11	9	8	12—86
S Harrison	9	8	8	10	8	5	8	11	9	9—85
J J House	9	9	7	8	11	10	8	7	6	8—83

NEWARK, N. J.—The Essex and Frelinghuysen Rifle Clubs will shoot a series of three matches. The conditions are as follows: 1st, date of matches, 7th, 14th and 21st of May; 2d, first match to be shot on the Frelinghuysen range, the second on the Essex and the third on the Warren, 3d, any rifle, .22 cal., 3-pound pull, and regular association distance, Zettler ring target; 4th, teams to consist of ten men and ten shots per man; 5th, matches to commence at 8 P. M. sharp; 6th, time to be limited to fifteen minutes per man; 7th, each club to appoint a scorer and the scorers to appoint a referee, the teams to shoot alternately; 8th, the losing team to pay for the match shot; 9th, no sighting shots allowed; 10th, the position of the referee to be at the firing point. The Frelinghuysen team will be taken from the following members: G. D. Weigman, J. K. Walsh, E. O. Chase, R. Westerman, Geo. Zimmer, Wm. P. McLeod, A. C. Neumann, W. F. Lyon, F. Brant, J. L. Tobin, James Dainty, T. Malcolm, A. Vreeland, S. Shackelford. Essex team, G. Snellen, Wm. Watts, C. Cooper, J. Coppersmith, S. Welter, A. Lake, Wm. Germayne, E. Neil, J. McCullum, C. Meisel.

CONNECTICUT MARKSMEN.—Practice of the Connecticut Militia will extend from May 1 to October 31, and the new orders make some important modifications of existing rules. Any position without artificial rest, may be taken at the mid-range targets. The men are to be divided into three classes instead of two as heretofore. Heretofore all members making 50 per cent. of the possible score were called "marksmen," and those making 80 per cent. were termed "sharpshooters," but the new division gives members making 52 per cent. of the possible score at 200 and 500yds. a title of "marksman" and those making 66 per cent. are termed "first class marksmen," and those making 80 per cent. to be "sharpshooters." All contestants must previously have qualified in the lower grades.

THE TRAP.

Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

THE NATIONAL GUN ASSOCIATION.

THE board of directors of the Association has spent no small thought on the question of how best to bring the more distant and at present unassociated shooters into intimate action with the main body. With the view of centralizing the friendly rivalry between the most distant members of the Association it is proposed, in the course of time, to divide the latter geographically into a number of divisions or sections, with the principal cities as the centers, where the principal offices of the gun clubs shall be established, and to, at least one of which, each member of the Association may be assigned, that is, with which he shall be entitled to shoot and to assist generally in carrying out the main objects of the Association.

It is proposed to name these clubs after the prominent Indian tribes, who originally frequented the respective localities, or other local names.

Until further notice the members will be divided into five divisions or tribes, with centers and names as follows, respectively:

New York city, the Manhattan Gun Club; Chicago, the Wyandotte Gun Club; Cincinnati, the Miami Gun Club; Nashville, the Choctaw Gun Club; San Francisco, the Modoc Gun Club.

As the number of members of the association in the vicinity of other cities increases, additional clubs will be formed, with the main office in said cities.

In the course of time it is proposed that these clubs shall rent shooting grounds, maintain an office and employ a salaried secretary or manager, whose duties shall be those usually pertaining to this office, and in addition shall assist and encourage those whose duty it is to enforce the game laws in their respective sections. This shall be done only when the number of members of each club shall be sufficiently large so as to justify the expense, which must be secured from the extra annual dues of club members, and various items of profit, such as sales of pigeons, admission fees to grounds of non members, etc.

No member of the National Gun Association is obliged to join either one of these clubs; it shall be entirely optional; it being understood moreover, that nothing contained in this prospectus shall derogate in any way from the rights and privileges of member of the National Gun Association as set forth in the constitution, by-laws and rules of said association.

It is in order that the above club expenses may be equitably divided among the club members, some of whom reside in the city and others at a distance, into the following (though a member of Class 2, 3 or 4 can, if he so chooses, be assigned as a member of Class 1):

In addition to the honorary members, there shall be four classes of members of this club, to be determined by the governing committee and depending upon the residence of the members, viz:

First Class.—The "city members," who live in the city or immediately adjoining, and who expect to avail themselves daily of the Club rooms, privileges, etc.

Second Class.—The "suburban members," who live in the suburbs of the city, outside of corporate limits and within 25 miles of the city, and who therefore do not expect to avail themselves daily of the club privileges.

Third Class.—The "distant members," who reside beyond 25 miles from and within 100 miles of the city, and who occasionally desire to avail themselves of the club privileges.

Fourth Class.—All members residing beyond 100 miles from the city.

An approximate estimate will be made of the annual expense, and divided among the club members in the following ratio:

First class, 5 (annual dues guaranteed not over $5).
Second class, 3 (annual dues guaranteed not over $3).
Third class, 2 (annual dues guaranteed not over $2).
Fourth class, 1 (annual dues guaranteed not over $1).

In other words, the annual dues may be less than the latter amounts, but they shall not be more.

When the Board of Directors of the National Gun Association have ascertained, by direct correspondence, that sufficient club members have been obtained whose annual dues, at the above rate, would meet the above-mentioned expense, then they will call a meeting of said members for the election of officers, the renting of grounds, the appointment of a salaried secretary, etc., after which meeting the above pro rata annual dues shall begin, payable semi-annually, in advance.

Upon becoming a member of the National Gun Association, the secretary of the latter will assign the same to one of the above clubs, or where a member is distant from all the centers, he is requested to state as to which of the clubs he prefers to be assigned.

THE SPRINGFIELD TOURNAMENT.

Editor Forest and Stream:

Kindly permit me to inform your numerous readers that preparations are now completed for making our First Inter-State Tournament at Springfield, O., May 5 to 9, one of the most inviting occasions of this kind of this season. The ground cannot be excelled for the purpose—few climates can be compared to that of Springfield in May—$1,50 to $2.50 per day secures good board and lodging; reduced railroad fares have been promised on routes centering at Springfield. A large attendance is expected, not only of the best shots, but also of the medium shots, as the handicap rules will enable the latter to successfully compete with the former.

This issue of your valuable paper is the final one before the tournament; hence, we desire especially to call the attention of those who do not shoot at the trap to the meeting of the members on the evening of May 4, 8 p. m., at the Arcade Hotel, for the general discussion of the affairs of the association. We especially invite the presence of such with the hope that their suggestions may enable us suitably to provide for other objects than that pertaining to the trap. Committees of various kinds will be appointed. Future tournaments will be decided upon.

Orders have been issued for 20,000 clay pigeons and 4,000 live pigeons. There will be three trap-stands for the former and two for the latter. The working of the association rules will receive a thorough test, the criticisms of all comers being invited to assist therein.

The Springfield "Big Six" brass band will enliven the daily programme with suitable music.

Refreshments will be provided on the grounds (but no liquor can be sold thereon) under the directions of the association.

L. E. RUSSEL, President.
WASHINGTON A. COSTER.
J. E. BLOOM.
F. C. BISHOP, Secretary.

REVOLVER SHOOTING.

Editor Forest and Stream:

I cannot now tell you when, but I remember that a year ago, more or less, I advocated the use of the .32-cal. extra short rim-fire cartridges for revolvers. In FOREST AND STREAM, March 12, your correspondent "Paddle" agrees with me, and though I have carefully read all that you have published on this subject, yet "Paddle" is the only one of your correspondents who thinks seemingly as I do on revolver shooting.

What is a revolver to be used for? Do you want it to carry, through a 3in. barrel, a Winchester rifle cartridge, model 1873 and .44-cal? Do you want to be able to kill a man at 500yds., if you can hit him? Do you expect to engage in conflicts with grizzlies, lions, tigers "and chimeras dire?" If not, of what use is such a weapon? Who will answer?

Let me quote from "Paddle;" he says: "I use the extra short rim-fire cartridge which gives perfect satisfaction. It will not penetrate thirteen inches into a pile of pine boards, but this does not affect my peace of mind. It will go through a rabbit at 30yds. and is powerful enough for anything ordinary. With this cartridge revolver shooting becomes a pleasant pastime without the bang and kick of the heavier charge." "O! excellent young man." My idea regarding a revolver is that the cylinder should be arranged with reference to the cartridge used. There is no revolver, to my knowledge, that does this. In every one there is a jump from the point where the ball has been seated into the barrel proper. My ideal revolver is of same weight as old Smith and Wesson .32, but with cylinder shortened to just admit a .32 extra short rim-fire (or central fire when so ordered) but the mode of locking the barrel changed to the Smith and Wesson new model style. The barrel could be 3in. instead of 6, as in their old model. The cylinder should be so bored that the bullet from its very start would be confined in a tight chamber, and the single barrel should be bored of exactly the same bench size as the muzzle of the cylinder. In other words there should be no jump at all. The trigger should have a guard, etc., and not be sunk in a mere projection from the weapon. The .32 extra short might be made with an enlongated bullet.

The advantages I claim for such a weapon are increased accuracy, comfort to shooter and safety to others. A .32 extra short will not carry more than 250yds. I have tried them on water. Any person can tell whether he will probably shoot somebody or something unintentionally with only that distance possible. AMATEUR.

SOMERSET, Pa.,

SEATTLE, W. T., April 16.—The Rod and Gun Club of Seattle held their first shoot for the season of 1885, at their grounds at the Driving Park. The shoot was at 20 birds, 5 single blackbirds, 5 single clay-pigeons and 5 pairs of doubles, doubles consisting of a clay-pigeon and a blackbird, 18yds. for singles, 15yds. doubles:

	B. B.	C. P.	Doubles.				
Clarke	00101	11111	00	11	01	11	11—14
Boarman	10100	11111	10	01	10	11	01—13

Jones	00101	00010	00	00	00	00	00— 3
Louch	00000	00000	00	00	01	00	00— 1

First sweepstakes—5 single blackbirds: Collins 3, Lewis 2, McDonald 4, Booth 4, McMicken 1, Perry 3, Brown 2, Edwards, 4, McNaught 1, Louch 0, Stackpool 3, Robertson 4, Harris 5, Clark 3. Boarman 2, Hardy 1. Harris took first, Booth Edwards and Robertson divided second and third.

Second—3 doubles: Collins 3, Lewis 4, McDonald 3, Booth 4, McMicken 3, Perry 3, Brown 3. Edwards 4, McNaught, 3, Stackpool 3, Robertson 2, Harris 1, Clark 2, Boarman 4, Hardy 1. Lewis, Booth, Edwards and Boarman shot off at doubles: Lewis 1, Booth 3, Edwards 2, Boarman 1. Booth first, Edwards second, Boarman and Lewis divided third.

Third—5 single clay-pigeons: Collins 4, Lewis 4, McDonald 4, Booth 2, McMicken 4, Perry 3, Brown 2, Edwards 3. Louch 2, Stackpool 3, Robertson 5, Harris 4, Clark 5, Boarman 3, Hardy 3. Clark and Robertson divided first and second, Collins, Lewis, McDonald, McMicken and Harris shot off for third, miss and out: Collins 0, McDonald 1, Harris 1, Lewis 1, McMicken 0. McDonald took third.

AUGUSTA, Me., April 30.—The Cushnoc Gun Club reorganized at Fairbank's gun store this evening with the choice of the following officers: President, J. F. Pierce; Vice-Presidents, P. O Vickery, S. B. Glazier; Secretary and Treasurer, J. A. Fairbanks; Executive Committee, W. T. Jones, G. M. Dana, C. R. Whitten. It was voted to have a shoot on Fast Day, at 2 o'clock P. M.

SACRAMENTO, Cal., April 12.—The Forester Gun Club held its first shoot of the season at Agricultural Park to-day. The weather was delightful, the birds first-class, and everything passed off successfully. The principal event was the contest for the gold medal, and eighteen members participated, the score standing as follows at the close:

Todd, 26yds	00110010101—6	Coffey, 21yds	10011000010—5
Schroth, 21yds	11110100111—9	W E Gerber, 21yds	11111011111—10
Eckhart, 26yds	10101110110—8	Watson, 26yds	11100011111—9
Verity, 21yds	10011001010—6	Kane, 21yds	11100111111—10

H Gerber, 26yds	01100111 1101—8	Dase, 21yds	11000011111—8
Miller, 21yds	01001100001— 4	Chapman, 21yds	11111011111—11
J Gerber, 26yds	11111011101—10	Zuver, 31yds	10111010111— 9

Messrs. Gerber and Chapman shot off their tie on 11 at double birds, and the former won the medal:

Gerber	11 10 11—5	Chapman	11 00 10—3

After this had been decided, a match was made between Coons and Zuver, 10 birds, for $25 a side, and Coons won easily, Zuver showing far from his usual form.

BOSTON, April 22.—The trap shooters assembled in large numbers at Walnut Hill to-day. The day was all that could be desired for the sport. Below are the records: 1. Five clay birds, five traps—Dickey first, Souther second, Bancroft third, Simon fourth. 2. Three pairs birds—Dickey first, Eager second, Simons and Gilman divided third, Webber and Brown divided fourth. 3. Seven single birds—Dickey and Webber divided first, Hart, Stark and Gilman divided second, Little, Lovejoy and Souther divided third, Knowles four h. 4. Five birds straight away—Gilman Stark and Mitchell divided first, Dodge second, Simons and Henry divided third, Souther and Moore divided fourth. 5. Three pairs birds—Gilman and Lee divided first, Bancroft second, Dickey third. 6. Seven birds, five traps—Lovejoy first, Bancroft second, Faulkner and Russell divided third, Souther and Henry divided fourth. 7. Three pairs birds—Dickey first, Eager and Shattuck second, Bancroft and Brown third, Little and Black fourth. 8. Ten single birds—Eager first, Gilmore and Stanton divided second, Dodge, Webber and Souther third, Nichols and Henry fourth. 9. Five straightaway birds—Nichols, Henry and Stark divided first, Stanton, Eager and Gilman divided second, Dodge and Souther divided third, Brown fourth. 10. Ten clay-pigeons—Stark first, Souther and Eager second, Mitchell and Moore third, Bancroft and Knowles fourth. 11. Bancroft and Stanton divided first, Hart and Eager second, Dodge and Nichols third, Souther fourth. 12. Five birds, 30 yards rise—Faulkner first, Gilman second, Mitchell third.

SOUTH MANCHESTER, Conn., April 22.—The following scores were made by the Manchester Gun Club to-day:

W B Cheney	1 0 1 0 1 1 1 1 1 0 1 1 1 0 0 1 0 1 1 0—13
J H Cheney	0 0 0 0 1 0 1 1 0 1 1 1 1 0 0 1 1 0 1 0—10
Dexter Cheney	0 1 0 1 1 1 0 0 1 1 1 0 1 1 1 1 1 1 1 0 1—14
W Hyde	1 1 1 1 1 1 1 1 1 0 1 1 1 1 1 0 1 1 1 1—18
F E Watkins	0 0 1 1 0 1 1 1 1 1 1 0 1 1 1 1 1 1 1 1—16
M White	1 0 1 0 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1—18

TRAP NOTES.—The Country Club, of Pelham, N. Y., announce a programme of trap shooting to take place during May and June.... An offer has been made to match the English wing-shot, Captain Gwynne Price, of St. Louis, against Mr. Penrose, of San Antonio, Texas, who defeated W. F. Carver. The conditions are to be English rules, 100 live birds each for $500. ..Henry Ockerhausen, John Tilson, Richard Costello, Andrew Doyle, and others have organized a new gun club at Clifton, S. I.....The Carteret Gun Club, of Bergen Point, N. J., announces a weekly shoot for a silver cup to be won twice by a member before becoming his property.

EMERALD GUN CLUB, New Dorp, S. I., April 21.—The supply of birds was a little short of the number that we generally shoot at, however, we had a very enjoyable day and finished the shoot with clay-pigeons. The following is the score, the last three shots of each man being at clay-pigeons. Grainger, Glaccum, Hudson and Otten 30yds.; Sidley, N. Measel, Cody and Godfrey, 25yds.; rest 21yds.:

C M Grainger	0100011110— 5	J Measel	1111111111—10
W Glaccum	1110011111— 8	J Howard	0101010011— 5
H Rubine	0010101000— 3	Counsellor Cody	0101011100— 5
J P Connor	1111110000— 7	J W Godfrey	1110111110— 8
L Schermerhorn	1101110000— 6	P Heenan	0101010000— 3
R Regan	0011100010— 4	W Turner	0100010000— 2
Dr Hudson	1011010111— 7	H Mackin	1101100100— 5
H Otten	1100101111— 7	A McHale	0100100100— 3
J Mackin	1001010000— 3	P Butry	1010111010— 6
J Sidley	0010111110— 6	M W Murphy	0110101111— 7
N Measel	1011111110— 8	T Strader	1011111000— 6

J. Measel wins first prize.

Ties for second at clays: W. Glaccum 1, N. Measel 3, J. Godfrey 2.

Ties for third at clays: Dr. Hudson 1, H. Otten 4, J. P. Connor 0, M. Murphy 3.

TOPSHAM, Me., April 24.—Annual shoot of Riverside Club for club badge, 20 clay pigeons, 10 singles at 18yds. rise, 5 pairs at 16yds. rise, use of one barrel for singles:

M C Hall	1 0 0 0 0 1 0 0 1 0	01	10	11	10	00— 8
A Q Goud	1 1 1 0 1 0 1 1 1 0	10	11	10	11	10—14
A S Alexander	1 1 0 1 1 0 1 1 1 1	01	11	01	11	11—16
G N Goud	1 1 1 0 0 1 1 0 0 1	10	10	00	10	11—11

G Strout	1 0 0 0 0 0 1 0 0 0	10	00	00	01	10— 5
G E Keen	1 1 1 0 0 0 1 1 1 0	00	00	00	01	10— 8
C L York	0 0 0 1 0 1 0 1 0 1	10	11	00	10	00— 8
C Goud	0 0 1 1 1 1 1 1 1 0	10	11	11	00	00—12
C Simpson	0 1 1 1 1 0 0 1 0 0	00	00	11	00	11— 9
A E Hall	1 0 0 1 1 0 0 0 0 1	10	00	01	00	00— 6

WELLINGTON, Mass., April 25.—Wing-shooters were not very numerous at the range of the Malden Gun Club to-day. The few who were there shot the following events: 1. Five clay-pigeons—Stanton and Souther divided first. 2. Six blackbirds—Herbert and Loring divided first. 3. Six blackbirds—Shaffer first. 4. Three pair clay bird—Shaffer, Ellsworth and Scott divided first. 5. Six blackbirds—Stanton first. 6. Three pairs doubles—Shaffer first. 7. Five clay-pigeons—Ellsworth, Jones and Shaffer divided first. 8. Five blackbirds—Shaffer and Wheelock divided first. 9. Three pairs blackbirds—Shaffer first. 10. Six blackbirds—Loring first. Sanborn won the gold medal.

THE GREENWICH (CONN.) GUN CLUB, lately organized as follows: Arthur E. Rendle, President, W. Miner, Vice-President, J. M. Tracy, Treasurer, L. Contoit, Secretary. Executive Committee, Messrs. Marshall, White, Ritch and Stackhouse. The president offers a Greener $85 trap gun to the member making the highest score in the eight monthly shoots ending November this year. Regular monthly shoot for the Rendle prize, Greener gun, 20 glass balls, 4 traps, 18yds. rise.

White	0001000000110000000— 3	Ritch	0010010110110110000— 8
Mead	0100100000100001001— 5	Marshall	1110100 001010000101— 9
Miner	1011001010 0101011110—11	Contoit	1001010000000 000000— 3
Tracy	1110010001100000100— 7	Merritt	1100101111000000100— 9
Rendle	1011010001101101010—10	Brush	0100010010000000000— 3

Two special prizes were given, one to the member making the best score in the first 10 balls, won by Mr. Merritt, the other to the member making the best score in the last ten balls, won by Vice-President Miner. Sweepstakes, 5 balls, 3 traps. 18yds. rise, five entries.

White	01011—3	Rendle	11011—4
Marshall	11111—5	Ritch	11010—3
Miner	01010—2		

The next monthly shoot takes place on May 13 at the same place.

THE NATIONAL GUN ASSOCIATION.—All who would foster "The Gun" as a healthy outdoor sport are invited to join the National Gun Association, organized New Orleans, Feb. 10, 1885. Incorporated Covington, Ky., March 4, 1885. Membership fee $5. Annual dues $1. Life membership $25. A series of inter-state and international tournaments, open to members only, will be announced shortly, the first at Springfield, Ohio, prizes $2,000 guaranteed, May 5 to 9. Handbook with full details, constitution, trap shooting rules, etc., price 10 cents. Dr. L. E. Russell, President, Springfield, Ohio; Fred. C. Bishop, Secretary, Box 1,292, Cincinnati, Ohio; J. E. Bloom, General Manager and Treasurer, Cincinnati, Ohio.—*Adv.*

Sept. 9—Beverly Y. C., Nahant, Fall Regatta.
Sept. 19—Hull Y. C., Champion Race.
Sept. 19—Boston Y. C., Fourth Club Race.
Sept. 19—Pentucket Y. C., Union Regatta.
Sept. 28—Pentucket Y. C., Championship Regatta.

THE CUP RACES.

A MEETING of the committee of the N. Y. Y. C. was held on Friday last to consider Mr. Beavor Webb's letter, lately received. The races will be sailed early in September, Genesta first sailing three, and in the event of her losing, Galatea also sailing three. Each series will probably consist of one triangular ocean race from Sandy Hook, one 20 miles to windward or leeward from the Hook and return, and one over the New York course, each being about 40 miles. The trial races will probably be held about July 1.

CRUISE OF THE WANDERER.

ON the morning of the 12th of December last, at 7 o'clock, I shoved the bow of my 17ft. catrig off Summerlin's wharf at Punta Rassa, situated at the lower end of San Carlos Bay, Florida, with three weeks' provisions, bound for a cruise through Charlotte Harbor, up the Wyaka River and return. My companion on this cruise was my father, a thorough sportsman, and one of the very best men I ever saw in the art of woodcraft, and many were the pleasant evenings spent with him around a cheerful fat-pine camp-fire during our three months roughing it in Florida.

We had the wind W. N. W. dead ahead, and freshening every minute. On the way across to Middle Point on Sanibel Island, I turned in a single reef, but with the strong tide and wind conflicting, we soon had plenty of the briny driving over us. Kept on, however, and reached under the lee of one of the numerous oyster bars with which these waters are studded, and concluded to come to under the point, from which a beautiful bay makes into the land some one and one-half or two miles, very shoal in spots, but full of swash channels, by which we felt our way inside. We smoothed the water at once, and sounding as we went along, soon found that we had plenty of water close into the beach. Came to twenty yards from beach, and paid out on the cable until the stern of our dingey just touched the sloping sand, so that we could use her as a ferry by pulling her up to our stern and shoving her ashore. Right here let me say, that during my stay in Florida I found a grapnel of much more service than an anchor, as the bottom is so full of oyster shells and 'coon oysters that an ordinary anchor fails to hold.

We went ashore and soon had a good fire going and the coffee pot singing, for we were somewhat chilly even in that land of perpetual sunshine, as a Florida norther brings nasty disagreeable weather. By this time the wind was howling for keeps, baffling from N. W. to N., accompanied by dashes of rain. My paternal, whom I shall call the Captain, for convenience, smiled as he stretched his fins over toward the warmth and said, "Guess there's no hurry," and immediately afterward made a frantic grab at the coffee pot as it had began to boil at a fearful rate, and that Captain swore by good coffee.

Ate our dinner of Boston baked beans, clams, bread and coffee, and taking my small caliber rifle, a .32 Winchester, and pulling across to the key opposite, walked around the beach. While groping under the thick mangroves I heard a sort of snarling sound, and peering carefully through the thick green foliage I saw two 'coon fighting over some 'coon oysters. Drew a bead on one and floored him, the other ran a yard or two and stood up on his hind leg, offering a pretty shot, which I accepted. At the sound of my rifle a big flock of white egrets, cranes, etc., etc., rose and flew over me, alighting in a thick cluster some twenty five rods distant. I drew a fine sight on a bunch of fifty or more and cut loose leaving one in his gore on the mud, took his plume, about half formed, and went to camp.

When about half way across the bay I heard the smothered report of a rifle way over in the middle of the island. Never dreaming it was the Captain, I pulled away, arriving at camp found it deserted and made up my mind something had been killed, for the old gentleman is one of the kind that never shoots at small game when deer hunting. Poked up the fire and lighted the old consoler. An hour dragged along and no one showed up. A good sign, for if he had killed nothing he would have been in long ago. It was getting dark rapidly and I set about getting supper of fried bacon, potatoes and coffee. Had everything nearly done and began to worry, as it was no child's play to go through a howling and strange wilderness and keep your bearings, and I began picturing the Captain lying alongside of a big fire alone that night with half a hurricane blowing, when a short, sharp whoop to my left caused me to let out an ear-splitting yell that would have done credit to a genuine "injun." The Captain soon put in an appearance, lugging a 100 pound buck, and such a sight; mud from head to foot and leggins hanging in pieces from frequent contact with the saw palmetto, but nevertheless his sunburnt face had a smile that was "childlike and bland" as he murmured: "Holy smoke what a hole I got into."

We ate supper, skinned and hung up the deer, and turned in after rigging our mosquito bars, which a man can hardly live without in Florida. I obtained the design of my bar from Dr. R. J. Levis, of Philadelphia, but improved it a great deal after using the original one some two weeks.

Turned out at 6 in the morning and found that the norther was still howling. No getting away that day, sure, so I went to work at a cabin for the yacht. It proved a mighty lucky thing for me that I served an apprenticeship of eight years before the mast in my father's ships, as I had on more than one occasion on this cruise to use the palm and needle. Turned out next morning and found the wind had gone to the eastward and had lulled somewhat. Concluded to make a start, and after boiling a big pot of beans and cooking some venison to eat on the way, made sail, steering W. N. W. to the two short stakes on middle ground on starboard hand, from thence N. W. to China Island, and N. ½ W. from China Island to Patricio. The wind hauled with us and we began to fly. Passed close by Useppa and saw the genial Irishman standing on the beach. The channel lies very close to the island here, and as we passed him he cordially invited us to land and lay in a supply of limes and guavas, the cultivation of which occupies his attention. Had just time enough to yell that we were going to the Myaka and wished to use this fair wind when we were out of hail, and hauled her up N. by E. ½ E., ranging Patricio with southwesterly end of Useppa Island. This course took us out of the ship channel to the black and red buoy off Cape Haze. Rounded the cape, wind hauling east and kicking up a nasty beam sea. Kept her going, and just at sundown reached into the mouth of the Myaka River. Made a camp on a rather high point, well pleased to have come the fifty odd miles in one day.

Turned out next morning and got up a breakfast of venison, potatoes, coffee and bread that would do to set before a queen. Saw before us a wide river, the surface of which was covered with ducks (salt water), which the Captain called "shell crackers." The point on which we had camped had one single palmetto tree close to the water, so naming it in accordance, we pulled off to the yacht, and getting under way, stood off up the river.

Laying our course about north, and as nearly in the middle of the river as possible, we bowled along up the Myaka in good shape. Having no charts, we were obliged to go it blind, judging from the lay of the land where to look for shoals. The wind freshened up due south, and we were not long in covering five miles, where we had been told as many as a thousand islands would appear. Made island No. 1 and attempted to pass it to port; brought up standing on a sandbar, and all hands went overboard to shove her astern. Got her off all right, and the skipper took an oar and went on a sounding tour; found that the channel lay close to the west bank, and shoved the yacht over that side. Dropped the peak and felt our way along. Passed a white bird rookery to starboard, and the river widening out before us we began to smile, thinking we were out of the woods; found to our dismay that the channel ran out in a shallow bay, showing not over 8 to 10in. water. Didn't find it out, however, until the dingey tried to play leap-frog over us. Captain said something in Spanish, and overboard we all went and stood back close hauled into deep water.

How to get out of that pocket was what bothered us. Nothing but solid pine woods to port; sandbars, oyster beds and marsh to starboard. I was letting her slide along easy, with the luff of the mainsail shaking, when I was startled by "Holy smoke, Ed, look at that snake. Hand me the gun, quick." Well, just at that time I was peering around on all sides for a channel between the islands, and in attempting to pass the gun let her luff on to an oyster bed. The snake dove, just showing a powerful rail, rather blunt at the end. I took it to be a moccasin, but soon forgot all about it in getting the yacht off her hard bed. Lit my pipe and went overboard; as I did so a porpoise rose right between two thick clumps of mangroves, thus showing us a channel; how far it would take us remained to be seen. Shoved the Wanderer back into deep water, hulled away, and half a minute later kept her square after Mr. Porpoise. The passage was so narrow we had to haul the sheet flat aft in order to clear the mangroves. She kept her way on, however, shooting out into a sort of lagoon; the tide being low the bars showed the channel, and the whiff on my pipe grew longer as I felt her slipping along with at least three feet of water under her. Ran her bow against the bank and cooked some venison, onions, potatoes and coffee, hurrying in order to make the most of the fair wind.

Got under way at two bells. Had the river stretching away before us now and couldn't help smiling at the manner of our escape from the shoal pocket, and taking a vote concluded that porpoises amounted to a great deal. At eight bells, river narrowing rapidly and crooked. Found a good camping place and landed. Water yet salty, and as darkness came upon us the ruddy glow of the pine logs drew numerous schools of mullet close to the bank. Rigged the grains and soon had five fine ones for a fry. I found this fish to be the best one to eat in the South, to my notion, either as a frying fish or boiling fish. They looked beautiful, darting and leaping over each other, throwing the phospores cence from their silvery sides in their eagerness to see what our camp fire was.

After supper I took the jack lamp and with the Captain to scull me, went up the river and killed nine large 'gators, skinned three of them next day, also secured some teeth. Found the 'gators plentiful and rather tame up the river. Turned in at 11 o'clock, figuring we had made about 15 miles northing, or forty miles actual sailing.

Turned out at sunrise, and after partaking of a hasty breakfast of boiled rice and syrup, shoved off and stood up the river. Soon the live oaks began to appear, and made a landing to look for turkey signs. Found a few and also deer tracks. Took in our mainsail at 11 A. M., the river growing too crooked and narrow to admit of sailing. Manned the poles after lashing boom firmly amidships, and the way we shoved the Wanderer up that creek would have done credit to a genuine flat-boatman.

At 4 P. M. the live oaks were plentiful, and we made a camp in their midst and bordering a cabbage palmetto grove. Father disappeared to the eastward with his rifle and turkey caller, for we had found any amount of "scratchings" in the sand. It could not have been over twenty minutes when four turkeys flew past me, crossing the river and lighting in the live-oak tops. I knew the Captain had started them, and stood listening for his shot. The birds across the river began to gobble, and an old gobbler flew down and strutted up and down the river bank. I couldn't stand that, so made a quiet sneak for my .32, secured it and threw it to my shoulder. Just as I glanced along the barrel—crack! went the Captain's gun to my left, causing my old gobbler to stop, raise one foot, and jog his head from side to side, a motion peculiar to this noble bird, either tame or wild. I seized the opportunity offered and put a bullet square through the butt of his wings. The captain now appeared with a fine hen turkey over his shoulders and a smile on his face.

We smoked our pipes with a silent satisfaction and turned in, resolved to remain in our present location for a time.

HUGH, JR.

TESTS OF ANTI-CORROSIVE AND ANTI-FOULING PAINTS.

WITH a view of determining the best coating for the new cruisers now building, the Naval Advisory Board ordered a thorough test of various compositions and paints to be made by Naval Constructor S. H. Park, Inspector of Paints. Makers of paints were invited to furnish samples for tests, sufficient to cover a 300sq. ft. area, to be sent to the navy yard at Washington, the Department agreeing to furnish to each party an official report of the results of the trials, the makers of any samples which failed to be allowed to furnish a sample for second trial. The results of the tests have lately been published in a pamphlet issued by the Naval Department. As the tests were only made on steel ship plates they are of comparatively small value to yachtsmen. Should a second test be made, as recommended by the Board, it would be a comparatively inexpensive matter to add some wooden test plates to the steel ones, thereby obtaining knowledge that would be useful both to the yachtsman and also to the Navy Department. In the method of testing employed a number of plates of ship steel, the same as used in the new cruisers, each 4ft. square and weighing 4 pounds per foot, were cleansed by immersion for one hour in a bath of one part sulphuric acid to 8 parts water, after which they were dried, weighed, painted with the composition to be tested and again weighed. Cages were prepared holding eight plates each, in which they were held for submersion, each plate being insulated by rubber packing. Two plates from each lot were sent to the following places: Portsmouth, N. H., Norfolk, Va., and Key West, Fla.; two also being kept at Washington. With each set were also sent four plates painted with three coats of red lead paint, two of them being first pickled and cleaned, and two as they came from the mill. The cages, those at Washington and Portsmouth being of wood, the other two of iron, were immersed for a period of about eight months, being inspected at intervals.

The circular first sent out to the makers of various compositions brought twenty-eight samples of paint, with which plates were coated and sent to the localities named, the paints being applied either by the makers or the Government.

In inspecting the plates after immersion but one cage at the time was taken out, all the plates being examined when it was replaced and another raised. The points specially noted were as follows: Proportion of plate from which paint is peeled, proportions of plate on which paint is loose or blistered, or on which the composition is dissolved, nature of fouling, grass, oysters, weeds, scum, barnacles, etc., with characteristics, evidences of corrosion or pitting, to be determined by cleaning the paint and examining it; lastly, the condition of the metal found by removing the paint from a space 5in. square. The rubber packing was also carefully examined and replaced when missing. As an additional test, the iron tug Speedwell was hauled out at Washington, carefully scraped and painted with a sample of each kind of paint. She was launched in December, 1883, and for eight months was about the waters of Washington, Portsmouth, N. H., New York and Norfolk, principally the latter place. In June, 1884, she was docked and examined, and again in December, 1884. From the results of the tests the Advisory Board concluded that the best paint was that made by P. G. West of Wilmington, Del., the next in order being the Gould Elastic Paint, made in Newark, N.J., both of which were recommended for use on the iron ships of the navy. Two others, that of F. W. Devoe and that of J. T. White & Co., were recommended as satisfactory.

ELECTION OF OFFICERS.

The Oceanus Y. C. was organized in San Francisco on April 2, with the following officers: N. Sweeny, Commander; James Young, Vice-Commander; E. E. Drees, Secretary; H. E. Besthorn, Jr., Treasurer. Members—N. Sweeny, E. E. Drees, H. J. Carlin, F. S. Davis, James Young, H. E. Besthorn, F. W. Barry, C. W. Pierce, J. W. Oxmo.

San Francisco Y. C.—April 7.—Commodore, C. H. Harrison; Vice-Commodore, I. Gutte; Secretary, Chas. G. Yalo; Financial Secretary, H. T. Gibbs; Treasurer, F. Bangs; Mariner, Mathew Turner; Directors, C. W. Kellogg, John Lee, W. Letts Oliver, J. D. Grant, N. B. Underhill, Jr.

MELUSINA.—Mr. Horace Binney writes us that the name of his new cutter is not Moya, but Melusina. The Moya, his former boat, still retains her old name.

LIGHTSHIPS ON THE ATLANTIC.

THIS plan was first suggested somewhat over a year ago by a member of the British Institution of Civil Engineers, who, however, confined himself strictly to the scientific aspect of the project. Recent statements in connection with the subject are to the effect that experience with lightships proves a vessel, if properly constructed, to be capable of riding out the fiercest storms at anchor, except on rare occasions, and that the light steel cables of recent construction have been successfully used to anchor ships in the deepest water.

Let us suppose a chain of lightships, seven in number, to be stretched across the ocean from the Grand Banks to the shores of Ireland. Then the distance between shore and ship and between the ships themselves would be about 250 miles. Each ship would ride to a mushroom anchor, which would permit it to swing to the tide without fouling. Only a small dynamo-electric machine and engine would be required to keep an arc light aglow in the tops.

The deep-sea cable extending along the whole line and connecting the lightships with the shore could be brought to the surface near each ship and buoyed, so that electrical connection could be made or broken at will. Each vessel would have permanent moorings, the anchor cable being made fast to a buoy, and not the lightship itself, so that, in case of peculiarly unfavorable conditions of weather, such as a hurricane, for instance, a lightship could slip her cables and run before it or be hove to under a small trysail, or permitted to drift to leeward under a floating anchor, regaining her moorings when opportunity offered.

The advantages of such a system of lightships must be apparent even to the most pronounced landsman. The stations being 250 miles apart, no ship upon the high seas, if following the alignment of the lightship, need at any time be more than 125 miles from telegraphic communication with the shore or from succor in case of mishap. This would be only an eight hours' run, and even much less, for a first class steamer, and about twelve hours' run for a sailing vessel with a fair wind. The position of each lightship would, of course, be accurately determined and laid down on the United States Coast Survey and Admiralty charts. The progress of the Great Atlantic liners could be telegraphed daily to both America and Europe, if kept within sight of the lightship, and that painful suspense which now attends the breaking of a shaft or rudder, would rarely, if ever, be experienced.—*The Iron Age.*

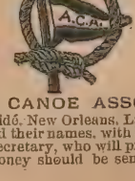
YACHTING NOTES.—The Stranger has been on the screw dock to receive a new four-bladed Delamater wheel. ..Galatea, Miss Mary Anderson's steam yacht, was sold at auction last week for $2,100 to Mr. W. H. Bender, of Lake George. She was built at Pamrapo by McGiehan, in 1882, and is 52ft. long and 9ft. 6in. beam. The "French-rigged boat" advertised to be sold with her, was an ordinary yawl with a spritsail. It brought $75....Norseman, schooner, Mr. Ogden Goelet, arrived at Fortress Monroe from New York on April 23. Mr. James O. Proudfit, treasurer N. Y. Y. C., and Mr. James B. Toler are also on board....Daphne, sloop, ex-Commodore James R. Maxwell, was launched from Mumm's yard last week....Norna, schooner, is now overhauling at Mumm's....Radha, steam yacht, is overhauling, after her cruise, at the foot of Fifth street....Magnolia, steam yacht, Mr. Fairman Rogers, arrived at Charleston, S. C., on April 22. She is bound from Florida to New York....Gannet, sloop, Mr. Oliver Adams, has had her centerboard removed and an iron keel 1ft. deep and of 2,300 pounds added. Thos. Webber, of New Rochelle, made the pattern, and completed the work in a very satisfactory manner....Seawanhaka C. Y. C. The new book is now in press and will soon be ready. It shows a fleet of 96 sail, divided into 13 steamers, 15 schooners, 18 cutters, 23 sloops and 27 open boats....Mr. Chas. J. Clarke, of Pittsburgh, Pa., has bought from E. E. Roberts his launch No. 21. She is 29ft. long, 6ft. beam, with 4x4 engine and vertical boiler 28x 42in. ..Knickerbocker Y. C. A new bridge 150ft. long and 6ft. wide, with a float 25x90ft., replaces the old one swept away last winter. The sloop Wacondah, K. Y. C., has six electric lights in her cabin, of two-candle power each, supplied by a storage battery good for four days' use.

HOW TO STOW THE DINGEY.—At the present season a few remarks on this difficulty may possibly be of use, and the following I have found a good arrangement: Let the after bulkhead dividing the cabin from the well, in lieu of being fixed, be movable, and let it be made of ¾in. board in divisions each a foot wide. These boards should be connected in pairs with brass hinges, so that when not in use they can close like a book, and be easily stowed away. The side seats in the well should always be made to flap down on strong hinges, to admit of getting as near as possible to the vessel's side both for standing and stowage, and a groove be made at the after end of the cabin deck or hatch, with a corresponding one on the well platform. The grooves should not continue the whole distance across, either at top or bottom, but a break should be left for the insertion of the bulkhead boards, which can thus be slid into their places on each side. It often happens that either in running a long distance, or going round a headland in a disturbed tideway, means of securing the dingey should be ready, and no method can ever be so safe as placing it below the deck level. By removing the after bulkhead the bow of the boat can be introduced into the cabin for the time, and lowered down on the platform. If it is desired to retain the platform for stowage space during the run, a couple of boards may be laid across the side seats to stow the dingey at this level. A small yacht of 8 tons, in which I went a few days' cruise some years since, was thus fitted, and had a sliding hatch on top of the fixed one, or cabin-head, which could be drawn aft and cover up the whole well if desired. Of the many small yachts I have met with, I never saw any plan which so thoroughly answered its purpose.—*J. C. Wilcocks in London Field.*

GALATEA.—We learn from private sources that Lt. Henn's new cutter is of exceptionally strong construction. It is now determined to enter her in the early races before starting across and she may enter the Brenton's Reef and Goelet Cup races on this side. Cranfield, of the Miranda, will command her. Our correspondent adds: "I expect that she will reach away from Genesta, but I doubt her being more weatherly, as I do not think it possible for any craft propelled by sails to be closer winded than the latter. If Galatea is as good on that point as Genesta, and can reach with irex, she will be a 'nailer' and will give the new sloops some trouble."

SWINGING KEELS FOR YACHTS.—Exeter, N. H., April 12.—*Editor Forest and Stream:* Is there anything more to be said in favor of swinging keels for small boats? No doubt there are many who would gladly use them if it is a practicable thing. I have watched to see if your paper had anything more from correspondents in relation to this kind of keel, and I thought perhaps those who had written about it may be waiting for some one to suggest something in favor of the swinging keel. If or one should be glad to see more favorable comments on it than have yet appeared in the FOREST AND STREAM.—E. O. LEAVITT.

OSWEGO Y. C.—The following are the officers of Oswego Y. C. for 1885: Commodore, John T. Mott; Vice-Commodore, W. B. Phelps, Jr.; Captain, Allen Ames; Secretary, Chas. A. Worts; Treasurer, J. D. Henderson; Fleet Surgeon, J. W. Eddy, M. D.; Directors, J. B. McMurrich, Swits Conde, J. B. Donnelly; Regatta Committee, B. F. Fitch, W. Gordon, G. D. Hart, F. Conde, R. S. Sloan, W. B. Burt, A. N. Ratcliffe; House Committee, J. P. Phelps, E. B. Mott, J. P. Tuttle. The following are dates arranged so far: May 30, opening cruise; May 30, champion pennant regatta.



THE NEW STEEL STEAMER.—The new steam yacht, building at Piepgrass & Pine's, was not launched on Wednesday, on account of low water. She will be put over on Saturday next.

Canoeing.

CANOEISTS are invited to send us notes and full reports of cruises club meets, information about canoeable waters, and other communications of interest.

FIXTURES.

May 29, 30—Pittsburgh C. C., Camp on Monongahela.
May 30, 31—Hudson River Meet.
May 30 to June 1—Connecticut River Meet.
July 18, 28—Western Meet, Ballast Island, Lake Erie.
July 24 to Aug. 8—A. C. A. Meet, Grindstone Island.

AMERICAN CANOE ASSOCIATION.

SECRETARY—C. A. Neidé, New Orleans, La. Candidates for membership must forward their names, with $2 for initiation fee and first year's dues, to the secretary, who will present the names to the executive committee. Money should be sent by *registered letter* or money order.

CANOE CLUB HOUSE PLANS.

A CANOE CLUB HOUSE.

As our canoe clubs grow in members and means, the question of a house is one of the most important that they have to consider. The expense of building even a small house is often a heavy burden for a young club, added to each man's private expenditure for boat, etc., but the growth and prosperity of an organization depend largely on the inducements it offers to members. A good shelter for the canoes, suitable racks and lockers, and a dressing room, coupled with a convenient location and facilities for launching, are the prime requisites. Next to these is needed a suitable meeting room, neatly furnished and clean, in which are kept the books, papers, models, etc., of the club. To put all under one roof at first is beyond the reach of most new clubs, who must begin in a small way, adding each year as they can afford it. The value of land along the water usually makes it desirable to build with the smaller side or end facing the water, but where room can be had for a house running parallel with the shore, there are some advantages in the style of house shown above, which we will call the "stall" plan. The main feature of the system is the division of the space into stalls or alcoves, each giving stowage room for 4 or 6 canoes, with a locker and dressing room at the end for the owners of the boats. A cheap house for a small club can be built with a floor space 20x10ft. The sills, floor joists and flooring being laid on suitable foundations, a light frame is built and sheathed with "novelty siding" or weather boards. The dimensions of this frame will be 8ft. high at ends. The sides will of course be 8ft. high where they join the ends, rising to 18ft. at the center, the roof pitching from the middle of the building toward the two ends. A door 5ft. wide in the water end gives exit for the boats. The boat room is 10x15ft. with 3 racks on each side, leaving a 5ft. gangway. The dressing room, with a small door opening on the street, is 5x10ft., with lockers for 4 or 6 men. Some stowage room is also left in the roof. This house can be built very cheaply and can be enlarged when needed by the addition of a duplicate on one or both sides. This addition can be continued indefinitely, each giving room for 6 canoes and 6 men if required. As the club increases an upper story 20x20 may be added if the lower be built strong enough to carry it. A wide piazza can be run along the front. If desired, instead of a second story, a space or two in the center can be taken for a club room. Such a building can be of very light framing, little material being required, the cost of labor will be very small, and additions can be made as required. The plans given above are for a large house on the "stall" plan, but under one roof, now building by the Hartford C. C. Instead of racks above, the lower tier of canoes, which rests on the floor, tables CC are built, supported on posts, each holding 2 canoes, while the dressing rooms accommodate 4 men each.

The house is located opposite the steamboat dock under a small grove of trees, well protected from floods, about 25ft. above low water mark, and about 80ft. back from the river. It can be reached by a ferry which the janitor will run at stated intervals during the day, and also run by call through the telephone, or by walking or taking a car across the bridge.

The main floor of the house is 60×30ft. A piazza runs across the entire front (60ft.) from the center of which an incline extends to the float which is 15×20ft. On the incline will run a car for the transportation of the canoes to and from the float. The north end of the house is furnished in two stories, on the second of which is the janitor's room, etc.

The interior accommodations are ample, as will be seen by looking at plan No. 1, first floor.

L R., locker rooms, 10×6ft., are designed to accommodate four persons each, who will keep their canoes on and under the racks C C. S S are staircases, the interior ones leading up to the janitor's quarters and down into the basement, where there is an earth closet, etc., and the outside one being for ordinary ingress and egress. W W are windows and D D doorways, the larger one for canoes to be taken through to the incline and the small one for ordinary use.

Plan No. 2 shows the front of the house, with incline, piazza, doors, etc., and No. 3 is an end view of the house. The house, incline, float and all complete cost $1,300, and was built by contract.

"PADDLING CANOES AND PADDLING RACES."

Editor Forest and Stream:

Your April 16 number contained a surprise for me in the article written by "Boreas." To accuse a builder, in the columns of a sportsman's journal like Forest and Stream, of publishing in his catalogue "statements likely to mislead the canoeist" and "untruths," is a grave charge, and one not to be passed over in silence. As the Forest and Stream has given space for the accusation, we trust it will also give space in which it may be refuted.

The "misleading statement" is nothing more or less than Article II. of the constitution of the A. C. A., and has been published in the writer's catalogue since 1882. Rather queer that the sharp eyes of "Boreas" had not seen it before. However, we hope that the A. C. A. will amend its constitution so that the publication of any of its articles will not "mislead."

Now to the second and graver charge;

I quote from "Boreas": "Again on page 20, in describing the Princess model, Mr. R. says, *re* the Nellie, 15×31½; She was also second in a half mile race, the first in the race being Mr. Johnson, in a canoe built especially for racing. *This is not true* [italics are the writer's] and is unfair to Mr. Johnson."

The record as published in Forest and Stream, shows that Mr. Johnson brought three canoes to the meet of '84, viz.: Maggie, 18ft.×24in.: Hillcrest, 16ft.×28in., and Mamie, 16ft.×31in. If these canoes were not built for racing, then it is a singular coincidence that one of them crowded the limit to a fraction and the other two were full length and but 1in. over beam for the events in which they could enter, and that Mr. Johnson went into every regular paddling race of the meet, using in each race whichever of these canoes it was to his advantage to use. This he had an undoubted right to do under the rules. Still, Mr. Johnson's persistent efforts to contest for and win every paddling race led to the belief that he was a professional (which was indignantly denied by his friends), and more than anything else led to the adoption of the rule that thereafter members should use but one canoe in A. C. A. races.

"Boreas," with far less than his usual perception, seems to have overlooked the fact that the language which he complains of was not found in a newspaper article where the reader might feel in doubt whether the point arrived at was to compare the merits of men or canoes, but in a catalogue describing canoes, and where there could be no possible doubt of its meaning, viz.: that the 15x31½ Princess (said by some to be unfit for paddling) had, in one event at least, proved nearly a match for a canoe "built especially for racing," and paddled by a man of Mr. Johnson's acknowledged prowess. We fail to see where the language used was "unfair" toward Mr. Johnson. Certainly nothing of the kind was intended, and as to the "untruth," we believe the record of events as above recited is circumstantial evidence strong enough to clear us from any imputation that our male parent was the individual who tempted Eve.

As regards Mr. Johnson he may well be proud of his record as a paddler. The writer is unacquainted with him but has always heard him spoken of as a genial and pleasant gentleman, whose hand he hopes to grasp at the next A. C. A. meet. J. H. Rushton.

Canton, N. Y., April 20.

A. C. A. PRIZE FLAGS.

The regatta committee thank the undermentioned members for their kind promises of prize flags and other prizes, received since the last acknowledgment.

The Rochester C. C., per Mr. Geo. H. Harris, one flag.
Mr. R. W. Baldin, Ottawa, for Miss Baldwin, one flag.
Mr. J. K. Bakewell, Washington, D. C., for Mrs. Bakewell, one flag.
Mr. Will Brooks, San Francisco, Cal., for Mrs. Brooks, one flag.
Mr. W. J. Root, Brooklyn, one flag.

Making a total of twenty-four flags. Forty-five are required. Offers of special prizes received from Mr. S. D. Kendall, a flag for canoeist making the longest independent cruise, and from "Dorsal Fin" of a camp kit as prize for an appropriate contest.

R. W. Gibson, Chairman Regatta Committee.

AROUND STATEN ISLAND.

Starting from "Marmalade Lodge" one bright spring morning, the Red Rover bounded off under full sail, as if she enjoyed the prospect of her first cruise for the season, and indeed it was a joyous scene; the sun shining brightly and warmly after the long cold winter, the waters dancing and sparkling as if glad to be relieved of the icy intruders, who had bobbed up and down on their surface for weeks and weeks, and the skipper as light-hearted as if he had thrown away work forever instead of a couple of days.

Dashing along at a merry rate, the Red Rover made short work of the distance between "Marmalade Lodge" and the entrance to Staten Island Sound, over whose waters she was soon speeding. Sometimes passing oyster skiffs whose owners watch the little canoe at first with derision and then with envy at the easy way in which she slipped through the water, and answered her crew's cheery "good morning" with different degrees of gruffness, varying with the condition of their individual digestive organs. Sometimes shooting by a quiet farmhouse, whose neat exterior showed that thrift and comfort reigned; sometimes gliding past a pebbly beach or steep bank. Although it was not yet noon, the skipper began to feel hungry (some claim that he always feels so), and decided to lunch before reaching Tottenville. In order to carry out this excellent scheme, the Red Rover was run aground on a mud flat about five yards from the shore and preparations for the feast begun. After rummaging around in the "fore hold" the flamme forcée lamp and alcohol bottle were produced, along with some canned salmon, tea, sugar, salt and crackers. The tea being made and the salmon warmed, after the lamp had nearly consumed the skipper's lower extremities, which were in "wading trim," the Red Rover's captain and crew proceeded, without any regard for rank, to enjoy the good things set before them. Some small boys who had thus far watched the proceeding in idleness, were now impressed into the service, and a couple of tin pails and some orders given them to fetch fresh water. The messengers having returned, the crew set to work restowing the cargo and hoisting sail.

Running down to Tottenville, the Red Rover was soon busy dodging the numerous sloops and schooners that lay before that ancient town, some of them at anchor and some of them sailing about, and all of them apparently bent on being destroyed by the sharp nose of that little vessel. To increase the difficulties of the gallant skipper of the festive Red Rover, the wind and tide were now dead ahead, and the laziness of the crew even stronger than usual. Somewhat daunted by this combination of difficulties, it was decided to go into camp, although the afternoon was yet young. Accordingly the canoe was run ashore about a mile below Tottenville, and camp pitched in the worst place the skipper could possibly find.

Having "slicked up" a little the skipper started for town, leaving his craft to take care of herself. After wandering around the town for awhile and exciting general comment by his appearance, the skipper returned toward evening to his camp, and was muchly relieved to find things all right.

The "inner man" again raising a howl, supper was considered in order, and the preparations therefor begun. Searching for fire wood for some little time, a pile of old shingles was found near a deserted house, and immediately appropriated, and contrary to all sayings about stolen goods, etc., made an excellent fire which cooked a first-rate supper. While the culinary art was being indulged in, the skipper of a coaster happened along and kept the Red Rover and her crew company till the latter turned in, and then went away declaring that the "hull bizness" looked like a corpse in a coffin, and indeed the resemblance must have been strong, as the skipper lay on his back in the bottom of the canoe with his upturned face gleaming in the starlight.

The next morning was foggy and squally, and the weather gave every promise of being as dirty as possible for the remainder of the day. After breakfast the cargo was restowed and the canoe restored to her natural element, was soon banging away at the short, sharp seas, under the pressure of her mainsail. That day seemed to be made up of fog, squalls and desolation, for the whole coast was deserted save for an occasional fishing party, who were out in spite of the weather, and who gazed at the canoe with wonder as she went along over the big seas that the wind was rolling up in the lower bay. The wind increased steadily till toward four bells it was blowing almost half a gale, and what was worse, the fog had become so thick that it was impossible to see fifty yards in any direction. In spite of this the Red Rover kept on till she ran onto a shoal, over which the surf was breaking violently, and was half filled by the foam of one big fellow. How she ever got out is still a mystery to her skipper, who only knows that get out she did, and no sooner was she out than she lay as straight a course as possible for a lighthouse, which she had passed but a few moments before entering the breakers. Arriving opposite the light the skipper quickly lashed the sail to the deck (the Red Rover was lateen rigged), and put the hatches out of harm's way, then grasping the paddle he backed her through the surf, jumped out, seized the forward end of the cockpit, and with the help of the willing lighthouse keeper soon had her out of danger. As it was useless to attempt to continue on that day, it was arranged with the lighthouse keeper to leave the canoe in his charge for a day or so. Accordingly, after having donned dry raiment, the crew of the Red Rover walked to New Dorp, where the train was taken for the city.

Monday afternoon sees the Red Rover afloat again, but under very different circumstances. The fog is gone, the wind is to be scarcely felt, and the glorious spring sun again makes the water dance and sparkle and glitter as her skipper lazily swings his paddle to the tune of his favorite songs, and partly drifts to the "Narrows," where the breeze being favorable, sail is hoisted and the dear little craft glides through the gathering darkness to the boathouse. Friday.

New York, March 19.

THE NEWBURG MEET.

At a meeting of canoeists representing four different clubs, held at Newburg, March 30, it was decided to hold the spring meet on the last Friday and Saturday (29th and 30th) of May. The camp will be ready for canoeists on Thursday, 28th. The location will be at Plum Point, near the camp ground of last year.

The float will be anchored off the northern extremity of the Point, and all races will start from and finish at that point.

The course for sailing races will be three miles, in form of a triangle, the base running one mile due east from the float, thence northwesterly one mile and back to starting point.

The paddling course will be half a mile south from float and return.

Wind and weather favoring, the regular races will be sailed Friday afternoon, 29th. Should there be no wind the sailing races will be postponed till next day, to be sailed either morning or afternoon, as the regatta committee may decide.

There will be four races, in following order:

First—Class 4, paddling.
Second—Class A, sailing, three miles.
Third—Class B, sailing, three miles.
Fourth—Class 2, paddling, one mile.

Saturday will be reserved for special races and other events of interest. For that day the committee in charge would like a race between four canoes to be selected, one each, from the four leading models in the races of the day before. Would also like a race in which all unclassified canoes could enter.

The committee are well aware that the time is limited and that crowding too many events into the programme would destroy all the pleasure of the meet, so limit the number of regular events to four, with two extras if found expedient. Any additions or alterations may be made later, or at time of meeting. Any special races may be arranged at that time. The committee will make races for beaching canoes, and will endeavor to have the float securely anchored. If the secretaries of clubs will at their earliest convenience report to our purser, Mr. H. A. Harrison, the number of their men likely to be present, they will greatly aid us in making the necessary arrangements.

Transportation from New York may be had by steamer James T. Brett from foot of Rector street, Pier 6, at 11 o'clock A. M., and from West Twenty-first street at 11:15. She will stop at the Knickerbocker Club House and at Rockland Point or Haverstraw for the Shattemucs of Sing Sing if desired. This boat is the successor to the "Milk-slinger," much larger and with good accommodations for passengers

and freight. Canoeists from up the river may come by Albany Day Line, Newburg and Albany boats or West Shore R. R., the freight yard of latter being close to the water. Those on line of O. & W. R. R. may come to Cornwall, one mile from camp. The "bunkboat man" will be on hand to furnish provisions to those who may need them. Any further information will be furnished on application to H. A. Harrison, Lock Box 512, Newburg, N. Y.

NATE S. SMITH, for Committee.

A CRUISE ON THE SUSQUEHANNA.

WEDNESDAY, July 30, 1884. Wyalusing to Terrytown, three miles. We started about 4 P. M., after much trouble, amid great confusion and excitement, weather suffocating, horns blowing and pennants flying, in the first race to see who would win the laurels for taking the first stroke in the river, from the tail of the mill race where we launched our canoes. I lost my burgee and also all hopes of honors. After passing into the river and towing about an hour, we came to good paddling, and as F. wished to sail or try to, I paddled on and came to a place which I thought would make a good camp, and soon had fire started and supper cooking. F. came in and we set up tent, fixed bunks, ate supper, wrote letters, and to bed but not to sleep, being used to something a good deal softer than the earth; it was a long night but ended at last.

July 31. Terrytown to Rummerfield, seven miles. At the first streak of light we were up and packing, a strong south wind blowing, and we did not mean to lose any time. [The reader will please bear in mind that we were going up the river.] Came to camp early, having to tow but once or twice; rained a fine rain all day, very disagreeable, camped early, supped and wrote letters home, and then laid down on Mother Earth again, but not to stay awake after 8 P. M.

Aug. 1. Rummerfield to Standing Stone, three miles. We camped here at 2 P. M., slept till 9 this morning and not rested yet; foggy morning but nice day.

Aug. 2. Standing Stone to Breakneck, fourteen miles. With a light north wind, stopped at Towanda and got some things to eat. Camped about 6. F. caught a few fish but broke his paddle digging worms. Made a bed of hemlock browse, got ready for the morrow; good camping ground, but no water but the river.

Aug. 3. Breakneck. Nothing like a hemlock bed on a camping expedition if you have time to make it. About 8:30 A. M. a track-walker came down to camp, and after asking a few questions of him he began, "Hanny hatchet," picking up the camp ax, "Very handy little hatchet, rather have it than a hammer with the claws on." So he kept going for an hour or hour and a half. I guess he was a lunatic, and we were glad to see him go. About 10:30 A. M. two friends came up having walked from Wysox, 7 miles below here, where they expected to find us; they brought papers and letters from home which were acceptable. I walked about ½ mile down to the railroad to a mile post and found we were 27 miles from home by that, but by the log 31; fixed F.'s paddle.

Aug. 4. Breakneck to Sneshequin, 4 miles. South wind blowing a young hurricane, but we were going to try it. The boys got off early for Ulster to catch train for home; sailed 4 miles in two hours; blowing, but did not try it again.

Aug. 5. Sheshequin to Athens, 10 miles. Reached Athens at 7 P. M.; a warm day; a good many riffs (rapids) and lots of towing; saw some friends and got some victuals. Started down at 7:30; it seemed very nice to be going down; ran about a mile below town and slept on cobble stones covered with blankets, slept very well, however.

Aug. 6. To Breakneck, no camp stuff to pack; breakfasted on tinned goods, and an early start; everything as we left it, let the canoes float down about 13 miles to-day.

Aug. 7. To Rummerfield, 17 miles. Same camp as we were in a week ago to-day.

Aug. 8. Home, 10 miles. A nice day; a tip over and an immense time in an old scow; caught a nice string of fish; we were out about 10 days and made 85 miles, one-half of which was against the current. We had 200lbs. burden which was 100 or more too much. Next season we think of shipping our canoes to some point north and then cruise down 150 or 200 miles on the beautiful river of many bends, Susquehanna.

DOMINE.

ROYAL CANOE CLUB.—The first races of the season came off at Hampton on Saturday last, prizes being offered by Mr. J. W. Clayton. The wind at the time fixed for the sailing race being much too light for sailing, it was decided to start the paddlers first. The course was half a mile down stream. S. Futcher, Claud Scott and E. A. Leach were the only competitors. Scott was unfortunate enough to break his backboard just after starting, and Leach not being in training, Futcher had an easy win. At the conclusion of the paddling race a light easterly air sprung up, and it was decided to send the canoes four rounds of the Thames Valley short course, that club having been kind enough to place their club house and course at the disposal of the R.C.C. for the day. The entries were: Nautilus, W. Baden Powell; Pearl (No. 6) A. H. Tredwen; Pearl (No. 7). Moskva, W. E. Graham, did not start. Diamond and Wave were also expected, but had been carted over to Hendon Lake for the races there, so they still remain dark horses for the present. The new Pearl was first to feel the light air, and slipped away with the lead, which she maintained to the finish, Nautilus and the old Pearl alternately heading one another during the first three rounds, when the latter fouled the upper buoy badly and had to retire. The rig of Mr. Powell's new boat, a combination of sliding gunter and battened lug, did not appear suitable for an up-river course, but on Hendon, or any other open water where a true breeze can be obtained, will no doubt show to better advantage. The races over, the members of the club, to the number of thirty-three, were entertained by Mr. Clayton with his wonted hospitality at his house on the river, and the events of the coming season were discussed far into the evening.—*London Field.*

AN EASTER CRUISE.—A correspondent in England writes us of a pleasant little cruise at Easter, as follows: "We had two fairly warm days on which during several hours the sun shone, and one day when, although it rained, the wind was strong and fair. Our party included six men and five boats—two canoe yaw's two open gigs (a 12ft. keel and a 10ft. centerboard) and a Clyde canoe. On Easter Monday an outrigged canoe (14×30) turned up with American lateen sails. They are splendidly simple, but can hardly be considered safe for running, as there is no possibility of lowering away for a squall or a heavy jibe. I lived the whole day in terror of the upset which came at last, though not in consequence of the sails, but because her skipper managed to run her on to a chain with which a horse boat was grinding across the Brent. As I had fortunately kept close to him all day I was able to come to the rescue with dry clothes. After emptying the canoe I rowed her on after the rest of the flotilla, leaving my mate and the half-drowned one to bring my yawl. The 10ft. centerboard gig was upset in a revolving squall while beating up a canal with sheets fast and sculls out, but fortunately plenty of help and dry clothes were at hand. You will see that our little cruise was not without incident. My boat was the only one that completed the journey by water, all the rest finishing by steamer; but I had to leave her for a few days until the wind moderated and the cold became less intense. The stopping places were: Thursday evening, Ganisboro; Friday, Torksey; Saturday and Sunday, Lincoln; Monday, Omston Ferry; Tuesday, Burton Stather. I rowed down the last twenty miles to Hull on Saturday, wind light ahead, then home by train."

TAUNTON C. C.—*Editor Forest and Stream:* The officers are: Commodore, T. R. Breed; Vice-Commodore, L. C. Bryant; Purser and Secretary, William Fox, Summer street, Taunton, Mass. This club was formed one year ago with a membership of twenty, with nineteen canvas canoes and one Stella Maris. At the annual meeting held April 15, 1885, the old board of officers were re-elected. The signal of the club is a blue field, with T. C. C. in white letters in the center. Commodore's signal, two crossed paddles.—T. R. BREED, Commodore.

HARTFORD C. C.—The loss occasioned by the withdrawal of a few dissatisfied members last winter has been more than made up by the addition of new members, and the roll is now larger than before. The club is in a very prosperous condition, and will soon be as well housed as any club in the country.

N. Y. C. C.—The new constitution was finally adopted at the meeting on April 23. It was decided, if possible, to build a floating house, to be anchored near their present location. Mr. Vaux, in company with Mr. Coudert, paddled the new Sea Bee from Williamsburgh to Marmalade Lodge on Saturday evening. After supper a reception was held in honor of the new addition to the fleet. She will soon appear with a suit of sails of new design, 70 and 30ft. balance lugs, planned by her owner.

Answers to Correspondents.

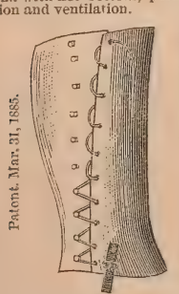
☞ **No Notice Taken of Anonymous Correspondents.**

R. A. C., Providence, R. I.—Can you tell me where I can get a temporary binder for the FOREST AND STREAM? ANS. We can furnish it. Price $1.50.

F. M. T., Brockville, Canada.—The various "spar compositions" in the market are all patented, and their ingredients are known only to the makers.

L. R. K., Hampden, Mass.—How can I capture minnows, and how can I make a net to do it? Ans. Write to any of our tackle dealers for price of minnow seines. You can get them with leads and floats ready to haul.

J. T. C., Cincinnati, O.—Is there any fish known which produces its young alive and fully developed? If so, please settle a dispute by stating its name, and where it is found. Ans. Yes. There are several. Some of the sharks and dogfishes do so, but the best known and most interesting fishes with this habit are in the family *Embiotocidæ*, inhabiting the Pacific coast of North America, commonly known as viviparous perches. They are common in California.



J. M. R., Little Rock, Ark.—I want to ask you a question. I see numerous references in your paper to small-mouthed black bass. What is a small-mouthed bass? We have in our lakes a black bass with a mouth like a cellar door, average size three pounds, though they grow to seven and eight. They have a stripe on the side. In the Ouachita and other clear rivers we have a black bass, smaller every way, without the stripe, and blacker. Both are vigorous biters and make a hard fight, the river fish fighting the hardest, though a good deal of that is due to swift current I think. Is this river bass a small-mouth? If so he is a misnomer. I never tried a fly on him but he will take a troll. Ans. Close the mouth of the fish and if the maxillary bone reaches beyond the eye it is a big-mouth. In the small mouth this bone reaches to the front or middle of the eye. The latter has minute scales on its dorsal and anal fins. The stripe usually denotes the big-mouth.

F. A. ALLEN, Monmouth, Ill.

"FOREST AND STREAM SERIES."

DEER HUNTING.

BY JUDGE JOHN DEAN CATON.

BY and by it will be time to hunt antelope and deer. It is always time to read about them. Judge Caton's book on the antelope, elk, deer, moose and caribou of America discusses in a readable way the life history of these animals and the methods of their capture. It is the work of an enthusiastic sportsman who has had a wide experience and has devoted the leisure of years to studying these interesting game animals. The volume is very fully illustrated, and is a perfect storehouse of information and entertainment. The first edition was sold by the Boston publishers at $4. Price $2.50.

WOODCRAFT.

BY "NESSMUK."

A COMPACT pocket handbook of condensed, boiled-down, concise, clear, comprehensive, sensible, practical camp gumption. "Nessmuk" has been "in the woods" in Michigan, New York, Pennsylvania, and South America, and this is a book for outers, wherever they kindle their camp-fire. The author believes in "smoothing it." He has learned how; now he tells others. It is much easier to learn from "Nessmuk" than from Dame Experience. We should not be surprised if "Woodcraft" completely revolutionized the methods of camping out. If you are going to the woods, read "Woodcraft" before you go. It may add to your trip a hundred fold. Price $1.00.

DOG TRAINING.

BY S. T. HAMMOND.

HE was a promising puppy, and when you turned him over to the breaker to be educated, you thought he was bound to make "the best dog in the world." And you'll not soon forget how disappointed and disgusted you were when the dog, the breaker and the big bill—all three turned up together, and you saw that the animal's spirit was broken and it would take a steam calliope to make him mind. Now, this could not have happened if you had been wise enough to buy a copy of Hammond's book, and in your odd leisure moments *train* the dog yourself instead of having him *broken* by some one else. We are selling edition after edition of this book, and it is revolutionizing the system of preparing dogs for work in the field. Price $1.00.

SHORE BIRDS.

A PAMPHLET for those who "gun" along the shore. Tells of: I. Haunts and Habits—Where the bay birds live and what they do at home. II. Range and Migration—Where they go to breed and where to spend the winter. III. A Morning Without the Birds—An episode of shore shooting. IV. Nomenclature—A list of our American species of *Limicolæ*, with a description of each specie. V. Localities—Where to go to shoot them. VI. Blinds and Decoys—How to shoot them after you have reached the grounds. 45 pp., paper. Price 15 cents.

ANGLING TALKS.

BY GEORGE DAWSON.

AS a political writer of conceded power, Mr. Dawson wielded a trenchant pen; when he terned from the conflict of parties to the praise of the favorite pastime of "simple wise men," his essays, limpid as the crystal streams, are aglow with the soft summer sunlight and melodious with the songs of birds. When angling was the theme, he wrote from a full heart and in closest sympathy with the scenes and pursuits described. These "Talks" are brimful of manly, wholesome sentiment; there is in them all not a particle of cant. Their sincerity and overflowing spirit at once win the reader, and he perforce shares the author's enthusiasm. The effect is magical, like that of the mimic players in Xenophon's *Memorabilia:* he who reads, if he be an angler, must go a-fishing; and if he be not, straightway then must he become one.—*Extract from Publishers' Preface.* Cloth, price 50 cents.

CANOE "AURORA."

BY DR. C. A. NEIDÉ.

A CHARMINGLY written and always entertaining account of a canoe cruise from Lake George, New York, down the Ohio and Mississippi Rivers to the Gulf of Mexico, by the Secretary of the American Canoe Association. To read the cruise of the "Aurora" is the next best thing to having made it; and the reading is decidedly more pleasant than would have been participation in some of the misadventures related. 216 pp., cloth. Price $1.00.

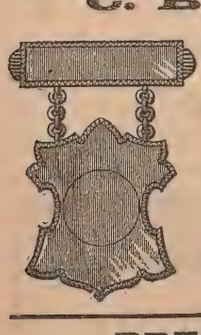
Reads like a romance from beginning to end.—SPRINGFIELD REPUBLICAN.

Old Saint Augustine.

BY CHARLES B. REYNOLDS (FOREST AND STREAM).

THE famous Florida town's three centuries have been crowded with romantic incidents; and a story of wonderful interest is this, with its Huguenots and Spaniards, Franciscan Fathers, English Sea Kings, Boucaniers, Minorcans, Liberty Boys, and Seminoles. It is told vividly, in the briefest possible compass, with strict historical accuracy, and with an enthusiasm that is manifest from the very first page to the last. Among the illustrations are copies of some of the very rare drawings by Jacques Le Moyne, the French artist, who so narrowly escaped massacre by the Spaniards in Florida, three hundred years ago. Another very rare engraving is the plan of the city in British times. The *artotypes* (or photographs in permanent ink) are among the most beautiful book illustrations of the day. They are made from negatives taken expressly for "Old St. Augustine," and are: Fort Marion (four views), the Matanzas Fort, the City Gateway, the Cathedral, the old Palm-tree, Garden Overlooking Plaza, and two very characteristic St. Augustine Houses. Cloth, pp. 144, 8vo. Price, $1.50. **Forest and Stream Publishing Co.**

FISHER'S ISLAND.



Important to Club Men and Investors!

The Eastern end of this Island, comprising about two thousand acres, is offered for sale (to close a trust). Its location is peculiarly adapted for club purposes—having good covers, fertile soil, and a chain of fresh water lakes and ponds extending through the Island, affording opportunities for stocking with Game, Fish, etc. Its situation and climate being cool in the summer months makes it very desirable as a summer resort. Being surrounded by salt water, and several miles from the main land—with the Atlantic Ocean on the South and the waters of Fisher's Island Sound on the North, with fine beaches for both surf and still water bathing, good roads, etc. A large section of the west end is surveyed and mapped for cottage purposes. A number of fine cottages have been erected. Steam communication from New London, Conn. For maps and full particulars address,

Publications.

CANOE

THE FOREST AND STREAM began a year ago the publication of a series of papers on canoe construction, by Mr. W. P. Stephens, of the New York C. C., widely known as an expert on canoe design and building. These papers, having appeared through the year in our columns, have since been rewritten, and with numerous additions are now published in a handsome volume under the title of "Canoe and Boat Building for Amateurs." Mr. Stephens is peculiarly fitted for the preparation of such a work, beginning as an amateur, and having after a long experience of the difficulties attending a learner, taken a prominent place among canoe builders, due both to the model and workmanship of his canoes. Realizing fully the difficulty of explaining to a novice an art in itself far from easy,

AND

and with which he is entirely unfamiliar, the book begins with a description of the various classes of canoes in general use, with their main features and dimensions, and definitions of the terms used in connection with them. Numerous examples of canoes are given, and in connection with them, such plain instructions in designing as will enable the beginner to select intelligently the proper craft for his pur-

BOAT

pose, and to plan her dimensions, details and fittings. To this end designs of all classes of canoes are given, with full dimensions and details. The object has been not merely to enable the tyro to build one boat as described, but to teach him the principles of designing and building in such a way that he may construct such a craft as he desires. Following the chapters on designing, the construction of a canoe is taken up in detail, the tools and appliances being first clearly described, as well as the various materials, after which follows the actual work of building. Every operation is taken up in order, from the selection of the keel to the varnishing of the finished boat, and illustrated with numerous diagrams.

A chapter on sails describes all the varieties in use by canoeists, down to the new Mohican settee, with directions for making, rigging and measuring them, while the method of proportioning the sails to the boat is clearly explained, all the calculations

BUILDING

being worked out in detail. The many minor points of a canoe, paddles, steering gears, rudders, aprons, and camp outfit are also described at length, while a chapter is devoted to canvas canoes.

The subject of boat building is fully treated, a rowboat of the usual construction being taken as an example, and described in all its parts in such a manner as to make clear the principles involved, and their application to any form of boat, either lapstreak or carvel build. Each of the numerous technical terms belonging to the subject is defined clearly when it first occurs, and as the index is full and complete, the book is in itself a glossary.

In addition to the numerous diagrams in the body of the work, twenty-four large plates are printed on bond paper, containing the working drawings of canoes for paddling, sailing, cruising

FOR

and racing, with their sail plans, rowing sailing boats, large canoe yawls, and various boats for special purposes, such as gunning boats, yacht boats, and the widely known sneakbox.

The canoe yawl, a boat between a canoe and a yacht, is illustrated by examples of various craft from 17 to 20ft. long, and suitable for a crew of two or three on a cruise. This class of boat, while little known among us as yet, is admirably fitted for cruising, and will meet the wants of many who object to a canoe as being too small, and yet desire a boat with the same excellent qualities. The boats and canoes illustrated are in all cases among the best of their class, the list of canoes including English, Scotch and American craft, and are all drawn

AMATEURS.

to scale, so as to be available as working drawings. The plates, for convenience in using, are placed loose in a tough manilla envelope and accompany the book.

Pp. 168, with 24 plates of working drawings. Price $1.50. Address,

Stud Fee, $25.00.

STUD FOX-TERRIER
Champion Raby Tyrant,
(K.C.S.B. 11,179.)

Pupped October, 1880. Weight 16½ pounds.

Raby Tyrant is a white dog, with an even marked rich black and tan head. He is a thoroughly game and stylish terrier, possessing a beautifully shaped long punishing head, with perfect drop ears, small eye, rare neck and shoulders, deep chest, well ribbed and muscular quarters, short, straight legs, excellent feet, great bone and substance, with an exceptionally hard and dense coat.

Raby Tyrant is without doubt one of the most successful terriers of the present day. He has been exhibited 67 times, 33 different judges having adjudicated upon him, and has won 47. First 10 cups and specials; 12 second and 3 third prizes. His breeding is undeniable, combining as he does the choicest and most valuable blood that can be obtained. At the stud Raby Tyrant is proving himself eminently successful.

Fee, $15.00.

JOHN E. THAYER, Hillside Kennels, Lancaster, Mass.

Stud Dogs Proper.

For Sale—Several Irish red setter brood bitches, of pure Elcho stock. One now in whelp to champion Nimrod These bitches will be sold cheap, as hereafter we confine ourselves to breeding mastiffs only. Address No. 1101 Tremont street, Boston, Mass. mar19,tf

---

GREYHOUNDS.—A BRACE OF EXCEPTIONally fine pups for sale from imported champion stock. H. W. HUNTINGTON, 148 South Eighth st., Brooklyn.

FOR SALE—ITALIAN GREYHOUND PUPS from imported stock. HENRY C. BURDICK, 150 Bridge st., Springfield, Mass. mar19,tf

---

WM. GRAHAM, NEWTOWNBREDA, BELFAST, Ireland, is prepared to purchase and ship dogs for importers. Dogs purchased from him had the following prizes awarded to them: At New York and Chicago, 1883, sixteen firsts, nine special, three second and one third. At New York, 1884, seven firsts, six specials and one third.

CHAMPION BRED ST. BERNARDS.
CHAMPION BRED ENGLISH PUGS.
Enclose stamp. CHEQUASSET KENNELS,
Lancaster, Mass.

FOR SALE, A NUMBER OF WELL BRED AND well broken pointers and setters, also dogs boarded and broken, satisfaction guaranteed. Address H. B. RICHMOND, Lakeville, Mass. Sept22,tf

---

Prize and Pedigree English Mastiffs.

American gentlemen desirous of purchasing these noble dogs should communicate with JAMES HUTCHINGS, 25 Gandy street, Exeter, England, who has the largest kennel of mastiffs in the world.

Beechgrove Boarding Kennels.

Dogs boarded at $5 per month. Plenty of exercise and good care given; also dogs got in condition for shows. Address HOWARD REYNOR, Beechgrove Kennels, Demarest, N. J. feb26,tf

---

ENGLISH MASTIFFS.—ALWAYS ON HAND, of fashionably bred choice mastiff pups, representing the best known blood, viz.: Lyme Hall, Elvaston Castle, and Lord Stamford's strains, correct in coat, color, mask and disposition, and delivered with well authenticated pedigree. FRED. GRANT, Clearance Office, Custom House, Boston.

FOR SALE.

Five Llewellin setter pups, one bitch and four dogs, color black, white and tan, whelped March 26, 1885, by champion San Roy and out of my Cora. She by Mark (Rob Roy ex Juno) out of Jennie (Leicester ex Dart). Price at 8 wks. old, $35 each. EDWARD DRANE, Clarksville, Tenn. apr16,4t

---

FOR SALE.—THE MASTIFF McMAHON (A.K.R. 550), 19 mos. old; price $50. A fine, handsome dog, good tempered, but so nervous that none but a good, gentle hand with dogs has any use for him. W. WADE, Hulton, Pa. apr23,5t

---

FOR SALE.—VERY LOW, HANDSOME BLACK and white ticked English setter bitch, 1 yr. old, is well yard broken and will make an extra fielder; one orange and white bitch, 6 mos. Skye terrier bitch, 3 yrs. old, sure death on rats. If sold soon can be had at a great sacrifice. Address P. O. Box 329, Newburyport, Mass. apr30,1t

---

TRAINED BEAR, DEER AND FOXHOUNDS, beagles and spaniels. Choice beagle pups, 2 mos. old. Now is the time to secure a good dog for the coming fall shooting. C. F. KENT, Monticello, N. Y. apr23,tf

---

FOR SALE.—A GORDON SETTER BITCH, color black and tan, 1 yr. old, with three pups, one dog and two bitches, color black and tan; pups 4 wks. old; sire of pups prize winner. Will sell lot cheap. Address H. B. VONDERSMITH, Lancaster, Pa. apr23,2t

---

FOR SALE.—HAVING RECENTLY ADDED several fine brood bitches to the Landseer Kennels of Scotch deerhounds and greyhounds reduced the price of puppies. Some choice greyhounds now ready to ship. DR. VAN HUMMELL, Denver, Col. apl16,tf

---

WANTED.—A POINTER DOG, THOROUGHLY broken on woodcock and partridge (ruffed grouse); one that can be warranted in every way. Do not care for pedigree, color or appearance, but do want a dog that will hunt. A dog broken and hunted in Western Massachusetts preferred. Address with price and particulars, HUNTER, Forest and Stream Pub. Co. apr30,1mo

---

FOR SALE.—FOX-TERRIER DOG, 2 YRS. OLD in June, imported, by a son of Spot (prize dog) out of Beauty; house broken, well marked and fine station; dead game. H. R. LAWRENCE, Brattleboro, Vt. apr30,3t

---

FOR SALE.—SETTER PUPPIES, PLANTAGEnet ex Matchless. F. THURLO, 57 Bromfield st., Newburyport, Mass. apr30,1t

---

FOR SALE.—SEVEN LLEWELLYN SETTER puppies (four dogs), whelped April 25, 1885, by Gun (Glaostone—May B.) out of Morning Star (Dashing Dan—Daisy Starlight). Price, boxed and delivered at express office, 8 wks. old, $20 each. Don't write unless you wish to purchase. CHAS. YORK, 9 & 11 Granite Block, Bangor, Me. apr30,tf

---

FOR SALE.—COMBINED DOG CRISTY, 3 YRS., king of dogs on treeing gray squirrels, trees 'coon, 'possum, barks up and in, trees pheasants, trails rabbits to gun or to ferrets. Five dogs trained on 'coon. No better time than now to buy a trained dog. Also pit game fowls, Irish gray, brass backs, Irish Belfast reds. My brood cock Irish B. red weighs 7lbs. tested, stands steel, warranted to stay to the death. Eggs packed carefully at $2 for 13. I breed foxhounds, beagle hounds. Write me before you purchase. H. C. GRAFF, Kensington, O. apr30,tf

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, MAY 7, 1885.

VOL. XXIV.—No. 15. NOS. 39 & 40 PARK ROW, NEW YORK.

CORRESPONDENCE.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications upon the subjects to which its pages are devoted are respectfully invited. Anonymous communications will not be regarded. No name will be published except with writer's consent. The Editors are not responsible for the views of correspondents.

ADVERTISEMENTS.

Only advertisements of an approved character inserted. Inside pages, nonpareil type, 25 cents per line. Special rates for three, six and twelve months. Reading notices $1.00 per line. Eight words to the line, twelve lines to one inch. Advertisements should be sent in by the Saturday previous to issue in which they are to be inserted. Transient advertisements must invariably be accompanied by the money or they will not be inserted.

SUBSCRIPTIONS

May begin at any time. Subscription price, $4 per year; $2 for six months; to a club of three annual subscribers, three copies for $10; five copies for $16. Remit by registered letter, money-order, or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States, Canadas and Great Britain. Newsdealers in the United Kingdom may order through Davies & Co., No. 1 Finch Lane, Cornhill, London. General subscription agents for Great Britain, Messrs. Sampson Low, Marston, Searles and Rivington, 188 Fleet street, London, Eng.

Address all communications.

Forest and Stream Publishing Co.

ANSWERS TO CORRESPONDENTS.

AMERICAN ARMS AND FOREIGN WAR.

WILL the war in Europe, which is now so imminent, bring any grist to America's small-arm shops? This is a question which has often been asked during the past few weeks, and answered by seeming experts by directly opposing replies. It is undoubtedly true that the private armories are now working along under double pressure, turning out weapons and ammunition. Where all the product is to go is, of course, kept a deep mystery, and it is not at all unlikely that there is a bit of speculation going on by the manufacturers who are making up stock in anticipation of expected orders.

It should be borne in mind that both England and Russia have rifle making plants of the most extensive sort. In Russia the army is provided with the Berdan & Mauser rifles, made up after German models, though much of the machinery came from this country. These rifles are somewhat antiquated, being complicated in construction, carrying cartridges which give a very high trajectory and consequent limited killing space, while the low initial velocity and large bore make them very unsatisfactory as an arm of precision.

England has been making certain changes in her small-arm supply. The Snider has been discarded, and even the Martini-Henry, fine weapon that it was, has been crowded from a portion of the regular army to make way for later models supposed to be of superior design. The result is that the resources of the Woolwich Arsenal would prove far too limited to meet the great demand which would come upon this great firearm factory if war should be declared. It has been discovered that the practice of putting inferior arms into the hands of the native troops, such as those of the Indian regiments, is not a wise one. These allies of England have found out that to do the best work they need the best tools, and are no longer to be put off with such rifles as have been condemned for use by English troops.

Another point of more than ordinary importance in all this discussion is the trouble which constantly threatens from the confusion of ammunition. Each rifle carries its special cartridge, which will not serve any other weapon. The result is that in the hurry and scurry of train dispatching, it very often happens that the wrong cartridge cases are sent to the fighting men in the front, and they are left with magnificent rifles, yet of no more use than so many hay-sticks. This condition of affairs was met again and again during our late civil war, and it would require the most careful sort of management of the supply trains to prevent its happening along the enormous fighting line which will open with the Anglo-Russian war.

America's opportunity will come in supplementing the arm-producing capacity of the European arsenals, or in furnishing the machinery to be put in charge of English or Russian workmen. The supply of fixed ammunition for both sides in the war could all come from the American Cartridge Company pool, with prompt delivery guaranteed.

The war would be doubly interesting to those who have made small arms a study if it will tend to settle many of the open questions in this branch of ordnance practice. The new rifle for the English regulars has had no end of adverse criticism directed against it, some dubbing it the M. M. (miserable malformation) rifle, and it is described by one of the war correspondents who saw its use at the Soudan, as certain to jam after firing a few rounds. It is to be hoped that the new models magazine rifles may be given a fair trial in the hands of picked troops. These rifles certainly represent the best result of the inventive efforts of late years, and it only remains to give them that last and final test which only actual warfare and firing at living targets can give. Then it will be seen whether they are as really destructive as theory points out they should be. This class of weapon has received the special attention of American inventors, and none of the foreign models can compare with those offered in this country. Should they be found to fulfill expectations, it will only prove that this country is still in the front rank and unrivaled in this branch of manufacture.

THE NEW TROUT LAW.

FROM all sides we hear echoes of the opinions expressed in our editorial of April 23, condemning the way in which an act was passed suddenly, and without a day's grace, closing the trout season after it had been legally opened, as well as in exempting Queens and Suffolk counties from its action. We have fully pointed out the injustice of the sudden closing while a man might have been legally fishing in the morning and subject to arrest in the afternoon, but the more we consider the exemption of the two counties the more idiotic it seems. The fish are protected in April in the counties of New York and Kings, where there are none, but where the great markets are, and allowed to be caught in the same month in Queens and Suffolk, the two greatest trout-producing counties in the State, but where there are no markets.

Why it is that to every law pertaining to fish and game Long Island should be excepted we fail to see. It was excepted from the provisions of the bill forbidding the hounding of deer, when the fact is that the few deer left on the Island might be forbidden to be killed in any manner, at any time, and no injustice be done. They are worth more to look at than to kill. But the trout that a Brooklyn gentleman may legally kill he dare not take home, a distance of twenty miles or so. Let us have a law passed that there shall be no legislation concerning fishing without the approval of the Commissioners of Fisheries to the proposed act. In this case the majority of the Board of Commissioners knew nothing of it until it was passed. Messrs. Roosevelt and Blackford never heard of it until it had received the Governor's signature, and Gen. Sherman saw a draft of the bill in which there was no extension of the close season until May 1, that being added afterward. Whether Mr. Bowman knew of the matter or not we cannot say.

We have not objected to make the opening of the trout season May 1, but we did object to the manner in which it was done and to the exception of the counties named. If New York city and Brooklyn had also been exempted, then it would not deprive our club men of bringing home their catch, nor the markets from selling trout from the great source of supply. That there will be changes in the law before next April is certain, for the anglers of New York city and vicinity are indignant.

THE DEER HOUNDING BILL.—Up to the time of our going to press, Wednesday, the deer hounding bill had not been signed by the Governor. The time for its signature expires to-day. We profoundly hope that it may become a law. The Otis bill relating to duck netting passed the Assembly yesterday.

COL. STUART TAYLOR, well known to our readers as the wielder of a most facile pen in yacht and dog discussions, has been appointed Naval Officer of the port of San Francisco.

NEEDS OF THE PARK.

AN attentive reading of the recently printed letters sent us by a staff correspondent from the region of the Yellowstone Park will convince one of the urgent need of Congressional legislation for this reservation. Matters in the National Park are at present in an unsatisfactory condition. Senator Vest's bill, if it had become a law, would have brought about a better state of things, but even then there would still have been room for improvement. We have been at no little pains to thoroughly inform ourselves on all points connected with it, and after a careful study of the subject offer certain recommendations for the government of the Park.

Three most important objects are to be attained by having a proper form of government there. These are the protection—

First, of the forests;

Second, of the natural curiosities, and

Third, of the game.

Besides these are the minor considerations of providing easy access to points of interest by means of good roads.

FOREST AND STREAM has so often insisted on the three points above enumerated, that their importance is acknowledged by all who have given the matter any thought.

1. From an economic standpoint, the most important and pressing requirement of the National Park is the protection of its forests. In the mountains which lie within the reservation, are the sources of two great rivers. The forests, which clothe the slopes of these mountains, protect the springs which give rise to these streams, regulate the melting of the snows in spring, and store up in their spongy floor moisture, which is given forth during summer and autumn, and renders the flow of these rivers equable. These two streams, the Snake and the Yellowstone, water a vast territory to the west and east of the Rocky Mountains, and all through this territory crops can be grown only by irrigating the soil. If these forests were to be destroyed, the result would be that the volume of these two great rivers would be decreased, or if not at once lessened, would be rendered irregular. If this takes place, the settlers along their banks, down on the plains on either side of the divide, will suffer incalculable injury.

2. To those who are interested in the preservation of this wonderland, the protection of the natural curiosities from destruction by the vandals who desire to carry them away with them seems scarcely less important than the conservance of the forests. For nearly fourteen years the work of tearing down these marvelous specimens of nature's handiwork has been going on, and the supply is well nigh exhausted. Unless steps are promptly taken to stop the destructive work, a few years more will see the last geyser crater leveled with the ground.

3. All enlightened people, and above all, all scientific men and all sportsmen, are anxious that the game of the region should be preserved. It is within the recollection of all of us that the buffalo were so numerous on the plains of the West that one could travel for days and never be out of sight of them during the hours of daylight. They have passed away, but the destruction of other species of our wild game goes on; and although their extinction cannot be compassed so speedily as was that of the buffalo, it will come just as surely, unless some place be set apart where these animals can be free from molestation. Such a region is the Yellowstone Park, if enlarged and properly protected, and there is still game enough within its boundaries to amply stock it, if the work of destruction is stopped at once. There are even a few buffalo still left there, a very few to be sure, but perhaps enough, if rigidly protected, to keep alive this noble race for a few years longer. But protective measures, if they are to be of any use, must be adopted at once, and must be sternly enforced. In a few years it will be too late to save the game, and how desolate this reservation will be if it is without life.

The necessity for such protection being acknowledged, it is evident that the only means of effecting it for so large a region is by providing an efficient force of officers whose duty it shall be to patrol the Park, and by arresting and bringing to justice those who violate the law, make it evident to such offenders that punishment will follow the commission of illegal acts. The existing law provides for the appointment of such officers, but unfortunately does not clothe them with the powers of sheriff or constable, nor authorize them to make arrests. At present, therefore, if an assistant superintendent surprises an individual in the act of destroying any natural curiosity, or slaughtering

game, or firing the forest, he has no power to do more than to order him to cease his work of destruction. To have him arrested, he is obliged to ride off to the nearest Justice of the Peace, obtain from him a warrant, find a constable and bring him back to the spot where the offense was committed, and then see that the constable arrests the individual—if he can. To do all this may require from fifty to one hundred miles of riding, occupying a couple of days, and it is very evident that the chance of apprehending the culprit at the end of this time is small.

If it had not been for the enlightened action of the Territory of Wyoming, even this weak attempt at enforcing the law would be impossible. Almost the whole of the Park lies within Wyoming, and at a recent session of the Legislature of the Territory, funds were appropriated to build a jail, and to pay justices and two constables for the Park, so that as a matter of fact the local government of the reservation to-day depends on Wyoming, and not upon the United States, which professes to own and preserve it. That such a state of things exists is surely a disgrace to Congress.

The appropriations annually made for the Park are very inadequate. Last summer the sum available for engineering work, including the building and mending of roads and bridges amounted to about $27,000. The bill authorizing this appropriation was passed July 7, and on account of red tape at Washington, it probably was not available for a month after this date. At all events the engineer officer in charge of the work had not reached the Park the last of August, and up to that time, we understand, not a stroke of work had been done. Travel may be expected to cease about Sept. 15, but even if it should last into October it is evident that three months out of the four during which work can be carried on in the Park, were wasted by the delay in furnishing the funds. It has been clearly shown that the mending of the roads should be done as early in the summer as possible, since the spring floods from the melting snows and rains do a vast amount of damage to roads left in good condition in the autumn. Much of the work completed in the fall is undone by the elements before travel sets in the following summer. The meagre appropriations are thus expended in the most wasteful manner; not through any fault of those who have the work in charge, but solely because Congress fails to appreciate the necessities of the case.

An absurd condition of things exists here so far as the Superintendent and his assistants are concerned. The former is the nominal head of the Park, but has control of no money and no men. He has no laborers to keep things in order, no buildings in which to store supplies, no tools. There is no one under him to carry out his orders. If a bridge breaks down, or a lot of trees fall across a road, or a washout occurs, there is no one that he can send to repair the damage or remove the obstructions, and if there were any one to send, he has no spades nor picks nor axes nor saws to be used in the work of repair. If an assistant chooses to ride off to some camp or hotel, borrow some tools, and attempt the work, he can do so, but he has no Government property which he can make use of for such a purpose.

The Superintendent is thus at present a mere figurehead, occupying an office which ought to be important, honorable and responsible, but which under the present state of affairs is merely nominal. If the Park is to be properly cared for there must be some one man who shall be responsible for the way in which things are attended to there; some one on whom the blame for neglect, or the credit for good work, should rest. No such responsibility is incurred by the Superintendent at present. He should have in his own hands the nomination of his assistants, who should be removable at once on his recommendation. Thus with an honest and efficient Superintendent, the assistants would feel that their continuance in office depended on the prompt and faithful performance of their duties. At present the positions of assistants are filled by appointment of the Secretary of the Interior, and several of those occupying this office are relatives of members of Congress. This, of course, would be nothing against them if they were competent men, but many of them are not. On the contrary, a number of them are men from the East, wholly unacquainted with the region and its requirements, its game, its natural features, its forests. They cannot find their way about, and are utterly helpless when they get off the roads and trails. They do no good whatever. We do not mean to do injustice to any of these officials who are conscientiously striving to carry out their instructions. We know that there are among them several who are good men, and who are thoroughly in earnest in their efforts to do all that they can in protecting the reservation, but they are terribly handicapped in their work because of their lack of power and of material to work with.

This is all wrong. The proper men for the positions of assistants are those who are familiar with the country and competent to travel through it, to look after themselves and to care for the natural curiosities, the timber, and the game. There are many such men to be found in the neighborhood of the Park—old mountaineers who have lived there for years, and who know the country well. Such men—although they do not often express it—have a real enthusiasm for the Park and its wonders, and would value, and most acceptably fill, such positions. They would be thoroughly competent, and their love for the beautiful region which has long been their home would render them enthusiastic in guarding it from injury and would insure their fidelity to the trust committed to their charge. At the same time it may be said that a number of the present assistants have now been stationed for a couple of years in the Park, and have no doubt learned a great deal which makes them better fitted for the position than any new men from the East would be.

The whole government and management of the Park, as at present constituted, are radically wrong. The Park should not be under the immediate control of the Secretary of the Interior. Any one who will think about it for a moment will see that it is impossible for this official to give the subject the attention which it requires. The Secretary's duties are enormously numerous, and subjects even more important than the guardianship of the Park are constantly claiming his attention. Even if he had the time to give to the matter the consideration which it requires, it is impossible that he should do so. He is too far off. It is absurd to think that every time the Superintendent feels the necessity of taking certain action he should be obliged to send to Washington for an authorization to carry out his plans. The conditions which govern the Park are constantly changing, and we do not yet know what is required there. The government of the Park is now, and will be for a long time, made up of a hundred matters of detail, which can only be determined by one who is on the spot, and the proper person to have control of all these details is the Superintendent, who can then be held to a strict accountability for all his actions. Give him plenty of power and some money to spend, so that he may accomplish something, and then if he does not do his duty, off with his official head and replace him by a better man.

But there must clearly be some men or some body of men over the Superintendent, for he must be looked after more sharply than can be done by the Secretary of the Interior. The readiest way of accomplishing this would be to give the control of the Park to a Board of Commissioners, who might be styled the Commissioners of the National Park. The Commission should consist of at least five individuals, and probably this number would be better than any larger one. It would seem fitting that the Governors of Montana and Wyoming Territories should *ex officio* be members of this Commission, and in the same way the engineer officer, who is for the time being the Chief of Engineers of the Department of the Missouri, should be one of its number. A scientific man familiar with the Park ought by all means to belong to it, and the position is so important, that it should be held by one of the Chief Geologists of the United States Survey. The fifth member should be some intelligent man, not in politics, who takes an enlightened interest in the reservation, in timber preservation, and in game protection. Such a man would not be difficult to find, and would be a very useful member of this body.

Such a Commission of five individuals would not be so large as to be unwieldy, and at the same time it would be sufficiently numerous to insure a proper inspection of the Park at frequent intervals. Several of the members being experts upon the various subjects of most importance in the conservancy of the Park, a wise supervision would be exercised over the roads and ways, the natural curiosities, the timber and the game, and suggestions and advice would be given to the Superintendent as to all these matters.

The Commission would no doubt be willing to serve without pay, but their expenses should be paid to the Park, and transportation furnished them through it, by the Government. They should visit the Park once or twice each year, and by December 1 report to the Secretary of the Interior as to the condition of the reservation and the improvements most necessary to be made. They should look after the Superintendent and his assistants, and see that they perform their duties properly, and should have the power to recommend the removal of any and every official connected with the Park in case it appears to them that such changes would be for the benefit of the reservation. In fact they should be the ones to whom the public should look for the proper supervision and care of this whole region.

The failure of Senator Vest's bill has put off for a year the extension of the Park and the providing of adequate laws for its government. The delay will prove an expensive one, and the culpable neglect of Congress on this matter is disgraceful, and on all accounts to be deplored. Whether the next Congress will be equally remiss cannot be told, but it is discouraging to those who have for years labored in behalf of the people to save the National Park from ruin, to see all their efforts go for naught. That these efforts will eventually be appreciated at their proper worth cannot be doubted, but in the meantime the old work of irreparable destruction, of forest burning, and of game slaughter will go on. As things are now, it is only by vigorous action of the Territories that anything can be done to save the most interesting features of the Park.

One step which should be taken without delay by the executives of the Territories of Idaho, Montana and Wyoming is to appoint the assistant superintendents of the Park constables or deputy sheriffs for those Territories. This would give them the power to make arrests themselves, instead of being obliged, as is now the case, to hunt up a constable. The appointments need not entail any expense on the Territorial governments, for the assistant superintendents, or at least those of them who are sufficiently interested in the Park to be anxious to do their duty by it, would no doubt be willing to accept these Territorial appointments and to serve without pay. The men who would not do so should be replaced by others who would.

To sum up, then, the National Park should be placed under the control of five Commissioners, who should be responsible for its care, and should make annual reports with recommendations to the Secretary of the Interior, who would thus be relieved of all detail work in connection with the reservation. All he would have to do would be to carry out the recommendations of the Board. To these Commissioners should be transferred most of the powers now vested in the Secretary. They should be authorized to lease lands, to grant licenses to run stage lines and pack trains, and to give permits to erect buildings and corrals. They should have authority to recommend the cancellation of any lease for cause, or the revocation of any license or permit. They should be the source from which the assistants appointed by the Superintendent should receive their commissions, and should be at liberty to refuse to issue the same at their discretion.

The Superintendent should be directly responsible to the Commission, on whose recommendation the Secretary of the Interior should remove him in case he does not appear to them the proper man for the place, and who should nominate to the Secretary his successor.

The powers of the Superintendent should be considerably enlarged, and a reasonable portion of the annual appropriation placed at his disposal. He should have authority to hire laborers and to make requisition on the engineer officer in charge of the roads for Government property—tools and supplies—to a reasonable extent. He should watch the Government tenants in the Park, and promptly report to the Commission any violations by them of the Park regulations.

The engineer officer in charge of the roads and bridges has an important part to perform in the Park. It is not necessary that his powers should be enlarged or curtailed; but he should certainly have more money given him, and it should always be ready for him by June 1, so that he may begin work just as soon as it is possible to get into the Park. In this way he can make his work show for something, and the visitors to the Park will be able to travel over good roads.

Finally, the assistant superintendents who are appointed in the future ought to be Western men; not loafers about the towns, but men who live away from them and out in the open air, who know the country and its needs; who can follow the trail of the man who fires the forest and kills the game until they have caught him, and then—just bring him into camp.

Take the offices in the gift of the Commission out of politics, and let that body manage the Park economically and well, as they would manage it if it were their private property.

This matter is one requiring careful thought and attention to detail, but the plan here outlined is one which can be carried out. If it be adopted the future of the Park is assured.

The Sportsman Tourist.

THE BUCKTAIL IN FLORIDA.

V.

I WRITE you from the Oak and Pine—a curiosity worth going many miles to see. There are two trees, one a low, sturdy, spreading live oak with three heavy, horizontal arms, gnarled and crooked, and the other a tall, umbrella-topped Florida pine growing up between two branches of the oak and firmly embraced by the angle of the strong limbs. And the two trees have become welded or grafted together by some strange chance, until the union seems perfect and indissoluble. The graft or weld is two and one-half feet in length perpendicularly, and seven feet in circumference at the junction, and the trees seem in perfect health. There is no apparent reason why they should not remain so for a century. Of course it will not be claimed that a tree of the genus *quercus* drains sustenance from a resinous conifer, or *vice versa*, but it looks like it. Hundreds have visited the trees the past season, and only one man claims to have seen anything like it before, and that on a smaller scale and much less perfect. The trees, including the camp, were photographed a few days ago, and I shall send you a copy of the same.

My last letter left us—Tarpon and the writer—about to explore the inlet of Lake Butler, called Brooker Creek. We had made camp on the west shore of a bay at the head of the lake and south of the narrows, and in going to the mouth of the inlet we headed north through the narrows, then turned to the east, skirted a shore lined with lily-pads, and soon came to a high, arched opening in the swampy forest where, under the meeting limbs of moss covered cypresses, the inlet debouched. It all had a decidedly tropical look, except the lily-pads, which I do not remember to have seen in the tropics. But the cabbage palms, palmettoes, vines, etc., looked much as they do on a Brazilian cano.

As the Captain quietly paddled under the lofty moss-covered trees he suggested that I get a feathered spoon in order, and take bass enough for dinner, as it might take us all day to explore the stream to the head of navigation, while he went ahead with the gun. So I, being all ready with Henshall rod and a gaudy silver and scarlet spoon with a showy tail of ibis feathers, got good headway on the canoe and sent the tinseled cheat far out on the port quarter, away from the lily-pads. It was short work. Hardly had the spoon got down to regular twirling than it was savagely snapped; and, as I don't lose time monkeying with a good fish where roots and lily-pads are handy, I reeled in at my best gait. He pulled hard and leaped out of water frantically; but I kept him coming until he had little more than ten feet of line, and then I drew him rapidly back and forth

with all the strain I dared put on the line, whopping him quickly at each turn, until he seemed to have lost his compass points and all notion as to where he wanted to go. Then I led him up to the canoe, and before he had time to take scare, had my thumb in his mouth. He was so dazed that he hung limp while I knocked him in the head. It is a pretty sure way to save a large fish—if your tackle be strong enough. Weighing him carefully with thumb and four finger, I said, "Four pounds (river weight), and enough for dinner and supper. Bismillah! Am I a cormorant? And there goes the Captain's gun; belike he has shot a turkey or a duck, at least."

So I paddled silently up stream, and found the Captain gazing earnestly at a wilderness of Spanish moss that hung in festoons and masses from the limbs of a huge cypress. He said, "I just wounded a hammock squirrel, but he dodged into the moss, and he is the same color. Might as well look for a needle in a hay-stack." And he took up the paddle again while I followed noiselessly behind, to give the gun a chance. Presently he laid in the paddle and raised the 12-bore. I backed water silently, as before, and his shot was followed by the splash of a dead squirrel which struck the water close to my canoe. "There," he said, "that's the hammock squirrel you've been wanting to examine. Look him over and say what you think of him." I did look him over carefully from nose to the tip of his tail, and he was just the same in every particular as the gray squirrel of the North. They are identical in all points, and not different varieties. And they are not as handsomely marked or as large by half as the fox-squirrel of this region. The latter being to my thinking the finest squirrel I have ever seen.

As we work our way leisurely up the dark, tortuous stream, the banks grow higher, dryer and show an occasional landing spot, at one of which the Captain pauses and says, "This is as far up as I have ever been. I came here with Mrs. K. last summer, and we tied up at this point for a lunch. Just as I was making the canoe fast I noticed a large water moccasin coiled up in easy reach of the canoe. It didn't take long to come down on his neck with the edge of the paddle and put him under. But it spoiled Mrs. K.'s appetite. And 'Nessmuk,' old boy, don't pride yourself too much in not being afraid of snakes; you might cruise all your life in Florida without being bitten, but the snakes are here, and if you do get bitten fairly and deeply either by the water moccasin or diamond rattler, you may as well sing your death song. Many cases have occurred in the south-western part of this State, and nearly all have proved fatal in a few hours after the bite was received. A little caution costs nothing."

Which is all very true. But all the same I am watching the chances for a black diamond rattler and a healthy, well-grown moccasin, that the skins of the same may adorn the sanctum of FOREST AND STREAM.

Cruising leisurely up the stream we suddenly opened on a burst of bright sunlight, and there was the usual Florida landscape; dry palmetto ground, wire grass and scattering pines, with a dry sandy bank on one side and thick hammock on the other.

We landed for a better view of the country, and the Captain suddenly ducked his head, came back to the canoe for his gun, took sight along the ground and cut loose. A bevy of quail got up and scattered off in different directions, while the Captain picked up three birds as the result of his ground shot.

"I'm aware it's not scientific shooting," he said, "but I'm shooting for the camp-pot. Besides if you undertake to flush them here they will mostly run off and hide under the palmettoes."

As the birds just filled the bill on fish and meat for one day's rations, I voted the shot as being in order, and we continued the cruise, but not for long. The stream narrowed, became more crooked, and was much obstructed by vines, hanging limbs and fallen trees. A few more crooked turns and we came to a huge trunk lying straight across the course. As it was a few inches above the water, the Captain, whose canoe is low in the rise and with little sheer, thought he could work her under, while the Bucktail with more rise and higher stems would have to be carried. So he straddled the log and wriggled his canoe under it, got in again and commenced to work his way up stream, while I landed the Bucktail, and being doubtful as to much more cruising in that direction, got out the pipe, selected a nice log and commenced whittling navy plug. It was a pleasant lonely nook for a contemplative, philosophical smoke, and I felt willing to resign the honors of discovery to the Linnie and her crew, while I enjoyed it.

I think it was ten minutes before I lost sight of that red shirt and black skull cap, wiring and twisting among vines, logs, bushes, etc., and in ten minutes more a voice hailed from above.

"You needn't come any further. Here's the head of navigation."

"I wasn't coming any further; I was smoking. Drive a stake and come back."

"No; you come up here."

So I went, and found the stream had degenerated to a forest rill, hardly big enough to float a bread tray. And it was scarcely a mile and a half back to the lake, and only 10 o'clock A. M. This was the tropical, mysterious and little-known Brooker Creek, where deer and turkeys were said to be plenty, with lots of wildcats and a few bear thrown in as extras. We saw fresh deer tracks, but no bear nor turkey signs; and the only living thing we saved was a large, black woodpecker, with a very bright scarlet crest, which, being only winged, fought and screamed like a demon, driving its strong, lance-like bill into the Captain's hands until they were covered with blood as he vainly tried to extinguish it by gentle strangulation, so as not to injure the feathers for a specimen.

Then we got into the canoes and headed down stream. We had packed all our traps and come prepared to camp on the inlet, but decided to go back to our camp on the bay, loaf around until evening, then shoot birds and fish for bass to take home. Man proposes, etc. When we had paddled half way to the lake, and were in the swamp where there was no landing, the Captain hailed sharply with, "I've cut a hole in my canoe; leaking fast."

"Dig out for a dry landing," I yelled. And with his long, muscular arms and nine-foot double blade he turned the canoe and soon sent her out of sight up stream. I followed at a leisurely stroke and found him landed on a dry, sandy bank, the canoe unpacked and turned up to dry, while he had started a fire and was busy with bits of canvas, wax and the usual duffle of those who go down to rivers and lakes in canvas canoes, and as he stuck the hatchet-head in the fire to heat he remarked sententiously, "The beauty of a rag canoe is that she is so easily mended." And I rejoined, "The beauty of a clinker-built cedar is that she takes ten times the amount of snagging and don't need any mending at all." "And costs twice as much," said he. "And lasts four times as long and will float a man when she is swamped," said I.

On the whole, it was not so unlucky that cut in the canvas. For in unpacking the canoe the Captain missed his favorite camp axe, which he remembered to have left sticking in a log where he had turned to go down stream; and that axe could never be made good by a new one. It had cruised with him all the way from St. Johnsbury, Vt., to Tarpon Springs in the Solid Comfort, and thousands of miles besides, and it had to be retrieved if it took all summer. Then it struck me that we were in a very good place for a camp; there was plenty of wood, pure, cool water, and dry ground, with pine timber for a frame in the hammock near by. The Captain had made the camp on the bay, and I volunteered to make one on the inlet while he went for his axe. So, the mended canoe being dried, he paddled out and I proceeded to cut crotches and poles for a frame. It was not a long job, and when he came back with his axe I had the camp all ready for the palmetto thatch, which he assisted in laying on properly; and by the middle of the afternoon we had a snug camp for the night. Dinner was a little late, but good, and we feasted on fried bass and squirrel to our heart's content, with coffee made in the Captain's best manner—and no man makes it better.

Then he, doing as he had a mind, paddled off in search of specimens, while I took the Bucktail down to the lake intent on trolling for bass; but fishing was a failure. There was a strong breeze directly up the lake, and the sharp, chopping sea made work for both hands with the double blade. Lake Butler can kick up a stiffer sea for its size than any sheet of fresh water this side of the Adirondacks that I am acquainted with. I paddled back and spent the balance of the afternoon slicking up the camp and making things cosy for the night, and just before dark the Captain came back with a long-legged, ill-looking bird that was new to me.

It was a pleasant camp that. The weather was fine, the wind went down with the sun, the tea had a flavor that it only has in the woods, the pine burned brightly and steadily, and our pipes drew to perfection. And when, having swapped yarns until a late hour, we drew our blankets about us, there came the old familiar Voices of the Night. Voices familiar, yet unknown. Voices that I knew fifty years ago, but the owners thereof have always been to me a mystery. And not to me alone, but to all the naturalists with whom I have ever spent a summer's night in the forest. And there were the voices, too, that I had known from childhood as belonging to the owls, the night-hawks, frogs, and best of all, that incarnation of a woodland sprite, the stately loon.

Then, as my eyelids drooped, I remembered nights passed in a cabano barrata on the Amazon, where the lofty forest that is so silent and lonely by day becomes a pandemonium of racket at night, with not a single voice that a northern ear can recognize. And then—and—I forgot all about it—to waken and find it daylight, with the Captain making coffee in that two-story tin invention of his, which really does make admirable coffee.

We had planned an early start down the lake to avoid the strong sea breeze that was pretty certain to be against us. For the Bucktail, being light and high on the water, does not take kindly to a head wind. And when she jumps the crest of a sharp sea, catching the wind under her flat bearings, I don't seem to get on. Perhaps we dallied too long over an epicurean breakfast of broiled quail and spent too much time with the pipes, or were dilatory in packing the canoes. Anyway, it was so rough when we reached the mouth of the inlet that I was tempted to turn back. But the Captain encouraged me, and laying his course diagonally across the lake, gave me a chance to paddle under his lee quarter. And when he luffed, taking it square in the teeth, I managed to catch on to his wake, which made things go a deal smoother. (I am not above taking a little help from a younger, stronger man, and an abler canoe).

What with winding in and out of bays, stopping to examine points of interest, shooting and fishing, with an hour for lunch on a palm-shaded point, it was late in the afternoon when we doubled the carry over to the Salt Lakes. And when we said good-bye at the neat sandy landing on Oak Point the sun was sinking behind the Anclote Keys.

NESSMUK.

REMINISCENCES.

"And quhan to the Norroway shouir we wan,
We muntyd our steedis of the wynde,
And we splashit the floode, and we darnit the woode,
And we left the shouir behynde.

"Fleet is the roe on the grein Lommond,
And swift is the couryng grew;
The reindeer dun can eithly run
Quhan the hundis and the hornis pursue.

But nowthir the roe nor the reindeer dun,
The hynde nor the couryng grew,
Can fly owr muntaine, muir and daile,
As our braw steedis they flew."

RETURNING at eventide from a snowshoe tramp through the forest, I loose the slings, stand the "raquettes" in a corner of the piazza, and congratulate myself that we of the frozen North have blessing denied the sojourner under tropical skies. No saw-grass, no sand-spurs, no moccasin snakes, no alligators, no cutting your way with a machete through the first thicket you wish to penetrate in search of game, no—well, never mind the rest; and I turn my gaze where the cold light of the waning moon rests on the frozen lake. The chill wind rustles the leafless vines around the porch, where moth and humming bird erst held high carnival, and I bethink me that away down South there are, after all, some comforts and many good things. North—South, both good, neither best; and with a slight shiver I open the door and pass into my sanctum. The wind rises, the chimneys roar, the occasional snapping of frost-work is heard. "Pau-puk-kee-wis is gathering in his harvest." It is a wild night—a good night for reminiscences.

I punch the fire, and betake myself to an easy chair and a meditative meerschaum. The smoke-wreaths curl around the grim trophies on the walls, and the mellow light of the reading-lamp falls on weapons and mementoes from pole and tropic—of peace and war; on spur and spear and sabre, creese and kandjar. There rest at last from chase and battle the axe and arrows of the pre-historic man, chipped by our brother hunters in the silent past; the knife of the Norseman in its silver sheath, the channelled buffalo shafts of Sioux and Pawnee, and the mighty bow and more than cloth-yard arrows of the Carib savage; beside the snaky African assegai and the deershorn naligeit of the Arctic seal hunter. Hum-m. That old hirschfänger reminds me of Herman, and there, from the antlers of a mighty stag, swing the pistols of other days—long, damasquined muzzleloaders, whose carved butts shone at my saddle-bow, as side by side with Colonel Delles, and hard in the wake of his stalwart hounds, we swept the plains in the long ago at the break of the breezy morn.

But one sad eve, the prairie stained with blood, we watched the last gleam of the Pawnee spears disappearing over a ridge, and gathered around our fallen leader, wounded, we feared, to death.

A jolly party of ten, well mounted and armed, we had fallen into a trap. Too strong for capture or extermination, we yet had lost our outfit—arms and buffalo horses excepted—and the scalps which hung at the belts of the guides but illy paid the loss. Contrary to our expectations, the morning found the Colonel able to ride, though slowly; and it was voted in council that we lose no time in making the best of our way to the nearest settlement.

I have spoken of the Colonel. A born leader of men, his was the kingliest presence I have known. Of the best blood in England, his ancestors had ridden at Hastings in belt and byrnie; in buff and corslet at Marston Moor, and the curtal-axe of him who rode by Baldwin's side under the walls of Jerusalem, still hung beneath his helm in the old hall in Kent.

At the breaking out of the Sepoy mutiny in India, he had been besieged, with his family and a few faithful followers, in his country residence, and fought with desperation in their defense. When at last he stood at bay, with sabre in hand, above his dying wife, and with yet no hope of rescue, he cursed the foemen with the curse of steel. The rattle of scabbards announced that help was near—it came, and he was saved, the only living one. He rendered good service throughout the war, then sought to forget his grief, as far as possible, in the excitements of Continental wars; these failing, then in travel and the chase. Not one of our party but would have followed wherever he might lead. Calm and courteous, he never smiled except when engaged in some act of kindness; as when, to rescue a comrade in imminent danger of captivity, he rode, with never a look behind, against the Pawnee spears. It was then he received the lance wound which had nearly proved his death.

Our homeward progress was necessarily slow, and game proved scarce, so that on the evening of the third day we encamped without food upon the bank of a small river, which skirted a low range of hills. The indomitable spirit of the Colonel had thus far sustained him, but he was weak and fevered, and we feared the worst. His tall German servant, Herman, prepared his couch, and made him as comfortable as possible, and it was arranged that with the first streaks of light those who could, should leave the camp and seek for game.

I have spoken of Herman as the servant of the Colonel, but he was, rather, a familiar companion and friend. Of brilliant prospects in his native land, he had quitted home for political reasons, and after a time found himself in this country, half starved, and but imperfectly acquainted with our language. He chanced to attract the attention of Colonel Delles, who, commiserating his forlorn condition, addressed him in German, asking if he could be of service, and Herman, rejoiced, was only too glad to join the train of his new found friend. Finely educated and accomplished, he proved a decided acquisition. A capital rifle shot and an expert horseman, he moreover possessed a magnificent voice. Our lonely camps were often cheered by the notes of his flute, or some wild Switzer lay, and the chorus of the Kuh-lied, or the Zingaresca, oft roused the deer and antelope from their grassy beds on the slopes of the western hills.

Slowly passed the hours of that night, and ere yet the day had dawned, one after another of our party arose from his bed of leaves, saddled his horse and silently rode away through the heavy mist.

At daybreak there remained only the Colonel, the old Indian guide, E-ta-pe-tah, (Fire-face), and myself. I was sitting by the sulky fire, repairing a rent in my leather chaparejos, while the Indian was engaged in performing a similar office for one of his moccasins, when, much to our surprise, the Colonel raised his head from the macheers of his saddle, and announced his intention of riding westward in search of deer.

Said he, "I marked the slot of a large buck near where we crossed the stream last night, and it seemed quite fresh. I may get a shot; if not, and we rouse him, we will try the hounds." Mounting wearily his Irish hunter, he rode away, the well-trained dogs following quietly at heel, while we continued our labors.

Soon after the mist lifted, and I saw the Indian drawing his tomahawk from his belt. A moment later it whirred across the stream and stuck quivering in a tree, while a rabbit sprung from a clump of bushes near, into which E-ta-pe-tah had seen it hop. A sharp whistle, the twang of the bow of the Fire-face, and the little animal, transfixed by the arrow, lay dead on the river's bank. "Ugh, good for Colonel," muttered the savage, as he proceeded to retrieve the game, while I, having finished my task, caught up my horse and rode slowly westward along a faint trail which followed the course of the stream.

Suddenly I checked my horse, as the note of a hound struck upon my ear; another. "That was Turco." Then sounded a deep bay from Nona, a crash from both the hounds, and a thundering "tayho" burst from the summit of the hill above my path, as a mighty stag broke covert on its side, and then appeared the wide-awake of the Colonel above the black crest of his horse, Shaunbuie, as they crashed through the brushwood in pursuit.

The stag was plunging down the hill, at that point steep, and covered with loose boulders. To my utter amazement the Colonel hardly checked his pace, but hallooed to the hounds and held his course. Surely, in his weak condition he will not try that slope. But the blood of the old East Indian hog hunter was up, and the spirit of the Neilgherries was upon him, and sitting well back in his hunting saddle, with a strong pull on the snaffle, he went down the hill like an avalanche and reached its foot in safety.

My horse was trembling with excitement, but now "ride" was the word, and I loosed the rein. A bound and we reached the river's gravelly brink that crashed to the dint of the spurning hoofs, as we soared across and lighted on the plain, with the sun just cresting the eastward hills, and the tall deer full in view.

"Now nerve thy limbs, El-Azrek, fling
Thy head aloft, and like a wing,
Spread on the wind thy cloudy mane,
The hunt is up."

Harkaway! heyaway! Over the prairie we swept like

breeze, the Colonel in the lead, well up with the hounds, his face like ashes, though a red spot glowed in either cheek, and lifting steadily forward his mighty steed. I, hard at his back, on my horse Malinche, his lips tossing the creamy foam, and steadily closing on the black.

The hounds were running almost mute so furious was the pace, yet was the air vocal with stirring sounds that swelled the morning breeze. With hark and whoop, and wild Comanche yell, from glade and coppice on either hand, and sweeping over the prairie rolls came our wild riders to join the hunt.

With floating plumes and tossing manes, with singing lariats, whirling quirts, and locks and fringes flying, with ring and rattle of bridle and spur, and clash and thunder of the horses' hoofs, the hunt rushed on

"As the Bourbon's *preux* were wont to dash
Still after the toss of his white *panache*."

or like a pulk of Cossacks in their wild hourra, swarming down through birchen wastes upon the decimated legions of Napoleon.

How long that race, I never knew, it seemed but a moment—it seemed an hour, when the chase had reached the foot of a low range of hills which crossed our path—the hounds still thirty yards behind, and the stag sprung up the steep front of the Sierras, seemingly as fresh as when he bounded from his couch.

A shrill neigh burst from a fallen treetop on the left, a puff of smoke, there came the ring of a rifleshot, and the stout buck bounded into the air and went rolling down the slope. A moment later we had checked our steeds beside the quarry, as Herman emerged from the leafy covert with his smoking "yager" in his hand, and his long *couteau de chasse* in readiness to perform the duties of huntsman.

"In the name of Typhon and all the rest of the Egyptian saints," said the Colonel with some emphasis, "Why did you shoot that deer?" "He vas making for a pig slough chust ofer de hill, Colonel, und I vanted mein preakfast." "The deuce take your breakfast, sir," replied the Colonel, "But it was a glorious burst;" and then he quietly dismounted from his horse, dropped the bridle-rein, seated himself upon the grass and fainted.

Colonel Delles was delirious that night, and talked and raved incessantly. Now in his yacht, close-reefed, and scudding before a gale in the Bay of Biscay, while, lashed to the weather shrouds, he saw the gleam of the following seas sweep over the deck beneath his feet, and watched the lurch of the staggering masts as he shouted to his crew; then, once more beneath the sun of India, he dressed his ranks in face of the charging lances of the mighty Scindiah and his sister Beema, with their turbaned hordes. Now he called fondly for his wife, then ordered that the slayers be brought before him and bound to the mouths of cannons. Then he led through jheel and jungle a party on desperate service, storming at last a hill-fort, where ginjall and matchlock poured their fire against rifle and bayonet, and tulwar clashed on sabre; and again, he was spurring his horse in a cavalry charge, where man and horse went down like reeds before the terrible cuirassier.

Anxiously we watched; at last sleep came, and for a space the weary soul found rest.

Some days after the occurrences I have related, we were riding late in an afternoon on a trail which wound along the eastern slope of an oak-timbered hill, when Colonel Delles, who was borne in a horse litter, raised his hand, and the cavalcade came to a halt. "Were I north of Tweed as I am east of the Neosho," said the sick man, faintly, "I would say that I heard the wild war-notes of Bonny Dundee;" and as we listened there came on the evening breeze the stormy swell of a wild northern pibroch. Two of us instantly rode in advance, and in a few minutes reached a homestead, whose rude, but extensive building and broad fields of cultivated land, promised rest and abundance for our weary train; and the warlike strains, which sounded from the house, indicated that something was in progress a little out of the common way.

This was the home of a substantial German farmer, and the occasion of the present jollification was the birthday of his aged father, in the celebration of which event several friends from different parts of the country had come to join; one, a Scotsman, having brought the great war-pipe, which he had played, as he said, when His Majesty held the last "drawing room" at Holyrood Castle.

We were heartily welcomed, accommodations provided for our sick companion, and a horseman dispatched to a temporary military post, some twenty miles distant, for a surgeon, who arrived in the course of the night.

Here our party dispersed, Herman and myself only remaining with the Colonel, and after a few days, he being apparently convalescent, I prepared to take my leave. I had incidentally observed that Herman seemed to have found favor in the eyes of the blue-eyed Margaret, one of the daughters of mine host; but as that was none of my business, I one bright morning bade good-bye to all, and with mutual good wishes and hopes for reunions in the future, I mounted and rode toward the rising sun.

The Colonel returned to England, and his bones now rest besides those of his mailed ancestors beneath the floor of the ancient chapel. Herman finally went to the wars, "with his wild harp slung behind him," and I lost sight of both.

Many years after, I was one afternoon riding through the great pine forests east of the Keshena reservation, in Northern Wisconsin. Old Snowstorm had put me on the trail, and given me directions how to reach a certain "half-way house," but either in consequence of his ignorance of English, or mine of Menominee, I missed my way, and it seemed likely that I should be obliged to camp in the forest, with no provender for myself or my horse.

It was nearly sunset when I heard the baying of a pack of hounds, and riding along an old log road, I paused at a point where they seemed likely to cross. Nearer and nearer in full cry on they came, evidently the scent was hot. As I looked, two splendid deer darted across the path, when from behind a giant pine in the dim shadow of a deep ravine shot forth a stream of flame. Another followed, and the reports of the rifle echoed through the ancient forest, whose giant arches crashed and rang to the bay of the deep-mouthed hounds.

The deer had passed from my sight before the shots were fired, but I was sufficiently near to note the dull sound of the bullets striking on their mark and knew that neither shot had failed.

Riding forward, I soon saw that one deer had fallen at the shot, while the other scarce had run two hundred yards before the strong hounds had pulled him down. I approached the successful hunter to offer my congratulations on his success and inquire my way to some place of shelter for the night, and he came forward, a tall, strong man, whose features told plainly his nationality, so that I was not surprised at the slight German accent which marked his courteous greeting. A few words put him in possession of the facts concerning my present predicament, and after telling me that it was quite too late for me to think of reaching my destination that night, he said that his own house was within half a mile, and that he would feel obliged if I would accept such hospitality as he could offer. This I was ready enough to do, and the deer having been bled, we moved onward and soon reached a farm of considerable extent, whose substantial buildings and well-kept fences showed evidence of thrift and prosperity.

After calling one of the farm hands and sending him for the venison, my host walked into the house, where, amid a bevy of bright children, we were met by a neatly-attired lady, whose blue eyes had somehow a familiar look, and to whom I was introduced as Mr. K. Surely, thought I, I did not tell him my name. And he merely called her his wife Margaret. I wonder what his name is. I won't ask him just yet, though. The house was comfortably, in some respects elegantly, furnished. Large bookcases with well-selected volumes in many languages, a grand piano, a guitar, and other evidences of culture and refinement, satisfied me that I had lighted on something rather unusual in that region; but supper was announced and I followed my hostess into a large dining-room, in which my eye was attracted by a sideboard made of the beautiful birdseye maplewood of the country, and over which was a trophy of ancient arms, offensive and defensive. Seeing the direction of my gaze, my host remarked, "You seem interested in those arms, sir?" and, as I assented, he added, "They were sent me not long ago by my good father. They used to hang in the old hall at Breslau."

There was something in his voice which stirred old memories, but for my life I could not think where I had met this by no means ordinary man. He seemed to divine my thoughts, for he regarded me with a quizzical expression, and I saw that the lady was smiling. Confound him, why didn't he tell me his name. "It seems to me, sir, that we must have met before, but when, I cannot tell." The lady laughed merrily, and her husband, putting on a comical look of simplicity, and assuming as far as possible the air and language of a young and newly arrived emigrant from the Vaterland, said, "Then you ton't remember Margaret unt Herrmann." K.

Natural History.

BIRDS IN QUEER PLACES.

THE past week we have had beautiful weather, at times real "snipy." A few scattering *Scolopax* have been shot, one winter yellowleg, one beetlehead (*S. helvetica*) and one jack curlew (*N. hudsonicus*) have been seen. Woodcock have been here for a week or two. I saw two that met death accidentally, one flew against the telegraph wires near Wakefield, and was picked up by a track hand, and one flew against a building in Boston and fluttering down to the sidewalk directly in front of a gentleman was picked up, and handed to a friend with whom I saw it. Accidental deaths must, I think, be more common than most people are aware of. I saw a song sparrow once fly in front of a swift moving locomotive, come in collision with the same and in a very few minutes the little fellow breathed his last in my hand. I have a grouse now stuffed which was picked up in Siberia by my late shipmate, boatswain Cole of the Jeannette. This bird had broken its neck by flying against a telegraph wire. Other personal incidents might be mentioned. Birds get into funny places. A man recently found a woodcock alive in the back shop of his store in Lynn. The bird's head was bruised. How it got there the proprietor of the store does not know. Three rails (*P. carolina*) were recently discovered in a large box used for storing dry tan in the yard of a tannery in Salem. They were set at liberty. I saw a cock quail in the yard of a friend of mine not long ago. He was out of his latitude, yet fully able to care for himself. Two years ago, while driving toward Danversport, I passed a cock quail right in the road. I drove by close to him, say within five or six feet. The bird just lay close to the ground, apparently not knowing what else to do.

Lots of geese went over us recently, bound for higher latitudes. I am told that brant were very numerous a week ago near the Monomoy club place on Cape Cod. They would not decoy well and therefore comparatively few were shot. By the way, can any one tell why (so far as I know at least) these birds do not breed in confinement? The Canada goose breeds, but the brant, so far as I can ascertain, will not. Red-shouldered, red-tailed and rough-legged hawks, white-bellied swallows, fox sparrows and bay-winged buntings were seen a week or more ago. Bluebirds are nesting. An albino female robin was shot yesterday near Readville, Mass. Blue herons and bitterns are along. X. Y. Z.

Salem, Mass., April 27.

HABITS OF THE PRAIRIE DOG.

THE opinion expressed by "H. J. R.," in your issue of April 9, that the prairie dog manages to exist without drinking, is one that is held by many of those who are most familiar with the habits of this curious little quadruped. Untenable as such a conclusion appears to be, it has been forced upon them by observations that made such a decision more reasonable than any other.

In the fall of 1867, I visited the little town of Abilene in Kansas, which was then the terminus of the great Texas cattle drive, or at least of that portion of it destined for the Chicago stock yards. In the center of the town, which then consisted of about twenty houses, nearly all of them stores, restaurants and saloons, was a grass plot, plaza or square about 100 yards wide, in which was a small colony of prairie dogs, all the descendants of a single pair that had been caught, tamed and finally turned loose by a rather eccentric old man, one of the first settlers of the place. There were, I should judge, twenty-five or thirty of the dogs, some of them so tame that they would readily approach a stranger and eat out of his hand, although they declined being handled, and all the rest would feed about perfectly unconcerned while persons were constantly passing within a few yards of them. They were a source of much pleasure to me while I remained there, and I gathered all the information possible about them from the inhabitants.

One point on which I remember of making particular inquiries, was whether they were ever seen to drink. They replied that the old man who owned the original pair and kept them a long time confined, declared that they never drank, and that on one occasion, when he forced one of them to swallow a small quantity of water, it was immediately thrown up again, having evidently produced nausea. I never took much stock in the theory that they dug for water, although I do not deny that it is possible, but if it is a fact that they can live without drinking, it is hardly more astonishing than the well-known one that they will not only live, but keep extremely fat when the whole village is as bare of vegetation as a billiard table.

On the vast alkali flats of Utah, Nevada and Arizona, where in summer there are no running streams or standing water, no rain and not even dew, the horned toads and lizards live and thrive in localities where, with their limited powers of locomotion, they could not get to water in a week; and the hotter and dryer the locality the better it seems adapted for their existence. Where the sun comes down with blistering strength, and the deceptive mirage is continually tantalizing the rider and his horse, there the great lizards, eight or ten inches long, beautifully colored with red, brown and yellow, and quick as a flash, bask in the sun evidently perfectly happy; but as you approach the mountains they become stunted, sluggish and almost perfectly black. They can live without water surely, and if they then why not the prairie dog? Forked Deer.

San Francisco, Cal., April 28.

THE BIRDS OF MICHIGAN.

BY DR. MORRIS GIBBS.

(Continued.)

31. *Mniotilta varia* (Linn.) Vieill.—Black and white creeper.

First embraced by Professor Sager, in his list published in the "Geological Report of the State of Michigan," 1839, since which time it has held a place in the lists of not less than fifteen different collectors, and is now known to almost every boy interested in making collections. The lists of Cabot, 1850, and Kneeland, 1850, do not contain the name of this species, and it has thus far not been reported from the Upper Peninsula.

The black and white creeper reaches the southern part of the State during the last week in April or the early days of May. My earliest recorded arrival is April 22. The birds were not seen until May 7 one season. A fair average may be placed at April 27. As a rule the males precede the females a few days, I think. The habits of this so-called warbler are so entirely different from those of any other member of the interesting family, that it is hard for one not versed in technical classification to understand why it is embraced in the *Sylvicolidæ* in preference to the *Certhiidæ*, creepers proper. In its habits it embodies the peculiarities of both creeper and warbler, and while securing its food, we may say mainly from the trunks and larger limbs as in the case of *Certhia*, it also gleams among the foliage with the elegance and vivacity of the typical warbler. I have occasionally observed *Mniotilta* in the act of securing his prey on the wing, and though perhaps an unusual method of capture with him, he acquitted himself with such expedition as to lead me to think him anything but a novice in that line of feeding. We often find him feeding on the ground, and he is a great fellow to scramble over logs and stumps in the woods. His usual habit is to keep well up in the trees, however, and the large majority of the birds are seen from fifty to sixty feet from the ground.

On his arrival he is inclined to keep silent, and only an occasional call note is heard from him as he circles around the trunks, but after deciding on a mate and while selecting a nesting site, he becomes very noisy, and few species of the family are equal to him in small talk and chatter. The mating season begins about May 15 as a rule, and the commotion caused by a few pairs of creepers in a patch of woods is surprising. The birds fight savagely, and I have witnessed several battles in which feathers were torn out by the bitter rivals. The lady in the case sits demurely on a limb near at hand and watches the conflict apparently unconcerned, while the gallant warriors flit hither and thither, alternately pursuing and retreating, and almost constantly in battle; now on a limb, the next instant on the ground, then a rush over a dead log or up the side of a stub. The combat often takes place in the air, and the little contestants flit among the branches or scramble and half fly over and under the underbrush, often coming within a few feet of the observer. During this amusing scene the birds keep up an incessant chattering and guttural chirping which may be heard at some distance and is characteristic of the species, no other bird of my acquaintance possessing notes in any degree similar.

The regular call notes of the creeper warbler are simple *tweeks* or *tweets*, and are uttered faintly by the caller during spring, summer and autumn. There is also a note which I have only heard a few times during the mating season—*creeeee-e-e e-p*—which much resembles the faint call notes of the little brown creeper. The notes commonly heard during battle, though greatly modified under excitement, are a sharp chatter often repeated, and so incessant is the noise, that one wonders how the bird manages to get breath. The notes may be described by the prolonged *chat-t-t-t-r-r-r-r-r-r-r-r*, the same being varied with an occasional *Tset-set-sit s-i-t-t-t-t* uttered very rapidly. The last are the common notes of both parent birds during nesting. The song is agreeable. It has been variously described by writers, all of whom in the attempted imitations on paper, have allowed but little or no variation in the repetition of the notes. I think it fair to allow that the creeper warbler has a greater compass in song than is usually admitted. To me the song sounds like this: *Che-wheepy-teepy-seepy-ka-wheepy-cheepy*, all of which is modulated to a degree of nicety little known to any but a careful observer. The song as usually heard from the top of the trees is not musical and is rarely noticed, but if the bird is heard near at hand, the listener will be surprised at the sweetness of the notes. Other notes, perhaps constituting a song, have reached my ears, but they appear to me to be only a modification of the above song.

In the proper place reference will be made to many peculiarities in the songs of our birds, and it is hoped that the growing interest in bird songs which has of late awakened, will cause the readers of this series of articles to refrain from too severely criticising these attempts at description.

The black and white creeper continues to sing in its nesting haunts until about July 10, and occasionally a little later. After this date it is rare to hear the song. In late August and rarely during the early part of September, a faint song may be heard, but never so strong or vivaciously uttered as

during the period of nidification. The chattering is heard, however, more or less throughout July, August, September, and at the time of the arrivals of the birds from the north, and when the little fellows are contemplating their autumnal journey, the chattering and call notes are almost constant in the thickets. The birds do not all leave us until late September and occasionally even as late as Oct. 20.

This species, although abundant during migration, is not really common (during summer) in any locality that I have visited south of 44° north latitude. During the last week in April the birds usually make their appearance, and by May 10 are abundant; but the large majority pass north to breed, and, notwithstanding the fact that the creeper is found breeding in Texas and many other southern sections, in Michigan very few remain to breed south of 43°. This is one of the birds which has become more abundant during the past few years, and it is reasonable to suppose that it is found at present in the Northern Peninsula, although not recorded from there by lists of twenty-five and thirty years ago. Few nests have been recorded as Michigan captures from the fact that in the localities where the birds are more often found in the breeding season there are no collectors. The nest is invariably placed upon the ground or near it in all Michigan examples. The site selected is usually near the roots of a stump or by the trunk of a fallen tree, the parent birds' object in building in such a situation undoubtedly being to seek partial protection from the weather. The nest is frequently built in a form similar to that of the golden-crowned thrush or oven bird, the cover or upper part extending nearly over the eggs. In composition it is similar to the nest of that species. One nest was lined with a profusion of horse hair. Another nest was composed, bottom and sides, of grapevine bark and dead maple leaves, and lined with fine roots and grapevine and some hair. In choice of location the birds evidently prefer a high and dry woods, usually beech and maple; but low woods are also resorted to quite frequently, as I have often observed the birds in such situations during the nesting season.

The eggs are three to five in number, the set being often augmented by the addition of cowbird's eggs. In color the eggs are of a creamy white background, with the larger end more or less covered by numerous dots, points and blotches of reddish brown. The egg is dotted and speckled also over its entire surface with fine markings of the same color, but not nearly so densely as at the crown or larger end of the egg. The average dimensions of some Michigan eggs are .63x.51. The eggs are laid from May 20 to June 1. A second brood may be reared, but to this I cannot attest.

The habits of this creeper warbler are very interesting, and an afternoon spent in watching their vivacious, varied movements is sure to be prolific of amusing incidents in bird life. The note book quickly contains valuable remarks on habits and movements which are read with great interest later in the year, when the chilling winter winds are sighing in the leafless branches, and we are longing for gentle spring to appear. There are few families if any in bird life which are as attractive in their ways as the warbler family. The woods would indeed be deserted if these gems of the woodland were absent.

The food of the creeper is, so far as my knowledge extends, entirely of an insect nature. I have not examined any birds in the autumn, and doubt not but that a change of diet is indulged in to the extent of an occasional taste of fruit or a few wild berries, but during the spring migrations I have been unable to detect anything of this nature in the crops. The food is principally of insects of the order *Coleoptera*, and large quantities of the partially digested bodies of beetles are found in the gizzards. Many representations of the order *Diptera* are also devoured, but it is more difficult to distinguish them, as they are so readily dismembered in capture and swallowing. All classes of insects are found, however, in the stomachs, and the active birds appear to eagerly feed on anything of an insect nature which comes in their way.

FOX SPARROWS IN SPRING MIGRATION.—Under heading of "Spring Notes," in your issue of April 23, "C. L." mentions the securing of the first specimen of fox sparrow "in the vicinity of Buffalo on the spring migration," while they have formerly been secured during the fall migration. My experience in this vicinity has been just the reverse. For the past five years we have secured one specimen every spring. In April, 1882, my son shot one out of a maple tree in front of the house; April 21, 1884, I secured a female; on April 22, 1885, I was in a small piece of woods a mile from the city limits; was talking with a woodchopper, when a bird came into the woods and stopped within gunshot. After looking at it through my glass, I exclaimed, "You are just what I want," and the next minute I held in my hand the finest specimen of *Passerella iliaca* I had yet obtained, a male, measuring 7¼x11¼ inches; weight, 1¾ ounces. The only specimen obtained during the fall migration I secured in the same piece of woods, Oct. 22, 1883. It was also a male, measuring 7¼x11 inches. I never thought they were common during migration, but did not know they were so rare during spring migration that they had never been secured in the vicinity of Buffalo; and if I secure another specimen this spring shall certainly send it to "C. L."—J. L. DAVISON (Lockport, N. Y., April 30).

WELCOMING MR. ALLEN.—On Tuesday last Mr. J. A. Allen, the distinguished ornithologist, was the guest of the Linnean Society of New York. The dinner was given at the Murray Hill House, and was a very enjoyable occasion. Among those present were, besides the guest of the evening, Mr. E. P. Bicknell, the president of the Linnean Society, Drs. Merriam, Fisher, Morris, Allen, Willis, Elliott and Grinnell, and Messrs. L. S. Foster, J. H. Sage, G. B. Sennett, L. A. Zerega, Woodward and Wm. Dutcher. After Mr. Bicknell's address welcoming the guest of the evening, speeches were made by Messrs. Allen, Sennett and Foster, and by Drs. Merriam, Willis and Grinnell. The advent of a naturalist of Mr. Allen's fame and attainments was the subject of general congratulation. The meeting broke up at a late hour.

DEPARTMENT OF ECONOMIC ORNITHOLOGY.—The Commissioner of Agriculture and Mr. C. V. Riley, U. S. Entomologist, have appointed Dr. C. H. Merriam, of Locust Grove, N. Y., as chief of the Department of Economic Ornithology, under the Department of Agriculture. The appropriation of $5,000, while it will not permit any great amount of new work to be undertaken, will at least enable Dr. Merriam to get the material accumulated last season in shape for publication. The choice of Dr. Merriam for this position will be received with satisfaction by ornithologists at large. We understand that Dr. Merriam has appointed Dr. A. K. Fisher, of Sing Sing, N. Y., his chief assistant, and that the latter has signified his intention of accepting.

A WHOLESALE TRAGEDY.—A friend brought me this morning a female woodcock and four young, dead. They were picked up on the railroad track about two miles from town. The old bird having been struck by the train and killed, the young ones were, I suppose, killed by the fright or starved to death, being between the rails and unable to fly. They are being mounted, and with the addition of a male bird this fall will make a beautiful group.—DALY (Hackettstown, N. J., May 4).

LARGE EAGLE.—A large eagle was killed about five miles from this place, on Sunday last, by Mr. Jas. W. Hamilton. The bird was carrying a lamb in its talons when shot at and wounded. The second shot carried away the entire top of its head. From its yellow feet it was judged to be a bald-headed eagle, and measured 7 feet 9 inches from tip to tip. Another was seen near here to-day.—BURNETTE (Romney, W. Va., April 12).

Game Bag and Gun.

THE DUCK NETTERS.

THE following sensational "special dispatch" appeared in the *Evening Telegram* of May 1:

SOUTHAMPTON, May 1.—Sporting men throughout the town are in a state of excitement to-day over the arrest of a number of well-known citizens, who are charged with the illegal capture of ducks in the waters of the Shinnecock and Peconic bays by the method known as "netting." The arrests are the result of investigations made by the State game detectives under the direction of State Game Protector Whittaker. The offenders will be held for the next Suffolk County Grand Jury. During the past three months netting of ducks has been carried on with impunity, hundreds of birds being taken, to the injury of the gunners and destruction of the birds.

Unfortunately the story is made out of whole cloth. There were no arrests of duck netters. State Game Protector Whittaker went before the Grand Jury of Suffolk county to secure indictments against Ellis Squires and Fletcher Skidmore, but the Grand Jury failed to find a bill against them. State Game Protector Whittaker will find that this will always be the case, it is almost impossible to secure the indictment and conviction of persons by jury made up of their own friends and neighbors. For years the owners of the ducking shores of Maryland attempted unsuccessfully to have the big-gun night shooters of Havre de Grace punished by the juries of Harford county, Maryland. Each trial of the law breakers was a farce, and considered a joke by them, and it was not until the Legislature of Maryland passed an act whereby the night shooter should be tried for his offense against his State in another county from the one in which he resided, that the big-guns were seized and confiscated and the law breakers found guilty and punished.

WITH THE QUAIL IN FLORIDA.

THE wind was blowing directly from the Gulf, tempering the cold breezes that come to us from the North, until the mercury stood at 68° in the shade, when we started out for a day's sport with the quail. It was the 20th of December, and we could hardly realize that the snow and ice in our Northern homes were making such pleasures impossible. My companion, a keen sportsman and an excellent shot, furnished dog and buckboard, and advised that we should choose a section of country which lay about a half mile from town, and is known here as the Flat Woods. It is covered with a growth of saw palmetto, interspersed with an occasional pine tree. We were soon jogging through the woods regardless of roads or trails, for the fires which rage here every spring keep the undergrowth in such a condition that a wagon can be driven anywhere through the woods. This is a paradise for lazy sportsmen. Sitting in our buckboard watching the maneuverings of our well-trained dog, with our guns in readiness, we were certainly a picture to make a Northern sportsman envious.

We had driven nearly half a mile when our dog struck a scent and began to trail. I wished to get out at once, but my friend told me to keep cool and wait, for the quail would run some distance before they would stop for the dog. We followed them at least three hundred yards before the dog came to a point. Hitching our horse and hurrying forward, we found the birds scattered under a fallen pine tree. We flushed them and got in four shots, killing three birds, the balance of them flew a few rods and scattered in fine shape; and as they rose one by one we dropped fourteen out of seventeen; but could not find any more, although we were confident there were more. We had given up the search and started away, when I happened to glance into a small pine tree and discovered eight sitting on the limbs. I shot one, supposing, of course, the others would fly, but they did not and I killed every one. I have hunted quail in the North and East, but never saw them take to the trees before; but here when a flock is flushed some will invariably do so, and on one occasion I saw a flock of about thirty take to the trees and sit there motionless, while I killed twenty-four, when, my ammunition giving out, I left the balance still on their perches. On another occasion I flushed a small flock and a few went into the trees, none of them more than ten feet from the ground, when they sat within six feet of the muzzle of my rifle until I picked their heads off.

While I was "potting" the birds in the tree my friend had found another covey and I hastened to him and we were soon knocking them right and left and finished with ten birds to our credit. Our next covey was found within five hundred yards of the last; but the birds had been shot at and when they rose flew so far we did not follow them; but we got three as they rose. After a short rest we started again and soon had another covey scattered, and had killed nineteen birds when our ammunition gave out. We returned to our buckboard with seventy empty shells and fifty-seven dead birds. It did not take us very long to reload and eat our lunch, for we were still anxious for more birds, and we soon had a large covey scattered, the birds buzzing away in all directions. They did not lie well and rose in small bunches, so that we did not get but eight. Our next bunch was the largest I have ever seen and contained at least seventy birds, but we had the misfortune to flush it near a swamp, into which a greater part of them flew at once. We flushed thirty and killed twenty-three, and then came to the conclusion that we had all the birds we could eat or give away, so we started for home. In the evening, reviewing the day, we found that we had been gone seven hours, killed eighty-eight quail, all found within a radius of a mile, and I for one will never think of Florida without wishing another chance at the quail there.

Our quail are about one-third smaller than those in Connecticut, and owing to the fact that they are not much hunted are not such rapid flyers, although if necessary, they get along equally as fast. They are as plump, and as their favorite food is the acorn, which grows here profusely, their flesh is delicious. This country furnishes some excellent hunting and fishing, but like all other places one has to be conversant with the habits of the game here. I have seen men who pretended to be sportsmen leave this place in disgust after a stay of one or two weeks, while if they had had a guide or understood how, they could have had excellent sport.

The greatest drawback, and a very serious one, too, is the scarcity of good dogs. I know of only two or three good ones in this section, but I suppose we should be thankful for that, for if there were plenty of dogs the birds would have no peace, as the law (if it is of any avail) is never enforced here, quail and other game being killed in all seasons. My experience has taught me that pointers are by far the best for this country, as their hair is short and easily washed and curried, for wash and curry you must if you wish to keep the fleas and ticks from killing your dogs. The quail breed here in April and May, and if they increase as rapidly this season as last, a person with a good dog and light gun next fall when the North is frozen up, can find quail to his heart's content here. I am neither a land agent nor am I writing in the interest of Florida, but am only telling your readers where they can surely find good shooting and fishing.

F. P. S.

EUSTIS, Orange County, Fla.

THE ST. CLAIR FLATS.

Editor Forest and Stream:

I inclose to you a concurrent resolution which has just been passed by the Legislature of Michigan, making special request to Congress to set aside the St. Clair Flats or territory as a National Preserve for the people of the United States, and also requesting the State senators and representatives in Congress to give their earnest support to the same. The resolution sets forth clearly the good reasons for the measure, and also recounts the past Government policy with reference to disposal of this class of territory—U. S. unsurveyed, overflowed and marsh lands bordering the public waters—recounts their legitimate and desirable relation to the public, protests against the old-time policy of selling the same going any further, and proposes a new one more consonant with public propriety and justice, making statement of good cause for such change. The full text is as follows:

WHEREAS, The United States unsurveyed shoal water lands in Lake St. Clair, in the State of Michigan, generally known as the St. Clair Flats, are and long have been a place of favorite and great resort by the people, even from abroad, for boating and sailing, recreation and health, and for fishing and hunting, the same being a world famous resort for game, in season;

And whereas, it is a grateful convenience and a beneficent privilege to the public to have at hand an inviting resort conferring as does this territory especial favors, where the people may go for proper and healthful pleasure and for relaxation and recuperation from the wearing pursuits of business;

And whereas, this territory has for so long been a place of free resort for all the people for the purposes aforementioned that they would not know how to do without it, and situated as it is adjacent to the great and growing city of Detroit—a just pride of the whole country—it too would most justly, deeply and forever feel its irreparable loss as a place of public resort, while the sum for which it would be sold as a part of the public domain would constitute but a trifling one which would never be felt to be of account;

And whereas, attempts have been made by various parties to possess this territory by private acquisition for the purpose of converting the same into close private preserves, thus arbitrarily excluding the public forever from all rights therein and constituting the territory a permanent and most aggravating monopoly against the people for all time, a bill for which purpose was introduced into the preceding Congress but which went down under the strong and earnest protest by the people against it by petition and otherwise, aided by private efforts;

And whereas, other attempts are being made for the private acquisition of this territory, its possession being very desirable, and it being probable that if not formally set aside for the people it will pass to private occupation either by free-booting right or by private acquisition;

Therefore, this territory being a part of the public domain and believing such measure to be in the line of a wise and beneficent public policy;

Be it resolved by the Senate of the State of Michigan (the House concurring therein) that Congress is hereby requested by proper statute to set aside the St. Clair territory as a national preserve for the people of the United States, subject to wise and proper regulations which it shall prescribe; and also that our Senators and Representatives in Congress are requested to give their earnest support to such measure, and efficiently oppose all private claims and efforts to obtain possession of said territory which are not plainly warranted by unmistakable legal right and justice.

And whereas, we deprecate the policy which the general Government has extensively practiced in the past of selling to private parties the United States unsurveyed overflowed shoal water and marsh lands which in many localities in extensive tracts border the nation's public waters—as the inlets of the ocean, our navigable lakes and rivers—to be converted by said parties into close private shooting preserves to the perpetual exclusion of the people therefrom, such exclusion greatly abridging, as it does, the freedom and desirable privileges to the people which should be afforded by the public waters, which exclusion is already, and in the future will more and more be felt to be a public aggravation and outrage of magnitude, for the people habitually, largely and very properly, and will more and more in the future resort to the public waters for recreation, tripping, health, fishing, sailing and shooting;

And whereas, these lands are of much account to the people for the purpose of public resort, and also as they come of or belong to the public or people's domain, there is eminent equity and propriety in the demand that they be preserved for public use;

And whereas, the majority of this class of overflowed favorite territory for fish and game, and for public resort in the nation, has already passed to the exclusion of private ownership and control; therefore, we express our earnest belief that the unwise and injurious policy of selling these lands to private parties should go no further; and therefore,

Be it resolved by the Senate (the House concurring) that Congress is respectfully requested to interpose against their further private acquisition, and to set aside, by proper enactment, this class of territory belonging to the public domain, as a common preserve for the use of the people, subject to such regulations as may be established by rightful authority; and that our Senators and Representatives in Congress be requested to use their best endeavors to secure such proper legislation.

The resolution passed the Senate April 17, the House on

the 21st, without a dissenting vote in either case. The St. Clair Flats have been a very famous territory in the past, and its final disposal is of much public account in the future. Well considered views also relative to the disposition of the like class of public territory have public interest and are of account. F. M. WILCOX.

ROCHESTER, Michigan, April 28.

JERRY'S SUNDAY DINNER.

I WAS riding in a buggy to a marsh about four miles from the little country hotel where I had been staying for a few days, to kill a few English snipe. Jerry, my guide, philosopher and friend, was at my side driving, and the dog was lying between our feet comfortably, but insisting on poking his nose out from under the lap robe to snuff the fine breezes of the country, as dogs always will. Jerry pointed out a little tumble-down shanty and said, "Mr. E., I used to live there once, and I shall never forget a Sunday dinner that I took in that house."

There was something peculiar in Jerry's manner of saying it that led me to inquire into the particulars.

"Well, you see it was the winter when me and Miraldy was first married; and I got a job from old Skinner to haul cord wood for him at seventy-five cents a day. It wasn't as much as other fellows was getting for the same work, but times was hard and money was mighty scarce with me that winter, for I'd only been working off and on for some time, you see. Well, when Saturday night came there was three dollars coming to me, and as I knew that Miraldy had nothing but a little cornmeal in the house, I asked old Skinner for my wages. He said that he hadn't any money just then, but would pay next week. Sez I, 'Give me a dollar on account, then;' but he said he hadn't even that. I knew that he was lying, but at the same time, as it was a long job and I didn't want to lose it, I hated to quarrel with him; so I tramped home with my heart thumping way down, like it was trying to knock my boot heels off.

"Miraldy met me at the door and 'Where is the meat?' sez she. 'I haven't any,' sez I. 'Well,' sez she, looking up smiling-like, 'Jerry,' sez she, 'we'll have corn dodgers for dinner to-morrow,' and put up her mouth to kiss me. I tell you that made me feel bad to think that a big, strong fellow like me couldn't give that dear little woman anything better than corn dodgers for dinner; so I walked out through the snow behind the house to—to—" Jerry turned his head away from me as though looking at something behind us as we rode along, but I thought that there was a little moisture on his cheek, which, "God save you, honest gentlemen," was no dishonor to his manhood.

"Seems funny, don't it?" said Jerry, looking at me wistfully, as though afraid that I was laughing at him.

"No," said I gravely, "I see nothing funny in it."

"Well," continued Jerry, "about forty yards from the house I see a good many rabbit tracks going from one little copse to another; and, thinks I, if I can kill one of them there'll be meat for us to-morrow. So I went and got old Crazy Jane—this very same gun I've got here in the wagon; she don't look like much, but she'll drop a snipe every time at forty yards, if the man only holds her right—reg'lar—and I waited and waited, and sot there; but none of 'em seemed to be trading, and so I went home and undressed to go to bed. Then as I stood before the window I saw in the bright moonlight something a-jumping and a-jumping in the very tracks that I'd been watching nearly all night. Sez I, 'Miraldy, there's the rabbit I've been watching for.' So I lifted the window quietly, very quietly, and when I got the gun, this very gun, she came up behind me in her night clothes, and, sez I, 'Here goes for fur.' 'Stop, Jerry,' sez she, 'be sure it isn't my cat.' Sez I, as I took sight, 'Think I don't know the difference between a cat and a rabbit.' So I let fly and fetched him down."

Just then we arrived at our stopping place at the edge of the meadow where we intended to shoot. Jerry got out and hitched the horse to a rail fence, while I took out the guns and ammunition.

"Jerry," said I, as we shouldered our guns, "what was it you shot?"

"Come, Sanch," and he whistled the dog to his heels. "Come, Mr. E., the snipe are waiting for us," and strange as it may appear, the most careful and guarded inquiry on my part has failed to elicit any information from either Jerry or Miraldy as to whether it was a rabbit (*Lepus americanus*) or the family cat (*Felis tomcatus?*) that made their memorable dinner on Sunday. FRANCIS ENDICOTT.

CENTRAL PENNSYLVANIA.

THE Game and Fish Protective Association of Central Pennsylvania was incorporated at Harrisburg April 27, 1885, for "the preservation of game and fish by the enforcement of all laws now enacted or which may hereafter be enacted for said purpose; to inculcate a spirit of respect for the game and fish laws; to assist in the study and dissemination of the natural laws of the propagation of game and fish; to propagate fish by artificial process; to increase the desire for gunning and fishing in forest and stream in a rational way."

The officers are: Walter H. Powell, President; John M. Peddicord, George W. Boyd and John B. Nicholas, Vice-Presidents; Albert J. Fager, Secretary; Horace Lutz, Treasurer; Walter H. Powell, Albert J. Fager, Samuel Fitzgerald, David Davidson, William Kutz, David G. Krause, Jacob Hess, Moses H. Brensinger and Charles Muffitt, Executive Committee; Daniel W. Seiler, John Vallerchamp and William S. Rutherford, Auditing. Peter Ludwig has been appointed fish warden, and he will see that no obstructions such as "Nessmuk" complains of will be allowed in this part of the Susquehanna River. The association is very large and at present consists of the active sportsmen of this section, who are determined, come what will, to see that the game and fish laws are enforced and that violators shall be brought before the proper officers and punished. It is intended to get the farmers interested and have them join the association and protect them in their rights against trespassers; to stock their farms with quail and have them looked after in the closed season and during severe weather. In this way they expect to draw the farmer and sportsman in sympathy for their mutual protection. The association will act with the Pennsylvania Fish Commission in the enforcement of the laws relating to the protection of fish, and hope to be able to make fish and game more plentiful. KEONK.

WAKEFIELD (MASS.) SPORTSMAN'S CLUB.—The Wakefield Sportsman's Club held its annual meeting recently and reorganized for the ensuing year, with its old president, C. I. Goodale, re-elected, and Geo. Clothey, secretary. This is a live club of law-abiding gentlemen.

WISCONSIN DEER LAW.—Fond du Lac, Wis., May 2.—*Editor Forest and Stream:* This summary of the deer law is correct, as the law is now in force in this State: It is unlawful at any time to take, catch, kill or destroy any deer for any purpose except for consumption thereof as food within the State. It is unlawful to take, catch, kill or destroy any deer or have in possession any part of the carcass of the same for consumption as food, within the State, except during the months of October and November in each year. It is unlawful for any person, company or corporation to expose for sale or have in possession except alive any deer or any part of the carcass of the same with the intention of sending or transporting or having the same sent or transported beyond the limits of this State. Every violation of any of the provisions named in the foregoing sections shall be a misdemeanor and shall be punished by a fine of fifty dollars, and any person so offending shall on conviction and in default of payment of such fine be committed to the county jail until such time not exceeding thirty days, as such fine shall be paid. It is unlawful to hunt after night fall by or with the aid of artificial light of any description. The penalty for each violation is a fine of twenty-five dollars. It is unlawful to chase, hunt, drive, worry or kill any wild deer by or with the use of dog or dogs. The penalty for each violation is a fine not exceeding one hundred dollars. It is unlawful to set or use any traps, snares or set-guns for the purpose of killing or capturing any wild deer. The penalty for setting guns is imprisonment in the State prison not less than six months and the penalty for setting traps or snares for deer a fine not exceeding one hundred dollars. One half of the fines collected shall be paid to the informer and the remainder shall go to the State. Tribal Indians while hunting on their reservations are not restricted by the foregoing statutes, but they are subject to all the penalties named for violations when found outside the limits of their reservations.

THE STATE GEOLOGIST OF NEW JERSEY in his report says there are more than 10,000 acres of land subject to overflow by freshets in the Passaic at any season of the year, which could be saved from this disaster by lowering the obstructions at Little Falls and Two Bridges seven feet. The other portions of the channel are already so low that very little expense would be required to bring them to a uniform grade with the lowered obstructions mentioned above. The damages to hay on these lowlands, from being overflowed by roily water last summer, could not have been less than $40,000 or $50,000, and the land itself is damaged to the amount of more than half its value by the uncertainty of its crops from the same cause. The water which is left stagnant on these flowed lands in summer is a fruitful source of disease. The project would result in reclaiming large tracts of land almost worthless, and the manufacturing interest, it is said, would also be protected by constructing a second dam at Little Falls, below the one now in use. It is the old dam that causes the overflowing of the lands by artificially raising the level of the river. Should these lands be drained, of course an end will be put to the snipe, duck and woodcock shooting. This year the snipe shooting has been a failure, owing to the late season and dry weather, but early in this month and in March the duck shooting was excellent, far better than for many years.

PHILADELPHIA NOTES.—May 3.—Snipe are yet plentiful south of Philadelphia in both Delaware and Maryland, the lateness of the season causing them to remain. A large flight occupied the borders of Milton Creek about the middle of April, and have been undisturbed up to this time. Milton is six or seven miles from the railroad, and the creek grounds at least three more from the town, and as none of the local shooters of the place kill them, the birds find undisturbed feeding places. The tramping there, however, is very soft, and top boots are advised for rheumatic individuals. I know of no better spot for longbills within a reasonable distance of Philadelphia than this same Milton Creek. Twenty years ago it was Dr. Clapp's favorite ground and he kept it all to himself. When birds are on they can always be found there. At Atlantic City quite a number of ducks are still being killed by sportsmen starting out from that town. Black ducks are fairly plentiful yet, redheads scattering, and shelldrakes are present in large quantities. The smooth water outside of the surf is black with coots, and some brant yet remain in Tuckerton Bay.—HOMO.

MAINE VENISON STEAKS.—It is a rather startling story that comes to us from a well-known Maine correspondent. It appears that in the first week of April there were hauled into Kingfield, for shipment south, no less than 2,700 pounds of venison, being all hindquarters. The owner registered as A. R. Smith, of New Haven, Conn. He affirmed that the deer had been killed across the line in Canada, and to give color to this statement he sent for a customs officer, had the meat appraised, paid duty on it, and sent it off by railroad to market. Kingfield is, we believe, forty or fifty miles from the border, and this duty dodge is very suspicious. It is believed by our correspondent that the deer were actually killed in Maine, all but the hindquarters being left in the woods, and by this ruse shipped to market in evasion of the law. Despite the fact that notice of this case was given to the Maine game officials, no adequate investigation appears to have been made to determine where the deer were actually slaughtered. There is something rotten in Franklin county, Maine, and it is something besides a deer's carcass, too.

THE MERINO WAD.—To-day ends the season (in this State) for duck shooting. It was very poor, birds few and very wild. Ducks all gone north, a few snipe and plover linger still. Quail are nearly all winter killed. More prairie chickens are left over this year than for the past five years; if hatching season is good there will be abundance in this part of the country next fall. Would like to say a word in favor of the merino elastic felt gun wads. I have been trying them the past season, and also have induced a number of our sportsmen to try them, and we all say they are capital.—J. R. O. (Dwight, Ill., April 30).

QUAIL IN MISSISSIPPI.—The quail have wintered remarkably considering the unusually severe and protracted cold weather. A natural abundance of food helped them through all the hardships. If the plentiful supply to be seen now is any criterion of future numbers, the shooting will be excellent the coming season. There is no snipe shooting in this section.—B. WATERS (Lamar, Miss., April 11).

KANSAS.—Columbus, April 28.—The goose, duck and snipe shooting was not so good as usual, and most of the above have gone north. A few fat, lazy plover, curlew and English snipe remain with us yet, and the last furnishes fine sport for dog and gun.—T.

CARD FROM MR. J. P. SQUIBOB.—*Editor Forest and Stream:* Permit me to say that no account of any "bear-scrape," bull fight, assassination, or other amusement in which I have been, am, or am to be a party, is to be considered authentic, unless it has appended my signature, with my qualities in full. I am, sir, with sentiments of the highest consideration, your most obedient and most humble servant, JEHOIACHIM PREPOSTEROUS SQUIBOB, Knt. Grand Cross of the Iron Crown, and Professor of Blood-and-Thunder in General. (Elk Rapids, Michigan, April 18, 1885).

THE SPENCER GUN.—Seattle, W. T.—Will not some of your readers who have used the new Spencer repeating shotgun give us the benefit of their experience with the gun? They have not yet appeared in this section, and I, for one, would like to know something of their performance at the trap and in the field. I see frequent mention of them in the columns of your paper, but beyond vague expressions of approval, have seen nothing further. The principle seems to be good, but do they pattern well and shoot hard?—ALKI.

CHATEAUGAY LAKE.—Adirondacks, April 27.—Although we have had a severe winter here, deer have wintered well and seem to come out in greater numbers than the past few seasons. I saw plenty of fresh signs to-day when going to my otter traps. Grouse have also wintered well and are quite plenty. Our fish were protected last fall while on the spawning beds, and we anticipate good sport this spring.—R. M. S. (Indian Point).

NEWPORT, R. I., May 2.—I am happy to inform you that we have organized the Newport Fish and Game Association with the following officers: J. P. Cotton, Vice and Acting President; F. H. Wilks, Secretary; W. H. Hammett, Treasurer; W. P. Sheffield, Jr., D. LeRoy Dresser, E. S. Hammond, Thos. Burlingham, S. E. Greene, Directors. We have a membership of thirty.—F. H. WILKS, Secretary.

Sea and River Fishing.

FLY NOMENCLATURE.

Editor Forest and Stream:

Seeing Mr. Harrington Keene's article in your paper this week, I must say it has brought recollections back to me of thirty years ago, in mentioning the king of flies, Spary's fancy. I had not forgotten it, but did not name it as I thought no one here knew there was such a fly. Mr. J. G. Lane, of Hartford, last season caught his largest basket of fish with Spary's fancy, sent him by my brother in England, and he is undoubtedly the best fly fisher and shot in Hartford. Wickham's fancy is also a good fly here. In speaking of Messrs. Currell and Wickham, two gentlemen that tied their own flies, and true sportsmen, I doubt if here they would use any larger hook than from No. 10 to 16 midge. I find as far as names of flies are concerned in this country, you can send to different makers and not two flies of the same name will be tied alike, and probably on different size hooks. Therefore I think as Mr. Ladd does, if there were a fly-fishers' association formed in this country, and it decides on a regular standard fly or flies, there would be a great deal less argument in regard to the best killing fly, and a great benefit to sportsmen in remote places where they have to send perhaps three or four hundreds of miles for their flies, where perhaps they will get a coachman with a red tail or a professor with gut body, according to the maker's fancy, for we all know not one out of ten fly-makers ever casts a fly, and what is more, anything fancy and neat will suit most dealers, anything to sell the fly. I met a gentleman in Maine with two books of flies, only one of which took a fish. If Mr. Russell should see this, being a New York gentleman, I would like him to mention in next issue the flies that he did kill with at Tyler and B. Cove. They were the red spinner, cow dung and yellow dun. In the evening we killed with white moth and sedge fly. A good killer also is the May fly on No. 8 hook, all of which I tied on the sneck bent hooks, Nos. 10 and 12.

Talking of a society of anglers, why not as well as your dog shows and cat shows? Certainly there is more science in casting a good fly than judging a cat or a dog. Let a man get a two-pounder on his fly, and get back and watch the expression on his face while playing his fish, and you will experience almost as much pleasure as he.

I would like to ask any fisherman why, this last few years, so many flies of different names and kinds are introduced? Is it because the flies have changed from thirty years ago? I see no difference in the small flies, such as the duns, gnats and dark flies. The house fly, mosquito, wasp, bee, etc., certainly have not changed in my time; why should the water flies? Take the dobson, a good bass bait. He's the same old dobson every year, except perhaps his horns might be a little longer. One fly, I admit, is a little smaller here than in the English waters, that is the May fly and green drake; as for duns, etc., I see no difference. Then why not, gentlemen of the rod and line, stick to nature? Have a society and let every flymaker tie five or six dozen flies from his own State and compare them, and let the society decide on a regular set of standard flies, and do away with this "Jack's fancy" and "Bill's favorite," and so on. Let every man who sends for a certain fly get it the same of one dealer as of another, and that will be a guarantee that you get what you call for. I will agree to tie six dozen of flies from the Connecticut waters, and if all will do the same we shall get at the standard fly. This is rather a poor State for fishing, that is, for the majority of sportsmen. As I say, there are a few good fly-casters here, but very poor fishing.

Now a word of advice to your friend from North Middletown, Ky. If your are fully determined to give up hunting worms go to some good flymaker and learn to tie your own flies, by study and observation on the streams in any State. Watch the fly taken and you will find it's a dun of some kind, or gnat. Carry your box of materials for tying, and imitate as near the natural fly as you can, and by studying the colors you can, after a little while, get a good imitation which will insure you a good day's sport. My first experience in fishing was in 1852, with my brother, on the River Itchen, between Winchester and Bishopstoke; the grayling were rising finely at a small fly called the willow fly. At that time I could tie a very bad fly. I got my brother's box and sat down and tied two, my brother, I suppose to encourage me, called them "big heads," but the color was there and I caught three brace of fine grayling. From that time to this I have tied my own flies, and several gentlemen in Providence, Elmira and Boston, use nothing but Spary's

"big heads." A new fly was sent to me last week by E. Spary, called the Alexandria fly, tied on a No. 10 long shank hook, with silver body, black legs and peacock tips for wings, to end of barb, a good killer here.

As I said before, give me the old flies, such as yellow dun, May fly, Wickham's fancy, Spary's fancy, coachman, sedge fly, black gnat, cow dung, alder fly, small red spinner, stone fly, and small gnats of different kinds on No. 14 hooks; with those flies you may depend on good luck on almost any stream. In my last, for May fly No. 3 read No. 8, and for ledge fly sedge fly. E. W. S.

HARTFORD, Conn.

FLY-FISHING.

Editor Forest and Stream:

So much has been said and written on fishing with the fly, that it would seem that there was nothing to add, yet how many writers agree in their rules and laws as laid down by them?

One of the rules followed by myself for twenty-five years was given me by Mr. Harry Pritchard, and yet, after I had proved its worth, and the fact that it was a rule, Harry himself, in an article on the subject published in the FOREST AND STREAM, says it is all bosh. The rule as given me by him was this: "When I find the water smooth, with no wind to make a ripple, I cast my flies lightly upon the water, but when there is a good breeze and a strong ripple, I send them into the water quick and sharp." And yet, while I have proved the rule a good one on lake and stream in a number of States, he at the Harlem Mere, in Central Park, has proved it all bosh.

Dr. Henshall says in "Fishing with the Fly," page 236, "The black bass will rise to the fly only in comparatively shallow water, say from one to six feet in depth." Now, while the rule is a good one, it is not by any means general. The line dividing deep and shallow water in most of the lakes in Central New York is very marked. A bank of weeds by the middle of July showing above the surface defines it. Outside the weeds, ten feet or less, the water is from ten to twenty-five feet deep; inside, from six feet to shore. The bass are all taken outside of the weeds in many of them, in fact I may safely say all, where the bank of weeds exists. Experience has taught me that black bass will be found in all waters where they have been placed, near old logs, boulders, or banks of weeds in water from one foot to twenty-five feet in depth. Some few years since, while fishing in the Skaneateles Lake, crossing a small bay, thinking the water too deep for casting, I had reeled up and sat looking at the waving grain in a field a quarter of a mile distant, admiring the different shades and colors as the breeze swept over it, when I was startled by the appearance of the top of a log showing just above the surface of the water in front of the boat. Calling to my companion, who was rowing, to change his course quickly, we passed some six or eight feet outside of the log, while four large bass swam leisurely away on the inside not six feet from the surface. Upon dropping a lead over the side I found about twenty-seven feet of water. Profiting by the observation, upon our return we halted a good distance away, and two bass of over two pounds weight each rewarded us for our pains. Again, "Uncle Reube" and I spent a day upon the larger of the Tully Lakes; our catch of twenty-three small-mouthed bass was nearly all taken around what we called the Rush Island, in water from eight to fifteen feet deep.

Now for the Doctor's side. On that same day upon our first tour around the lake (prospecting, as we had never fished it before), we had been passing through deep water between an island and the east shore. I, sitting in the bow of the boat, made a cast toward shore, and while telling the oarsman to head out or he would be aground, had a rise and hooked a bass in one foot of water; after landing him, I arose to my feet to see why that fish was in such shallow water, when I readily saw the reason; there was a sunken log half bedded in the white marl, with which the bottom of that lake is mostly covered.

That summer I camped upon the shores of that lake for two weeks, and that log I counted on for one or two fish each day. In that two weeks I learned more about bass fishing from the bass themselves than all my former fishing or "book larnin'" had taught me. And to give to my brother anglers of the FOREST AND STREAM (if this does not get into the waste basket instead of the paper) some of the traits of the black bass there learned, is what incited this scrawl.

Near the above-mentioned log, where the waters were narrowed by a point from shore running well out toward an island, I almost invariably, morning, noon, or night, struck a fish. A clear white bottom, no log or obstruction of any kind to draw them, the why was a mystery to me until the morning I broke camp, when at the earnest solicitation of my boy I went with him "above the point" to take a final bath. After wading out until the water was waist deep, I struck out. Well, if you could have heard me snort and my boy laugh, to see me "strike in" again, it would have caused you to smile. I had solved the "why" the bass were found there. There was about as cold a spring of water bubbling up there as I care to drink from in a warm day, much colder than I care to swim in again.

Shall the flies be kept on the surface or allowed to sink beneath? has been well argued. Here is what a bass in that lake told me. Being alone one day in the boat, the wind blowing quite strong from the south, I swung under the lee of a point on the west side of the lake. The shore was densely wooded, on a steep hillside, the slope of which was continued into the lake, so that ten feet from shore there was at least ten feet of water. The bottom was interlaced with old logs and trees that had lain there for years waterlogged, and covered with the marly deposit of the bottom—white spectres made to assume fanciful shapes by the heavy ripple of the water and the shadows cast by the swinging boughs above. With no thought of a fish in that clear water where the bottom was as plainly visible as the trees on shore, I was simply playing my flies to keep them from sinking to the logs below, when my rod was nearly perpendicular and my line slack, in no position to strike a fish, out from beneath my boat darted a bass. With really no thought that it would take a fly under the situation, yet to see what it would do, I recovered and cast again, dropping my rod well down. As I recovered the line the fish darted under the boat again, but as the flies landed upon the water it turned toward them. Ah, could you have seen that fellow; he swam leisurely toward them but about three feet to the right, no motion of the body indicating his intention, but his eyes! Talk of the brilliancy of diamonds; they are nowhere. I did not move the rod while the flies slowly sank, and Mr. Bass as slowly swam in shore. The upper fly on my leader was a grizzly king. Every particle of the wings and hackle was floating separately, and the green body glinting beneath. What a sight to see the fish and lure slowly approaching. As they arrived abreast of each other, I drew the flies with a quick movement about six inches toward me, when like a flash the bass sprang upon his prey and inclosed it with his capacious jaws. Not an inch beyond, stopping the moment he took the fly, nothing but sight to tell me he had the fly, I struck. The hook was well down, caught in the root of his tongue. War? Well, that is just the word; he bound to get under some of those logs, and I bound that he should not. Ordinarily to feel the struggles of the lordly bass is joy enough for any angler, but to not only feel but see him in all his strength dart, dive, spring to the surface, and with mouth wide open try to shake the barb that holds him prisoner from its firm seat, is the experience of but once in a lifetime, and is indescribable.

Now, brother angler, from the method of that fellow's springing upon that fly and giving me no intimation that he had it, taught me a lesson in casting for bass that has since served me well. Who has not often, when casting from a boat, if casting abreast as the boat passed on, the line curving out as the flies drop astern, seen his line straighten for a moment as though caught upon a weed and then assume its old motion of quietly floating astern? Strike, and my word for it, you will find a bass on your fly. In casting, let your flies sink for a moment before you begin to draw; then with simply the contraction of the muscles of the hand grasping the rod, and the raising of the tip correspondingly, you slowly draw the flies toward you. That Tully Lake bass taught me that the bass, when sure of his prey, is like a cat; he loves to hold his desire in check and enjoy in anticipation his food. So, when the flies are under the water he is sure of them, and is in no hurry to strike.

One of the most successful bass fishermen on Onondaga Lake seldom or never casts his flies, but by the aid of one or more "B" shot on his leader sinks his flies, and trolls them seventy-five feet astern, using a fly-rod. He gets all the play out of his fish and saves himself the fatigue of casting, and he gets his fish.

In fishing from a boat, is it best to sit down or stand up? If you are thoroughly familiar with all of the shoals, rocks and sunken logs, sit down and take it easy; if not, stand up and your eye will have in sight a greater expanse of ground than your line can cover, rocks, logs and bars, invisible to the eye when sitting, can then be seen, and your flies can be placed with certainty on the spot that, were you sitting, can at best be guessed at. Methinks I hear the tyro in fly-fishing say, "When the old hands differ so in their judgment of how to catch the various fish that will rise to the fly, how is the beginner to be guided?" Learn from the fish, boys. Study their habits, tastes, etc., learn the various forms the bottoms of your streams and lakes possess. Then with the light you have, study and get more, and rest assured none of us know it all, for life is too short to learn it. Give the fish credit for possessing some sense, else will you wake up some fine morning and realize that instead of the fish being fools, the fool has been at the other end of the rod. IRA WOOD.

ALBANY, N. Y., May 1.

TROUTING IN PENNSYLVANIA.

Editor Forest and Stream:

The warm weather has started our fly-fishermen, and I am hearing daily of good catches. I have noticed that some papers which devote a part of their columns to angling have frequently stated that we have no fly-fishing in Pennsylvania. The following letter received by me this A. M. from a friend who is on the ground, goes to show the trout are not all gone yet, and fly-fishing proper is yet to be had in our State:

"I was out fishing one day last week—made a full day—and filled my creel with good-sized trout. The day was warm, and the fish took the fly with avidity. There were three of us in the party, two bait-fishermen and myself, who you know have not carried a worm or other than artificial fly to a stream for years. We left home about 3 o'clock A. M., and drove some twelve miles over one of the worst roads you ever saw to the foot of the Pocono Mountains, reaching our destination a little after sunrise. The stream was small and so completely overgrown that it was not possible to cast a fly without first clearing a place for that purpose. This I did at one or two likely-looking holes, and went from one to the other catching a few at each as often as I returned to them; but this soon became monotonous, the fish were small, and I threw back all that were not badly injured by removing the hook. It was just the kind of fishing my friends enjoyed, however, and I left them to look for an old dam some two miles down stream. I found it after a long, tedious walk; but it was not much of a dam, being filled up with mud and dead leaves, and not over a foot or so in depth, not a very likely place to find big trout. To make the matter still worse, there was not wind enough to cause a ripple on the surface of the pond. After taking a few small ones at the head of this slack water, I moved down stream to ground that I had been over before years ago. I found a dam there and some cleared land, fished through the meadow down to a farmhouse, taking a few fish as I went; but the dam presented no better appearance than the pool above, it was as smooth as glass, not a breath of air to create a ripple.

"I made my peace with the owner of the dam, drank not less than a quart of good fresh milk, which his wife brought from the spring house, lit a cigar and sat down to chat with them and wait for a breeze. It came much sooner than I expected, but only struck one part of the dam and was gone before I could get there. I sat down among the black alders that lined the bank to wait another puff of wind; it came in a few minutes, but there did not appear any trout in that part of the dam. Some time during the afternoon the wind sprang up and ruffled the whole surface; this gave me a chance to select my own position to cast from. I had previously gone all around it and taken in the position of things—knew exactly where the channel ran and where the shoal places were—my first rise was a failure, but I succeeded in taking him at the next, not a very large fish (almost 10 inches long) but I had out about forty feet of line when he struck and gave me a lively fight before the landing net was put under him, more than once he jumped clear out of the water and shook himself like a big Newfoundland dog, then he went to the bottom and turned up the mud, tried all kinds of dodges, but came to grief at last. I pitied him and had a mind to put him back in the water, he was such a plucky little fellow.

"I took several larger ones during the evening. One big, broad fellow, that measured a full foot, was a perfect lunk head, had no fight in him, and gave right up after the first struggle. I was surprised at this, but the matter was explained when I came to unhook. I found he had a great bait hook half way down his throat, with three inches of snood fast to it. He had all the vim taken out of him, but could not resist the tempting early fly, as he supposed. I took another that had one of my flies in his mouth. He bit first early in the afternoon and again in the evening. When fish do that they are hungry. The dam had not been fished with a fly this spring, and while I enjoyed the sport all alone, I kept wishing for my friends, who were to join me when they had enough worm-fishing.

"They came along a little after sundown with something over a hundred small trout, weighing not much more than half as much as my catch. I caught three or four good fish after they came, just to show them how it was done; but my creel was so full they would not go in, and we concluded to start home, all well satisfied with the day's sport—they to think they had more heads and tails than I, and I that one fish at the end of forty or fifty feet of line, big enough to fight for his life, was worth more to me than the whole of theirs." HOMO.

THE MOST KILLING FLY.

Editor Forest and Stream:

The interesting and instructive discussion on the most killing fly was started by a question asked by "Kokomo." He had reference to the best fly for a true trout—the Rocky Mountain trout (*Salmo virginalis*). Some of your correspondents seem to have lost sight of this, and their articles are about the best fly for a fish that is not a true trout, but only a charr, the so-called brook trout of the East (*Salvelinus fontinalis*). A recent letter on the subject stated that the majority had mentioned the red ibis as the best fly. This is an error. Nothing of the kind was written by those who referred to the best flies for Rocky Mountain trout. I notice that many think it is impossible to state which is *the* most killing fly. This is their opinion, unbacked up with any statistics.

Now, Mr. Editor, I hold that a man who has kept no record of flies used can not give as good testimony as the man who has kept such a record carefully, provided the latter has fished as much, and over as extensive a country, as the former. There is some difference between putting down, year after year in black and white, the fly that has caught the trout, and only generalizing from memory about the best fly. Such a record I have, extending for five years. I first caught the Rocky Mountain trout twelve years ago, and have caught it from the Wind River country, in Northwestern Wyoming, to the southern part of New Mexico, a stretch of country over eight hundred miles long; and I think this does entitle me to speak more positively than those who have only general ideas of the subject. Especial care was taken to guard against using too much a favorite fly because it was a good one; and often when trout were rising well to a fly it was changed to see how they would act with others. Pains were taken to try all flies used equally, with favor shown none.

Now for results. The red ibis so well spoken of by some for the so-called brook trout of the East, caught during these five years only eleven-hundredths of one per cent. of the trout caught. I will repeat again that the coachman is by far the best fly for the Rocky Mountain trout, fifty-three per cent. being caught by the coachman. The next best fly, the black hackle with peacock body, falling to fourteen per cent. The next fly, the black prince, thirteen per cent. The June spinner, four per cent.; the silver black, three and a half per cent.; the March brown about the same, and so on down a long list.

Some popular Eastern flies caught as follows: Red hackle, three-fourths of one per cent.; stone, one-third of one per cent.; claret, one-tenth of one per cent. The gold spinner caught none at all, green drake none. As your correspondent "Sport" wrote, the Rocky Mountain trout seem to prefer a peacock-bodied fly to the same fly without the peacock body. For instance, black hackle with peacock body, fourteen per cent.; black hackle with black body, seven-tenths of one per cent.; gray hackle with peacock body, three per cent.; gray hackle with red body, four-tenths of one per cent. The brown hackle with peacock body caught nearly three times as many as the brown hackles with colored bodies. A good fly is a hackle made from the hairs out of the tail of a deer. I have also found it very good for the big-mouth black bass of the Gulf States. But for bass, the addition of a red body adds to its attractiveness. On the contrary, the Rocky Mountain trout do not like red in any quantity in a fly, I have noticed. The only exception of red in a good fly is in the case of the black prince, which has a red tail. The grizzly king, which also has a red tail, was way down on the list. CYRTONYX.

FORT STANTON, New Mexico.

MAINE TROUT.

MAY 1 gives everybody the right to catch trout in Maine, but the best lakes and ponds are still ice-bound with ice so rotten that the fish are now safe from the ice fishermen. Would that it had been so all the spring. But, unwisely enough it seems to the sportsman who only hopes for a few days each year on the Maine waters with rod and fly, special laws allow inhabitants of the State to fish through the ice for trout for their own use, beginning March 1. Such special laws are bad—they have worked very badly this year if accounts are true. One local paper, which pretends to work for the interest of its locality in the way of advertising it as a sporting resort, emblazons the story that 500 trout were taken in one day by a party of three from one of these ponds where the law permits of such fishing after March 1. The paper asks: "How is this for a starter?" Butchery!—that is the word. The editor of that country paper does not appreciate the situation. His item makes one of the best of reasons why anglers whom he desires should come later will avoid his locality. He has let out the fact that the worst sort of pot-fishermen are stripping the ponds of North Franklin county.

I learn that there has been too much of this ice fishing done in that country this spring. Tuft's Pond, in the town of Kingfield, has been very remarkable for its trout. I shall never forget the 10th day of May, 1873, spent on its waters. The wind blew a stiff breeze from the northwest. Our boat was old and leaky. We began with bait—Sim and I—but the trout actually took the bait before it touched the water so freely that a red ibis or two, which we happened to have, were hitched to our lines. It was too early to think of fly-fishing in those waters, but they rose nevertheless, and to the extent that our flies were quickly worn out and broken. Pieces of red flannel were substituted by the ingenuity of Sim, who was one of the best fishermen I ever knew. These worked just as well. Toward night our boat, half full of water, began to be alive with trout from a quarter to a half a pound. We camped that night, as we had done the night before, in a "lean-to" on the shore of the pond. The next morning we

counted our catch. Over 400! I have vowed I will never do it again, and I am ashamed of it now. Trout enough for the table are enough for me. As for Sim, he is in Colorado, and I pity the trout stream that is within reaching distance, unless he has become a reader of the FOREST AND STREAM and learned better things.

Such fishing soon stripped Tuft's Pond. In 1882, I think, Kingfield people asked the Maine Legislature to make a close time on that pond and one or two above it for three years, and it was done. The close time was up this spring, and the special law made it legal to fish after March 1. Bad work has been done there. Three, four and five hundred trout a day have been taken through the ice. One year will strip the pond as badly as ever.

It is understood that but little fishing has been done through the ice on the Androscoggin lakes this spring, and now the hot weather of the past few days has so badly rotted the ice that the fish are safe for this year till the sportsman arrives. By the way, the real opening is likely to be earlier than at first expected. The unusually hot weather has actually about started the ice in the Sebago waters—ice which was one foot thick and solid a week ago. If the hot weather is continued, the Sebago lakes will be opened next week and the landlocked salmon season opened. Local fishermen and Portland, Saco and Biddeford sportsmen are making great preparations. The Maine Commissioners themselves will probably be there, the same as last year. Eleven-pound land-lockers were taken, and bigger ones are looked for this year.

Guides and sportsmen of long experience now expect the Moosehead waters to clear of ice as early as May 13, and the Androscoggin waters—erroneously called Rangeley Lakes—to be clear by the 15th. SPECIAL.

WHAT KILLS THE GAMY BASS?—It is an admitted fact by those who fish the Hudson River, between this place and the mountains on the west, that year by year the black bass therein have decreased in numbers until now few are taken during an entire season; but the cause of this decrease is not so well established. When sawdust is suggested as a possible factor in their extinction, the reply is that the mills were contributing sawdust before the bass were introduced. The charge is next laid at the exit from the paper mills, only to meet with the answer that water fouled at Luzerne or Palmer's Falls would become purified before reaching Big Bay; so we are left to conjecture among the general vicissitudes that bring destruction to fish life. Mr. Fred Mather, one of the most experienced of our fishculturists, offers a solution of the mystery in one of his reports to U. S. Fish Commissioner Spencer F. Baird. Mr. Mather, as superintendent of the Cold Spring Harbor hatchery on Long Island, had occasion to hurriedly enlarge his works to receive a consignment of Maine salmon ova, and some of the troughs in which the fish are hatched were in the haste imperfectly coated with tar. He soon discovered that the eggs in these troughs were unhealthy, and the first salmon that hatched died, and then he removed the remainder and began an investigation which resulted in finding that the trouble came from the improperly coated pine wood. The following is taken from Mr. Mather's report as showing his conclusions: "In this connection it has occurred to me that the reason that trout do not flourish below sawmills is on account of the water being impregnated with either pine or oak. In 1875 I lost a lot of California salmon at Blacksburgh, Va., in an oaken trough, which one of the then fish commissioners insisted upon my using. The impregnation of tannin was perceptible to the taste, and the fry died as fast as hatched. The theory of the fishermen near sawmills is that the sawdust gets into the gills of the trout and kills them. This may be true to some extent, but I doubt it, for the reason that sand or other material does not appear to injure the gills, and I have taken adult trout below sawmills. I incline to think that the mills are destructive merely to the young, by covering the spawning beds to some extent with sawdust, but more by absorption of turpentine from the pine or tannin from the oak, the evil effects of which we know too well."—*Glens Falls Republican.*

REMARKABLE CATCHES.—Washington, D. C.—In your issue of the 16th inst., I noticed an article from "R. P. L." detailing how a black bass was captured by jumping into a rowboat. In the summer of 1878 I was sent, by order of Col. M. McDonald, Commissioner of Fisheries for Virginia, to Saltville, Va., to procure breeding black bass from the native stock in the north fork of the Holston River. I procured the services of a native, who was the owner of a flat boat 50 feet long and 10 feet wide. The plan followed was to quietly work the boat to one side of a still pool and then rapidly pole her broadside across the pool. When nearing the opposite bank the bass would commence to leap into the boat like sheep over a fence, sometimes eight or ten, ranging from fingerlings to six-pounders, being taken at a single "haul." On one occasion a magnificent fellow cleared the entire width of the boat. In a few days we procured all that was wanted. They were then transferred and deposited in one of the tributaries of New River at Martin's Stations. At that time New River possessed only the catfish, some of which would go over 75 pounds. Now the catfish are getting scarce, but the black bass are plenty. The black bass here spoken of are the small-mouth bass. Holston River is a small mountain stream oftentimes less than 100 feet wide. —W. F. PAGE.

THE LAKE SUPERIOR COUNTRY.—Lake Linden, L. S., April 29.—Those who have arrangements made for a trouting or bass trip to Lake Superior this season should not get here before the latter part of June. We are at least four weeks behind this spring. I took a run out to a favorite stream last week to see how things looked, and they look blue enough for anything earlier than June. The drives will not be down any of the streams in this part till late in May, and it takes two or three weeks for the water to settle down to the quiet that is indispensable for good trouting. I had to snowshoe fourteen miles out of eighteen, going and coming, and should judge there is at least over two feet of snow yet in the bush. The weather is very cold, and the ice has not broken up yet in the lakes. Several dams washed out.—W. S. S.

THE FLY-FISHERS' CLUB, of London, recently elected two Americans to be honorary members of the club. They are Mr. A. N. Cheney, of Glens Falls, N. Y., and Mr. Fred Mather, of Cold Spring Harbor, N. Y., both well known to our readers. The club is purely a social one, has no prizes nor competitions, and has for members some of the best-known anglers and angling authors in the world. Its rooms are at No. 10 Adelphi Terrace, Strand.

HIS WILD DOMINION.—Kennedy Smith is fifty-one years old. He is erect as an arrow. He has a woodsy look, from the graceful circle of his wide-brimmed soft hat to the sole of his thick boots. He is bearded like the pard. Threads of silver are in his hair. He is a Kennebec boy, and was born in Readfield and has brothers living in New Sharon and in Mt. Vernon in this State. In 1858 he was in the California gold mines, and after that in New Granada. His father was a tailor, and would have made a tailor of the son if it hadn't been for his love of the woods, the perfect horse and quiet days by the trout brooks. Kennedy Smith was a roving blade, born and bred, and one day he packed his valise and sailed for the gold mines of California. He didn't make his pile there, though he delved hard and deep into the earth. He went into the army in the first of the war, and for five years was enrolled in service. Then he came home and saw the folks and determined to travel north into the quiet of the Maine woods and build a home on the mountain side and find, perchance, gold in the pine woods. Kennedy Smith bought land cheap three miles from Eustis on the side of a mountain where he can look old Mt. Bigelow in the face, with Saddleback as a right bower, and all the grand panorama of the Dead river valley spread out before him with its noisy lakes and rivulets. Over beyond him, he says, are hills piled on hills, while off to the east stretches the Kennebec valley, with the Kennebec winding through it like a silver ribbon. He says that he likes it for a home and bought it, and there he has moved his family. He has had a rough time and a tough time, but every year finds an improvement. At first it was hard sledding. Smith's farm is more beautiful than good. War prices clung longer in the woods, and farming was costly, but what a country it was! The game, big and little, was on every hand. Grouse fraternized with the chickens and caribou with the cows. It was the land of the pine and the spruce. Kennedy Smith is monarch of a big tract of land and water in northern Maine, a paradise for hunters and fly-fishermen. He has leased Tim Pond, famous in annals of big trout fishing, and has all that he wants of Seven Ponds. On the map, if you will take pains to spread it out, Tim Pond will be found as a moderately large dot in the west part of Franklin county. It is in the grand valley of the Dead River. Twelve miles above Tim Pond is the first of the Seven Ponds. Tim Pond is near Eustis, and almost under the shadow of Mt. Bigelow, up which Maj. Bigelow ascended when Benedict Arnold was leading a forlorn hope through the gathering winter of the Dead River valley. Maj. Bigelow climbed the mountain that bears his name, hoping from its summit to see the spires of Quebec. Tim Pond is 2000 feet above the sea level. On its south shore is Tim Pond Mountain. Travelers who have been there say that no lovelier sheet of water sparkles in Maine than Tim Pond.—*Lewiston (Me.) Journal.*

HOME-MADE MINNOW NET.—*Editor Forest and Stream:* I note in your issue of 30th ultimo an inquiry, 'How can I capture minnows?" etc. At Harvey's Lake, Pa., the net is made of the small mesh black netting, generally sold in dry goods and millinery stores, and is fastened all around to a frame of quarter-inch round iron, 36 inches square. At each corner is tied a heavy cord about a yard or more long, and these are brought together at the end of a stout stick, to be used for a handle and there fastened. The net should "bag" about eighteen inches. The net is generally used from a boat and by means of the handle. A stone is placed in the center of net to aid in sinking it, and it is lowered into the water as far as may be necessary and convenient. Into the water over the net well-soaked corn meal (best) or light bread is thrown to attract the fish, and if there are no black bass or pickerel, which abound in this lake, near by, the minnows come over the net by the hundreds, and a fair proportion are captured by slowly drawing up the net. This last operation must be carried out quietly, at least until the net is near the surface, or the small fry will take alarm and quickly glide out of danger.—FATHOM.

PROTECTION IN WISCONSIN.—Oshkosh, April 25.—The Governor's veto of the Fish-Warden bill is not going to deter a few enthusiastic devotees of the piscatorial art in this city from having the existing State law enforced so far as it appertains to the lakes and rivers adjacent to this city. The first move has been the organization of a fish protective association comprising the cities of Oshkosh, Fond du Lac and Neenah for a united action in prosecuting fishermen who are operating with nets. The organization is not wholly completed, but will be at a meeting to be held in a few days. The next step was the arrest of thirteen fishermen on complaint of Geo. F. Stroud. These thirteen men were all brought in at once, and while two were fined $50, the trials of most of the others have been set for future dates, stringing along for the next two weeks. It is the determination to repeat these prosecutions as often as necessary to break up net-fishing entirely. The fishermen are much incensed at Mr. Stroud, and threaten all sorts of dire vengeance. Rumor has it that Stroud has increased his life insurance $10,000, but that may be only a joke.—C. J. P.

PHILADELPHIA, May 3.—The backward run of shad has begun, and as is always the case, weakfish or striped bass are following. Several large ones were taken last week in Brandywine Creek, and many of our down-river piers are thronged with anglers, tempting daily the fish with shad roe, and what is much more disgusting to use, the undeveloped eggs of the sturgeon. The water is yet too cold for successful fishing for striped bass, but in a week we shall hear of good catches at many points. At Delano large catches of white catfish with roe bait were made last week under the railroad bridge. It is said by experts that they can distinguish the flavor of a shad caught in the Delaware River within a mile of the mouth of the Schuylkill, as the fish caught either in the latter river or very near it has an unmistakable taste of gas tar.—HOMO.

BASS IN NORTH CAROLINA.—*Editor Forest and Stream:* Will some of your readers be kind enough to inform me, through your columns, in regard to the fishing near Morganton, N. C.? Is there good black bass fishing in the Upper Catawba and Upper Yadkin? How far from Morganton, or from Lenoir, N. C., does one have to go for trout (*Salvelinus fontinalis*)?—CYRTONIX.

NEW HAMPSHIRE TROUT.—Lancaster, N. H., April 27.—The streams are all open here now, and from present indications the fishing will be good by the 10th or 15th of May. We find the best fishing here before the water gets very low, and some good catches are frequently made on the 1st of May.—S. J. G.

Fishculture.

THE NORTH CAROLINA OYSTER INDUSTRY.

[Paper read before the Fishermen's Convention, Raleigh, October 16, during the progress of the State Exposition. By Lieut. Francis Winslow, U. S. Navy, by kind permission of Hon. Mr. Chandler, Secretary Navy.]

MR. CHAIRMAN AND GENTLEMEN: I think I have reason to congratulate myself that I am to address you under auspices so favorable to the reception of novel ideas. You have brought together an exibit of the resources of the State which must be not only gratifying to each citizen, but which also cannot fail to impress every one with the advantages to be derived from intelligent and progressive policies. To a stranger like myself, the exhibit is not only interesting, but significant. Superficial as my examination has necessarily been, I am impressed forcibly with the fact that the State is advancing on those roads that lead to ultimate wealth and prosperity, and that the people of North Carolina are inclined to put into practical operation any theory, however new it may be to them, if it appears likely to be of benefit. Therefore, I am to speak to you and at this time. For I come to preach a new gospel and I want to preach it to open ears; I am here to suggest a practical way of utilizing one of the great gifts of nature, and the indications are that you readily receive such suggestions. Certainly no man, under the influence of what we have about us, can fail to see how much science, energy, labor and original genius have accomplished during these last two decades. All the qualities I have enumerated are, I am sure, among you; and I wish now to point out a new field in which they can be exercised; a field, too, which will repay cultivation a thousand-fold.

Numbers of people coming here are conversant with agriculture and thoroughly understand and appreciate all its possibilities in the present and future. Numbers, also, who have visited the exposition, are equally well informed as to the raising of stock and of the perfection to which that process has been brought. But I fancy both the agriculturist and the stock-breeder, as well as a large proportion of all men, will be astonished when I tell them that there is a field for exertion closely resembling in its methods of operation the processes of agriculture, of which the agriculturist has never dreamt; a species of animal, a veritable food product, to be raised and improved according to the same general laws that govern stock breeding, but of which stock raisers are profoundly ignorant. And when I state that this agricultural field is the bottom of the sea, and the stock to be raised is a shellfish so familiar to all Americans as the oyster, I know full well that agriculturist, stock breeder and the great mass of the public will be inclined to think me a visionary person who sees imaginary rather than real relationships. Yet, though I am addressing men who, like myself, are of the sea; to whom the ocean and its inhabitants are as familiar as the potato to the farmer and the calf to the stock raiser, yet nevertheless, it is actually of operations which more closely resemble farming and stock raising than the fisheries, that I have to speak to you who represent the fishermen of North Carolina.

I would therefore ask you to dismiss from your minds all impressions due to your ordinary vocation and forget, if possible, that I am speaking of denizens of the salt water.

I suppose that I may safely assume that you, in common with all other citizens, are anxious to increase the prosperity and material wealth of the State. To others belong the investigation and development of the uplands; but to you, the population of the coast, belongs the development of the water. You are responsible for the condition of the fishery interests. Assuming you to be willing to undertake your natural duties, I shall try to point out how one of those fishing interests—the oyster industry—may be greatly developed. To properly understand the problem it is necessary for us to look at the actual state of affairs. I have not made very close calculations, but I doubt if you have at present a grand total of 3,000 acres of productive oyster ground, while you certainly have two hundred times as much acres that can be made productive. The last census shows that North Carolina produced but 170,000 bushels of oysters per annum, or about fifty bushels for each acre now yielding a product. That amount, so far as statistics can be relied upon, is about the maximum yield of natural beds when in a normal state. In other words, you are getting nearly all you can get from your oyster beds as they now are, without endangering their productive life. Assuming that to be the case, and supposing you want more oysters than you now have, the question is, how are you to get them?

Possibly, just at present you think that you do not want any more and therefore do not care how you are to get them. But, as I have already said, I believe you to be a people ready to take advantage of an opportunity when it offers, and I think you will see before I am through that the possession of a large number of oysters will be of considerable benefit a few years from now.

The great Chesapeake Bay produces, or did produce some four years ago, eighty per cent. of the oysters used in the country. We hear of "Blue Points," "Rockaways," "Shrewsburys," and other local brands of the North, but they represent only "fancy stock." The real bulk of the product is derived from the Chesapeake. Of the 23,000,000 bushels consumed, the Chesapeake and its tributaries yield over 17,000,000. Of the 37,000 fishermen and laborers engaged in the industry, Maryland and Virginia employ 28,000. Of the $10,500,000 capital invested, over $8,000,000 is located in the two States bordering on the Chesapeake Bay.

Yet, notwithstanding the importance of the interest involved, the people of Maryland and Virginia are allowing their great industry to perish. For years the oystermen have lived upon the accumulated stores which nature supplied in the past. But, like the boy in the fable, they have killed the goose that laid the golden eggs. Warnings enough had been given, but no heed was paid them. Advice as to the remedy to be adopted has been freely proffered to be met with only a like neglect; the outcome is, that the yield of the beds has fallen off enormously, the price of oysters increased to more than a proportionate degree, and still no remedy at all likely to be adequate has been adopted. All persons who have studied the matter at all, agree in prophesying the ultimate extinction of the beds. The beds once extinguished, from whence will come the 17,000,000 bushels of oysters now produced by the Chesapeake? Where will the 28,000 people find employment? and to what locality will the $8,000,000 of capital transfer itself? Unquestionably the capital and labor will seek the oysters. Unquestionably if the oysters are located in North Carolina's waters some eight or ten million dollars will eventually rest in the State and some twenty-five or thirty thousand people be employed by it. It is evident then that there is great probability that you will need more oysters before many years. The next question is how to get them. Here I would ask you to follow me through a brief summary of the experience of other localities and then judge for yourselves if my conclusions be correct.

On the Schleswig-Holstein beds the oysters decreased about ninety per cent. in sixty years; the beds were managed and controlled by the government and cultivation by private persons was not attempted. In the vicinity of Falmouth, England, the oysters decreased in ten years from a catch of ten thousand a day to a catch of one hundred a day. The beds were common property and controlled by the government. Private cultivation was absent. At Guesworth, England, the catch ran down in eighteen years from twenty-four thousand a day to nothing. The government controlled the fishery and it was common property. The French beds in the districts of Maremus and

Isle d'Oliron were reduced in eight years from 15,000,000 to 400,000 oysters in annual yield. The government managed the beds, and private persons had no share in the administration. The Bay of Cancale, on the French coast, produced 70,000,000 oysters in 1845. In 1867 it produced 2,000,000, a falling off of 68,000,000. The government controlled the beds and the fishery was common to all men.

The pond of Caraguette, on the New Brunswick coast, at one time produced 5,000 bushels per annum. In less than six years the production ran down to 425 bushels. The Shediac beds also ran down from 1,000 barrels to 200 bushels in a comparatively short space of time. In both cases the government controlled the fishery, which was open to any and all.

All along the coasts of Maine, New Hampshire and Massachusetts, oysters were found in the past in considerable numbers. The fishery was a common one, and the beds are now extinct. Rhode Island, Connecticut, New York, New Jersey, Delaware, Maryland and Virginia, have all had the same experience. They have all had large and prolific oyster beds; they have all been controlled by the State; they have all been subjected to a common fishery, a fishery of all men, and they have all eventually either run out completely, or greatly deteriorated. So much for that side of the subject.

Abroad, in England and France especially, attempts have been made to increase the supply through elaborate systems of cultivation. In some localities these systems have been in operation a long time. In others they are of recent origin. It is a noticeable fact, however; that the first modern attempt to assist nature in supplying the market demand was made by the French government, and it is still more remarkable that, despite all the resources of the Empire, the attempt was, in a commercial sense, a total failure.

Indirectly, however, it was a great benefit. People along the shores were stirred up. The experiments of the government were followed, when possible, by private individuals, and with general success. For a time in France oysters had a "boom" and oyster culture was the fashion. Capitalists formed companies, people invested liberally, and the coast in oyster-growing localities was the scene of great activity. In other words, the era of speculation had set in. Naturally a good deal of money was lost, for great fortunes are not made hastily in oysters any more than in anything else. But eventually skill, knowledge, hard work and business capacity won the success in this field that they win in all others, and while the government's direct efforts failed, yet, indirectly, by starting the movement, they caused an eventual increase in the supply; and at the present day there is hardly an oyster from a natural bed to be found in a French market, though the annual production of the private beds exceeds 600,000,000 oysters.

The methods of the French oyster culturists spread to England, and though following the well-established Anglo-Saxon principle, that private persons should, where possible, undertake and manage all affairs of a private nature, the English government did not attempt to cultivate oysters or establish government oyster farms, yet concessions of bottom were made to corporations and stock companies, whose operations have generally been successful. The South of England Company and the Whitstable Company are notable examples of this success. While the natural areas were fast being depleted, these two companies have had well-stocked beds and a certain and assured supply for all demands made upon them. Summing up for Europe, before turning to this country, I find that of the 2,000,000,000 oysters marketed abroad, only 6 per cent. or 7 per cent. are from the natural beds, while from 65 to 75 per cent. are artificially raised. In other words, the common public property produces in Europe less than 170,000,000, while the private property produces nearly 2,000,000,000.

Turning now to our own country. In Canada and the provinces no steps have been taken to remedy the condition of things I have outlined, and the oysters are still disappearing.

In the United States only two instances exist of a recuperation at all adequate to the increasing demands of the markets. These instances are the cases of the States of Rhode Island and Connecticut, and both are exceedingly instructive and significant. In common with all other States, Rhode Island, up to 1865, maintained the old practice of holding her oyster ground as common property. Also, as with all other States, Rhode Island saw her oyster beds and oyster industry gradually disappear. Prior to 1865 the oyster crop was derived almost solely from the natural beds—the common property. These beds now yield only a small seed oyster, unfit for market, so great has been their deterioration! In 1865 a law was passed which virtually allowed private individuals the right of preëmption of unlimited tracts of bottom. Under the influence of this law the industry revived, and Rhode Island at this day proudly contrasts the exhibit of 1865 of seventy acres under cultivation yielding 71,000 bushels, with the condition in 1883, when she had 11,000 acres under cultivation yielding over 1,000,000 bushels.

Connecticut has about the same story to relate. She held her oyster ground as common property until 1855, when individuals were allowed to pre-empt small tracts and their proprietary interests were acknowledged. No great advance followed for some time, principally on account of the restriction of the grants to small tracts of two acres. Ten or fifteen years later, however, enterprising individuals began to evade the law by procuring assignments of two-acre lots from a large number of persons. Thus, virtually, the possession of sufficiently large tracts was secured to one man. Then the industry began to flourish. In 1880 the Legislature passed an act which legally recognized the existing state of affairs, and authorized the continuance of its essential principle—the right to hold forever as large a tract of bottom as a man could afford to buy. Under this law an extraordinary advance has taken place. Connecticut's natural oyster beds do not cover quite 5,000 acres and produce nothing but small seed oysters, no larger than a thumb nail. But through the wisdom and liberality of her laws she has now 100,000 acres of artificial beds yielding a splendid harvest of great profit to the State. Steamers by the score are engaged winter and summer over this area. Thousands of men are employed winter and summer in the cultivation of the beds or in harvesting of the crops. Millions of bushels of oysters are produced from those bottoms of the sound that have been, heretofore, for countless ages, totally barren and unproductive, and no more forcible indication of the value of the two systems of treating the oyster interest by Legislatures could be given than the mere mention of the fact that during the last year Connecticut has sent from her private artificial beds oysters to supply the Baltimore markets.

From the foregoing, I am sure, you must reach the same conclusions as I have. Reviewing the history of all localities, we find that so long as the fishery is common property and the industry controlled and managed by the State, deterioration and eventual destruction ensues. So long as it is managed and controlled by private individuals, and as soon as it ceases to be common property and becomes individual property, then it prospers to its fullest possible extent. These are the first general laws governing all successful oyster fisheries, and I commend them to your earnest, careful consideration. To them you may also add one other deduction from the history of the oyster fisheries. That is, that remedial measures are not usually adopted until it is too late to save the natural beds—until, in fact, they have in reality ceased to be of value.

Here then is indicated the first great and important thing to be done. The law must permit indefeasible proprietary rights to oyster bottom, and the control of the fishery must pass to the private individual. Adopt that principle, by suitable legislation, and all else will follow. At least, so the history of other localities tells us, and you cannot but agree with me in thinking the evidence overwhelmingly conclusive.

[TO BE CONCLUDED.]

CLAMS FOR SCOTLAND.—New York, May 2, 1885.—*Editor Forest and Stream:* During a visit to Scotland, I suggested to the Duke of Sutherland the advantage to be gained by planting our clams and oysters along his coast line. At his request I shipped him a lot last fall. They were detained at Liverpool and all died. I made a second shipment by the Anchor Line in February last. A letter received from Mr. Henry Wright, secretary of the Duke, dated Stafford House, London, March 16, conveys the gratifying intelligence that they arrived at Dunrobin Castle, Sutherland, Scotland, alive; were immediately planted and began excavating in the sand at once. Only the hard clams or "quahog" (*Venus mercenaria*) were sent. Mr. Wright now requests that the soft-shelled clam (*Mya arenaria*) be forwarded. I believe this is the first successful transplanting of the quahog or hard clam from this country to the shores of Scotland. Mr. Wright informs me that as yet nothing has been seen of the twenty-one black bass which I conveyed to Scotland in 1882. As they were placed in a loch six miles long and half a mile wide, perhaps it is hardly time for them to be noticed.—GEO SHEPARD PAGE.

FIXTURES.

BENCH SHOWS.

May 5, 6, 7 and 8, 1885.—Second Annual Dog Show of the Cincinnati Sportsman's Club, Cincinnati, O. W. A. Coster, Superintendent.

May 13, 14 and 15.—Third Annual Dog Show of the Toronto Dog Show Association. W. S. Jackson, Secretary, Toronto, Ont.

May 19, 20, 21 and 22.—Show of the Philadelphia Kennel Club. F. A. Diffenderfer, Superintendent, Philadelphia, Pa.

June 2, 3, 4 and 5.—First Annual Dog Show of the Illinois Kennel Club. John H. Naylor, Secretary, 3,182 Archer avenue, Chicago, Ill.

FIELD TRIALS.

Nov. 16, 1885.—Seventh Annual Field Trials of the Eastern Field Trials Club, High Point, N. C. Entries for Derby close May 1. W. A. Coster, Secretary, Flatbush, L. I.

Dec. 7.—Seventh Annual Field Trials of the National Field Trials Club, Grand Junction, Tenn. Entries for Derby close April 1. B. M. Stephenson, La Grange, Tenn., Secretary.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription $1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed **2312.**

THE PITTSBURG PIECE OF PAPER.

Editor Forest and Stream:

Mr. Mason, in reply to the cold facts I gave him in my former letter, as is his usual custom, shuns the issue and says he has bred, owned and exhibited winners at Birmingham and the Crystal Palace, England. I say that I have carefully searched the records of the "English Kennel Club Stud Book," and I cannot find an instance where he has won a first prize with a pointer which he had himself bred. If I am wrong, why does he not come out squarely and give the name of the dog with which he won, when the dog won, and which show, and where it is to be found in the "English Kennel Club Stud Book."

Mr. Mason's memory is extremely tenacious when there is anything to be remembered that will accrue to his own advantage, but seriously defective when the reverse is the case. I will prove that he does not always write the truth. He says he sold the bulldog Blister for twenty-five dollars, and when a man stoops to prevarication to prop up the flimsy foothold on which he stands, his case must be a weak one, and like the notorious Buddensiek's buildings, need a new foundation.

I bought the bulldog Blister from Mr. Fred Duckworth, of England, showed him successfully, and afterward sold him to Mr. Thayer, of Lancaster, Mass., the enthusiastic breeder and exhibitor of bulldogs. He after a short time made an exchange with Mr. Mason, on what terms I know not, for the bulldog Romulus. Mr. Mason, having found by previous experience that raffling dogs was a profitable way of getting rid of them, proposed to raffle Blister, and for that purpose placed him on exhibition in a liquor store on the corner of Twentieth street and Eighth avenue, in this city, known as "The Kennel." The chances were put up at $1 each, reduced rates to clubs. I myself went there and was invited by Mr. Mason to take a chance. But "the best laid plans of mice and men," etc. Blister was troubled with a villainous temper, which before the raffle came off brought him to an untimely end. He made a savage attack on the bartender and succeeded in destroying the latter's trousers, for which piece of bad behavior the bartender very properly shot and killed him. Can Mr. Mason deny this? If so, let him tell to whom he sold the dog for $25; or, if he sold the dog for $25, how it happened that he (Mason) offered him at a raffle, or why, if the dog was not his property, the bartender held him responsible for the damaged garment? Mr. Mason seems to object to my styling him a "self asserted authority," but I will take him from his own standpoint.

He condemns me as a judge because I have not been an extensive breeder of dogs, and therefore says, "I have done myself and brother fanciers a great injustice by acting in that capacity," consequently I take it that he must mean that no man can be a judge of any breed unless he has been a successful breeder of the particular breed of dogs which he undertakes to judge. I have already shown by the English Kennel Club Stud Book, that Mr. Mason never bred a pointer which he had exhibited successfully in England. I will now ask when and where he ever bred mastiffs, St. Bernards, Newfoundlands, greyhounds, deerhounds, or any other breed of dogs? "A man who is not a successful breeder of dogs cannot be a judge of dogs," says Mr. Mason. Mr. Mason has never bred any breed of dogs except pointers, ergo, he cannot judge any breed of dogs except pointers, and from his record and his more recent comments on pointers and pointer judging at the late Boston show, I, with many others, am inclined to the belief that he has but a very superficial knowledge of the breed he affects most to admire.

It is true his name appeared in a book, but what is that worth? FOREST AND STREAM once said that I was a good judge of dogs, now they allow Mr. Mason to repeatedly say I am not.

There have been and still are pointer breeders in England, whose names will never die as long as the noble pointer lives. We have heard of Garth's Drake, Lord Sefton's Shot, Whitehouse's Hamlet and Price's Bang, but who ever heard of Mason's anything? Nobody, nor ever will, because Mr. Mason is not a breeder, is not even a lover of dogs, except to the extent of the dollars and cents he can get out of them at a raffle or otherwise.

In conclusion I would refer Mr. Mason to a letter which appeared in the *Kennel Gazette*, London, England, a few sentences from which I will quote: "An Englishman well known in this country as a fairly successful exhibitor, but certainly not an authority on any breed * * * * * * Englishmen should at all times learn to be modest before they begin to spread their opinions broadcast. If they know sufficient, and can write sufficiently well, they can find plenty of employment in their own country, and by the time they become authorities their writings and opinions will be quoted in foreign countries; but to commence as teacher or censor in another country is an intolerable piece of egotism."

This letter was quoted in a Western contemporary during the week in which the first Louisville show was held. I read it to Mr. Mason, and never shall forget the unutterable expression of anguish and mortification which came over his features as he gasped out, "This is the work of my inveterate enemy, Vero Shaw," notwithstanding the fact that Vero Shaw was not at that time on the editorial staff of the *English Kennel Gazette*, and that it was in Vero Shaw's work on the dog that Mason's name "appeared in a book," as he is so fond of quoting.

When I have more leisure I will, with your permission, propound for Mr. Mason's special perusal a few questions on certain dogs, which I will guarantee will be interesting to him, however much it may try the patience of your readers.

JAS. MORTIMER.

THE AMERICAN KENNEL CLUB.

Editor Forest and Stream:

The most healthy sign I have seen for some time is the statement of your correspondent "Rosecroft," that there will be no representation from the Eastern clubs at the association meeting at Cincinnati. The scorn with which "construction" has been received, has scotched the snake concealed in the association, but it is not killed yet. The same stupid fatuity that concocted "construction" is at work to further its own ends and has chosen Cincinnati as the field of operations. Nothing is needed to completely kill this snake further than leaving it to its own devices. The genius that elevated "construction" to its commanding dignity, suffices to cover a continent with—well, we won't call it glory. I suppose the outcome will be two associations, an Eastern and a Western one. This seems the likeliest solution of the present mix. One thing is sure, the association that promulgated "construction" got up the meeting at Cincinnati, and finally snaked through the postponement of the annual meeting to Cincinnati this year, can never command the respect of the honorable, sensible men in dog circles of America. When a sensible association is gotten up, let us hope that it will sit down on all such tricks as proxies, except, perhaps, in voting for officers, no more such business as referring the whole conduct of affairs to a "hole and corner" meeting of "dearly beloved Roger and I." I do not see why a club or clubs cannot be organized on a liberal basis, one that will invite the confidence and respect of the exhibitor, even if it does not give him a share in its actual work. This will probably be the easiest way out of present difficulties, and for the present will do well enough. As soon as we get a sufficient number of specialist clubs, they can keep the association straight by creating a congress of their delegates to keep an eye on the association. Pray, may I inquire of the members of the A. K. C. who constituted the meeting at Boston, what in the world they were at when they approved the minutes of the "last meeting"? Wasn't that the meeting at Cincinnati that gave us proper "construction"? And didn't all the Eastern members repudiate "construction," or did the same wise "proxies" that met "in the woodpile" outvote them? Now, come up to the rack, don't keep family secrets, in the present state of public mind nothing will be satisfactory but a clean breast of it. The proceedings of the Boston meeting will leak out gradually, but a frank confession will clear all the innocent ones, but until we get it they will be lumped in with the black sheep.

W. WADE.

HULTON, Pa., April 24, 1885.

THE NEW YORK DOG SHOW.

THE ninth annual New York dog show, given under the auspices of the Westminster Kennel Club, was held at Madison Square Garden last week. The arrangements were excellent, and Mr. Mortimer, who superintended the show, is to be congratulated upon the success of his first attempt. We gave last week a description of the show, with a list of nearly all the awards. The remainder will be found below. The number of entries was not quite up to the average of previous shows, the falling off being mainly in the pointer and setter classes. The condition of the dogs was equal, if not superior, to that of any exhibit we have seen. The quality of the animals, especially in the non-sporting classes, was also better than usual.

The judging was not in all cases satisfactory. Mr. Dalziel is an acknowledged authority upon many of the classes which came before him, and we cannot quite understand how so good a judge could make some of the mistakes that occurred in his decisions, although we have the best authority for stating that some of the dogs were overlooked, and that had a more careful examination been made the result would have been different. Mr. Tracy is a true artist and shows wonderful skill in transferring to canvas life-like pictures of the dogs he portrays, but in passing judgment upon a group of animals we fear that his artist's eye is prone to dwell upon the lines and curves of beauty rather than upon the oftentimes less pleasing outlines that denote greater worth.

The comments on the dogs are for the benefit of the public, and as a guide to the breeder who has no opportunity to examine them. No dog is perfect, and it is only by judicious breeding that improvement of the various breeds can be accomplished, and it is of vital importance that a thorough knowledge of the faults of each animal should be had in order that the mating may be so intelligently done, that these faults shall not be intensified in the offspring by the careless mating of animals that have the same bad qualties.

MASTIFFS—(MR. DALZIEL).

Hero II. and Lorna Doone were the only entries in the champion classes. The son of Salisbury was looking well, and his kennel mate better than when exhibited at New Haven. In the open dog class four out of the eleven entries failed to put in an appearance, and the judge was not long in selecting Moses for premier honors. The newcomer has a good head, but is heavy in ears and has a superabundance of dewlap. We will reserve our opinion of his body until we see him in better condition. His legs and feet are fairly good. Homer—the much abused—was well placed second. He is on the small side, but has a very nice mastiff head, and is much above the average in body, legs and feet. Lion, placed third, is a big, handsome dog, good in body and coat, but lacking in mastiff character. His head is much too long and his ears are heavy. Rex is houndy in head, and so is Jumbo. There were only eight bitches in the open class, six of which were present. First went to Prussian Princess, a bitch with a good head, but faulty in the legs and heavy in ears. Lady Gladys came next, and a rare good bitch she is. She has a very good head that might be improved a little below the eyes, stands on good legs and feet, and has plenty of length between the couplings. We would like her tail better if it were longer, reaching to the hocks, and perhaps she is a bit slack behind the shoulder. Third went to Queen II., whose good and bad points we have frequently alluded to. How Mr. Dalziel managed to overlook Rosalind we do not know. She was in nice condition, and is at all times a good bitch. She should have been second, if not first, with Prussian Princess third, and Queen II. vhc. Twenty-one puppies made a big class, but the quality was below par, and we failed to find anything among them that is likely to develop into first-class form. The printed list of awards sent out by the club gave Vulcan as the winner, but the prize went to Leo. He is a big, fine dog, but is much too long in the face and heavy in ears. He has a ring tail, stands too high behind and is weak in second thighs. Pharaoh, winner of second prize, is of better type, but too much dished below the eyes and long of ears. He lacks size and is faulty in back and tail. Duke, placed third, was our choice for first. He carries his tail too high, is throaty and lacks in color of ears.

Vulcan, hc., stands on good legs and feet, but lacks depth of muzzle and is a bit leggy. We liked him better than the winner. Count Robert, hc., is too long in the face and carries his ears badly. Countess is not square enough in muzzle and her eyes are light in color. Kaffir is heavy of ears, leggy, and not massive enough in head. Olaf and Odin are faulty in head and ears. Paris is deficient in ears, muzzle and back.

ST. BERNARDS—(MR. DALZIEL).

Duke of Leeds, wonderfully improved in body since last year, and but for his faulty tail a grand dog, defeated Otho for the champion prize. Otho is immensely the superior in front of any dog we have had, but shown as he was, he can never beat a conditioned dog such as Mr. Hearn always brings out. Bonivard did not compete. Mr. Hearn's Gertie had a walk over for the champion bitch medal. In the open dog class Mr. Dalziel got the wrong one first. Besides being improperly entered, as was stated in the protest published last week, St. Elmo is a cripple behind, and his queer pedigree can be detected in his color and appearance. First Choice was the best in the class. His ears are set on a bit too high, face like his half brother Plinlimmon's, rather long, but he is young enough to allow of some improvement, and he gets his tail too high. His color and markings are good; he is a large dog and has plenty of bone. Rollo, the winner of third, was rated too high; he is heavy in ears, and has a curly, open coat. Carlo is good in head and color, but is cowhocked and very weak in his hind legs. The typical little Rene was the second best in the class. He was well shown and had improved since New Haven. Duke, like Rene, is small and lacks character in head. Dare is faulty behind, and his left eye gives him a sour expression. Barnard's Prince, though undersized, is a good dog, and how Mr. Dalziel overlooked him we do not understand. The well-known Rhona beat the equally well-known Lady Abbess in the bitch class, these being the only entries. In the smooth champion classes, Don II. and Daphne had walks over. Verone, fully described in our Boston report, was at the head of affairs. Two visits to Essex Kennels failed to find him, and we must pass him. Castor, entered as imported from the Hospice, is not worth his passage money as a St. Bernard. Ernst, third, is still light in body, is large, but plain in head and has a ring tail. Chic is dish-faced and full in the eye. The highly commended Zeno was easily detected as a son of Harold; he is too small to take high rank on the bench. The plain-faced Wanda won easily in her class, the others shown against her being properly passed over. A poorer lot of puppies we have seldom seen. Konig, first, was a long way the best. Roi looked for all the world like an overgrown collie, and Mountain Maid is a snipy-headed, poor-coated one, quite unworthy of such a mention as vhc. Alpine Maid is plain in face, lacks squareness of muzzle and is weak in jaw. Abbott is at present only a fair puppy, but he may improve. In smooth puppies we preferred Valentine, Jr. for first, though Kobold, great in bone, may outsize Valentine when mature.

NEWFOUNDLANDS—(MR. DALZIEL).

The winner, Miro, came all the way from New Orleans, and his only close rival was Tasso. They are both above the average, but Tasso was handicapped by being badly shown. Pride, who split the pair, has a long, plain head, and is not good in coat. Bruno is curly, as was any number of the passed over division. Crank should have been noticed, as he is of fair size and has a straight coat.

GREYHOUNDS AND DEERHOUNDS—(MR. DALZIEL).

Friday Night, faulty at both ends, was the only entry in the champion classes, and in the open dog class Mr. Smith's great dog Memnon fairly smothered his opponents. No fault could have been found with the judge had he withheld the second prize for want of merit. Faulty behind and without teeth, Ben looked a miserable picture when standing by the side of his handsome kennel companion. King Lear is light of bone, plain in head and prick-eared. Master Donald is light of bone and faulty in head. Victor is not a show dog—too coarse and weak in muzzle. In the bitch class it was Mother Demdike first, and the rest nowhere. Fan, checky, snipy, light of bone and weak in the pasterns, came next. Maud McGrath was given hc. She is a coarse bitch. Belle is light of bone, faulty behind and full at the brow. The puppies were a seedy looking lot, excepting perhaps the winner, Hawthorne Belle. Zulu is leggy and faulty in ears. School Boy is plain in head and shallow. The winning deerhounds are well known. Mac and Perth were the best of the lot.

POINTERS—(MR. TRACY).

The marked falling off in the number of entries in these classes shows that something is wrong, and it is to be hoped that next year the club will appoint a pointer man to handle pointers. There were only 91 entries against 149 last year and nearly 20 dogs were absent. The judge worked hard, and no doubt did his utmost to give satisfaction; but it was easy to see that he was not at home with the breed. There were no entries in the champion dog class, and in the bitch class, Water Lily, looking very well, was alone. In the open dog class Mr. Tracy had not more than a dozen dogs before him, and yet it took him exactly two hours to judge the class. There were only four or five dogs in the race, and a man gets "mixed" if he spends two hours in examining dogs which might easily be judged in a fourth of the time. The winner turned up in Robert le Diable, a "flash"-looking son of old Croxteth and Spinaway. He is a white and liver-ticked dog of very "catchy" appearance, the very sort of dog to mislead a man who is not up on the breed. His head is by no means good, being deficient in stop. His eyes are light and his ears are placed too high. He has plenty of length of neck, and his forelegs are good until you come to the pasterns, which are light. He carries his tail well, and his stifles are beautifully bent. His loin and feet are bad, and he lacks substance all through him. In appearance he resembles Donald II., but is not so stout. If Robert le Diable was deserving of first, Donald should beyond doubt have been second. The latter has improved very much during the last twelve months, but our first opinion of him will never be changed, and we do not hesitate in saying that if this dog and Robert were stripped of their "beauty spots" they would have fewer friends. The pointer is a dog possessed of great bone and substance; strong loins and good feet must he have. These are indispensable requisites, and without them no dog can be first-class. Weeds can gallop, but cannot stay, neither can they beget good stock. Fritz, placed second, is a much better built dog than the winner, but he has not improved on his old form. Tammany disappointed us. He is splendidly bred and should beget capital stock if put to the right type of bitches. Glen is too coarse for a show dog. How Mr. Tracy managed to overlook Pilot we do not know. He was one of the best dogs in the class. Rush III. is faulty in shoulders, light behind, and slack in the back. Jimmie may be a workman but he lacks true pointer character. Carlo, Mr. Munson's recent importation, is one of the worst looking animals we have ever seen entered in a pointer class. Drake got more than he deserved; he is not nearly so good a looking dog as his kennel companion, Sefton. Croxteth, too, is a better looking dog. Drake is very faulty in loin and feet. In the bitch class Mr. Tracy got all wrong. Nan, the winner, is long and round in the barrel, faulty behind, and her color is "washy." The judge withheld second prize for want of merit, and to make matters worse, gave third prize to a very much better specimen than the winner, whereas he never mentioned Bonnie Kate, about the best bitch in the class. She is not quite straight in forelegs, or strong enough in second thighs and is too wide across the chest, but in other respects she was away in front of the class. These were a very poor lot. In the champion small dog class Bravo had matters all to himself. If he showed more character in head, and was not quite so round in the barrel he would be a red hot one. Rue, in the bitch class, is a sweet little specimen, but too heavy in whelp to show. The quality in the next class was much above that in the same class last year, and the judging was equally bad. Last year Mr. Sterling overlooked Bon Ton's good points, and didn't even commend him. (Dash was his name at that time.) This year Mr. Tracy gives the dog second prize when he is not entitled to it. He is round in barrel, light of bone and cheeky. Third was about his place. Robin Adair, placed first, is very like Meteor, but is shorter on the legs and better in head. Second was his place. Bob, a dog that Mr. Sterling never noticed, but which we said was deserving of notice, now takes third in a very much better class. He. is what he deserved. He is wide in front and faulty in shoulders and stifles. Prince of Orange, hc., is very weedy and snipy; he got at least one letter more than he was entitled to. Mr. Tracy missed the best dog in the class, and didn't give him a commended card. Doctor is his name. He is not a "flash-colored" dog, but he looked something like a pointer. The small bitch class was better than the same class last year, but the judging was even worse. Jilt, the winner, is a good little bitch. We said of her last year that she was too throaty for so young a bitch; she is now very throaty, but her worst fault is behind her shoulders. She is at all times a nice one. Second was her place. Belle, that should have been second last year, takes second this year when she is not entitled to it. Rosa should have been higher up on the list. In head and stifles she is faulty. Flash, faulty in feet and light of bone, deserved a card. Belle of the Glen, too, should have been noticed. She is wide in front and coarse in tail, also a bit light of bone. Dora is snipy, light of eye, and heavy in shoulder, but deserved her card. Modesty, vhc., was away in front of anything in the class. How Mr. Munson could enter such a bitch for sale at $150 and bring Vanity out as a world-beater is a mystery to us. Mr. Hitchcock took the bitch at the catalogue price, and she is a bargain. Her fault is in loin, which is not good, too much "tucked up," and she is a bit throaty. Head, legs and shoulders remarkably good, tail well placed and equally well carried. She was the best small pointer in the show, and her owner never need be afraid to exhibit her in any light-weight class. There was nothing in the puppy classes that is likely to develop into anything first-rate. In the class for dogs and bitches over twelve and under eighteen months, Duke of Bergen, from the Ramapo Kennels, was properly placed first. He is too high on the legs and is very throaty for a youngster; his ears, too, are not properly placed. Tempter, placed second, is throaty, shelly and lacking in character. We preferred Beausire, good in legs, feet and body, but snipy, for the place. In the class for dogs and bitches under twelve months old, Happy Medium, placed first, was not deserving of premier honors, being faulty in eyes, ears, shoulders and feet. The New Haven and Boston winner Lou, was points the best puppy in the class. Bang Grace, placed second, will never make a good one. She has a very plain head. The hc. Mona should have been second. She is heavy at the shoulders and is a bit snipy. Chloe, a fair good black, deserved a card, and so did little Butterfly, a niceish four months old puppy. Viola is bad in loin and feet, and is very throaty for a puppy. She has lots of bone, her best point. It is to be hoped the classes will be better filled and better judged another year. Such confusing awards as were made on his occasion mislead the public and muddle beginners. The result is that progress cannot be made.

ENGLISH SETTERS—(MR. HIGGINS).

These classes were much better judged than the pointers, and we regret there was such a marked falling off in the quantity and quality of the exhibits. There were only 76 entries against 154 last year, and New York has always until this year eclipsed other shows both in quantity and quality. Plantaganet represented the champion dogs, and was looking well. In corresponding bitch class Petrel II., a handsome bitch, not well shown and too light in bone, was alone. The quality in the next class was not good, and Foreman, faulty at both ends, scored an easy win. Mr. Goodsell's exhibits were in wretched condition, and Rockingham, although entered, was "not for competition." Second went to Clifford, who is too long and round in barrel. His head is not good and he was out of coat. His legs and feet will do. Bob White, vhc., is a catchy-looking dog, but does not improve on acquaintance. His feet are not good, and he is a bit throaty and slack in the back. He gets his flag up too high and is light in second thighs. Some people liked him better than the second prize winner, but we think Mr. Higgins was right. Storm, not mentioned, although faulty in tail, short of coat and leggy, deserved mention. His legs and feet are good. Count Tempest is curly, throaty and cheeky. Paris III. is heavy in head, throaty and wide in front. Ranger, vhc., was shown too lusty. His ears are not well carried, and he is heavy in shoulders and too straight from the hocks down. Sandy was worth a c. card, although he is leggy, faulty in tail, short of coat and a bit weak in pasterns. Ponto won the special offered for the best black setter. We don't know why, seeing he is a black and white dog. Rock is faulty in tail, neck, muzzle, carriage of ears, and thighs. Jester, apple-headed and underhung, has some rare good legs and feet to recommend him. We have seen him looking better. Glen Rock, vhc., is not up to Mr. Jester's usual form. He is faulty in hocks, curly behind, besides being a bit leggy and plain in face. The bitches were a much better lot than the dogs, and Modesta, a nice bitch, was perhaps the best of them. She has improved since Boston, but is not yet in full coat. She does not carry her ears well, and is a bit heavy at the shoulders and faulty in gait. Second went to Coomassie, a decision we cannot indorse. She is a pretty weed, faulty in shoulders and thin through the thighs. Blue Belle, placed second, and Dashing Belle, third, are worth a street full like her. Blue Belle is not so good as she might be, either in coat, bone or feet. Dashing Belle was shown too fleshy; she is a bit sheepish in expression and light in hind parts. Marchioness, hc., deserved another letter. She has good legs and feet and a fairly good head. She is light of bone and not so good in loin as she might be; neither do her ears lie close enough. Bessie, vhc., is faulty in feet, neck and ears. Lady Suffern, unnoticed, is a better bitch. In feet, neck and eyes she might be altered to advantage, but she is a nice bitch. Paris Belle is faulty in head, ears, neck, pasterns and coat, and is too round in barrel. Maud S., hc., got more than she deserved. She has a short stumpy head and a bad tail. Crete II., a little faulty at both ends, deserved notice. Rose did not, whereas she took the vhc. card. She is light in body, faulty in eyes, bone, elbows and feet. Mac's Bijou, of poor color, was worth hc. In the puppy class we only noticed four that are likely to be seen in future prize lists. Prince Imperial and Princess Victoria, owned by Mr. Donner, and Dame Petrel and Stormy Petrel, owned by Mr. Lorillard. Prince Imperial, good in legs, feet, bone and coat, and above the average in head, is a bit faulty in the back. Victoria is faulty in tail, neck and eyes, but good in coat and bone, and not bad in head. Dame Petrel is better in head than her kennel companion, and not so light in eye. Tip, vhc., has a sour face. We liked Lady Blanche better, but her age (six months) was against her.

BLACK AND TAN SETTERS—(MR. GLOVER).

Argus and Lady Gordon was the order of things in the champion classes, and in the open dog class, Phil, by no means a crack, took first. He is straight behind, has a plain, sour head and faulty ears. Flash, curly, throaty and leggy, came next. Vhc. was as much as he deserved. Glen III., that took third prize, is a better dog. He is faulty behind and lacks bone. Echo, c., is of poor color and is sour in expression. Angus, vhc., is faulty in head, eyes and color. Jet, vhc., is faulty in muzzle and color. Carlo, c., is faulty in color and at both ends. Jack is too heavy. Rock is dish-faced and poor in color. Carlo is snipy, faulty in ears and was not well shown. They were a very poor lot, and the judge was liberal with the cards. The bitches were even worse than the dogs. Rhoda, hc. at Boston, took first. She is heavy in shoulders, short of coat and her head is too much of the Irish type. Bessie, curly, light in head, but nicely marked, came next. The second prize was withheld for want of merit. The puppies were a wretched lot, and only the first prize was awarded. Madge was the best. She is faulty behind and too weedy.

IRISH SETTERS—(MR. TRACY).

The entries in these classes were very few compared with previous shows, but the judging was bad. In the champion classes the judge could not get wrong, as Elcho, Jr., and Faun were alone. But in the open dog class he got all astray, and when the number of the winning dogs appeared on the blackboard, dissatisfaction was expressed on all sides, and it never subsided until the Garden was emptied of dogs and their owners. The judge took great pains to arrive at correct decisions, and no man could possibly have tried harder to give satisfaction. The first prize went to Rory O'More II. This decision we must dissent from most emphatically. Three other dogs were shown in the class that can beat Rory O'More II. all through, and there were still others left as good as he. Blarney, placed third, was our choice for premier honors. He has improved since Boston. He has the head of an Irish setter, and he is an Irish setter. We would like him better if he was not so broad across the chest or so long in the back. Chief, placed second, is a much better dog than the winner. His head is not equal to Blarney's, but his color is superb and he is remarkably good between the couplings. He is too straight from the hocks down, and his head, though not bad, is below first-class form. Bruce, vhc., is a beautiful little dog; his clean-cut typical head, nice coat and color and raking appearance made for him many friends. If he were stronger in forearm, firmer in back, and a bit larger he would beat any dog living. If the judge had placed Blarney first, and Bruce and Chief equal second, the decision would have been well received. The condition in which Blarney, Chief and Bruce were shown did credit to the owners. Rory O'More II. has not improved upon his puppy form. He shows too much of the English type for an Irish setter. His head is faulty; it is too flat, the muzzle is wedge-shaped, and he is light in the eyes; his neck is thick and short, while his hocks are straight, and close together when he moves; in color he is too dark, and his coat is not flat. Burke, faulty in tail, shoulders and ears, deserved a card, and so did Rory O'More, Jr., who is light behind but fairly good in front. Scamp and Chip, were each worth hc. Chief II. is faulty at both ends but deserved his card. The bitches were a poor lot, the best of the entries being absent. Hazel's appearance could be improved by condition. Her ears are set on high and she does not move well behind. Little Nell was not at her best. Her coat requires attention and her ears are not good. They were properly placed first and second. Lady Edith, third prize, is faulty in ears, curly and flat in skull. Bell is faulty in ears and light in color. Gerald and Molly Bawn were the best of the puppies, and we did not see anything else that is likely to be heard of in the future. Gerald is good in coat, color, legs and feet, but is not clean enough below the eyes, and is faulty from the hocks down. Molly Bawn is good in head, bone, color, legs and feet. M'liss is heavy in head, which will get worse with age.

SPANIELS—(MR. DALZIEL).

The spaniels made a good showing in point of numbers, but there were many absentees, and these withdrawals lowered the average quality very much. Taking them altogether, the New York display was nowhere near as good as what was seen at New Haven. The only Irish water spaniel shown was a mongrel, and the prize was withheld. Benedict, now owned by Mr. A. E. Foster, secured still another championship and the spaniel special. Mr. Dalziel transposed Mr. Watson's judging in the field spaniel class by placing Black Prince over Newton Abbot Lady. They do not now need description. Barrister II. is a trifle too leggy and has a light eye, otherwise a very good dog, with a nice, flat coat. Moor is high on the leg and short of coat. Nellie Neil was off her bench. Prince Hal was quite deserving of his card, a fair good dog. Bob, Jr., is well known. Jumbo is good in coat, a fair head and ears, but not low enough, still the plain commended was not enough for him in such company. A bad Bedlington was shown in this class by Capt. Paul Boyton, and on looking among the terriers we found it was a transposition of numbers no one had sense enough to detect. He was meant to be shown in the rough-haired terrier class. Othello is weak in muzzle and was badly shown. Mr. Richardson, who has gone in for Clumbers, had the field to himself with Newcastle, Tyne, Bateman and Blondy. They were placed in that order. Newcastle is the heaviest and longest Clumber spaniel we have seen in this country. He is only ten months old and will yet improve. He is low on the leg, is of good color, and excellent coat. His head, however, will never be strong enough for his size and his feet are also too small. Tyne is better in head than her brother, but is higher on the leg and shorter backed. Bateman is well-known. Last year Bateman was placed ahead of all the Clumbers, but the Clumber special medal Mr. Mortimer awarded to another dog on the ground that Bateman was not a Clumber. Mr. Dalziel, who ought to know something about the breed, gave Bateman vhc. on this occasion. In black or liver cocker dogs, Brahmin won, he is too much like a small field spaniel. Hornell Jock, second, has a good body, but is too high stationed and is weak in muzzle. In bitches Miss Nance, Shina and Juno W. were abscut, and first went to Helen. Hornell Silk, who walked over for the champion prize, was shown as curly as a poodle on his quarters. Sport, previously described, was alone in any other color dogs, and out of three poor bitches Lilly was chosen as the best. The winning puppy, Belle, is too fine in muzzle. Negress III., her kennel companion, will walk away from the winner in fine style in a very short time as she is long in the barrel and has a head not likely to go wrong. Black Reno is leggy and coarse. O'Donovan Rossa is aptly named, the expression of his face would convict him of any canine crime. Dash II., c., was to our mind the best in the class, but there was also a splendid litter by Black Prince in which there looked to be several future winners. It was a large class but contained a lot of rubbish.

FOXHOUNDS—(MR. PURDY).

There were only five entries in the foxhound class. First went to Vinegar; he was in fair condition and deserved the place. Manager, second, is also a good dog, with not so good a head as the winner. He has plenty of bone and looks a workman. Major, third, is a fairly well-formed black and tan, his head is of the bloodhound type, and he has a surly look that detracts from his appearance. We liked for the place Truman, vhc., he is a trifle coarse in muzzle, and is a little out at the elbow; he has a good head and capital legs and feet. Sis, unnoticed, is of the harrier type.

BEAGLES—(DR. J. W. DOWNEY).

Well judged was the verdict in the beagle classes, and although the entries were not numerous, there was a decided improvement over past years. The good of a specialty club was clearly evidenced in beagles, as there was something like type about the exhibits, an appearance of something definite being aimed at. Fleetwood has a nice head but is light of bone and slack in the loin. Rover is throaty, is short in the head but has good body, legs and feet, and a working coat. Mark Anthony is coarse, light of bone and leggy. Minstrel having no pedigree, it is safe to assume from his appearance that his father was a half-bred bull-terrier. It was a mistake giving such an animal a card at all. Little Duke is a smart little hound, a little off in carriage of ears, which are not long enough. He is the best beagle ever shown at New York. Frank has no bone and is too long cast. In the bitch class Music showed badly in the ring; she has nicely placed ears and

good legs and feet, but is too long in the couplings. Lou is coarse and leggy. Little Beauty, too long in the couplings. Marjory showed mange, is leggy and wants character. Fly is not a beagle. In the class under 12 inches, Blue Boy and Blue Maid, brother and sister, led off the catalogue. They are the tallest 12-inch beagles we ever looked at, and they are not extra good-looking. Their heads are coarse and wedgy, and lack the neatness and finish of such a head as Little Duke. The best point about them is their good legs and feet. Bannerman's domed skull and toy-terrier muzzle is his great fault. Behind the head he is a model miniature hound, without that slackness of loin so marked a characteristic of American beagles. Mamie Ringwood was put down as a five-year-old—a dog dealer's five years—for she looks as old as the hills. Marchboy II. is simply a toy, but Magnet would probably have been in the money but for arriving too late for the judging. The puppies were well treated by Dr. Downey, but we could see nothing in the class to arrest attention.

DACHSHUNDE—(MR. DALZIEL).

This breed is improving, but there was nothing first-class. Fox-terrier heads, short ears, tight skins and light limbs were too conspicuous, and it is to be hoped breeders will set about to get rid of such defects.

FOX-TERRIERS—(MR. L. M. RUTHERFURD, JR.).

Raby Tyrant and Richmond Olive led off Mr. Rutherfurd's classes, and earned bloodless victories for their respective championships. In the open class, our notebook says, Sir George is coarse and overgrown. Mr. Tinker deserved a card; he wants more length of head; but he is a terrier. One Dollar and a Quarter—his name is the best criticism we can give of him, perhaps one dollar would be nearer the mark. Grover was put down as hc., and had such a card over his bench. Why, it was impossible to see, for he is a leggy weed with a snipy muzzle; no terrier about the dog at all. Scarsdale every one knows all about, and placed next to Spice his cheekiness was more noticeable than ever. Spice, entered as four years old, is over six years of age and his mouth shows it. If his tail had not been docked, it would have crooked over on his back. Coat soft, and when he stands at attention he gets up in the air so as to look leggy and straight in the shoulders. He is just off the ship, and looked a little light all over. He won without difficulty. His legs and feet are still perfect. He is a capital terrier, but we are somewhat disappointed in him. Jocko is weak in front of the eye and out at elbows, but is a nice cobby little dog. Vakeel has not improved at all since last year. Sancho is coarse and houndy. Richmond Johnnie is heavy-eared and too strong in head. The bitch class contained Richmond Delta, for whom Mr. George Raper gave over $500 at auction a few months ago. We thought Mr. Raper a better judge of a terrier. She is far too fine in muzzle, her legs are like pipestems and her mouth is all gone. The absence of the teeth from one jaw in front would indicate that her mouth might not have been level. At any rate, if Mr. Rutherfurd had looked at her mouth he could not have placed her first in this class. This is another of the animals with a great English reputation which is not deserved. Gurrey Gypsey is very wide in front. Her best point is her nice, small ears. She is a well bred one, too. Izzie is a liver, tan and white nondescript. The wire-haired terriers were badly handled. Tyke was shown a mass of woolly hair, as were all of Mr. Grainger's. Trophy is the proper sort, a smart terrier of the right size. He was out of coat, but what was left of the old one showed it to be of the proper length and harshness. Tip was the second best in the class. Whitethorn is faulty in muzzle and had no coat. Venom is only a wreck, is small and pinched in muzzle, soft coat, undershot, and her mouth all gone. Foiler is coarse, heavy in ears and woolly. The dog puppies were again led by Scarsdale Joe. Di won in the bitch class. She is rather strong in muzzle for a bitch, but has good ears, legs and feet. Mr. Rutherfurd made an unpardonable blunder in awarding the special for best dog and bitch to Spice and Richmond Delta over Raby Tyrant and Richmond Olive. Mr. Kelly requested him to judge by points, and he gave Spice 95 and Delta 55, total 150; Raby Tyrant 55 and Olive 80, total 145. Taking Spice as equal to 95 points, which is preposterous to begin with, both Olive and Tyrant are rated far too low. In point judging Olive is pretty well bound to beat Spice, and the difference of thirty points between Spice and Tyrant, who were judged together, is simply ridiculous.

COLLIES—(DR. J. W. DOWNEY).

Mr. Terry entered his kennel of collies "not for competition;" there were therefore no champions, Mr. Terry having so far the only eligible competitors. Ben Nevis once more came out at the top of the tree in the open dog class. He was shown in marvellous condition and deserved his success. The heavy-eared Bruce of the Fylde, who since his first appearance on the bench has grown coarse, was given second, and his kennel companion, Kilmarnock Bruce, third prize. This was wrong. Kilmarnock Bruce is better in head, though he is far from perfect in that respect; has more freedom, and his mane, frill and coat were far better than on Bruce of the Fylde. The third best in the class was Bounce, a light sable, shown in splendid coat. His skull is not flat enough, and his head loses in length. He was the best-eared dog in the class. Robin Hood is weedy and has no bone. Marquis is curly. Sambo is almost a pure Gordon setter. Jake, vhc., is the open-coated setter-collie Dr. Downey gave first to in 1883. The dog would be well off with a commended card. A great mistake was made in passing over Carlo; he is the proper stamp of dog we want, and but for being a little out of coat should have ranked high. Foxey (late Darnley), with a commended card, was another great mistake. Unfortunately for the judge, Foxey and Jake were benched close together, and it was only too evident their cards should have been transposed. Foxey is a collie and Jake is not. Laddie's mention was still another mistake. His coat is curly and there is no collie look about him. No card for such a dog as that. Guido Rene has heavy ears, a plain face, and was placed too high. Argyle has the same faults as Guido Rene. Brack is showing age and was out of shape. Hiram is well known. Talisman is aging very fast, and was quite out of condition. The bitch class was well filled. Winnie, so often described, got first, but that place we considered belonged to Lady of the Lake, a splendid Eclipse bitch, and winner of first in the puppy class at the Non-sporting show. Her ladyship's sister, Lassie, was shown as fat as a prize hog, but even then her quality made her worth her vhc. Daisy, the Boston puppy winner, was properly placed next to Winnie. Lark is too small and toyish, but she is a nice-looking bitch. Fairy, as every one knows by this time, is heavy-eared. She was well shown. Lilac is short and thick in head, and lacks character. Lady Hempstead is about the best Robin Adair bitch we have seen, and would have done with a higher card, and Mr. Gray's Effie Dean we liked, notwithstanding her short head and her not being in good coat. The Kilmarnock Kennel entered no end of puppies, but as a general thing they were not well reared. Madge, for instance, was simply a bag of bones. Craft owned his place to his good coat, as Strephon, the second in the dog class, will make a clinker if he ever gets in good coat. At present he is shedding and looked light and weedy. Joe Nettles was this time hc., and he was not well treated. Dr. Downey, by leaving out Joker, corrected about the only mistake Mr. Apgar made at Boston. In the bitch class, Clytie might well have been left out altogether and Belle given second place, and the promising Adelia should have been noticed.

BULLDOGS—(MR. DALZIEL).

With the exception of Britomartis the winners are well known. The newcomer resembles her litter brother Robinson Crusoe very much, but she is a decided improvement on him. Her red fawn coat is relieved by a few brindle stripes, which are a great improvement. Her head is a study, both for size of skull and shortness of face. Her faults are that she stands on her legs in place of between them and she wants more length to her back, which is well roached.

BULL-TERRIERS—(MR. DALZIEL).

Another walk-over for Grand Duke in the champion dog class, and Victoria scored in a similar manner in bitches. Dutch Jr., who has been described before, was placed first in dogs, and Saxon should have been second. Jack is cheeky and faulty in forelegs and feet and was very soft. Young Bill is getting worse and worse, and now will probably be retired. Rosa, first in bitches, was in no condition, is long in the back and her feet turn out. Young Venom, notwithstanding her white eye and weak muzzle, is much the better bitch. She has splendid legs and feet, a good body and was shown as hard as nails. Little Maggie had no opposition in the small-size champion class. In the open class for both sexes Gypsy, though approaching rather too much to the terrier type, was infinitely superior to Nell, while Crown Prince would have been well off with commended. The Earl stood out in bold relief in the puppy class.

IRISH TERRIERS—(MR. DALZIEL).

There were four entries. Sheila, weak in jaw, won without difficulty from Nailer, who is bitch faced and was out of coat.

TERRIERS, OTHER THAN FOX—(MR. DALZIEL).

In the black and tan class Queen, weak in face and lacking in substance, won. She was in splendid condition and is a smart bitch, good in coat, color and markings. Bessie, placed second, is a better terrier, but was not nearly so well shown as Queen, and it was perhaps on this account that the judge put her back. Victor, hc., is strong in head and his markings are not distinct. Cuss, hc., is plain in head and heavy in shoulders but good in color. Spring, c., is round in skull. The rough-haired terriers were, as usual, a medley lot. Half-bred Irishmen were to the front. In the Dandie class Badger, II., soft in coat, was first. His mouth has gone. Pansy, faulty in head, coat and eyes, came next, with Bonnie Briton, out of coat, vhc. Among the Bedlingtons (dogs) we marked Blucher down for premier honors, and Sir George, faulty in head and coat, for second. Beresford, vhc., is faulty in head, and so is Elswick Lad who was hc. In the bitch class Lillie was the best and won. Souter Johnnie took the valuable medal offered for champion Skyes. He would do with more coat. In the open dog class Duke, a fair good dog, scored an easy win. He, too, would be better with more coat. Watty is a bit woolly, but was well placed second. Phœnix, in the bitch class, is a fair good specimen, much better in head, ears and coat than Mopsey, placed second. Mr. Dalziel handled these classes well.

PUGS—(MR. DALZIEL).

The awards in these classes caused some dissatisfaction. There were no entries in the champion classes, and in the open dog class the judge made an unaccountable blunder in giving first to Punch (Parker's). His ears are badly placed and badly carried, forelegs crooked, and he has no trace. Victor was in his right place—second. His tail is not close enough in curl, and his legs are not good. He carries one ear badly, and his trace mark is not distinct. Tootsey-Wootsey, with an equal second, got more than he deserved. He is faulty at both ends. The third prize, Punch, is a better dog. In eyes and wrinkles he will do. His ears are heavy, trace mark not well defined, toes not black, and tail not close enough in curl. Toby, a bit apple-headed, was worth another letter. Young Othello, hc., has a good head, but he is smutty in color and heavy in ears. His condition was first-rate, but that will never pull him through in good company. Rowdy, vhc., is smutty, small of eye and plain in head. Away ahead of everything in the class was Bradford Ruby, vhc. He is the best specimen we have seen in this country, and we hope Mr. Dalziel will reverse the decision before he leaves us. In the bitch class Beauty, placed first, is much too large; her ears are heavy and badly carried, eyes light in color, and tail very faulty. Flossy, placed second, was the best of the lot. The class was not a good one. The puppies were a wretched lot. James G. Blaine, faulty in ears, eyes, muzzle and color, was the best, and won. Dolly, commended, is very poor in head and ears. Jim Crow is apple-headed and faulty in eyes end markings.

YORKSHIRES—(MR. DALZIEL).

There were no champions, and among the twenty entries in the over 5lbs. open class, we failed to find a good specimen. Prince, light in color and minus tan markings, was about the best of the lot and took first, but he was closely pressed for the place by Ben, who was hc. He was the best formed and best colored dog in the class, but his coat is not so profuse as the winner's. Flora lacks in color, and so does Bobbie. Lancashire Star is short of coat and light in tan. Lass, hc., got more than she deserved. She is of poor color, long cast and faulty in head. Rosie C. is light in color and short in coat. Mr. D., who took second, is light in color and lacking in coat. All of the winners in the light weight class are deficient in color. They were better judged than the heavy weights.

TOY TERRIERS OTHER THAN YORKSHIRES—(MR. DALZIEL).

This was a poor class, and Tiny, the first prize winner, was about the best of the lot. She is faulty in head, and her face markings are not well defined. Fannie is faulty in tail and her color is too light. Busy was lucky in getting a card.

TOY SPANIELS—(MR. DALZIEL).

There was not a good one in the lot. In the King Charles class Duke, who took first, stands badly on his hind feet and is not very good in eyes and ears. Charlie, placed second, is long-faced and curly. Countess is faulty in skull and muzzle. All of the Blenheims are faulty in head, eyes and ears. The first prize Japanese spaniel is faulty in ears and is too large.

ITALIAN GREYHOUNDS—(MR. DALZIEL).

Only four were shown, and Fanny, faulty in color, had no difficulty in taking the blue ribbon to Englewood. Babe, placed second, is prick-eared and is too large. Romeo is as big as a rabbit-coursing dog.

POODLES—(MR. HECKSCHER).

These dogs are improving, but most of them are still too open in curl and long in coat. Rajah II. was not looking his best, and Romeo and Cognac are both too woolly.

MISCELLANEOUS—(MR. DALZIEL).

A medley lot, as usual, but much better than we generally find. The heavy-weight class was divided for bloodhounds and boarhounds; the latter lack the tiger appearance in head that we like to see. All of the bloodhounds are well-bred specimens, but they fall below the standard in head. In the light-weight class Mexicans were in demand. Me-Too, the best of the lot, was placed at the head of affairs.

THE SPECIAL PRIZES.

The judging of class EE, for the best pointer or setter, was a complete farce, and although there were but four dogs in the race it took the judges exactly four hours to arrive at a decision, and as might have been expected, they gave the prize to the worst dog instead of the best. Stonehenge was strongly in demand, and the tape was frequently unrolled and stretched to test the proportion of the competitors. We are informed the pointer won by two points. Either Rockingham, Plantaganet or Elcho, Jr., is many points ahead of the pointer, and the score, which showed a different result, should be printed. The prize for the best Irish setter went to Elcho, Jr., we thought him uncomfortably pressed by Blarney. Phil won the special for the best black and tan setter. We thought Argus and Lady Gordon many points ahead of him. We liked Don II. the best for the smooth St. Bernard prize, and Rosalind and Lady Gladys for the mastiff prize. Spice scored fifteen points more than Richmond Olive, how or why, we cannot say. Bradford Ruby was the best pug in the show. The light weight pointer prize went to Rue. Modesty is a better bitch.

The following awards are additional to the list published last week:

In the class for rough-coated St. Bernard dogs H. E. Newell's Duke was very high com. and reserve. In the class for greyhound bitches Dr. Mary J. McCleery's Maud McGrath (Victor—Bella) was very high com. In the English setter bitch puppy class, H. S. Bevan's Lady Blanche (Tam O'Shanter—Lady Margaret) was high com. In the class for spaniel puppies Miss Mary D. B. Wagstaff's Dash II. was commended. In the foxhound dog class Wm. Darrow, Jr.'s, Major was third. In the fox-terrier dog puppy class, Rustic Flash was said to be over age and was ruled out. He was afterwards proven to be eligible and the class was rejudged as follows: 1st, Wm. Clark, Jr.'s Rustic Flash, 9 months (Mark—Dingie Bell); 2d, Scarsdale Joe. Very high com., Boxer, Joe and Gaylad. In the class for bull bitches, Bellona, winner of second, is owned by R. & W. Livingston instead of J. E. Thayer. In the class for Bedlington terriers Edward Lever's Beresford (Sting—Wasp) was very high com. and W. S. Jackson's Elswick Lad II. (Elswick Lad—Tynesider II.) high com. In the class for pug dogs Mrs. Elsie Lee's Young Othello (Othello II.—Clytie) was very high com.

IRISH SETTERS.—PUPPIES—*Dogs*: 1st, Frank S. Parrott's Gerald (Glencho—Zelda); 2d, William Boswell's Rex (Nerwood—Clara Belle). Very high com., C. W. Vincent's Rory-of-the Hills (Glencho—Red Lassie). High com., C. H. Dayton's Glenmar II. (Glencho—Lassie). Com., C. T. Pierce's Bena (Cap—Sweet).

COCKER SPANIELS—ANY COLOR OTHER THAN LIVER OR BLACK, UNDER 25LBS.—*Dogs*: 1st, Andrew Laidlaw's Sport (Jet—Daisy). *Bitches*: 1st, H. K. Bloodgood's Lilly (Prince Hal—Lulu); 2d, withheld.

POODLES.—BLACK—*Dogs*: 1st, Dr. O. H. Presby's imported Jack; 2d, William Clark, Jr.'s Sabot (Puff—Jet II.). Very high com., Miss Work's imported Rajah II.; Miss C. L. Ryder's Nigaud (pedigree unknown). High com., Miss Claire Condert's Bourbon (Rajah—Mignon). Com., S. S. Howland's Romeo: John Hammond's imported Cognac. *Bitches*: 1st, William Clark, Jr.'s Jet II. (Brussels—Lolotte); 2d, S. S. Howland's Rosamond. Very high com., S. S. Howland's Juliet and Desdemond.—OTHER THAN BLACK—1st, Eugene Faehner's imported Beleau; 2d, A. Kraft's imported Alonzo. Very high com., Mrs. Merrill's imported Montonu

SPECIAL PRIZE LIST.

The special of the Eastern Field Trials Club for the best Irish setter dog with field trial record, was won by Max Wenzel's Chief instead of Claret as published last week. Westminster Kennel Club's medals: Best kennel of pointers, Neversink Lodge Kennel. Best kennel of English setters, no entry. Best kennel of Irish setters, Rory O'More Kennel. Best kennel of black and tan setters, no entry. Best collection of five pugs, no entry. Best Clumber spaniel, M. Richardson's Newcastle. Best pointer, E. C. Sterling's Robert le Diable. Medford Fancy Goods Co. collar prizes: Best pointer under eighteen months, Ramapo Kennels' Duke of Bergen. Best red Irish setter, Dr. Wm. Jarvis's Elcho, Jr. Best black and tan setter, Miss Lillian Woodworth's Phil. Best greyhound, H. W. Smith's Memnon. Best brace of greyhounds, H. W. Smith's Memnon and Mother Demdike. Best rough-coated St. Bernard, E. R. Hearn's Duke of Leeds. Best smooth-coated St. Bernard, Mill Brook Kennels' Verone. Best bulldog, J. E. Thayer's Britomartis. Best field or cocker spaniel, A. E. Foster's Benedict.

Deerhound Challenge Cup, Clovernook Kennel. Best pointer or setter, E. C. Sterling's Robert le Diable. Best cocker spaniel dog owned by a member of the A. C. S. Club, Jas. Luckwell's Brahmin; best bitch, W. O. Partridge's Helen. Best rough-coated St. Bernard, E. R. Hearn's Duke of Leeds. Best smooth-coated St. Bernard, Mill Brook Kennels' Verone. Best English setter over 12 and under 18 months, Ramapo Kennels' Prince Imperial. Best smooth-coated St. Bernard in open class, Mill Brook Kennels' Verone. Best pug, John Parker's Punch. Best English setter in open class, Blackstone Kennels' Foreman. Best light-weight pointer, J. E. Thayer's Rue. Best pair bulldog puppies, M. V. B. Davis's Adonis and mate. Best kennel of greyhounds, H. W. Smith. Best pug dog, John A. Parker's Punch. Best pug bitch, Mrs. A. Kiseman's Beauty.

BROCK—DIANA II.—New York, May 5.—*Editor Forest and Stream:* I cannot under the circumstances accept Mr. Chas. Heath's challenge to run my Irish setter Brock against his Diana II. a six days' race; were I to do so I would be placing my dog at a great disadvantage. It is known to the members of the Eastern Field Trials Club and to many other sportsmen that Mr. Heath had his Diana II. in North Carolina and Virginia, handled by a professional trainer, during the whole of the past shooting season, which in those two States is from Oct. 1 to March 1, and doubtless now has secured the services of the same trainer to handle his dog in case the race takes place, whereas my dog Brock was shot over only five weeks during the fall of 1882, four weeks during the fall of 1883-4 respectively, and during the interim allowed to run at large, and has not been in the hands of a competent trainer for nearly three years. Besides, were I to accept his challenge, I am not sure that I could secure the services of John N. Lewis, who broke him, to prepare and handle him in the proposed match. For these reasons I have to decline. Nothing could afford me more pleasure than to make a friendly match with Mr. Heath, to run my dog Brock against his Diana II., under the published rules of the Eastern Field Trials Club, a two or three days' race for a club dinner for the Field Trials Club members present at the trials which take place in November next at High Point, N. C., owners to handle.—GEO. T. LEACH.

PROTEST OF ST. ELMO.—The following is a copy of the reply to the St. Elmo protest: Dear Sir—Your protest *re* St. Elmo received. We do not understand that it touches the question of ownership or owner, therefore that so far it was properly entered. We received a challenge before its entry and investigated the question of age, and are convinced that four years and two months is correct. You do not state that as Snip the dog won a first, the failure to give that name is therefore not within the rule. The entry was made "full pedigree" under the following circumstances: When Mr. Foster called to make his entry, we questioned him as to the numerous statements as to sire and dam, and were satisfied with his explanation, which was briefly that an employe had blundered. We asked him to put the correct pedigree in his entry, but he stated that he did not have "the papers" with him. On his assurance that he could and would produce his proof on demand, we permitted him to enter "full pedigree." —Yours, ELLIOT SMITH, Manager (April 29, 1885).

THE BLACK AND TAN SETTER CLUB.—There was a meeting of gentlemen interested in the breeding of black and tan and Gordon setters on last Thursday evening, at Madison Square Garden. The club was organized under the name of the Black and Tan Setter Club, and the following officers were elected: President, H. Clay Glover, New York; Vice-President, Jean Grosvenor, Boston, Mass.; Secretary and Treasurer, Chas. S. Fitch, New York. The meeting then adjourned to meet on May 20 at 8 P. M., at the Industrial Art Hall, Philadelphia.

THE FOX-TERRIER CLUB.—The first annual meeting of the Fox-Terrier Club was held at Madison Square Garden on April 30. A constitution and by-laws were adopted, and officers for the ensuing year were elected as follows: President, William Rutherfurd, New York; Vice-President, J. E. Thayer, Boston, Mass.; Secretary and Treasurer, Edward Kelly, New York. Board of Governors—J. E. I. Grainger, John G. Heckscher, Thos. H. Terry, F. H. Hitchcock, A. E. Godeffroy and Prescott Lawrence.

PITTSBURGH DOG SHOW.—Pittsburgh, Pa., May 4.—*Editor Forest and Stream:* At a meeting of the Western Pennsylvania Poultry Society, held April 29, it was resolved to hold a bench show of dogs the first week in October next.—C. B. ELBEN, Sec'y.

SPRING STYLES.—The latest "fad" with society young ladies is a visiting card for their pet dogs. The card is about an inch long and three-quarters of an inch wide and bears the name of the dog with that of the owner, such as "Miss R——'s pug Toodles," or "Mr. O——'s poodle Smike." I know a number of dogs that received Christmas and New Year's cards. A Rembrandt lace collar is now considered the proper thing for a pug's evening dress, and the silver-blue blanket, bound with gold braid or satin ribbon, is the thing to wear while walking out. Nevertheless, it looks as if the pug must go; his popularity is on the wane, and it seems very much as if the black and tan or Prince Charles would fill the vacancy his departure will leave. The change is not to be wondered at; the pug is not the most intelligent of dogs—even the common cur of the streets has more ability to learn; he can only look beautifully ugly, learn tricks, and has a moody temper.—*Boston Beacon.*

THE CHICAGO DOG SHOW.—The first annual dog show of the Illinois Kennel Club, will be held at the armory of Battery D, Chicago, on June 2, 3, 4 and 5. The prizes offered are $10 in champion classes, $10 and $5 in open classes, and $7 and $3 for puppies. Exhibitors can have cash or medal prizes as they may prefer. The superintendent writes that the special premiums will be numerous and valuable; he also states that the many applications for entry blanks from all parts of the country leads him to believe that the show will be one of the best of the year. Major J. M. Taylor will judge setters, pointers and Chesapeake Bay dogs, and Mr. Hugh Dalziel will judge the remaining classes. The address of the superintendent is, L. F. Whitman, 108 East Madison street, Chicago, Ill. Entries close May 23.

THE PHILADELPHIA DOG SHOW.—Entries are coming in rapidly now that the New York show has closed, and the members of Philadelphia Kennel Club are assured of a fine exhibition. The display of foxhounds will be a feature of the show, and packs will be kenneled in circular inclosures in the center of the room. In addition to the main hall of the Industrial Art Building an adjoining room has been secured in which the toy and small classes will be caged. There is a large list of special prizes and more are promised.—HOMO.

ST. LOUIS SHOW.—The report of the St. Louis show in our last issue should have been signed, as it was written by a special correspondent in St. Louis.

KENNEL MANAGEMENT.

☞ **No Notice Taken of Anonymous Correspondents.**

R. A. C., Providence, R. I.—Can you tell me how to reduce the weight of my black and tan dog? Ans. Reduce his feed and give plenty of exercise.

E. C. M., Ontario.—A cocker spaniel pup, ten weeks old, has a large lump on the side of the throat, pretty hard. It must have come the last two or three days, as I have not noticed it before. Ans. Shave the hair from the pup and apply a "fly blister" or any hardies, with collodion. The latter is the best blister, and should be painted on with a brush. After six hours a large blister will have formed. This can be snipped with a scissors, the fluid evacuated, and the parts dressed with vaseline.

T. H. H., Norfolk, Va.—My setter dog is about one year old. Some time ago he showed symptoms of canker of the ear. Was weak and in poor condition at the time, but with good feeding and plenty of exercise the trouble seemed to leave the base of the ear, and I did not see anything the matter for some two months. A day or two ago while running my hand over his ear he whined, and I found on the very point of the pendulous part of his ear a hard lump about the size of a chestnut. It looked as if pus was oozing out of the ear on the point, matting the hair and forming a hard lump. At the present time the other ear is nearly as bad as the first one was. I have washed the affected part with soap and warm water, but I think the trouble is internal. The dog is in good condition otherwise, and is casting his coat. Ans. Continue to syringe the ear two or three times daily with warm water. Having cleansed the ears and dried them, drop in a few drops of the following solution: Bromo-chlorali and laudanum, of each a drachm; water, six drachms. Mix. Do not use a glass syringe, and never put any solid instrument in the ear. You may use a syringe for applying the warm water, but use a dropper or camel's hair brush for the medicine.

Rifle and Trap Shooting.

RANGE AND GALLERY.

HAVERHILL, Mass., April 28.—About ten months ago some of the "boys" thought that there was material here for a rifle club, and accordingly a few got together and formed the Haverhill Rifle Club. There were a few older riflemen here who had not outgrown their love for the sport, and with their co-operation the club was soon in practice and all interested. Now there are some thirty active members. We have a shooting house and are generally getting things fixed at the range, so that we are looking forward to many friendly contests. We have a match every Saturday afternoon, and the last Saturday in each month a shoot for medals. We use the Creedmoor target, 200yds., off-hand. Inclosed is the score of the last shoot, Tuck winning the gold and Worthen the silver medal:

H Tuck	5345454455—44	J Johnson	4443445444—40
W Worthen	4545555344—44	E Brown	4554433444—40
J F Brown	4444544455—43	J Choate	4434445443—39
J Busfield	4454453451—42	J W Jackson	2433643433—36
R Griffin	4454444444—41		

The officers for the present year are: President, J. F. Brown; Vice-President, S. E. Johnson; Captain, H. Tuck; Executive Committee, J. Busfield, G. F. Floss, N. H. Hildreth; Secretary, J. P. M. Green.

GARDNER, Mass., April 28.—At the last regular meet of the Gardner Rifle Club at Hackmatack Range the American decimal target was used, distance 200yds., off-hand, with a possible total of 100, two strings were shot with the following result:

G F Ellsworth	87	87—174	C Shumway	61	73—134
A Mathews	80	81—161	G R Warfield	45	65—110
H C Knowlton	74	76—150	W Austin (at rest)	86	86—172

WORCESTER, Mass., April 30.—At the regular meet at Pine Grove Range, of members of the Worcester Rifle Association, the Massachusetts target was used, out of a possible 120 the score was as follows:

M G Fuller	10	9	11	9	11	12	11	12	11	10	—106
S Burton	12	11	9	9	11	8	11	9	12	12	—104
J N Morse, Jr.	11	11	7	9	10	10	10	10	11	11	—100
A L Rice	12	10	10	10	8	11	11	11	11	7	—101
A Williams	10	9	9	11	11	11	9	9	9	9	— 99

CLUB SCORES.—*Correspondents who favor us with scores are requested to send them in as soon as possible after the matches described. We go to press Wednesdays; and it is necessary that matter for publication should be in hand by Monday, or Tuesday at the latest.*

SPRINGFIELD, Mass.—The Rod and Gun Club had a fair good attendance at their weekly shoot, Saturday, May 2, Lake Lookout Range, when the following scores were made:

E C Knox	12	12	10	10	10	11	9	11	8	11	—105
Re-entry	11	10	11	10	8	9	11	11	11	10	—102
Z C Talbot	12	12	11	8	10	9	11	10	10	10	—104
F B Wilson	11	11	7	9	10	10	11	11	12	9	—101
E T Stephens	10	12	11	9	9	7	11	10	10	11	—100
Re-entry	10	9	10	11	8	10	10	9	9	11	— 97
T T Cartwright	11	10	10	9	8	9	11	7	11	12	— 97
Re-entry	9	10	10	10	11	10	8	12	10	6	— 96
J A Sterling	10	9	2	5	9	4	8	10	11	8	— 76
Re-entry	8	9	7	5	6	3	11	6	0	— 69	
F C Douglass	9	6	6	2	2	10	8	2	4	11	— 60	

A record match will be started next week, also two $10 gold pieces as badges for first and second class marksmen, competitions to take place weekly, the best score for the month to win it, to be won six times before it becomes private property.—PINHEAD.

MASSACHUSETTS ARMS CO.—In the description of the target shown in our advertising columns and made with the new .22-caliber Maynard rifle, nothing has been said for several issues about the distance at which it was made. The omission is this week remedied, and the reader will see that this remarkable target was made at 100yds.

THOMASTON, Conn., May 2.—A very strong, gusty wind veering from the four to twelve o'clock quarters, with a bright light during the first part, and cloudy during the latter portion of the shoot, were the weather conditions at Bridgemoor Range to-day. Position standing, off-hand, 200yds., Massachusetts ring target:

W H Dunbar	12 10 10 9 9 11 10 11 11 10	12—104	
G A Lemmon	12 8 12 10 12 11 10 10 9 9	—103	
G P North	12 7 9 10 10 11 10 10 8 11	— 98	
A S Hubbard	11 9 12 8 7 12 10 9 9 10	— 97	
C F Williams	12 9 11 8 9 10 10 7 10 10	— 96	
G C Gilbert	10 11 9 9 10 11 9 11 9 7	— 96	
F Carr	12 7 9 10 10 8 9 9 10 11	— 95	
F A Perkins	9 10 6 9 10 12 8 8 7 12	— 91	
A Fox	5 8 10 9 11 11 10 8 9 10	— 91	
C L Alling	7 12 6 8 10 11 8 8 10 8	— 88	

Our open to-all prize shoot occurs May 19, 20 and 21. All riflemen cordially invited.

The Lawrence, Mass., Rifle Club has challenged the Empire Rifle Club to shoot a telegraph match May 7.—.32-CAL.

BOSTON, May 2.—There was a fair attendance of Riflemen at Walnut Hill to-day, and for a stormy day some good shooting was done; the wind, fish tail all day, blowing from 11 to 1 o'clock. A team match between members of the association was shot, the Tuft's team being victorious. Private W. M. Merrill of the cavalry battalion, made scores of 22 and 21, securing the silver badge. The records were:

Creedmoor Match.

J Haisy	4555455544—46	N F Tufts	4444545434—43
S T Lowell	4545455444—44	Re-entry	4445444454—42

J N Frye	6	6	1	6	5	7	4	6	6	6—53—271

Although several of the well-known long-range shots, whose big scores at Walnut Hill have made that range famous, will not be able to take part in the new match, which is to begin May 14, there are still enough to revive the interest of former years; and after the first competition, there will be, as the committee is advised, many contestants.

SPRINGFIELD, Mass.—A practice shoot for the match with the Minneapolis (Minn.) Rifle Club was shot by the Schuetzen Verein, Tuesday, April 21, when the following grand score was made by the champion marksman, Captain W. Milton Farrow. The Captain shot the new model .32 cal. Farrow rifle. The score, when complete, was the first full score of 10 shots made here with a .32-cal. The team telegraphic match was shot Wednesday, April 22, and was won by the Schuetzen Verein with the score of 466 to 459. The conditions were, 7 men, 15 shots each, 200yds. off-hand, Creedmoor target. The following were the individual scores:

F R Bull	4455455555445455—69	J D Marks	4445555444444551—66
W M Farrow	4544454455455554—67	Z C Talbot	4554555444444451—66
M W Bull	4445445555445554—67	S S Bumstead	5444545455544444—65
T B Wilson	5454545454444445—66		

After the match the contest for the six months gold badge commenced, the member winning it the most number of months out of the six becomes the owner, it is shot for weekly. April 29 commenced a contest, match conditions, for a second class marksman's badge. The following scores were made for the badge, German target:

Capt W M Farrow	22 18 20 21 24 20 24 22 24 21—216		
Z C Talbot	22 24 23 24 15 22 20 20 20 22—212		
J Allen	17 23 21 23 22 21 32 22 21 16—208		
Lieut Kron	20 24 18 20 18 9 20 25 19 25—193		
A Folsom	18 23 21 10 22 16 20 11 24 18—183		
Capt Buchholz	16 21 20 10 18 19 16 10 14 20—164		

During the afternoon T. B. Wilson and Z. C. Talbot shot a seven string match, Creedmoor count, both using the new model .32-cal. Farrow rifle, grooved bullet, without cleaning, the score of Mr. Wilson was very fine, his sixth shot only being out of the bull about a sixteenth of an inch. The scores were:

T B Wilson	5555545—34	Z C Talbot	0345455—30

LAWRENCE, May 2.—Regular weekly shoot of the Lawrence Rifle Club, at the club range in Riverside Grove. Despite the strong wind that was blowing from the northwest, some credible scores were made as follows:

Creedmoor Match.

O M Jewell	5555555455—49	H Schouland	4454444444—41
J Merrill	5554555454—47	J S Henry	4444434454—40

A W Howland	8	8	9	4	10	6	7	10	9	7—78

RIFLE NOTES.—A very liberal programme has been arranged for the spring meeting at Walnut Hill, to occur, as before announced, May 28, 29 and 30. The matches will be off-hand, and the value of prizes in the Creedmoor match will be at least $350. A. G. Gould of Boston has started a monthly paper to be styled *The Rifle*, and devoted exclusively to topics connected with the rifle. The first and May number contains the first of a series of articles entitled "America's Crack Rifle Shots." It describes the position adopted by H. G. Bixby in rifle shooting, accompanied by his record and illustrated by an engraving showing his manner of holding the rifle. Location of different rifle ranges, directions for reaching them, and the shooting days are given; the record of rifle shooting in America, which will be revised each month, and such news from different parts of the country as will be interesting to devotees of this sport.

THE TRAP.

Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

TEKAMAH, Neb.—Match of Tekamah Gun Club, 7 clay-pigeons:

J F Beard	1001111—5	A T White	1110110—5
C E Bardwell	1100101—4	Geo Atwater	1101000—3

Ties of 5 divided.
Second match:

J F Beard	0111011—5	Geo Atwater	0100010—3
W R Fitch	1100110—4	A T White	1011100—4
C E Bardwell	1101100—4		

Shoot off ties of 4, won by Bardwell.
No 3—Seven glass balls:

J F Beard	0111111—6	Geo Atwater	0111100—4
A T White	0101111—5	C E Bardwell	1011111—6
W R Fitch	1101111—6		

Bardwell won shoot off.
No. 4—Seven glass balls:

Bardwell	0111110—5	Beard	0111111—6
Atwater	1101101—5	Fitch	1111111—7
White	1011111—6		

Ties of 6 divided.
Bardwell and White shot a private match at double clays:

White	10 11 11—5	11 10 10—4	10 10 11—4—13
Bardwell	00 11 10—3	00 10 11—3	11 11 01—5—11

COLUMBUS (KAN.) GUN CLUB.—April 28.—Ten clay birds and 10 glass balls, 18yds. rise, screened trap, use of one barrel:

	Glass Balls.	Clay Birds.

Lewis	0011101000—4	1111111010—9

WORCESTER, Mass., May 1.—The Worcester Sportsmen's Club, with friends and guests, went out to Coal Mine Run Range for a field day. The principal event of the day was the contest for the New England individual clay-pigeon badge, held by H. W. Eager of the Worcester Club. The contestants entered were J. B. Bartlett, C. Wilber and W. H. Allen of the Brockton Club; O. R. Dickey and J. H. Faulkner of the Massachusetts Rifle Association: G. A. Spring and C. M. Stark of the Walnut Hill Club, and H. W. Webber and D. H. Gilman of the home club. Faulkner and Wilber did not put in an appearance. The rule allowing only seven to contest, Gerrish and Stark were thrown out. The prizes were the badge, 500 cartridges and $10 to the first, 300 cartridges to the second and 200 cartridges to the third. The cartridge prizes were offered by the United States Cartridge Company, of Lowell, the cash prize by the Worcester Sportsmen's Club. G. J. Rugg and L. G. White were the judges, and C. H. Gerrish referee. The contestants shot in the following order:

G A Spring	1110011011 1001001011 1101110101 0101001100	withdrew—23	
H W Eager	1101001101 1110111111 1111111001 1110111101	1111101111	—40
W H Allen	1111101111 1111010101 1011111110 1111111110	0111011011	—40
M D Gilman	1111111101 1101111101 1111111101 1111111011	1101111011	—43
H W Webber	1101010111 0110010111 1111111110 1010110011	1111111010	—37
O R Dickey	1110001011 1111110001 1111111111 1111110001	1111111111	—40
J B Bartlett	1111011111 1110011110 1111111010 1111111110	1101100010	—39

The first prizes were awarded to Gilman, and thus the badge for the third successive time is held by the home club. The tie of 40 was shot off and the second prize awarded to Dickey, while the third went to Bartlett.

Sweepstakes were as follows: First—5 clay-pigeons: Holden and Gilman first, Gerrish and Rugg second, Eager third. Second—7 clay-pigeons: Houghton first, Holden second, White third, Allen fourth. Third—5 singles and 2 pairs: Holden and Brown first, Eager second, Stark third, Gilman fourth. Fourth—7 single birds, teams of two: Eager and Gerrish first, Holden and Gilman second, Allen and Bartlett third, Rugg and Webber fourth. Fifth—The individual badge contest. Sixth—3 pairs: Dickey first, Eager and Webber second, Whittier third, Gilman and Gerrish fourth. Seventh—10 singles: Eager first, Dickey second. Eighth—7 singles: Eager and Spring first, Gerrish and Webber second, Dickey third. Ninth—3 pairs: Dickey first, Welsh and Webber second, Gerrish third. Tenth—5 singles: Gerrish and Eager first, Brown second, Stark third. Eleventh—3 pairs: Eager and Weittier first, Dickey and Stark second, Gilman and Bartlett third, White fourth. Twelfth—7 singles: Allen, Houghton and Eager first, White and Gilman second, Gerrish, Webber and Brown third, Dickey and Welsh fourth. Thirteenth—7 singles: Dickey, Allen and White first, Eager and Rugg second, Stark and Holden third, Brown fourth. Fourteenth—3 pairs: Webber and Bartlett first, White and Houghton second, Gerrish and Holden third, Brown and Allen fourth. Fifteenth—7 singles: Dickey first, Eager second, Webber third.

There were nine other events, "miss and outs." During the day there were over 1,700 clay-pigeons used. The meet was a success from first to last.

H. W. Eager had an experience which his associates would like explained. He was shooting "doubles." As he pulled on the first bird he felt an unusual recoil to his gun which nearly lifted him from his feet. As soon as he could recover himself he examined his gun; he found the hammer to the right-hand barrel down, the left up. Both cartridges had been exploded and both had been punctured.

FIRST GERMAN N. Y. GUN CLUB.—Quarterly shoot, Woodside, L. I., live pigeons:

Dr Hudson	1010101010—5	A Goetz	0111111111—9
Fr Plaender	1111000000—4	F Jenner	0101111110—7
H Rubino	0010019000—2	C Pfaff	1010101100—5
J Carvin	11100110 0—5	F Bockelmann	0111111000—6
H Meyer	1010010111—6	John Goerlitz	1100111111—8
L Maisch	1110100111—7	F Oppermann, Jr	0101101111—7
H Eckenberg	0011001000—3	H Zahn	0110011010—5
P Neusch	0101100110—5	Julius Grau	1111110101—8

J. Grau took second.

MINNEAPOLIS, Minn.—The Minneapolis Gun Club has secured grounds of Mr. James Adams, near Minneapolis Falls, and will proceed at once to erect a club house. The grounds chosen are well adapted to gun-shooting and are situated within a few rods of the Motor line. Friday, April 16, a large number of the club turned out to participate in the regular shoot. The wind blew a gale, sending the birds some eighty yards from the trap, and preventing old, experienced shooters from scoring, no matter how firm or steady was the aim. Thirteen sweepstakes were shot and the feathers were dusted from about 500 birds. The gold medal was won by I. Hoblitt, the following being the score:

Hoblitt	1110111111111111011—18	Kreuger	0110111100111111110—16
Rookey	0011111011111110111—16	Miller	1000111101101110110—13
Bendeke	1110111101110111111—16	Leopold	1001100001710111100—11
Lawrence	1110101111110111110—17	Gallop	0011031111011111000—12
Kimble	1110111110001111011—16	Ward	1111110010001110011—12
Skinner	1110011111011111111—17	Ames	1100111010110100010—11
Sabolio	1111101101111101111—17	Spalding	1111110110011111011—16
Harrison	1110110111111110011—16	Howe	1001100110000100010— 9

SAN FRANCISCO, April 25.—The Dirigo Club held its first regular shoot at Bird's Point, Alameda, to-day. The match was a handicap at twelve birds each, Hurlingham rules. The club was well represented as far as the lookers-on were concerned, but there was not as large a number of shooters as was expected. The shooting, however, was exceptionally good, the eight contestants making over 90 per cent. of kills. Fred Johnson and Matt Fuller each made clean scores, Johnson has not shot for two years and somewhat surprised himself with his good score. Fuller was in excellent form and never shot better. Hicks and Hamilton both did good work, the shooting of the former being especially good. Each of them scored eleven good kills. Woodward came next with ten, while Bell took the leather medal with six. The following is the club score:

Kilgariff	101111011011— 8	Woodward	011111110111—10
Hodges	110100101111— 8	Bell	001101001101— 6
Hamilton	011111111111—11	Johnson	111111111111—12
Hicks	111111110111—11	Fuller	111111111111—12

A freeze-out was then shot off. There were five entries, and after tieing at six kills each, Hicks and Fuller decided to divide. Not content with so much success, Fuller won the next freeze-out with two kills against Hicks's one and Kigariff's miss, and was again the winner of another match with the same men shooting. The last two shoots were at 33 and 35yds. Altogether Fuller killed twenty-eight straight birds. It must, however, be taken into consideration that the day was all in favor of the gun. There was little or no wind during the greater part of the day, and the weather was quite hot.

WASHINGTON HEIGHTS, May 2.—Regular monthly shoot to-day, the following is the score:

Fountain	1111011101111111110001111—20
Rue	1101010011111011101101110—17

Terwilleger, C R	0110111010100111010111111—17

Sweepstakes at clay-pigeons:

Fountain	11111—5	Terwilleger, J H	11111—5
Roe	10110—3	Terwilleger, C R	10001—2
Moore	11010—3		

Fountain and Terwilleger divided first, Roe and Moore second.

GIRARD MANOR, Pa.—Our first shoot took place under very trying circumstances. The wind was blowing a perfect gale. Many pigeons were broken 45 and 50yds. from trap. The following is the score:

Chance Clark	11010101—5	Geo Loroh	00101111—5
Geo Stauffer	10010001—3	Jas Loroh	01011101—5
S B Torbett	10010110—4	M Loroh	10111001—5
Macmillan	00110101—4	C Kleckner	01111000—4

The club has now the full number of members. The following are the officers: President, M. M. MacMillan; Vice-President, Chance Clark; Secretary, James Loroh; Treasurer, S. B. Torbert. Our next shoot will be at glass balls, May 9.

ATHENS, Pa., May 4.—The Athens Gun Club has lately been reorganized with about twenty active members. At the last meeting the following officers were elected: A. H. Sheridan, President; E. W. Davies, Secretary and Treasurer. The club will hereafter hold a shoot once a week. The score at the regular shoot, May 2, 15 glass balls, Card's rotary trap, 18yds. rise, resulted as follows:

Knasboro	111010101011001—10	Park	011111111101111—13
Welsh	000101100101111— 8	Stroud	001010100101101— 7
Davies	100011111111100—11	Marks	000010100111111— 8
Nevins	011110110101110—10	Lewis	011101011100110— 9
Armstrong	001010001100101— 6		

THE ROCKLAND COUNTY (N. Y.) GUN CLUB was recently organized at West Haverstraw, N. Y. Its officers are Mr. Frederick Tompkins, President; Mr. Peck, Secretary, and O. S. Williams, Treasurer. It has a membership of 25. Thursday of each week the members practice shooting.

WELLINGTON, Mass., May 2.—The number of shooters of the Malden Gun Club at Wellington to-day was not as large as usual, owing to the tournament of Thursday and wet weather. The shooting was, however, a little better. The result: 1. Five pigeons—Loring first. 2. Five pigeons—Shumway first. 3. Five pigeons—Ellsworth first. 4. Five blackbirds—Loring first. 5. Five pigeons—Sanborn, Parkhurst and Ellsworth first. 6. Five blackbirds—Loring first. 7. Five pigeons—Jones first. 8. Five pigeons—Jones and Shumway first. 9. Five pigeons—Souther first. 10. Five pigeons—Loring first. 11. Five pigeons—Stanton, Jones and Sanborn first. 12. Five pigeons—Loring and Souther first. Sanborn was the winner of the gold medal.

On the 30th ult. a large number of gentlemen were at Wellington to participate in the annual spring tournament of the Malden Gun Club. In the shoot for the gold medal, at 12 singles and 12 doubles, there were 25 entries, Mr. H. W. Eager winning the trophy by a score of 18.

In the other events, Mr. Eager stood first eleven times, second once and third four times.

THE FOURTH OF JULY MATCH.—The manager of the National Gun Association, responding to a note of inquiry, sends the following to a correspondent, touching the proposed telegraphic match on Independence day: "Cincinnati, April 27, 1885. Robert Hayson, Esq., Swanwick, Mo. Sir—In reply to your favor of the 24th inst. received this A. M., inquiring as to the 4th of July telegraphic match; please note conditions on page 73 of the handbook, all National G. A. Rules; besides Art. 15, Rule 60 will govern the contest. Ties will likewise be shot off per telegraphic match, same conditions, on the 20th week day thereafter. As to enforcing the rules rigidly, the honesty of each member contesting is relied upon to secure this end.—THE NATIONAL GUN ASSOCIATION."

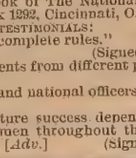
HARRY G. MILLER.—This popular keeper of the Fountain Gun and Rod club house, died on the eve of April 30 from an attack of apoplexy. He kept the club house for the past sixteen years, a favorite resort of the lovers of pigeon shooting and fishing. He was one of the organizing members of the Fountain Club, and was also a member of the Prospect Club, Coney Island Club and of the State Sportsmen's Association. He furnished large quantities of the pigeons used in the various shoots. "Harry," as he was familiarly called by sportsmen, was a genial host and an ardent admirer of the sports of the field, forest and stream.

SEND ten cents for handbook of The National Gun Association to F. C. Bishop, Secretary, Box 1292, Cincinnati, Ohio.

TESTIMONIALS:

"The very best and most complete rules."
April 3, 1885. (Signed) GANCHO.

"Very satisfactory comments from different parties"
April 13, 1885. (Signed) GLOAN.



"We want a national law and national officers to enforce it."
April 27, 1885. (Signed) ALMO.

"Fairly started and its future success depends entirely upon the manner in which the sportsmen throughout the country respond."
April 18, 1885. [*Adv.*] (Signed) C. M. STARK.

Canoeing.

FIXTURES.

May 29, 30—Pittsburgh C. C., Camp on Monongahela.
May 30, 31—Hudson River Meet.
May 30 to June 1—Connecticut River Meet.
July 18, 28—Western Meet, Ballast Island, Lake Erie.
July 24 to Aug. 8—A. C. A. Meet, Grindstone Island.

AMERICAN CANOE ASSOCIATION.

SECRETARY—C. A. Neidé, New Orleans, La. Candidates for membership must forward their names, with $2 for initiation fee and first year's dues, to the secretary, who will present the names to the executive committee. Money should be sent by *registered letter* or money order.

NEW ENGLISH CANOES.

THE new Pearl, No. 7, built under the amended rules of the Royal C. C., which limit weight of canoes and fittings to 200 pounds, sailed her first race on Saturday, April 4, only ten days after her keel was laid. She is 14ft. 6in.×32½, and is 15in. deep at gunwale amidships, her sheer being only 2in. at bow and 1in. at stern. In model and fittings she is very like No. 6, the moulds being spaced a little further apart to give the extra 6in. length, while her beam is reduced ¾in. The mainmast is 8in. further aft than in No. 6, and the boat is lighter, being built of planks barely ¼in. thick, her weight being under 105 pounds. The new Nautilus, No. 10, we believe, is of ribbon carvel build, planking ⅜in., with mahogany ribbands. Her frames are of sawn oak spaced 12in., and her weight is 125 pounds for hull, 156 pounds in cruising trim, and centerboard and ballast together 44 pounds. Her mainsail is 60ft and mizzen 10ft.

CANOEING ON THE PACIFIC COAST.

THE following letter from a correspondent in San Francisco gives some interesting particulars of the weather and water which canoeists have to contend with. A comparison of speed with Eastern boats is difficult, as the craft mentioned would not be considered a canoe strictly speaking, and would not be eligible for our races. The speed certainly seems high for such a sail area. Our winds are evidently much lighter, as a 15×30 canoe will easily carry 100ft. of sail in a good breeze, with little ballast but with crew on deck.

"The last noteworthy event was the trip of our Oakland fleet to Saucelito about Washington's birthday. 'Folly,' of the San Francisco club, gave you some items relative thereto. We have had many discussions since as to the advisability and safety of such expeditions. Saucelito is located on Richardson's Bay, formed by a peninsula of the mainland on the northern side of the Golden Gate, while San Francisco is on the southern side. Alcatraz Island lies in the Straits about a mile and a half from San Francisco. It is about four and three quarter miles direct from San Francisco to Saucelito. The fresh westerly breezes blow direct from the ocean through the Golden Gate and through the Straits and across the bay. Angel Island, which forms part of the easterly side of Richardson's Bay, is separated from the mainland by Racoon Straits, a narrow pass perhaps a half mile wide. Goat Island, which is well over to the Oakland shore, is about eight miles from Saucelito, and I should judge about three from Alcatraz. As the tide sweeps in it breaks to the north and south, up and down the bay of San Francisco, scurrying through Racoon Straits, and eddying around these various islands, forming great tide rips, which seethe and boil with vicious strength. All the islands named and the mainland are very high ground, from 100 to 300 feet elevation, and more or less broken by canyons and gulleys. When the breezes blow the wind comes sweeping down in ever-varying puffs and flaws, and one never knows how to prepare for it.

"These tide rips too are apt to bubble up at any time and locality, and when there is a strong breeze it makes desperate sailing for light boats. The commodore of the S. F. Y. C. only a few days ago said we would run much less risk on the broad ocean than cruising around that part of the bay. Of course these conditions are not always to be encountered. In the winter months the weather is mild, and except during a storm the winds are likely to be gentle. Then, too, by proper calculation as to the tides we can time our start so that we go under favorable conditions.

"Our party left Oakland about 5 o'clock Saturday evening, Feb. 21, in the face of a strong westerly breeze, and under escort of the sloop yacht Gracie. It was after 8 o'clock when we cast anchor, having beaten about half way down Oakland Creek. After supper the Talisman and Undine kept on to Goat Island, the Sunbeam (the smallest canoe in the fleet) having missed it in the dark and paddled out into the bay, and presumably on to Goat Island. We (that is the crews of the Gracie, Mystic and Zephyr) slept in our boats and made an early start next morning, and about 9 o'clock the whole fleet rendezvoused in the cove at Goat Island. But you have already had the details of our trip from that point. The Mystic was obliged to leave the party at Saucelito and return a day before the time set. It is more particularly in regard to this return trip that I wish to write, that comparisons may be made with some of the canoes in the East. The Mystic is a Racine, Saranac model, 15ft. long, 36in. beam, well-rounded deck, and with a good flat floor, carried well forward and aft. Her mainsail, cut after the Mohican pattern, had about 48ft., and the mizzen a lateen, 21ft., say 70ft. in all.

"We had a fair wind and as much as we needed of it—strong tide in our favor—and we made the trip, say about thirteen miles, in two hours and seven minutes, which would represent about six miles an hour. I was very particular in taking the time and the distances I have measured on a coast survey map. Now then, I read of the performances of certain canoes in the East, but generally there is some factor missing to make a fair comparison. I note that some of the larger canoes are carrying 100 to 150sq. ft. of sail. Last Sunday we had a pretty stiff breeze, and the Mystic under reefed mainsail 25ft. and driver 10ft., had plenty of sail—plenty. The Eastern boats are generally much less beam, and I am at a loss to know how they manage it to carry so much sail on less beam. I am taking it for granted that the winds do not vary so very much. I will endeavor to ascertain the average velocity of our regular trade winds, and I'd be glad to have you note the velocity of the winds about New York. I find there is a great deal of science needed to determine just the right amount of sail to get the most speed, as too much sail (even although the boat will carry it) does not seem to conduce to speed.

"The Government is still at work dredging and enlarging the Oakland Harbor. I will some time send you a diagram of the whole lay out. It is the prettiest canoeing ground about the bay.

"A gentleman of the Mosquito fleet has lately presented two very pretty champion pennants to be contested for; one specially for canoes, and the other for the yawls. The suggestion is that a contest must take place at least once a month, and whoever wins the most races shall own the flag at the end of the season, the winner of each race to fly the pennant until the next race. The flags are about three feet long and five inches wide, two stripes of red and one of white; the material satin. The word champion is worked in blue rustic letters, and 1885 in red. The club pennant is also worked on the white stripe for the yawls, simply a red field with a white star, the canoes a red field with a white circle and a blue star in it."

W. W. B.

THE EXTENSION OF THE A. C. A.

IT HAS long been apparent to all who have watched the rapid spread of canoeing from the vicinity of New York, first to the North and East and then to the West, that it would be impossible to cover so great an extend of territory by one meet at any point, however central. This year sees the first effort of the Western canoeists to organize a meet at a point practically accessible to the majority of them, the general plan of the meeting being similar to the A. C. A. Although the promoters of the scheme are mostly A. C. A. men, the meet is not under the direct auspices of the Association, but it will be left to those present to decide on a plan of organization, either independently or as a part of the A. C. A. The advantages of unity are well shown by the rapid growth of canoeing under the influence of the Association, as after ten years of hard work on the part of a number of individuals it hardly obtained a foothold in this country; while five years under the care of the Association has put it in the foremost rank of outdoor sports.

There is no doubt that some organization is necessary to aid it in the West, and the present system does not meet the recent needs. Several plans for the extension of the Association to meet new requirements have been proposed of late, the details of one of which, embodying the main ideas of all, we give below. This plan will divide the National Association into such branches as may in time be necessary, placing them under such general laws as will conduce to a healthy growth, but leaving the details of government to each branch, all being on an equal footing in every way. We submit the plan to canoeists, especially the Western men who will attend the Erie meet and will be called on to decide the question in July next, and we invite comment and suggestions from all interested.

CONSTITUTION.

ART. I. This Association shall be called the American Canoe Association, and be composed of such geographical divisions as may be deemed advisable by the Executive Committee.

ART. II. Same as now.

ART. III. Same as now.

ART. IV. Same as now.

ART. V. The officers of this Association shall be a Commodore and a Secretary and Treasurer, and to each geographical division a Vice-Commodore, a Rear Commodore, and a Secretary and Treasurer. The Commodore and Association Secretary and Treasurer shall be elected by the Executive Committee at their annual meeting. The Vice and Rear Commodores and Division Secretaries and Treasurers shall be elected by the members at the annual meetings of the respective Divisions. All officers shall be elected by ballot and shall hold office until their successors are elected.

ART. VI. The officers of the Association and three active members elected at large from each division shall constitute the Executive Committee of the Association. They shall have the general government of the Association, and power to elect members and to fill vacancies until the next annual meetings of the Divisions. They shall hold the annual meeting before Oct. 15, at such time and place as shall be specified by the Commodore.

ART. VII. It shall be the duty of the Commodore to visit, if practicable, each of the Division meets during the year, to assume command of the same during said visit, and to see that all rules and regulations are properly enforced. He will also preside at the meetings of the Executive Committe, and within thirty days of his election appoint a Regatta Committee of three for each Division.

ART. VIII. The Rear Commodores shall organize and in the absence of the Commodore preside over the annual meetings of their respective divisions, and perform all duties pertaining to the Commodore in his absence. In the absence of the Vice-Commodores the Rear Commodores will act in their stead.

ART. IX. It shall be the duty of the Association Secretary and Treasurer to keep a record of the proceedings of the meetings of the Executive Committee, to keep a correct roll of members, to notify each member of his election, to print each year the Association Book, to receive all moneys due the Association, to pay all bills passed by the Executive Committee, and to make an annual report of finances, and to pay to the Division Treasurers one dollar for each member duly elected and assigned to his Division. Division Secretaries and Treasurers shall receive and expend for Division meets, subject to the approval of the Division officers, the money received from the Association Treasurer. They shall also forward to him a record of the canoes in their Divisions, and shall publish annually a list of the cruises made by the Division members, and make an annual report to the Executive Committee.

ART. X. Substantially the same.

BY-LAWS.

ART. I. Substitute two dollars for dues. Substitute payable annually before May 1.

ART. II. Same as now.

ART. III. Meetings for business, camping and racing shall be held in each Division annually, the date and place to be fixed by the Executive Committee.

ART. IV. Same as now.

ART. V. Same as now.

ART. VI. Same as now.

ART. VII. Same as now.

ART. VIII. Same as now.

CONSERVATIVE.

NEW YORK C. C.—The first dip of the season befell an unwary canoeist who slipped overboard this week. The Tramp has the finest suit of sails yet seen in the club, a mainsail of 105ft., rigged like the Pearls with 3 reefs and reef gear, and a roller mizzen also fitted *à la* Pearl. She has not yet tried her new after centerboard. Sea Bee made her first essay under sail this week, starting out with a mizzen forward and smaller mizzen aft. Her rudder not being hung, she was worked by the sails only, coming about and wearing easily and showing good speed under the small rig she carried. Her new sails are extremely handsome, and though somewhat "angular" are also "flat" enough to suit the most particular sailor. Four new members have lately joined the club.

DEATH OF MR. DELANY OF GRINDSTONE ISLAND.—New Orleans, La., May 12—*Editor Forest and Stream:* I have received notice of the death of Mr. J. J. Delany of Grindstone Island, Sunday, April 12, the result of blood poisoning from a wound in his hand received while opening a stone quarry. I do not believe this will make any difference in our camp arrangements, as his sons will probably carry on the farm for Mrs. Delany. I have written to the latter, and as soon as I learn who the executers of the will are, will open a correspondence with them. On April 25 I sent Tiffany & Co. a list of fifty-one members of the A. C. A. who had ordered badges. I have received no additional orders.—CHAS. A. NEIDÉ.

BROOKLYN CANOE AND SAILING CLUB.—A new house has been contracted for and will be ready in about two weeks. It is built on a raft composed of four large spars, and will be moored at Bay Ridge. The membership of the club is increasing, and additions are expected when the house is once opened.

"NESSMUK" is cruising in Florida with "Tarpou," who was erstwhile known as "Barnacle," the captain of the Comfort, on that trip down the Mississippi with Dr. Neidé in the Aurora. "Nessmuk's" accounts are given in our Sportsman Tourist columns. Don't miss them.

SHATEMUC C. C.—We have received a neatly printed copy of the constitution of this club lately formed at Sing Sing, N. Y. The roll shows a membership of nine, the officers being: Commodore, J. H. Carpenter; Captain, W. M. Carpenter; Purser, T. J. Hand, Jr.

GOLDEN STAR C. C.—Will "Senorita" send us his name and address, which has been mislaid.

Yachting.

MONTAUK AND POCAHONTAS.

ABOUT one hundred yachtsmen were present at the salesroom of Brown & Lecomb on May 6, presumably in search of bargains in shoal draft property, as the schooner Montauk and sloop Pocahontas were advertised to be sold at auction. No response was made to Mr. Brown's call for bids or to an attempt to start the Montauk at $30,000, and it was some time before a bid of $15,000 was offered. This ran up slowly, and after half a dozen bids Montauk was bought in by Mr. E. Houghton for $24,000.

Pocahontas was started at $1,000, Mr. Brown informing the audience that she cost over $14,000, was as good as new and fast. After some slow bidding she was disposed of to Mr. J. F. Tams for $2,950.

THE FUTURE OF LAKE YACHTING.

WITH as fine natural advantages as can be found anywhere, and with ports and havens at convenient distances along their shores, the Great Lakes are fitted in every way to be the home of a large pleasure navy. On none of them, however, except perhaps Ontario, has yachting yet found a secure foothold, or any firmer foundation than a number of independent clubs in Chicago, Buffalo, Cleveland, Toledo, Detroit and some other places, all in a more or less healthy condition, but entirely disunited, and doing nothing to aid each other or the general prosperity of yachting. On Lake Ontario matters are somewhat more promising. For many years yachting has been popular on both shores, and a number of small clubs have existed independently but with no very startling growth. The conditions of their existence have not been such as to build up a firmly established system of yachting which should be successful and progressive, a self-sustaining body, not depending on any one club for its support, such as the Yacht Racing Association in England. The lack of any policy or government, the difference in sailing rules, and above all, measurement rules not only bad in themselves but differing in each club, have made any concerted action almost impossible, and hindered greatly the advancement of yachting. Last possible, and hindered greatly the advancement of yachting. Last year a successful effort was made to secure unity of action, and as a result, the Lake Yacht Racing Association was formed, composed of the principal clubs on Lake Ontario. Officers were elected, rules were adopted for the government of the Association, a round of races were planned, and most important of all, the old length and breadth rule was thrown aside, and the Seawanhaka C. Y. C. rule—length plus square root of sail area divided by two—was adopted by the Association. The programme was followed out, the cruise and races were successful, the new rule worked well, and though the change has been in operation barely a year, it has exerted a highly beneficial effect on the yachting of Lake Ontario. At the formation of the L. Y. R. A. invitations were sent to all the other clubs on the Lakes to join, in fact, the name Lake Y. R. A. was chosen so as to include them, but none accepted the invitation. Some made no reply, and some objected to the distance, so thus far the Association is confined to Lake Ontario.

The situation we have sketched exists now on all the other lakes, lack of unity or definite purpose, diversity of rules, with the accompanying absence of vitality and backbone in the yachting system. Under such a state of affairs yachting may and probably will increase slowly, but it must be years before it is in a position even to begin a healthy and vigorous growth. At present the evils are hardly apparent, the yachts are mainly of one type, and races between the clubs are so few that the clashing of rules is little regarded; but if the present state of affairs continues, each club will build up to its own rule, the difficulties of inter-club racing will increase, and all influences will tend to disintegration. When the time does come—as it must some day if yachting is to reach its full development—that an effort will be made to organize, each club will be loath to submit to a common rule, however good it may be, which taxes their peculiar boats. Vested interests, an infant now, will be a strong and powerful giant in the path of all improvement, as it has been for years abroad.

The functions of a rule are not merely to rate boats fairly, but to offer a standard and safeguard in building, taxing excessive development in any direction, and enforcing a certain equality, while allowing full liberty in design. Under a suitable rule boats of all types will exist according to their qualities; keel or centerboard, wide or narrow, deep or shoal, should each have its fair chance for existence, and survive or disappear according to the manner in which it stands the test. To-day the entire yacht fleet of the lakes is undeveloped and plastic; though mainly of the beamy centerboard type, the boats are mostly small and comparatively few in number, and would soon fit themselves to a common rule of measurement on all the lakes. We cannot tell what types may be prevalent five years hence, or which will be the most powerful; but it is certain that yachts will increase greatly in size and numbers, and that then any attempt to enforce a common rule will meet with powerful opposition.

The present year promises to be a remarkable one in American yachting. Not only will the coming international races give an impetus greater than ever before to all yachting on the coast or inland, but the question of type is involved to an extent that it never has been in the previous contests for the Cup. In any event, great changes will be made in our yachts, following the impetus of the movement in favor of deeper boats; but in the event of a cutter victory, such as is now extremely probable, we may see the evolution or adoption of a type radically different from the well-known deep centerboard sloop. We are, in all probability, at the commencement of a thorough change of type, and no more favorable moment could be found for the adoption of new rules. A year or two and a fleet may be formed that, whether of good or bad design, will be very hard to bring under any rule; but now, on the lakes at least, such a difficulty exists in a comparatively slight degree. The general interest in yachting affairs created by the coming races is in itself an aid to any effort at improvement, inducing men to take an active part, and an additional opportunity is offered just at this time in the meet at Ballast Island, in Lake Erie, in July next. The promoters of the plan have prepared for the reception of a large number of boating men, yachtsmen, canoeists, and all interested in water sports. Provision will be made for their amusement by various races, and further, an opportunity will be given them to form organizations. If the action of the canoeists there is little doubt; an association, either independent of or in union with the present national body, will be formed there, and arrangements will be made for annual meets and for suitable government. The machinery is at hand, either to adopt and improve or to imitate as they see fit, and as a body they are fully awakened to the benefit of co-operation. The action of the yachting contingent is more uncertain, as the idea of union has not been as thoroughly canvassed among them and its importance so clearly demonstrated by actual practice. The opportunity, however, lies open before them, and in a form which they may not have again for years.

The most important question is, What is to be done? We suggest, first, the formation of an association which shall have entire control of the yachting interests of the lakes, the power to be vested in a general government, with sub-divisions (probably one for each lake) having control of local matters. The details of such a scheme are easily arranged; in fact a similar one is outlined in our canoeing columns this week. Secondly, a definite policy of development, looking to the firm establishment of yachting on the lakes and for its future growth. No one man or club can grasp the entire question. The area covered is a large one; the possibilities of yachting, in even a few years under proper management, are immense, and require to be treated liberally and without petty local considerations. What is required is a body composed of the leaders of lake yachting, chosen from all localities, who shall consider what is best, not for to-day or to-morrow, but for the future. Such a body canoeists have already found, and certainly yachtsmen must be able to do as much. Thirdly, or perhaps as a part of the second proposition, the question of sailing rules and measurement must be dealt with broadly and liberally, dealing as fairly as possible with existing boats, but not deterred by mere local considerations from adopting and enforcing a broad and comprehensive scheme that shall at once tend to develop good boats, and shall be at the same time capable of adaptation to future needs. The advantages to yachting of such a liberal and well-arranged scheme must be apparent to all. A body constituted as above could survey the entire field of operations and work intelligently with a definite end in view; now we have a few clubs stumbling along without any special aim or policy. The results of the deliberations of such a body, arrived at after thorough discussion and embodying the ideas of many, would certainly be better than the crude regulations which hinder our clubs; and the lively contests, and the healthy sport of rivalry between the various branches, as well as between the clubs composing each branch, would be far more effective than any similar feeling that now exists between neighboring clubs.

Two objections only stand in the way of the successful carrying out of such a scheme, distance and the apathy or inertia of the interested parties. The former may seem at first sight a serious difficulty, but it is not with such a plan as we propose. For the fleet of Lake Ontario to visit Lake Superior for a race would be impracticable, or even for shorter joint cruises, but the interests of all are identical and best subserved by a general government. With such an arrangement of fixtures as may readily be made, it will be possible for some yachts from each lake to join the cruises of the other branches each year. At the termination of the Ontario cruise and round of races, some of the yachts, perhaps with some Erie yachts that have cruised with them, will proceed to Lake Erie for the races there, while others from the West will also join the Erie fleet. All are under one rule, races are sailed and yachts measured as in the home club wherever it may be, and yachtsmen are as much at home on one lake as another. Those whose time is limited can confine themselves to their home cruise, but even they reap the advantage of additional entries by visitors, enlivening races, and the competition and exchange of ideas between them and their neighbors. In purely local affairs the division or any club must decide for themselves, but in general matters they have the benefit of wiser and better councils than any one club can command.

The second obstacle is rather more intangible, but still more potent than the first. Yachting in any locality goes through several stages in its development into the grandest of sports. First the era of sailing and cruising in such craft as the locality affords; second, the racing between these craft and their immediate successors, and third the improvement of boats and refinement of racing rules, as racing becomes a more important feature. All clubs at some time pass through these stages, but many American clubs have as yet only

reached the second. In this and the previous stage it is a most difficult matter to convince men of the absolute importance to them, not only from a racing point of view, but for the general good of their yachting, of suitable rules. Usually in such a case the boats are of one type, any rule works fairly well, and members do not realize the necessity for a change. Some day a boat of a different type comes into the club and perhaps under the rules has an unfair advantage. Such a case occurred with the cutter Aileen, in Toronto, where, under the old length and breadth rule, she received time from smaller and beamier centerboards. In such cases the rule is usually changed, but the other extreme is more frequent here. Under the prevailing length rules in which half or less of the overhang is measured as so much boat, the beamy stubtails have the advantage over anything of the cutter type with long overhang, and the latter are practically excluded from races. Either of these cases may awaken a club to the faults of their pet rule, in use perhaps for years, but until something of the kind occurs, even to an extent bordering under the old rule until a change is difficult or impossible to inaugurate. In this stage too, yachtsmen are apt to undervalue the importance of a strict interpretation and observance of the sailing rules and rules of the road, and to race in a half-hearted and slipshod manner that is death to the sport. Sooner or later they come to learn that even where cruising rather than racing is the object of a club, a strict observance of yachting rules and etiquette is necessary to success. The club that has the best boats, the most skillful sailor men, and the fullest entries for races or cruises, is the one in which the greatest attention is paid to details, however small.

This week is the date of the annual meeting of the Lake Yacht Racing Association, at Toronto, and the question of the Erie meet will be discussed, and probably some action taken to have representatives present. Should the yachtsmen of the lakes, from superior to the St. Lawrence, see fit to adopt such a plan as we have laid before them, a beginning is already at hand, and half the work of organization already done in the L. Y. R. A. Arrangements can easily be made at Ballast Island to extend the Association over all the lakes, adapting its rules to go into effect at once or at some time in the immediate future. No violent change is needed, all can be done easily and quietly now, and all the clubs brought to work harmoniously under the rules in a year, or two at most. Should the general plan be approved, the details may be arranged as desired; but we believe no better rule could be found than the present one of the L. Y. R. A. We have spoken of it at some length a year since, April 17, 1884, and after another season have no reason to change our opinion. Those who have watched the set of the measurement question carefully for a few years past, both here and abroad, know that it is drifting strongly in the direction of a length and sail area rule, and this particular form is probably the best of the three. Any measure to be successful must deal broadly and boldly with the questions that present themselves, and it must not only be up to but in advance of the yachting of to-day; but we believe that lake yachtsmen are safe in following the course given them by the present L. Y. R. A., and we hope to see this summer at Ballast a hearty indorsement and adoption of the good work they have done.

A CRUISE IN FLORIDA WATERS.

ON Tuesday, Feb. 26, 1884, a bright, warm day, at the Palma Sola wharf on the Manatee River, lay a small sloop bearing the euphonius name of the Sneezer. Why it was so named I have never been able to learn. The Captain's somewhat emphasized remark, "I call it the Sneezer," with a sort of don't-question-me-any-further air, being sufficiently discouraging to a timid mortal like myself. At 12 o'clock M., our little party, consisting of Mr. C. H. Babbitt of New York, Mr. Curtis and myself, having seen the last of our provisions and multitudinous bundles of clothing, etc., stowed on board, took our places on the stern seats of the boat and swung slowly out into the channel, our two small boats towing behind. We proceeded on our way, but had not gone far when we saw Mrs. Babbitt in a small boat in hot pursuit, waving something in her hand. The something proved to be some mail which she thought might be important. There were no further hindrances, and soon the familiar landmarks along the shore were hidden from our view as we swept out with the tide toward the gulf. The wind was light and we sailed very slowly. A little before dark we anchored off Hunter's Point, just at the entrance of Big Sarasota Bay, and all went ashore. Mr. Babbitt set a trap for 'coons, 'possums, or whatever might come that way. We caught a few fiddlers for bait, and returned to the boat and soon retired, each one making up his bunk to suit his individual idea of comfort. During the night we heard a 'coon crying and snarling. Mr. Babbitt remarked he had one in his trap, but in the morning he found only a bit of fur, which led him to resolve thereafter to get up and attend to his trap next time he heard any disturbance from that quarter if he wished to secure his game.

The next day, after breakfast, we went through Sarasota Bay, anchoring about noon at Long Boat Key, and all went ashore. We set the trap and saw a large flock of pelicans, also heard deer running, but did not get a shot at either. Early next morning we left our moorings. The wind was quite fresh and rapidly increased, being dead astern. After sailing some distance, our little boat, the Hope, turned wrong side up, and the little blue box seat went bobbing away on the waves. As soon as possible the Captain put into a little harbor, took the Hope on board and lashed her on the roof of the cabin. We then resumed our course, the wind freshening so rapidly that we were obliged to lower our mainsail, and shortly after our jib, and sped under bare poles a distance of twelve miles, the bay being as rough that often it seemed as if Mr. Babbitt's boat was far above us and must be dashed over the stern and into the cabin. It, however, escaped with a few severe bumps. We saw at intervals a sloop at some distance from us, which Mr. Curtis thought might be one belonging to his cousin, Mr. Giles. As we came around a point into the little channel just inside of Big Sarasota Pass, we saw the aforesaid sloop anchored near. It proved to be the Grace Darling of Cedar Keys, Captain Wilson, and we soon discovered that not only Mr. Giles but Dr. A. Ferber was on board. We hailed them as we passed, Mr. Curtis using a small hunter's horn for the purpose, of which Mr. Giles possessed the counterpart. The latter soon replied, and later came over to our boat which lay near.

About 11 o'clock next morning Messrs. Babbitt and Curtis went in the former's boat some miles up the bay to get a young man, Mr. Gildehaus, who had agreed to join the party at this point. They met with many difficulties, and it was so late when they at last found Mr. Gildehaus, that although they started on their return at once, the night was so dark, and they met with so many obstacles, that they concluded to remain all night at a settler's house, which they did, sleeping on the floor. As I kept vigilant watch from the Sneezer the next morning I espied them about 9 o'clock coming around a bend of the bay, Mr. Gildehaus in his own odd-looking craft. They were tired and hungry and did ample justice to the warm breakfast awaiting them. The following morning the gentlemen from both boats went hunting and fishing together, while I took a long walk about the outer beach, where the surf came roaring up on the white sands, and shells lay in long rows. The next day we explored the various bits and nuts of the shore, the gentlemen walking down to the spot which marked the entrance to the Pass. As I stood on the beach I saw Whisky, Mr. Giles' dog, rushing toward me, making a strange moaning noise. I called him and he came near, as though in answer to my call, but rushed past me and up the beach out of sight. Search was made for him, but he was not found until late that night, when Mr. Giles found him lying on the ground in an exhausted condition. He took him in his arms and carried him back to the Grace Darling.

Mr. Giles told us when we met him later, that he nursed poor Whisky carefully for two or three days, but was finally obliged to shoot him, as he was taken with a fit that resembled hydrophobia, rushing about the boat snapping at everyone, the foam flying from his mouth. His grave was made on Sanibel Island, near which they were anchored at the time. In the evening (Sunday) Mr. Gildehaus and Mr. Curtis had gone over to the Grace Darling, Mr. Babbitt was on shore attending to some skins he had put out to dry. He soon came back, and after packing everything preparatory to leaving us in the morning, he sat down and sang with me a number of hymns (he has a fine baritone voice). At 8 o'clock Mr. Gildehaus and Mr. Curtis returned in one of the Grace Darling's boats. Mr. Curtis was all wet, and in explanation he said that just as they started to return he stepped over into Mr. Babbitt's dingey, but the tide was so fearfully swift that it whirled the boat from under him. He caught at the rail of the Grace Darling and his cousin Mr. Lewis Giles reached over the side, caught hold of him and helped him on deck. If he had fallen in there would have been small chances for his life, if any, as the tide was so strong and the night very dark. Mr. Gildehaus only just escaped falling over. The tide swept the boat away into the darkness in a moment. Early next morning Mr. Babbitt went out and found the boat far up the beach, half full of sand and one oar gone. No other damage was done except that he broke one of the oars in trying to pry off the boat.

As we were lying idle inside the Pass, we concluded to go about and take Mr. Babbitt to Sarasota; then we could return to run out when the sea was calm enough, consequently we came and just now are anchored in front of Sarasota's one store. Some of the party have gone ashore to purchase some necessaries and to bid good-bye to Mr. Babbitt, and I sit on the stern seat dodging the sunshine as the boat swings around. After leaving Mr. Babbitt at the store, we turned about and ran down to the Pass again, but again found it too rough so we lay at anchor just inside the point. Toward evening we tried again, but just in the most needed place the wind failed and the strong tide carried us up to shore; so, being baffled, we again turned back and anchored. To day (March 3) the wind and tide were more favorable, the Grace Darling hoisted sails and went out, we soon followed and proceed to run down to Big Sarasota Pass. We followed the shore for about thirty miles, when we came to Stump Pass, through which we sailed, and dropped anchor just inside in the mouth of Kettle Harbor. We all turned out on the beach for exercise. After breakfast on the following morning, we ran up the harbor to a deserted lemon grove for water; the latter was not good, but we brought away about half a bushel of lemons. After dinner we started down the harbor for Pass Huevo or Egg Pass. The wind was contrary, so we were obliged to anchor inside for the night. Next morning before breakfast we ran a little further down the harbor, anchored and had breakfast, after which we went on shore. The others fished while I took a long walk on the beach down to the Pass. Just on the point I saw a large flock of white pelicans, who were very tame and did not fly till I was quite near them. After dinner we sailed for Pass Huevo, but found it too rough, the tide rushing like a millrace through the narrow channel. The captain concluded to run down to Big Gaspirilla inside the harbor. A head wind and shoals made our progress slow, and having found deep water, we anchored for the night. We think Kettle Harbor very pretty. It rained during the night, so they say, but I slept too soundly to hear it. We are really in Charlotte Harbor at last, just in the edge of it.

Saturday, 11:35 A. M.—We are still on the spot where we spent the night, i. e., anchored in front of a fish ranch. There are five or six houses built of palmetto leaves and one wooden shanty. On one of the former is a large wooden board, evidently part of a ship, bearing in large black letters on a white background the name "Northampton;" hence we christened the place the Northampton Fisheries. The wooden shanty is just now occupied by two young men from Massachusetts who are taxidermists, and who have a fine collection of birds and shells. Mr. Gildehaus (whom I will hereafter call Professor for short, as Mr. Curtis has dubbed him Professor Wiggins, on account of some weather predictions I believe) and Mr. Curtis have been washing clothes. It was amusing to see them. Armed with a bag of soiled clothes and plenty of soap they went ashore, and having borrowed some tubs (improvised out of syrup barrels) went bravely to work. The water was brackish, the clothing impregnated with salt water, and in spite of tremendous efforts and the wonderful soap, their success was not a matter of congratulation. Meanwhile I made biscuit, and having left the Captain to superintend the baking, I took a stroll on the outer beach, whence I returned laden with pretty shells, and wading to the sloop lost my footing, and stumbled and fell in the water (but saving my treasures), greatly to the amusement of the fisherman's family, who were grouped about the door of their curious house, thus commanding a good view of our movements. We are anchored in the curve of a very pretty bay, only separated from the gulf by a narrow strip of land, so we can hear the surf while we lie in perfect calm, and two or three minutes' walk brings us to the very wide, shell-bestrewn beach. We hope soon to be where there are plenty of deer. The fishing here is superb, sheepshead and channel bass abounding. I was fortunate enough to catch one pompano, which is esteemed as a great delicacy, and we certainly considered it so when, well browned, we discussed it for breakfast next morning.

Sunday, March 7.—We passed quietly in the same place. The following morning, having a fair wind we hoisted sail and steered for Boca Grande entrance to Charlotte Harbor, passing which we sailed all day and until long after dark. We were now fully in Charlotte Harbor, and the beauty of the scenery fully justified the enthusiastic descriptions we had previously heard of this lovely haven. Island after island rose into view and faded into the distance behind us; some mere clumps of mangrove trees, others of greater extent, showing a charming variety of foliage. Flocks of snowy heron, crane and curlew arose from the rookeries and sailed majestically in long undulating lines to more distant and undisturbed resting place. Some of the islands we passed deserve more than a passing notice, among them were Petruchio, known to many as Cayo Casino, Maudango, Palmetto and Useppa islands. As we intend to visit one or more of these islands on our return trip, I will reserve the description of them until then. We were unable to make the desired haven, Punta Rassa, that night, as the fair wind which had sped us on our way all day suddenly failed us when we were about thirteen miles from that port. After an interval of comparative calm the wind again rose, but from a less favorable quarter, and after vainly striving through the darkness for some time, the wind having again shifted, but this time dead ahead and blowing very hard, we took shelter behind Buck Island, seven miles from Punta Rassa, where we anchored for the night; the tide running against the wind made a chop sea and the boat rolled and pounded all night, so we had but little sleep. Indeed our situation was anything but enviable.

Next day we got under way and sailed the remaining seven miles to Punta Rassa, reaching there about 7:30 A. M. Punta Rassa is an important cable station and post office, so we were surprised to find that the whole settlement consisted of only two buildings in consequence, one being the post office and telegraph station, and the other Summerlin's Hotel. The landlord of the hotel is one of the cattle kings of Florida. A young taxidermist was preparing a collection of birds for two foreign noblemen. In the evening we enjoyed some nice vocal and instrumental music, after which we returned to the sloop and turned in. The following day after breakfast we started out, intending to run over to Sanibel Island, which is just opposite; but seeing the Grace Darling coming in, we turned about and anchored. The Grace Darling came to anchor near us. Mr. Giles came over in a small boat with an invitation for us to join the party. We accepted the invitation, accompanying him immediately. The Grace Darling soon headed for Oyster Creek, the Sneezer following in her wake. We all went deer hunting, but returned unsuccessful. After tea our party returned to the Sneezer for the night.

Next morning the Grace Darling bade us good-by for the present. We were out of water and ran back to Boca Captiva, a fish ranche; we found excellent harbor but no water; we lay there over night, and next morning weighed anchor and came five miles further to Boca Grande. Here we found very good water, good harbor, good hunting and fishing grounds near. There is a fish ranche here kept by Spaniards. Eleven palmetto houses, a wooden barn, several curious frames for drying fish seines, making altogether quite a picturesque looking settlement, framed in by the lovely green of the varied foliage. Our captain is busy in the culinary department, while he awaits a good opportunity to run the Sneezer on shore so that he can fill all the water casks. Professor is fishing in the lee of some of the small islands here. Mr. Curtis and I are on board awaiting the next turn of events. We all went deer hunting and found plenty of deer tracks, and once heard true deer running, but the thick growth of underbrush, cactus, etc., was not favorable to hunters without dogs. We saw also many panther and wildcat tracks. Next day, Sunday, we took a long walk to the outer beach. We found no new shells. We discovered a pretty looking fruit, resembling the lady apple of the North in appearance, its pulp white, sweet, and slightly astringent, the seed inclosed in a fibrous husk. The Spaniard called it the opossum plum.

The next day we left Boca Grande. The water here so we ran into Boca Captiva at about 10 A. M. Professor, in his explorations, found a well of good water which we failed to find on our first visit, and having filled everything available, we wandered about on the beach, gathered shells, tried to catch fish, but found only "cats;" we saw many wildcat and 'coon tracks and heard the 'coons fighting at night. Had our friend Babbitt remained with us, with his trap, he would doubtless have rejoiced in a multitude of spoils. We left Boca Captiva Wednesday, March 17, and after five hours of sailing, part of the time beating, we ran into the entrance of Oyster Creek, and prepared for a stay of several days. About an hour before sunset we went in the Hope, and Professor in the Wash Tub (as he laughingly styled it on account of its awkward shape) up into the rookeries after birds of plumage, but the gnats were so thick, it was impossible to take good aim at anything, we were nearly frantic with the sharp, incessant stinging. I struck one white ibis, but it fell in such thick growth we could not get it. Meanwhile the Professor had been off to the open flats after snipe, of which he brought back quite a number. Next day, after breakfast, we all went up to the flats, leaving our boats anchored, we waded some distance to the fiddler grounds. Professor and Mr. Curtis went their separate ways, the former after snipe, the latter following a deer trail. The Professor brought back thirty-five snipe, and Mr. Curtis shot two brown curlew, but could only get one. I dug fiddlers in the meanwhile, and explored around generally, found a number of beautiful shells, like the so-called coffee shells, only, I think, larger, also some trees laden with a kind of pear-shaped fruit, evidently half grown, internally like a pomegranate, an outer case of pulp inclosing a softer portion of small flat seeds.

Next day, Friday, we again took our line of march to the fiddler grounds; more wading. We walked a long distance, over flats and shallows, through long grass full of trails, a strip of tropical woodland, and there, the rain beginning to fall, and with the prospect before us of an interminable walk should we persevere in our purpose of finding the outer beach in that direction, we retraced our steps. Found fresh deer tracks in our own recent footprints, and after some time, saw two deer running in the distance. Unfortunately our hunters had not brought their guns, being on a quest after fiddlers only. The tide was low, and we alternately waded, now pulling the boat by its painter, then poling, till in one shallow we rolled the Hope on its oars across a narrow island to the deeper water on the other side. On our way up we had stopped at one of the small islets to eat 'coon oysters, which we found very good. While so engaged, a saw fish about three feet long passed near the stern of the Hope followed closely by a shark; indeed, we saw plenty of the latter during the day. On the way back we investigated the old oyster beds, but the oysters had all been killed, probably by the northers creating low tides. Having stopped in a favorable place to fish, we caught several sheepshead and one curious spotted fish, which our captain called a "divil fish," but which we called a rock bass; also several little kittens. Returned to the Sneezer and had some fish fried for supper, reserving the rest for breakfast, including our devil fish, which we found very good.

The following morning Professor and Mr. Curtis went off in their respective boats for snipe, fish and whatever else might fall in their way, leaving me with the Captain on the Sneezer. I helped the latter put things in order, finished Vol. II. of the "Mysterious Island," and wrote thus far in my log; and now, just 12 o'clock, I see the boats coming with our hunters. They brought more snipe, of which I at once proceeded to make a couple of pies. Soon after dinner I rowed to a little island near, and walked about until I saw a very large snake, light brown with stripes running lengthwise. Thinking "discretion the better part of valor," I left his snakeship to his native heath, and made good my escape to the boat. About an hour later Professor and Mr. C. went over to the rookeries, whence they returned at nightfall with six birds of plumage—ibis and herons. The mosquitoes and gnats were so thick there the next day the Captain decided to run down the coast to Sanibel Island in search of Salt Inlet, of which we were told, and which is the narrowest part of the island, where I could readily walk across to the outer beach for my coveted shells. Therefore this morning at 9 o'clock we left Oyster Creek; and after about two hours sailing we turned into a large, round bay which we thought must be the place we sought; but on investigation no indication of the outer beach could be discovered. So the Captain again weighed anchor and sailed out what he called Deception Bay, coming to anchor just around a sandy point on the south side of the aforesaid bay. We have all been ashore, walked along the beach for exercise. There we saw plenty of fiddlers and fresh deer tracks. Mr. C. is ashore now, Professor and I are writing, Captain is doing a wonderful amount of thumping and rustling overhead.

[TO BE CONCLUDED NEXT WEEK.]

CRUISING SLOOP ALICE.

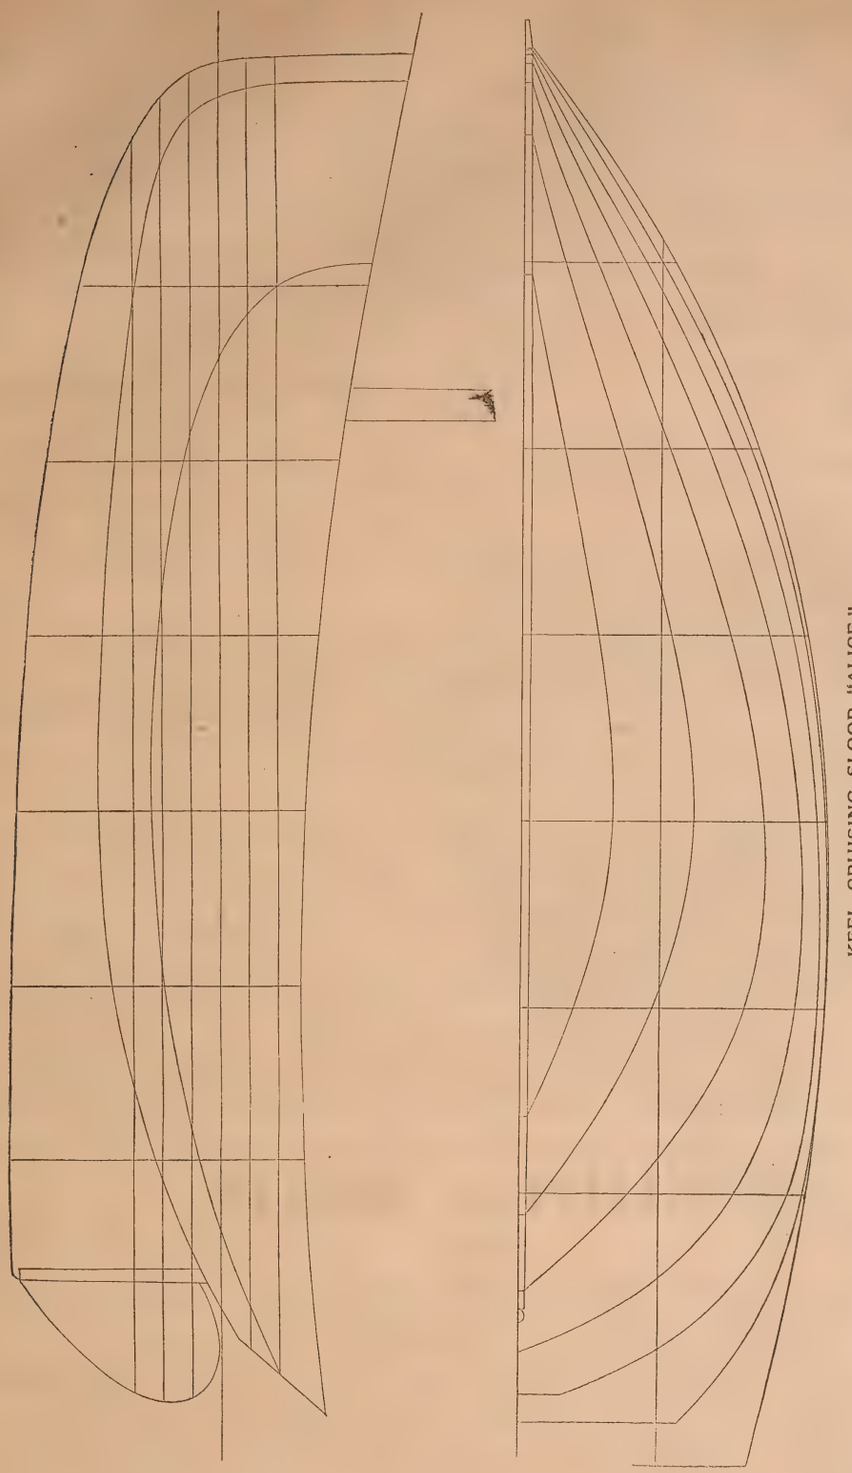
THE yacht whose lines are given above is a keel sloop now building for Mr. D. W. Tryon of New York, by F. C. Smith of New Bedford, about which latter place she will be sailed by her owner, who intends to use her for cruising only. Her dimensions are:

Length, on deck	24ft.
Length, at waterline	21ft. 6in.
Beam, extreme	10ft.
Beam, at waterline	9ft.
Draft, extreme	3ft. 6in.
Keel, iron	3,000lbs.

She will be sloop-rigged, with single jib only. Her cockpit is of moderate size, with tight deck and scuppers, while a house gives over 4ft. height in cabin. There will be two berths or lockers, ice-box, water-tank, oil-stove, pantries and shelves for stores and utensils, and she will be comfortably fitted for living aboard. In model the Alice is similar to the usual type of centerboard boats in use in the locality, but in this case the board has been dispensed with, and a keel 2in. deep added, making the total draft 3ft. 6in., with which she can run in almost anywhere along the coast where she is intended to be used, while the entire cabin is available for living room. Her builder and modeller has modelled a number of similar boats, and in the Alice, while the extreme dimensions do not afford many possibilities in the way of fine lines, he has turned out a very shapely and fair craft. She is built of oak, with yellow pine planking and white pine decks, and in quality of material, fastening and workmanship, she speaks well for her builder as a strong, substantial and workmanlike production.

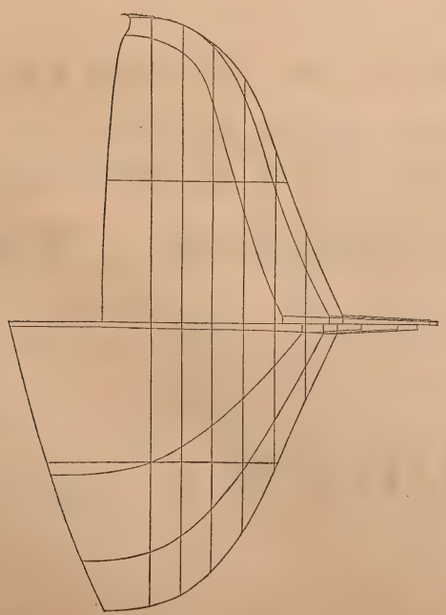
NOTES FROM THE DELAWARE.

Editor Forest and Stream:



The iron steam yacht Dione, built for speed only by Mr. Harvey, of the firm of McDaniel, Harvey & Co., anchored this evening at Cooper Point with the sailing yacht Zimmerman in tow, from a winter cruise in Chesapeake Bay. The Dione has a snake-like appearance, reminding one of Herreshoff's 100, the smartest type of steam yacht in the world. The owners use the yacht for pleasure excursions in the magnificent stretches of Chesapeake Bay and the Southern coast. A letter before me from Mr. McDaniel states that they get 18 miles average per hour out of the yacht even in rough water. After stopping with us over night she left again for her Southern home. The 28ft. yacht Mascotte, built by Jos. Nixon, of Kensington, for Thad Chambers, Atlantic City, is a fair sample of the Ledyard type, and no doubt will be speedy. Fenimore, of Burlington, N. J., has just completed a 27ft. yacht on the dish order. Her transom is rather wide, but she has been lined with care, and the whole structure is the work of a mechanic and a practiced eye. In short she is a beautiful boat, perfect in every detail of workmanship, the result of long experience. Mr. Fenimore is one of the oldest yacht builders in the Delaware, and although not professing to be scientific, his quick perceptive eye never fails him. This man taught the New Jersey builders how to shape an oyster boat, and the coastwise people how to build boats suitable for their necessities. His first efforts, however, commenced at home, on the Delaware, where his superior skill as a builder elevated our yachts and working vessels to a standard unsurpassed in his country. He has never from business pursuits, but his old love for fine lines cannot be suppressed, and so it is that in his leisure moments his active brain sets his willing hands to work. Mr. A. Colburn's 55ft. yacht Butler, purchased, I believe, in Boston, built some years ago in New York, will remain in our waters. Will mention her again in my next letter in connection with other local matter.

R. G. W.



THE STEEL STEAM YACHT WANDA.

IT is a long time since the old time fame of New York as a ship building center departed with the decline of wooden vessels. All of the famous yards about the city have practically disappeared, and for many years their custom has gone to the iron shipyards of the Delaware. Iron shipbuilding has never found a home in New York, but now that it in turn promises to be superseded by the adoption of steel, it is encouraging to note the establishment of the new industry along the East River. Last year the first steel vessels on the lakes were launched, the first steel yachts built in this country, the Nourmahal and Electra, were launched on the Delaware, and in New York two steel ferryboats were built at Greenpoint by the Continental works, and the keel was laid for their first essay in steel shipbuilding by Messrs. Piepgrass and Pine at their newly fitted up yard in Greenpoint. This vessel is a steam yacht of novel design from the drawing board of Mr. John Harvey, heretofore known here only from the success of his cutters, and is to the order of Mr. Wm. Woodward, Jr., of the firm of Woodward & Stillman, of New York. The dimensions of this yacht, intended for long cruises with greater ability under sail alone than is common here, vary greatly from those of American steam yachts. Her length over all is 143ft., on waterline 127ft. and her beam is 18ft., a proportion of 7 to 1. The depth of hold is 11ft. 6in. and the draft is 10ft. 2in., her displacement being 190 tons. Her midship section resembles more a cutter widened out than it does the steam yachts of American model, and with its depth and lead ballast promises excellent results under canvas alone. Above water is seen the long overhang of an English schooner, with a handsome clipper stem forward. The entire vessel is of steel, the keel and stem being 5½x1⅛in., with sternpost 5½x2⅜in. Angle iron frames 2¼x2¼x¼ are spaced 18in. centers, and 22in. at ends, with reverse frames 2x2 abreast of and for 10ft. fore and aft of the engines and boilers. The plating is of ¼ and 5-16in. steel. Five bulkheads of 3-16in. steel divide the hull into six watertight compartments. Forward of the engines are the captain's and officers' quarters and the forecastle for the crew, while the cabins are aft of the engine space. A deck house contains a pilot house in the fore end and a galley aft. The rail and fittings on deck are all of teak. The engines were designed by Mr. John Haug and built by John W. Sullivan, of New York. They are of the usual inverted compound type with cylinders 23 and 38in. by 24in., connected to a steel shaft 8in. in diameter. The wheel is of iron, 8ft. 6in. diameter, and 14ft. pitch. The boilers, two in number, were designed and built by David M. Nichols, of New York, and are horizontal tubular 9ft. 6in. long, 6ft. 6in. wide, and 9ft. 6in. high over all, with ⅝in. steel plates. Each contains 187 tubes 2¼in. diameter and 7ft. 3in. long. The grate surface of each is 35 sq. ft. The stack, 3ft. 5in. diameter inside, turns down out of the way in sailing. The yacht is schooner rigged, with foresail of 690ft., mainsail of 1072ft., staysail 312ft., jib 327ft. and mainstaysail 281ft., or 2682 sq. ft. in lower sails. All her canvas was furnished by Sawyer.

The launch was to have taken place on Wednesday of last week, but low water prevented. On Saturday morning all was ready, however, and by noon the workmen had the wedges under the chains in which the yacht was slung and had started to rally up. Soon the weight of the handsome vessel rested entirely on chains and cradles, the keel blocks were split out, and the dog shores knocked away. The grease on the ways had hardened, owing to the postponement, and the yacht lay motionless until some sharp blows from battering rams started her. As she moved slowly and gracefully down the ways little Miss Edith, Mr. Woodward's daughter, broke a bottle of champagne over her forefoot and named her Wanda, while a little German band stationed near by rent the air with variations on "Hail Columbia." Gathering way she entered the water easily, made her bow to the shore as she left it and floated lightly on the East River. Her engines and boilers will at once be put in place, and her joiner work, designed by Mr. Eldlitz, will be completed by her builders,

KEEL CRUISING SLOOP "ALICE."

AMERICAN PUBLICATIONS ON NAUTICAL SUBJECTS.

THE following list will answer many of the questions as to information on various subjects connected with yachting and canoeing which are frequently asked us, and will no doubt prove useful to many of our readers. Most of the books can still be obtained, though a few are out of print. The demand for this class of literature is rapidly increasing with the growth of water sports, and it will probably not be many years before the list is doubled.

Editor Forest and Stream:

Inclosed herewith I send you a catalogue of American publications on nautical subjects.

An idea of the work involved in its preparation may be gained when I state it was necessary to carefully examine the catalogues of about thirty publishers, our principal library catalogues, and all the government lists available.

Owing to the desultory manner in which works on these subjects were published, I fear many omissions and errors have taken place, and trust your readers will kindly point them out:

THOS. I. MILLER.

NEW YORK.

BOATING.

Boating Trips on New England Rivers, H. P. Fellows, 1884. Cupples, Upham & Co.; $1.25.

Four Months in a Sneakbox, N. H. Bishop, 1879. Lee & Shepard; $2.50.

Up and Down the Merrimac. P. S. Boyd, 1879. D. Lathrop & Co.; 50c.

Week on the Concord and Merrimack Rivers (A), H. D. Thoreau, 1867. Houghton, Mifflin & Co.; $1.50.

CANOEING.

American Canoe Association Book (pamphlet), 1881, 1883, 1884.

American Canoeist, vols. 1, 2 and 3, 1882, '3 and '4. Brentano Bros., New York city; per volume, $1.

Canoe and Camera, T. S. Steele, 1880. Orange Judd Co.; $1.50.

Canoe and Flying Proa (The), W. L. Alden, 1878. Harper & Bros.; 40c.

Canoeing in Kanuckia, Norton and Habberton, 1878. G. P. Putnam's Sons; $1.25.

Canoe Trip, or a Lark on the Water, F. H. Seymour, 1880. Detroit Free Press Co.; 30c.

Canoe and Boat Building, W. P. Stephens, 1885. Forest and Stream Publishing Co.; $1.50.

Canoe Aurora, C. L. Neidé, 1885. Forest and Stream Publishing Co.; $1.

Canoe Handling, C. Bowyer Vaux, 1885 (in press). Forest and Stream Publishing Co.; $1.

Cruise of the Canoe Club (The), W. L. Alden. Harper & Bros.; $1.

Paddle and Portage, T. S. Steele, 1882. Estes & Lauriat; $1.50.

Voyage of the Paper Canoe, N. H. Bishop, 1878. Lee & Shepard; $2.50.

Woods and Lakes of Maine (The), L. L. Hubbard, 1883. J. R. Osgood & Co.; $3.

YACHTING.

American Pastimes, Yachting, Etc.; C. A. Peverelly, 1866. New York.

American Yacht List (The), 1832, '3, '4, Neils Olsen; per vol., $3.

America Cup (The), a nautical poem, H. Morton, 1874. G. P. Putnam's Sons.

American Yachts, F. S. Cozzens, text by J. D. J. Kelly, a collection of twenty-six colored plates, 1884. Chas. Scribner's Sons.

MISCELLANEOUS.

Nautical Astronomy, American Works on Quarterly Review, January, 1876.

Besides the articles given above, many on boatbuilding, canoe-building, shipbuilding, etc., were published in the Scientific American supplement, New York, and Journal of the Franklin Institute, Philadelphia.

ULIDIA.—As Madge after a successful career as a racer finally was outbuilt and succumbed to Verve and later boats, so Verve has in turn given way to newer craft, and, like Madge, found a home in America. One of Verve's successful rivals, Ulidia, a newer boat, has in turn been eclipsed by one still newer, and (under the present Y. R. A. rule) a faster boat, and like the other two, she is to be sold, as advertised in another column. She has been most successful as a prize winner, her only fault being that, like all other English racers, she has been outbuilt under their faulty rule, and her value as a racer in English waters has depreciated, as in course of a very short time must happen to her successors. Her speed and good qualities were proved in her races and passages. She is strongly built and fully rigged and equipped, and will make a handsome addition to the fleet of any yacht club, and we hope some day to see her in New York waters or on the lakes, for which latter she is specially adapted.

MANNING'S YACHT AGENCY.—This firm have issued a list of yachts and vessels for sale, including all varieties of craft for business or pleasure purposes. Their reputation is well known, many of our yachts having changed hands through their aid. They are also agents for the Coast Survey and other charts, the "Coast Pilot," and nautical and yachting works generally. At their basin at Twenty-sixth street, South Brooklyn, a number of yachts for sale may be seen, and owners desiring to lay up their yachts at any time can have them cared for.

NEW JERSEY Y. C.—A largely-attended meeting of the New Jersey Y. C. was held at their club house, foot of Tenth street, Hoboken, last Thursday evening, Commodore Longstreet presiding. Mr. James A. Reed and Mr. Martin V. B. Evesson, owners of catamaran Nemesis, and Mr. H. W. Sagendorf, were elected members, and the names of two candidates were proposed for membership. The amendment offered at the last meeting of the club by Mr. Dilworth to Section 9 of Chapter VII. of the by-laws (noticed in FOREST AND STREAM), relating to the sails, was taken from the table and that section was amended so as to read, "All cabin sloops, in addition to mainsail and jib, shall be allowed to carry working gaff and jib topsail, and cutters shall be allowed an additional staysail, and catamarans shall be restricted to use of jib and mainsail only." The amendment offered at last meeting by Mr. Garland to Section 15 of Chapter VII., relating to the time required to complete a race, was taken from the table for action, and that section was amended so as to read, "* * * nor shall a prize be due to any class except the distance shall have been sailed over by the winning yacht in its class in eight hours." The steamboat Blackbird has been engaged by the Regatta Committee for its regatta on June 9, and will leave Fifth street dock, Hoboken, at 9:30 A. M., West Twenty-second street, New York, at 9:45, and Pier 8, N. R., at 10 A. M.

CAROLINE.—This little keel schooner is advertised for sale in our columns this week. She is specially fitted for cruising and for a comfortable family boat such as may be run at a moderate expense and yet make a pleasant home for the summer.

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

G. F. C., Poughkeepsie, N. Y.—The address of Mr. Von Culin is Delaware City, Del.

W. H. J., Argentine, Mich.—The bird you send for identification is a specimen of *Dendrœca æstiva*.

M. M. M., Girard Manor, Pa.—How can I prevent my gun from leading? Ans. Use a wire brush with plenty of oil.

W. K. A., Bloomsburg, Pa.—If the instructions for curing gun-shyness, contained in Hammond's "Training vs. Breaking" do not help you, we know of nothing else that will. We can send the book, price $1.

SUBSCRIBER, Marblehead.—1. For railroad rates apply to the Boston & Maine Central Railroad. 2. For taxidermy consult Gibson's "Tricks of Trapping," price $1; we can supply it. 3. You will not find unoccupied free huts at the Rangeleys. 4. Quail are not trapped; it is forbidden by law.

W. P. M., Missoula, Montana.—Would you kindly inform me the name and location of the most reliable kennel where I could get some deerhounds in the West? Ans. We would recommend Dr. Q. Van Hummell, of Denver, Colorado, in the West, and the Clovernook Kennels, 185 Fifth avenue, New York, in the East.

GEO. H., Wagon Works, O.—For detailed description of the Ohio and Mississippi rivers of which you write, see Dr. Neidé's book "Cruise of the Aurora," advertised in our columns. A tent 14x20 ought to be amply sufficient for your needs. The Gordon's Pass country on the west coast of Florida is a capital hunting ground.

S. B. D., Rosendale, Wis.—In your answer to correspondents, April 16, to H., Spring Valley, N. Y. "Three shooters are members of two gun clubs; a match is to be shot between the two, and the club to which they have belonged for the longer time claims the right to draw them on its team. Ans. The matter is one to be decided by the men themselves. They can elect with which team they will shoot." Would either club have a right to pass a by-law to conflict with said right of individuals? Ans. Yes.

HUMPHREYS' MANUAL, enlarged and revised edition, 144 pages, bound in cloth and gold, sent free upon application to the company. The extensive circulation of Humphreys' Homeopathic Manual having rendered it a household possession, has induced the company to issue a better edition in richer and more attractive form. Not only is it enriched externally, but it has been rendered more complete as a book of reference, which the purchasers of the Specifics will not be slow to recognize. The portion treating of hygienic topics is well written, admirably arranged, and renders it a thoroughly reliable book for family use. Its friends, while not slow in recognizing it in its newer and more attractive dress, and while grateful for the information furnished in the old one, will be glad to welcome the new in its better dress. A handsomely bound copy may be had upon application to the company, 109 Fulton street, New York.—*Adv.*

Sproat do.
Aberdeen.
New York Bass Hooks.
Virginia.
Black Fish Hooks.

Live Bait Hooks. Kirby and Shepherd's Crook Eel Hooks. Kirby and Round Bent Sea Hooks, tinned or blued, etc., etc.

Manufacturers also of Gut Leaders, Hooks to Gut. All kinds of Artificial Flies and Baits. Brass and Steel Swivels and Fishing Tackle of every description for home and export. Importers of Silk Worm Gut. Sole Proprietors and Manufacturers,

R. HARRISON, BARTLEET & CO.,
Metropolitan Works, Redditch, England.
Wholesale Only. Established 1803.

FISHING RODS.

Having been the pioneers in the manufacture and introduction of Section Bamboo Rods, we have always taken great pride in securing and perfecting every improvement in order to maintain our position as the makers of the very best rods. Knowing not only theoretically, but also by long experience, that a properly made round rod is the only absolutely perfect rod, we have invariably refused, and still do refuse, to put our name on any but our "Best" round section rods. Our prices for these round rods average only about 40 per cent. more than the prices asked by any other makers, while the rods are widely known to be *incomparably superior*. While no hexagonal or any angular) rod can be perfect, we long believed that with proper workmanship and material a *really good* angular rod could be made. Being much easier and cheaper to make than round rods, we hoped to be able to offer to those anglers who can not afford to pay the price of our "Best" round rods, a hexagonal rod that would be good and serviceable at a moderate price. We are more than satisfied with the success which has attended our efforts, for we are now able to furnish a hexagonal rod that is really worth having, and at a price which is only a trifle in advance of that asked by other makers.

In addition to the many styles of round and hexagonal Section Bamboo Rods, we wish to call the attention of anglers to our large variety of fine Ash and Lancewood and Greenheart rods. *Every rod guaranteed absolutely hand made.*

If your dealer does not keep our goods in stock, or will not order them for you, send us 50 cents for 120-page illustrated catalogue.

ABBEY & IMBRIE,

18 Vesey Street (Fourth door from Astor House), New York City.

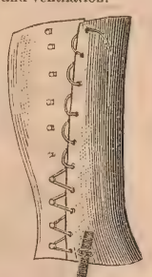
The white dots indicate States and Territories from which correspondence is published in this week's issue.

Yachts and Canoes For Sale.

CATBOAT TRITON, 18FT. 10IN × 8FT. 6IN. one year old in May; holder of champion pennant, Newark Yacht Club, 1884. Finished in hard wood (varnished), nickeled composition fittings, molded cast iron ballast. Complete in every respect. Can be seen at N. Y. C. house, Center st., Newark. Price $275.

FOR SALE.—THE KEEL SCHOONER YACHT Caroline, built by the present owner in 1880, 22 tons N. M., 53½ft. over all, 15½ft. beam, and draws 7½ft. Is fast, able, commodious and completely fitted. To any one wishing a family cruising yacht this offers an exceptional chance. For further particulars address P. O. Box 2,578, Boston, Mass.

FOR SALE.—CEDAR CANOE, CUTTER MODEL, 14×1½ft., 72ft. balance lug, 80lbs. false keel, two bulkheads and paddle; $35. F. HUSSEY, 135 West Thirtieth street, New York.



OSGOOD FOLDING CANVAS BOAT FOR SALE. Used about four months, in need of slight repair and one stool missing. Price $15. FRANK L. BROOKS, 346 West Baltimore st., Baltimore, Md.

ULIDIA, 10 TONS.—THIS VERY CELEBRATED racing cutter is now offered for sale. Built by Fife & Son in 1883, and in condition almost equal to new. New mainsail and other canvas 1884, by Lapthorn, and otherwise in best possible order and fully found. Well known as one of the largest winners of prizes afloat and presents an exceptional opportunity to any buyer desirous of insuring success in this class. Is handsomely fitted and has comfortable cruising accommodation, consisting of roomy after cabin with two berths, separate w. c. and companion, good saloon, headroom 5' 11", spacious forecastle. Can be bought cheap and arrangements can be made for immediate shipment to New York or elsewhere by the agents, Messrs. COX & KING, Yacht Brokers, of 22 Spring Gardens, Charing Cross, London. Please note telegraphic address. "Derat, London." N.B.—Instantaneous photographs of the yacht under canvas can be seen at the office of Forest and Stream.

WARNING!

As parties in the East have put on the market a horrible-toned imitation of my Duck Caller, this is to notify all sportsmen and gun dealers that none are of my make unless stamped "F. A. ALLEN, Monmouth, Ill." And I will prosecute all parties selling such villainous goods as of my manufacture.
F. A. ALLEN, Monmouth, Ill.

GUNNING COATS
Of superior construction and devices, with eight pockets outside, and large game pocket the full size of skirts, with inside and outside openings thereto, and with net bottom, permitting dripping, distension and ventilation.

All goods sewed with linen thread.
Best fitting and best-made goods in America.

HINDS' BLACK-FLY CREAM,
For Repelling
Flies, Mosquitoes, Midges and other Insects, and protecting the Skin from Sunburn, Irritation and Infection.
No Tar. No Stain.

GLENS FALLS, Vt., June 15, 1884.
Mr. A. S. Hinds, Portland, Me.:
DEAR SIR—I have not sooner acknowledged the receipt of box of "Black-Fly Cream," as I desired to first test it; this I have now done on two fishing trips where I found the Mosquitoes, Black Flies, Punkies and Moose or Deer Flies in great abundance. Although all these pests swarmed about me, I found the *Cream a perfect preventive* against their bites when it was applied to face, hands, ears and neck. For many years I have sought after *the* insect repellent, and have tried all manner of compounds, but yours is the most thorough, at the same time cleanly and not disagreeable.
Yours truly, A. NELSON CHENEY.

Price, 25 Cents, Postpaid.
SOLD BY DEALERS IN SPORTING GOODS.

"FOREST AND STREAM SERIES."

DEER HUNTING.

BY JUDGE JOHN DEAN CATON.

BY and by it will be time to hunt antelope and deer. It is always time to read about them. Judge Caton's book on the antelope, elk, deer, moose and caribou of America discusses in a readable way the life history of these animals and the methods of their capture. It is the work of an enthusiastic sportsman who has had a wide experience and has devoted the leisure of years to studying these interesting game animals. The volume is very fully illustrated, and is a perfect storehouse of information and entertainment. The first edition was sold by the Boston publishers at $4. Price $2.50.

WOODCRAFT.

BY "NESSMUK."

A COMPACT pocket handbook of condensed, boiled-down, concise, clear, comprehensive, sensible, practical camp gumption. "Nessmuk" has been "in the woods" in Michigan, New York, Pennsylvania, and South America, and this is a book for outers, wherever they kindle their camp-fire. The author believes in "smoothing it." He has learned how; now he tells others. It is much easier to learn from "Nessmuk" than from Dame Experience. We should not be surprised if "Woodcraft" completely revolutionized the methods of camping out. If you are going to the woods, read "Woodcraft" before you go. It may add to your trip a hundred fold. Price $1.00.

DOG TRAINING.

BY S. T. HAMMOND.

HE was a promising puppy, and when you turned him over to the breaker to be educated, you thought he was bound to make "the best dog in the world." And you'll not soon forget how disappointed and disgusted you were when the dog, the breaker and the big bill—all three turned up together, and you saw that the animal's spirit was broken and it would take a steam calliope to make him mind. Now, this could not have happened if you had been wise enough to buy a copy of Hammond's book, and in your odd leisure moments *train* the dog yourself instead of having him *broken* by some one else. We are selling edition after edition of this book, and it is revolutionizing the system of preparing dogs for work in the field. Price $1.00.

SHORE BIRDS.

A PAMPHLET for those who "gun" along the shore. Tells of: I. Haunts and Habits—Where the bay birds live and what they do at home. II. Range and Migration—Where they go to breed and where to spend the winter, III. A Morning Without the Birds—An episode of shore shooting. IV. Nomenclature—A list of our American species of *Limicolæ*, with a description of each species. V. Localities—Where to go to shoot them. VI. Blinds and Decoys—How to shoot them after you have reached the grounds. 45 pp., paper. Price 15 cents.

ANGLING TALKS.

BY GEORGE DAWSON.

AS a political writer of conceded power, Mr. Dawson wielded a trenchant pen; when he terned from the conflict of parties to the praise of the favorite pastime of "simple wise men," his essays, limpid as the crystal streams, are aglow with the soft summer sunlight and melodious with the songs of birds. When angling was the theme, he wrote from a full heart and in closest sympathy with the scenes and pursuits described. These "Talks" are brimful of manly, wholesome sentiment; there is in them all not a particle of cant. Their sincerity and overflowing spirit at once win the reader, and he perforce shares the author's enthusiasm. The effect is magical, like that of the mimic players in Xenophon's *Memorabilia:* he who reads, if he be an angler, must go a-fishing; and if he be not, straightway then must he become one.—*Extract from Publishers' Preface.* Cloth, price 50 cents.

CANOE "AURORA."

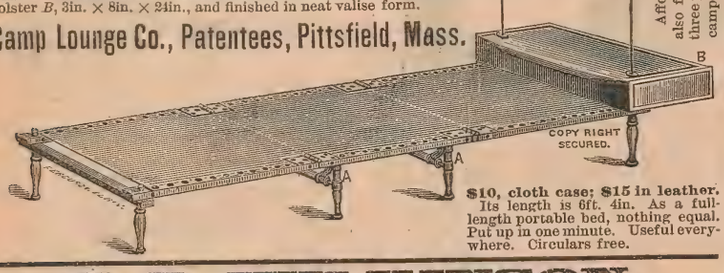
BY DR. C. A. NEIDÉ.

A CHARMINGLY written and always entertaining account of a canoe cruise from Lake George, New York, down the Ohio and Mississippi Rivers to the Gulf of Mexico, by the Secretary of the American Canoe Association. To read the cruise of the "Aurora" is the next best thing to having made it; and the reading is decidedly more pleasant than would have been participation in some of the misadventures related. 216 pp., cloth. Price $1.00.

Reads like a romance from beginning to end.—SPRINGFIELD REPUBLICAN.

Old Saint Augustine.

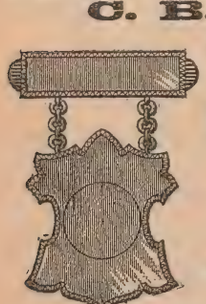
BY CHARLES B. REYNOLDS (FOREST AND STREAM).



THE famous Florida town's three centuries have been crowded with romantic incidents; and a story of wonderful interest is this, with its Huguenots and Spaniards, Franciscan Fathers, English Sea Kings, Boucaniers, Minorcans, Liberty Boys, and Seminoles. It is told vividly, in the briefest possible compass, with strict historical accuracy, and with an enthusiasm that is manifest from the very first page to the last. Among the illustrations are copies of some of the very rare drawings by Jacques Le Moyne, the French artist, who so narrowly escaped massacre by the Spaniards in Florida, three hundred years ago. Another very rare engraving is the plan of the city in British times. The *artotypes* (or photographs in permanent ink) are among the most beautiful book illustrations of the day. They are made from negatives taken expressly for "Old St. Augustine," and are: Fort Marion (four views), the Matanzas Fort, the City Gateway, the Cathedral, the old Palm-tree, Garden Overlooking Plaza, and two very characteristic St. Augustine Houses. Cloth, pp. 144, 8vo. Price, $1.50. **Forest and Stream Publishing Co.**

"SHERMAN" FOLDING COT.

All of which folds in bolster *B* at the head of the cot. Size of bolster *B*, 3in. × 8in. × 24in., and finished in neat valise form.



Camp Lounge Co., Patentees, Pittsfield, Mass.

Hornbeam Rods

A SPECIALTY.

W. HUNTINGTON,

WILTON, CONN.,

Makes a specialty of the manufacture of FINE HAND-MADE RODS of Hornbeam for fly-fishing. Every fly-fisher should have one of these rods, for whatever preference he may have these are the only thoroughly reliable rods, secure against breakage and capable of real hard usage. With one of these rods a sportsman may venture into the woods for a season and take no other rod, and be fairly sure of returning with it in a serviceable condition. As made from wood of my own cutting and seasoning, they are powerful, easy in action and full of endurance. For circular send to WALLACE HUNTINGTON as above.

Publications.

CANOE

THE FOREST AND STREAM began a year ago the publication of a series of papers on canoe construction, by Mr. W. P. Stephens, of the New York C. C., widely known as an expert on canoe design and building. These papers, having appeared through the year in our columns, have since been rewritten, and with numerous additions are now published in a handsome volume under the title of "Canoe and Boat Building for Amateurs." Mr. Stephens is peculiarly fitted for the preparation of such a work, beginning as an amateur, and having after a long experience of the difficulties attending a learner, taken a prominent place among canoe builders, due both to the model and workmanship of his canoes. Realizing fully the difficulty of explaining to a novice an art in itself far from easy,

AND

and with which he is entirely unfamiliar, the book begins with a description of the various classes of canoes in general use, with their main features and dimensions, and definitions of the terms used in connection with them. Numerous examples of canoes are given, and in connection with them, such plain instructions in designing as will enable the beginner to select intelligently the proper craft for his pur-

BOAT

pose, and to plan her dimensions, details and fittings. To this end designs of all classes of canoes are given, with full dimensions and details. The object has been not merely to enable the tyro to build one boat as described, but to teach him the principles of designing and building in such a way that he may construct such a craft as he desires. Following the chapters on designing, the construction of a canoe is taken up in detail, the tools and appliances being first clearly described, as well as the various materials, after which follows the actual work of building. Every operation is taken up in order, from the selection of the keel to the varnishing of the finished boat, and illustrated with numerous diagrams.

A chapter on sails describes all the varieties in use by canoeists, down to the new Mohican settee, with directions for making, rigging and measuring them, while the method of proportioning the sails to the boat is clearly explained, all the calculations

BUILDING

being worked out in detail. The many minor points of a canoe, paddles, steering gears, rudders, aprons, and camp outfit are also described at length, while a chapter is devoted to canvas canoes.

The subject of boat building is fully treated, a rowboat of the usual construction being taken as an example, and described in all its parts in such a manner as to make clear the principles involved, and their application to any form of boat, either lapstreak or carvel built. Each of the numerous technical terms belonging to the subject is defined clearly when it first occurs, and as the index is full and complete, the book is in itself a glossary.

In addition to the numerous diagrams in the body of the work, twenty-four large plates are printed on bond paper, containing the working drawings of canoes for paddling, sailing, cruising

FOR

and racing, with their sail plans, rowing sailing boats, large canoe yawls, and various boats for special purposes, such as gunning boats, yacht boats, and the widely known sneakbox.

The canoe yawl, a boat between a canoe and a yacht, is illustrated by examples of various craft from 17 to 20ft. long, and suitable for a crew of two or three on a cruise. This class of boat, while little known among us as yet, is admirably fitted for cruising, and will meet the wants of many who object to a canoe as being too small, and yet desire a boat with the same excellent qualities. The boats and canoes illustrated are in all cases among the best of their class, the list of canoes including English, Scotch and American craft, and are all drawn

AMATEURS.

to scale, so as to be available as working drawings. The plates, for convenience in using, are placed loose in a tough manilla envelope and accompany the book.

Pp. 168, with 24 plates of working drawings. Price $1.50. Address,

Stud Fee, $25.00.

STUD FOX-TERRIER

Champion Raby Tyrant,

(K.C.S.B. 11,179.)

Pupped October, 1880. Weight 16½ pounds.

Raby Tyrant is a white dog, with an even marked rich black and tan head. He is a thoroughly game and stylish terrier, possessing a beautifully shaped long punishing head, with perfect drop ears, small eye, rare neck and shoulders, deep chest, well ribbed and muscular quarters, short, straight legs, excellent feet, great bone and substance, with an exceptionally hard and dense coat.

Raby Tyrant is without doubt one of the most successful terriers of the present day. He has been exhibited 67 times, 33 different judges having adjudicated upon him, and has won 47. First 19 cups and specials; 12 second and 2 third prizes. His breeding is undeniable, combining as he does the choicest and most valuable blood that can be obtained. At the stud Raby Tyrant is proving himself eminently successful.

Fee, $15.00.

JOHN E. THAYER, Hillside Kennels, Lancaster, Mass.

Stud Dogs Proper.

ANSWERS TO CORRESPONDENTS.

THE PARK NEEDS A SUPERINTENDENT.

HERE in America we are too much accustomed to the discovery of inefficiency and unfaithfulness in our public officers to have it cause much surprise. The practice of appointing men to office as a reward for political services has long prevailed, and the natural result of this pernicious system has led to gross maladministration in many places, high and low. The appointee is apt to look upon his position not as one in which he is bound to do faithful service for the government which pays him, but rather as a sort of a claim which opens up to him various avenues, either for the accumulation of wealth, or for the strengthening of his political influence, and consequent paving the way to further and more desirable political honors. That this view of a public office is a low and degrading one is so evident, that to a man of ordinarily keen perceptions no demonstration of it is needed. It is apparent and is daily becoming better understood, that the public servants who hold their positions in such estimation as this are unfit to longer occupy them. A man who uses his official position for his own private gain is out of place in an office, and should give way to some one who has more just ideas of his duty toward the public.

We pointed out several weeks ago that the Superintendent of the Yellowstone National Park had in a variety of ways shown an utter failure to comprehend what he owed to the public, whose interests he was appointed to guard. He entered on his duties last fall, but left the Park in December and passed most of the winter in Washington, where he held close relations with one of the Hobarts, who was a principal of the notorious Park Improvement Company. The vigorous, but, happily, unavailing efforts of this company to obtain a monopoly of the National Park are too familiar to our readers to make it necessary to recall them. This close affiliation of the Superintendent with the Improvement Company was of itself enough to destroy his usefulness in his position, for the relations which that corporation holds toward the Government are so well known in the Territory that the mere suspicion of an understanding between the executive officer of the Park and the company would at once destroy all respect for laws and regulations. Trespassers and poachers would feel that the Improvement Company was to receive favors and privileges which could not with justice be denied them. The authority of the Secretary of the Interior would thus be brought into contempt, and there would be nothing in the way of the lawbreakers, who would renew the work of destruction and slaughter.

It is with the actions of the Superintendent and the results which would follow these actions that we have to do. No matter what his motives, the worst results will ensue if he be allowed to retain his position. A fool can often accomplish more harm than a knave. Besides taking, by his relations with the Improvement Company, a position hostile to the public, the Superintendent has proved himself inefficient. His duties are in the Park, but he had scarcely shown himself there, and taken a look about him, when we find him back again in Washington, where—with but a short interval—he passed the winter. During his absence almost all the horses were withdrawn from the Park, and it was made impossible for the assistants who wintered there to see what was going on, except in the immediate vicinity of the points at which they were stationed. Thus he not only neglected his own duty, but prevented his assistants from performing theirs.

The crowning act of culpability, and we may also add stupidity, was the filing a claim to a portion of the National Park. It is difficult to understand how any one could be guilty of such a hopeless blunder. If Carpenter knew anything at all about the Park, he must have known that a number of people were watching closely the course of events in it, and if he had thought of the matter a little, he would have seen that it was impossible for his course to remain long unknown. His action indicated either the height of audacity or a most dense ignorance. Whichever it may have been, the action of itself showed most clearly how unfit a man Carpenter is for the important position of Superintendent.

The season for active work in the Park is at hand, and it is important that an efficient and honest Superintendent should be on the ground when there is so much work to be done. The responsibility in the case rests with the Secretary of the Interior, who alone, under present conditions, has the power to remove a delinquent official and appoint his successor.

FISH LEGISLATION.

IN the State of New York there is pressing need of some law restraining legislation on questions relating to fish and fishculture. Hardly a winter passes without the laws being tinkered by some well-meaning but ill-advised persons in the interests of what they believe to be for either the protection or propagation of fish. This in its turn necessitates counter-tinkering, and confusion is the result. The remedy for this state of things is to pass a law that all bills relating to the fisheries or to fishculture shall receive the approval of the majority of the Board of Commissioners of Fisheries before being sent for the signature of the Governor. These gentlemen have for years paid attention to the needs of the fisheries, and in their zeal have served the State faithfully without other pay than occasional abuse from unappreciative people who fancy that their locality is neglected or who have some private grievance.

We have recently said much on the last trout law, which was amended in the Senate after one of the Commissioners had seen and approved it, and it is not our purpose to refer to it again at this time. We wish to call attention to a bill which some one had introduced to compel the Commissioners of Fisheries to stock Lake Ontario and the St. Lawrence River, and which compelled the Governor to veto the entire appropriation for fishculture in order to defeat this scheme. The Governor's veto is sensible and just, and the only regret is that it must include the other appropriation, for the objectionable item cannot be separated from the others. In his message the Governor gives the following reasons for his veto:

" 'For the Commissioners of Fisheries, to be expended as they may deem proper upon the vouchers to be approved by the Controller, for the purpose of replenishing the lakes, rivers and other waters of this State with fish, as provided in chapter 285 of the laws of 1868, chapter 507 of the laws of 1870, chapter 74 of the laws of 1873, chapter 523 of the laws of 1875, and chapter 309 of the laws of 1879, $26,000, of which sum the Commissioners are hereby directed to expend $2,500 in stocking Lake Ontario with pike, whitefish and salmon trout, and $1,000 in stocking St. Lawrence River with black bass and California trout.' This item is objected to and not approved for the reason that in the last clause the Commissioners are directed to spend $3,500 in stocking Lake Ontario and the St. Lawrence River. The high character and fitness of the Commissioners are well known, and the Legislature has very properly recognized these qualities in appropriating $22,500 to be expended as they may deem proper. I see no reason why they should be 'directed' to stock this mighty lake and river, half the waters of which belong to a foreign government, even though they may deem it useless. They are the best judges of the needs of the State, and should be permitted to expend the money untrammeled. If, in their judgment, waters can and should be stocked, I doubt not they will attend to the matter. The principle of directing expert officials how to expend money appropriated for their uses I believe to be wrong, and should not be countenanced even in so small a matter as this. The Fish Commissioners should receive all the money the public means demand, and they should expend it as they deem proper."

The only remedy now at hand is to have another bill framed which excludes the items objected to, or to pass the whole over the veto. We entirely agree with the reasons given by the Governor, and believe that the Commissioners should have something to say on all legislation pertaining to their department, which their experience and years of study qualifies them to judge of. This would prevent the passage of all hasty and ill-advised bills and would not be productive of evil in any case.

NEW YORK FORESTRY BILL.

THE Assembly passed last week a compromise forestry bill, which has been approved by the New York Chamber of Commerce and the Board of Trade. It provides for the appointment of three Commissioners, to serve six years, without pay; and these Commissioners are to employ a forest warden, inspectors, agents, etc.

All State lands now owned or which may be acquired in the counties of Clinton, Essex, Franklin, Fulton, Hamilton, Herkimer, Lewis, Saratoga, St. Lawrence, Warren, Washington, Greene, Ulster, Delaware and Sullivan shall constitute the forest preserve. These lands shall be forever kept as wild forest lands. They shall not be sold, nor shall they be leased or taken by any person or corporation, public or private.
